The second code is with regard to administration of health and welfare funds, which we've already discussed.

The third code deals generally with racketeers, crooks, Communists, and Fascists in the labor movement, and prohibits any union from aiding and abetting such elements.

The fourth code deals with conflicts of interest, and in substance or in a general way, prohibits a trade union official to have any interest that conflicts with his primary responsibility to the membership of his union.

Then the fifth code, recently adopted, has to do with all of the phases of financial practices in a labor union.

Senator DOUGLAS. I notice that there you require an audited statement which will be made available to the membership.

Mr. HAYES. Yes. Made available to all local unions and to every individual member of the union, periodically.

Senator DOUGLAS. And you believe, and I think this is correct, that if the audit has to be made by an outside agency, that this will lead not only to greater efficiency and economy, but it will also be a deterrent and protection against possible temptation.

Mr. HAYES. Yes, and it might be well to mention that this financial code applies to the local unions as well as to the national and international unions.

Senator DOUGLAS. And I wonder if you'd say a word about this last code that you've adopted, namely, about union democracy.

Mr. HAYES. The last code deals with union democratic procedures, and assures to the membership—to the rank and file membership of the union—the opportunity to decide how its union is going to be operated.

Senator MORSE. I want to stress that because I think it's one of the great public demands. The public is so misinformed about it; the public seems to think that labor runs an oligarchy or a dictatorship in the handling of union affairs. The public doesn't realize that almost all unions—some exceptions—but almost all unions are just little democratic states, really, as far as their own procedures are concerned.

Senator DOUGLAS. This isn't true of all unions.

Senator MORSE. No—I say most of them; some of them are not. But a great majority of them are certainly democratic states where the delegates from the local union level on up, really under democratic processes control and determine union policy.

Mr. HAYES. Well, Senator MORSE, I said in some recent speeches that I've been making at colleges that the machinists union which is typical of approximately 90 percent of unions, insofar as our procedures were concerned. And in our organization, all of the laws that govern the organization were adopted by the membership in a referendum vote; these laws can be changed only in a referendum vote. Even the delegates at convention are not empowered to change the laws. The officers of the organization are nominated and elected by the membership, and not by convention delegates. I say that more than 90 percent of the unions in the federation are as democratic in their procedures as are the machinists union. And this is not commonly known to the American public.

Senator DOUGLAS. I notice that you provide that union officials should hold office not to exceed 4 years, and should be elected by democratic methods either by referendum or by the vote of a delegate body which is itself elected by a referendum or at union meetings.

Mr. HAYES. That's correct.

Senator DOUGLAS. And also that all conventions should be open to the public.

Mr. FLANNERY. What is the procedure, Mr. Hayes, in case of violation of these codes? What happens?

Mr. HAYES. In case of violation of the code, of course, the ethical practices committee is duty bound to investigate all of the reasons for the violations and the extent of the violations, and submit——

Mr. FLANNERY. How does the violation come to the attention of the ethical practices committee?

Mr. HAYES. In many ways—either it can be reported to the executive officers of the federation who then refer the matter to the ethical practices committee, or it is reported directly to the ethical practices committee. And the ethical practices committee then, on its own motion or by direction of the counsel of the federation or the executive officers, can conduct a formal investigation to determine whether or not there has been a violation of any of the codes of policies or laws of the federation, and the extent of the violations. Then after the investigation has been conducted, the ethical practices committee submits it reports, its findings and recommendations to the executive council. And then the executive council takes action on the report of the ethical practices committee.

Mr. FLANNERY. Senator DOUGLAS, would you believe from your experience, your knowledge of unions, and so forth, your study of these particular codes, that there is hope of labor being able, along with congressional committees cooperating, to be able to do its job in cleaning house definitely?

Senator DOUGLAS. Oh, yes. I think the formulation of these very carefully worked out codes will be of great help, and then the fact

that a committee has been set up to carry them into effect will be a real advantage. Now, in all these matters eternal vigilance is the price of liberty, and we need to work at this. But I do want to say that I think the labor movement has stepped out ahead of industry and business in these matters, and I would like to see industry and business adopt similar codes.

Mr. FLANNERY. Is there a final word you'd like to say, Mr. Hayes?

Mr. HAYES. Yes, Mr. Flannery, I think that organized labor needs the help of Government, needs the help of industry, needs the help of business, and others—in first of all minimizing whatever may be wrong within the trade union movement and ultimately eliminating this wrong.

I think, however, that help must come from people who are sincerely dedicated to helping the trade union movement, and not hurting the trade union movement. And we certainly solicit that help—from congressional committees, from State legislature committees, from industry, and from business.

Mr. FLANNERY. Thank you very much. Very good indeed.

Thank you, gentlemen. You have just heard a discussion on labor's new broom, the AFL–CIO Ethical Practices Code, with Al J. Hayes, chairman of the AFL–CIO ethical practices committee, and two United States Senators, PAUL DOUGLAS, of Illinois, and WAYNE MORSE, of Oregon. Mr. Hayes is also an AFL–CIO vice president and president of the International Association of Machinists.

For copies of the codes, address AFL–CIO Radio, Washington, D. C.

For further answers to your questions on labor today, you are invited to be with us next week at this same time. This is Harry W. Flannery speaking for the American Federation of Labor and Congress of Industrial Organizations, which has presented this program as a public service in cooperation with this station. Next week, same time, same station, labor answers your questions.

Oklahoma Today—Statement by Hon. A. S. Mike Monroney, of Oklahoma

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement the Senator from Oklahoma [Mr. MONRONEY] has prepared concerning the Oklahoma State magazine.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OKLAHOMA TODAY

The semicentennial souvenir edition of Oklahoma Today has just come to my attention. I am proud to report that, with this edition, our State magazine has come of age. I believe we are catching up with Arizona Highways and the New Mexico magazine, which for many years have had a well-deserved popularity inside and outside those States.

Two outstanding examples of contemporary Indian painting from originals in Tulsa's famous Gilcrease Museum are used for the front and back covers of this issue of the Oklahoma State magazine. The front cover is Blackbear Bosin's very spirited painting, "Eagle Dancer," while the back cover picture, "Bending Willows Setting About the Care of Motherhood," by Woody Crumbo, portrays a peaceful scene.

The land, the people, and the spirit of Oklahoma—all these compel the readers' attention in story and picture. "Oklahoma Family of Man" is particularly interesting. Between the covers, in one way or another, the saga of our State is told from before it was born to the present, with significant looks into the future.

Perhaps one reason I like this issue of Oklahoma Today so much is that the 8 color photographs printed for framing are dramatic proof of some of my contentions through the years—such as my claim that there is nothing in the world quite like an Oklahoma sunset, whether it silhouettes an oil derrick or a barbed wire fence. The photographers, whose work is shown, are Cliff King, Ross Cummings, Jesse A. Brewer, Kazimir Petrauskas, Edith Hogan, Mel Woodbury, and Paul E. LeFebvre, who is the art director. All of the photos are superb.

Congratulations also are in order for the magazine's editor, Dave Loye; the editorial board, composed of Gov. Raymond Gary, Dr. Randall T. Klemme, C. A. Stoldt, Kelly Debusk, and Dave Ware; contributing editors Jeff Griffin, Carl Held, and Miss Juanita Mahaffey; and writers Bill Thomas, Bill Burchardt, and Gladys Jeffords.

The schedule of activities listed by Oklahoma Today as a handbook for visitors to Oklahoma this year gives a comprehensive picture of the State, past and present. The following calendar for July and August records the enthusiasm and variety with which many communities in the State are celebrating the 50th anniversary of Oklahoma's first half century as a State:

JULY EVENTS

1–8. Homecoming, rodeo, beauty pageant, oldtimers picnic, band concerts, fireworks display, Sapulpa.
1–4. First annual Kiowa Indian powwow, Carnegie.
2–4. Rodeo, Wright City.
2–6. Annual Will Rogers Roundup Club Rodeo, R. C. A., Claremore.
3–4. Annual reunion and free hometown carnival in beautiful Redbud Park, Marlow.
3–5. Perkins semicentennial Fourth of July celebration.
3–5. Rodeo, Purcell.
3–5. Indian stomp dance, Miami.
3–6. Picken's intertribal powwow, seventh day for Indians only, Madill.
4. Annual fireworks display, Pryor.
4. Annual carnival, Frederick.
4. Fourth of July celebration, Pawnee.
4. American Legion fireworks display, Boise City.
4. Woods County Day, Freedom.
4. Play Day, Woodward.
4. Fourth of July celebration, Prague.
4–6. Roundup Club Rodeo, Tahlequah.
6. Dramatization of David and Saul at Holy City, Lawton.
8–10. Twenty-seventh annual Kiwanis Rodeo, Hinton.
4–6. Roundup Club Rodeo, Drumright.
11–14. Junior chamber of commerce rodeo, Miami.
11–14. Twelfth annual Pawnee Indian homecoming powwow—no admission, Pawnee.
12. Old Greer County pioneers reunion, pageant, and parade, Mangum.
16–19. Semicentennial rodeo, R. C. A., Chickasha.
17–20. Rodeo, Pryor.
20. Tulsa Indian powwow dances, Reserve Armory, Tulsa.
21. Fishing boat relay race open to all boats 16 feet and under with outboard motors, Fort Gibson Lake, Wagoner.
24. Tulsa League all-star baseball game, Tulsa.
24–27. Oklahoma quarter horse show and race meet, Enid.
25. Seventh annual street square dance festival, Pawhuska.
26–28. Eleventh annual international Roundup Club's Cavalcade—world's largest amateur rodeo, Pawhuska.
28. Ardmore's birthday celebration, Ardmore.
31–Aug. 1–2. Golden Jubilee Championship Rodeo, R. C. A., Duncan.

AUGUST EVENTS

1–3. Jaycee Rodeo, Broken Bow.
2–3. Junior Rodeo (Quarterback Club), Talihina.
2–6. Rodeo, R. C. A., Lawton.
2–4. All-Colored Rodeo, Drumright.
4–6. Reenactment of Kiowa-Comanche Indian land drawing (actual drawing for a small tract of land), El Reno.
6. Lawton's birthday celebration, Lawton.
8. Watermelon festival, Rush Springs.
13–17. Twenty-second annual rodeo, R. C. A. Stock to be furnished by Gene Autry & Associates, Ada.
13. All-State high-school baseball game, Tulsa.
13. All-State high-school basketball game, Tulsa.
15. All-State high-school football game, Tulsa.
17. Tulsa Indian powwow dances, Tulsa.
18. Runabout cruiser race (for cruisers 21 feet and under), Fort Gibson Lake, Wagoner.
18–24. The Will Rogers country pageant, Claremore.
19–24. American Indian Exposition, Anadarko.
22–23. Annual rodeo, Madill.
22–24. Cimarron Cowhand Reunion and Rodeo, Freedom.
24–25. Ozark Singers Association convention, Miami.
26–30. Sooner State dairy show, Enid.
28–Sept. 1. Will Rogers Memorial Rodeo, R. C. A. (4 nights and Sunday afternoon), Vinita.
29–Sept. 1. National hot-rod races, fairgrounds, Oklahoma City.
29–Sept. 1. Elk's Rodeo, toughest of 'em all, Woodward.
29–Sept. 2. Ponca Indian powwow, Ponca City.
30–31. Roundup Club rodeo, Tahlequah.
31. Sucker Day, Wetumka.

Address by Lewis L. Strauss at Dedication Ceremony of Blacksmith Shop of Jesse Hoover

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. SMITH of New Jersey. Mr. President, on Thursday, June 20, at the birthplace of former President Herbert Hoover, in West Branch, Iowa, there was a dedication ceremony of the blacksmith shop of Jesse Hoover, the father of our former President. On that occasion the address of dedication was made by the Honorable Lewis L. Strauss, Chairman of the Atomic Energy Commission, and a lifelong personal friend of former President Hoover.

Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD this address by Mr.

Strauss. It is an outstanding commentary on some of the vital issues before the world today, and it includes a magnificent tribute to our former President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF LEWIS L. STRAUSS, DELIVERED AT THE DEDICATION OF BLACKSMITH SHOP AT BIRTHPLACE OF HERBERT HOOVER, WEST BRANCH, IOWA, JUNE 20, 1957

Far away in the Holy Land, in a cave near the shores of the Dead Sea, as I am sure all of you know, there were found not long ago a number of very ancient scrolls containing parts of the Scriptures and the complete text of the Book of Isaiah. It enabled us to discover that His words have come down to us through the ages substantially unchanged. In the 51st chapter, 1st verse, we can read: "Ye that follow after righteousness, ye that seek the Lord; look unto the rock whence ye are hewn."

It is this injunction we observe when we recall our own fathers and mothers or when, as citizens of a great Republic, we look back to the parentage and the heritage of men who have made our Nation materially strong and morally respected among the peoples of the earth.

Here, in this pleasant town, which had been a frontier settlement not long before, and on this very ground where we stand today, in a structure like this one whose counterpart could be found in every American community, there labored a pioneer father, Jesse Hoover—whose son was to grow up and dramatically fulfill in a manner never before equaled the Biblical injunction to feed the hungry, clothe the naked, and give shelter to the homeless. Incidentally, he was also to become the President of the United States.

On an anvil such as this—perhaps the only tool except the sword which has preserved its essential appearance since man first worked with iron—Jesse Hoover worked at the honorable calling of blacksmith. From earliest days the blacksmith has personified the technological progress of mankind. In ancient wars he forged the weapons and the armor of fighting men, and in time of peace he mades the axes, which cleared the wilderness, and the plowshares and the pruning hooks which raised agriculture from the subsistence level of the sharpened stick to the capacity to feed great urban multitudes.

Science and technology are exemplified in the smithy. The mineral riches of the earth, rendered malleable in the white heat of the blacksmith's forge and shaped by his brawn and his brain, were at the very beginning of science.

Across the lane in the neat cottage still standing, which served as adequately as castle or palace for the home of this blacksmith, was Huldah, his wife and mother of his children. She was equal partner and contributor to the inheritance they left here. Devout housewife and mother to her own flock, she also preached the word of God to others. Thus, in this family, there was a complete microcosm of the good life.

Besides his blacksmithing, Jesse Hoover dealt in and repaired agricultural machinery which represented the advanced technology of his day. And so, in one establishment, one might say, science was joined with moral precept, with respect for human dignity and awe of the Almighty. It was the wholesome pattern of those vanished days.

And now, although only a long generation separates us from them, we are witnesses to a profound and troublous change. Man's skill, his science, and his ingenuity are no longer balanced by the ethical influences in his life. His inventiveness has run far ahead of his ability to control its product. His discoveries, many of them made for the sheer joy of gradually lifting the curtain that since the beginning of time has hidden from his gaze the laws of nature, have also provided man with cpaabilities for self injury—a propensity to which his retarded development in the disciplining of his national ambitions, prejudices and greeds have made him fatally vulnerable.

Today we are like children who have found our way into a cave filled with glittering treasures, but children who may become lost in darkness forever if we venture farther without a lamp to guide us or a strong cord by which we may find our way back to the sunlight.

We have honored science, and properly so, for the enormous accomplishments which it has recently made, and we should be gravely misled were we to join in the unreason of blaming upon science the predicament in which we find ourselves. For, as a general rule, it is not scientists who apply their discoveries, either for good or evil. When science gives us fire it is we ourselves who allow it to burn down our houses. When science gives us engines for rapid locomotion, it is we—in our recklessness—who use these machines to slay 40,000 of our fellow citizens every year.

We discover better crop strains and better insecticides, wherewith to increase our harvests. At the same time we learn to control various plagues and epidemics, with the result that the teeming populations of chronically famine-stricken parts of the world multiply beyond their meager food supplies, and we know not how to prepare our own bounteous table before them.

And that is only part of the story, for men have discovered bacterial and chemical warfare agents, and nuclear weapons, so that if war ever comes again we may be sure that its quick and deadly toll will far surpass the aggregate casualties of all the wars which men have fought since the beginning of recorded time. In the face of all this, nations have been able to agree on no sure means of preventing such a cataclysm, but, instead, live today in constant fear of unprovoked attack.

Great inventions and discoveries which once appeared to be entirely unrelated to warmaking, or actually to enhance our chances for peace, have repeatedly been perverted for war.

It is of record that Benjamin Franklin, after witnessing the first ascension of a hydrogen-filled balloon from the palace courtyard at Versailles, wrote that he had seen "a discovery of great importance and what may possibly give a new turn to human affairs." One effect of this discovery, he believed, might be that it would "convince sovereigns of the folly of wars, since it will be impracticable for the most potent of them to any longer guard his dominions."

When airplanes were invented, and after Bleriot flew across the English Channel, a popular writer of the day speculated that, while planes might be used in the event of war for purposes of recconnaissance, the notion that explosives might be dropped from such airplanes on great cities was sheer nonsense. "That simply would not be allowed," the writer concluded. The rubble of thousands of gutted homes and schools in World War II is the silent commentary 30 years later.

While as for the more recondite discoveries, one might have said that clearly there was nothing of military significance in an abstruse formula with which, in 1905, a young clerk in the Swiss patent office equated energy and mass. But that clerk was Albert Einstein and today we know all too well that matter can be transformed into energy.

The most innocent discoveries—improved methods of preserving food, advances in medicine and surgery are, all of them, contributions to the more efficient management of armies and therefore to the conduct of bigger and more devastating wars.

Considered as the race of man, we must sadly admit that our curiosity and our instinct for refinement of knowledge continues to be successful, while our capacity for keeping out of trouble has become increasingly undependable.

Perhaps we have put insufficient emphasis on inquiry as to why we act as we do, as individuals, as tribes and as nations.

This is the great challenge of our times. It is the multibillion dollar question, the 2,700,000,000 person question. Can man learn to live with his inventions, or must he perish because of them? Can his sense of moral responsibility, which we have to believe is common to all human beings—can this sense of moral responsibility find a common denominator in spite of the difficulties of language, and the soundproof barriers erected by dictatorships to insulate the oppressed multitudes they rule from the voice of truth? I am convinced that it is possible.

In the summer of 1955 we initiated a great international conference on the peaceful uses of atomic energy. It was a conference attended by scientists from 73 countries. It was the first time in a great many years that they had been able to come together, for the threat of war, then war itself, and the aftermath of war, had long separated and isolated them. It resulted in a great exchange of knowledge on the benign uses of atomic energy in an atmosphere of friendly reunion. The conference was attended by over 1,400 scientists and engineers. The learned papers on the peaceful atom which were presented there fill 16 thick volumes. The conference was acclaimed as a monumental success.

But the fate of man's civilization was not solved in that conference, nor was it even upon the agenda for discussion. The overshadowing dilemma of our time remained unsolved. That scientific conference did serve, however, to underline the sober fact that man's material improvement, and the enrichment of his knowledge of the physical universe, only means that he has much more to lose than ever before.

Have we exhausted every means to solve the problem of survival? Have we left any stone unturned? Is there something that might be done which has not yet been attempted? Have we tried everything to discover whether there is some course of action, somewhere in reach of human ingenuity, to bring to pass what surely all men in every land must passionately desire—to achieve a durable peace—to balance man's advancement in science with a growth in human understanding and moral force?

Short of a simultaneous religious experience illuminating the whole world, which it is beyond our human power to promote, is there something we can do?

I think that there is.

I believe that the time has come to call a new kind of conference among the nations, but not for the reasons that engendered the scientific conference of 1955. That was a great convocation at which men learned what they might gain in a material sense from the applications of scientific discovery—how life could be enriched in the future if atomic energy could be developed for peace. What I am proposing is a conference which starts from the knowledge of what men will lose—the accumulated treasure of culture and civilization—if the fruits of science are used for destruction.

To this conference we should invite those far less concerned with man's insatiable curiosity than with his civilized survival, with the cultivation of his art, literature, philosophy, and history. I see this as a great gathering to which we will ask the chief humanists of our day from all coun-

tries—the philosophers, historians, sociologists, theologians, and all the leaders of thought whose concern is with man rather than the physical universe which man inhabits. It need not be a conference great in numbers, indeed it should not be, but it must be composed of scholars great in repute and great in honor among their fellows.

Before these men, a harried world would lay its problem. Is there a way to peace? Can you propose a plan whereby this shadow may be lifted from us? Can you tell us how we may prevent the knowledge which we have, and which irresistably we must continue to acquire, from overwhelming us? How, and upon what, can we from so many diverse backgrounds agree? In our world where so much distrust has been sown by violent and brutal regimes is there a formula which will be a safe and prudent one and not a trap to ensnare us? Give us an answer and a hope.

Now I realize that there are some, of course, who will ridicule this idea as utterly visionary. Pragmatists will be sure that a conference faced with such questions is bound to fail. The practical will point out that such a gathering of men who are impractical by virtue of their very callings can contribute no more as a body than the ideas of its separate individuals.

To those objections, there is at least a response. It is an analogy from physical science. One atom of fissionable uranium by itself is of little moment. It may be inert for ages. This will also be true of two or of a considerable number of such atoms. But let enough of them be brought together in one place and time and something new and dynamic occurs to the mass. The physicists call such a quantity of these atoms a critical mass, and when one atom in such a group fissions a chain reaction is the result which transforms some portion of all of the atoms present into enormously powerful energy.

So it may be in a gathering of many noble minds, from many parts of the world, all focused upon a problem of critical—of transcendant—importance, that an idea may be generated which by a chain reaction will transform the thinking of us all. It is for this purpose that such a conference would be convened. It is for this result that we would unite in our prayers. And even if it should fail of its purpose—then, at the very least, such a conference would represent an attempt by rational men to leave no resource untried.

And that concluding thought brings me back to this forge and anvil and to this pioneer memorial to Jesse Hoover which we dedicate here today. The men and women who first came here in covered wagons were not discouraged by the thought of failure or even by the temporary experience of failure. This was because they carried with them into the Western World an unshakable faith, a discriminating moral standard, and a respect for a higher authority than their own sanctions. In their quest for a more prosperous life they would not have identified an increase in knowledge alone as an accurate measure of the growth of the good life. On March 4, 1929, in his inaugural address, Herbert Hoover, the son of the blacksmith of West Branch, made a prophetic statement. "The United States," he said, "fully accepts the profound truth that our own progress, prosperity, and peace are interlocked with the prosperity, progress, and peace of all humanity."

Friends, if in some way, by some formula, this profound truth can become the common property of all humanity it may be the truth which will redeem all men from the disasters which overshadow us.

Amendment of Robinson-Patman Act

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. DIRKSEN. Mr. President, in the course of the long hearings on Senate bill 11, to amend the Robinson-Patman Act, one of the witnesses was Mr. Bernard L. Majewski, president of the Great American Oil Co., 855 West Evergreen Avenue, Chicago, Ill. This is an enterprise which distributes petroleum and petroleum products.

Mr. Majewski appeared to express his views and experiences and what he believed would be the impact of Senate bill 11 upon an independent petroleum refinery jobber and retailer who has been in that line of endeavor for 48 years.

Subsequent to his testimony before the committee, on May 14, 1957, Mr. Majewski addressed an airmail letter to the Senator from Tennessee [Mr. KEFAUVER], chairman of the subcommittee, commenting on some of the testimony in the record, and requested that these comments be made a part of the RECORD on Sentate bill 11.

I am informed that the chairman advised Mr. Majewski that his comments came too late to be included in the committee record; and I therefore ask unanimous consent to have his letter to the chairman and his comments published in the Appendix of the RECORD.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

GREAT AMERICAN OIL CO.,
Chicago, Ill., May 14, 1957.

Hon. ESTES KEFAUVER,
Chairman, Subcommittee on Antitrust and Monopoly, Committee on the Judiciary, United States Senate, Washington, D. C.

DEAR SENATOR KEFAUVER: The testimony of Messrs. John W. Nerlinger and William D. Snow, of the National Congress of Petroleum Retailers before the Subcommittee on Antitrust and Monopoly, on April 5, 1957, the last day of the formal hearing on the above-captioned bill, contains a number of statements and opinions which, as an independent refiner, jobber, and retailer, with more than 48 years of practical experience, I cannot let go unanswered.

Your committee, I am sure, is seeking informed and truthful opinion, borne out by incontestable facts and not by unsupported generalization and innuendo. Hence, I respectfully submit this letter and statement for insertion in the record immediately after the aforementioned testimony on April 5.

I am aware that all witnesses on S. 11 were privileged to submit for insertion in the record additional data or statements through April 12, 1957; however, since I was unable to get a copy of the April 5 transcript until April 14, and it took me 10 days thereafter to substantiate the facts, I am hopeful your committee will grant my request. If this is not permissible, will you please place this letter and my statement in the CONGRESSIONAL RECORD when consideration of the testimony and record pertaining to S. 11 is undertaken by your subcommittee and/or the Committee on the Judiciary:

"STATEMENT OF BERNARD L. MAJEWSKI IN RE VOLUME 13, THE UNITED STATES SENATE, REPORT OF PROCEEDINGS, HEARING HELD BEFORE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY OF THE COMMITTEE ON THE JUDICIARY—S. 11—TO AMEND THE ROBINSON-PATMAN ACT WITH REFERENCE TO EQUALITY OF OPPORTUNITY

"Quoting from the record of Friday, April 5, 1957, at pages 2506, 2507:

" 'Senator KEFAUVER. One final question, and then I will turn it over to counsel.

" 'I have been furnished here by Mr. Watson Snyder, one of the staff members working with Senator O'MAHONEY on the Near East oil hearing—he has secured a table from the United States Bureau of Mines showing the number of petroleum refineries in the United States, starting with January 1, 1949, 336; 1950, 320; 1951, 325; 1952, 327. And then, beginning in 1952, January 1, it has been going down every year—1953, 313; 1954, 308; 1955, 296; 1956, 294; 1957, not available.

" 'Do you know, Mr. Snow, or Mr. Nerlinger, whether that is the fact that they have gone down since the Supreme Court decision in the Standard Oil case, whether that has any bearing?

" 'Mr. SNOW. I wouldn't be able to state particularly factual situations about it, though it is obvious that the position of independent refiners as a result of the Standard Detroit decision—the independent refiner is defenseless against a localized price cut initiated by a major company to destroy his business, and on a conversational basis, which is the only basis of inquiry that we have with individual major refiners, we understand that they want to get out of business.

" 'There is a trend against them running very strongly now that their position is relatively weakened.

" 'Senator KEFAUVER. Discriminations do adversely affect the independent refiner; is that it?

" 'Mr. SNOW. Absolutely so. A tremendous effect. In fact, so much so that, in our opinion, they would be the people most seriously hurt, because they have the largest investment which becomes worthless.'

"In response to Senator KEFAUVER's question as to the bearing of the Detroit case (*Standard Oil Company* v. *F. T. C.*, 340 U. S. 231) on the decrease in the number of petroleum refineries in the United States, from 336 in 1949 to 294 in 1956 (a decrease of 12½ percent, or less than 2 percent per year), Mr. Snow testified that the independent refiner is helpless against a localized price cut by a major company, and that the independent refiner is being adversely affected by discrimination. This testimony, coming from a man not engaged in any aspect of refining, not only presents a false picture of refinery developments during this period, but completely ignores the real reasons for this slight decrease in the number of refineries.

"Total United States refinery capacity has increased from 5,336,000 barrels daily in 1947 to 8,282,000 barrels per day in 1956, an increase of 50.5 percent. Such capacity of refiners other than the 20 largest oil companies has increased from 1,048,000 to 1,564,000 barrels per day, approximately 50 percent during this same period. The percentage of total capacity of the 20 largest refiners has not increased disproportionately in this 10-year period and the number of such refineries has decreased from 132 in 1947 to 121 in 1956.

"Furthermore, the fact that some few refineries are no longer operating is not, in my opinion, in any way due to pricing practices, notwithstanding Mr. Snow's unsupported opinion to the contrary. The decrease in the total number of refineries is due to the obvious fact that a number of refineries has been rendered obsolete by the "octane race," and are no longer able to produce gasoline of sufficient octane number (test for antiknock quality) to meet market requirements. The average octane rating of motor fuel, according to the American Society for Testing Materials, Research Method, for regular grade gasoline has risen from 80.5 in the winter of 1948–49 to 88.8 in 1956, and for premium grade from 86.5 to 96.4 in the same period, as reflected in the 1956 edition of Petroleum Facts and Figures, and in Bureau of Mines Information Circular 7779, and the competitive quality race is trending ever higher; for example, currently the octane rating in much of the Midwest is 91 for regular grade and 98 for premium-grade gasolines. The octane required by the consuming public today has risen to the point where older refineries have not been able to produce such gasoline without incurring prohibitive modernization and operating expense.

"According to Nelson Refinery Construction Cost Index, refinery construction cost has increased from a base of 100 in 1946 to 199.9 in November of 1956.

"According to S. W. Curry, of Universal Oil Products Co., as stated in the April 1, 1957, issue of the Oil and Gas Journal, the cost of raising the octane number of output from a modern 20,000-barrel refinery, from 93 octane to 96 octane, is 9.7 cents per barrel (42 gallons), to increase from 93 to 97 octane is 15.3 cents per barrel, to increase from 93 to 100 octane is 45.5 cents per barrel, and to increase from 93 to 101 octane is 60.2 cents per barrel, nearly 1½ cents per gallon. Not only has the cost of refinery construction doubled in 10 years, but the cost of increasing the octane number of refinery output to meet consumer demand substantially increases per octane with each increase in the octane scale.

"I am convinced that the octane race, the tremendous cost of increasing the octane number of refinery output, and the doubled cost of refinery construction in the past 10 years, are the real causes of the small decrease in the number of operating refineries in the period mentioned. But in spite of these rapidly increasing costs, the so-called independent refiner has been able to increase his total capacity by 50 percent in this period, thus maintaining his historical percentage of refinery capacity. It is quite obvious that the independent refiner has not been tremendously affected by any alleged price discriminations, as asserted by Mr. Snow, but to the contrary has substantially increased his growth capacity during this period.

"At page 2507 of the record Mr. Snow stated 'the independent refiner is defenseless against a localized price cut initiated by a major company to destroy his business, and on a conversational basis, which is the only basis of inquiry that we have with individual major refiners, we understand that they want to get out of business.'

"Senator KEFAUVER, will you please ask the Department of Justice to immediately contact Mr. Snow to get the names of the individual major refiners, as well as the times and places of his or Mr. Nerlinger's conversations with said individual major refiners, from whom their understanding was obtained that 'they (the majors) want to get the independent refiners out of business,' so that prompt action can be taken against such majors under existing statutes. May I inquire why you did not question Messrs. Snow and Nerlinger more fully about these alleged violations of existing antitrust law of which Mr. Snow claims to have personal knowledge?

"Mr. Snow also testified (p. 2485 of the record) that: 'A great many new stations are being built every year, and substantially all of these stations are being built either by major oil companies or pursuant to a major oil company lease.' He cites nothing in support of this reckless contention. The April 1957 issue of National Petroleum News contains an article (photostated copy of which is appended hereto) which illustrates the error of Mr. Snow's statement. This article concerns Site Oil Co. one of the many so-called independent marketers. It points out that Site has 160 stations in 12 States, expects to add 25 more stations in 1957, plans to move 126 million gallons of gasoline this year, and has launched a $2,500,000 expansion drive. Further, that 'Site is presently in an expansion boom; its 160 stations have grown from a core of 60 since 1950.' The article reflects that this company averages 60,000 gallons a month per station, with top stations selling 150,000 gallons per month, which amounts are both far in excess of the average gallonage sold by any of the so-called major oil companies' stations referred to in Mr. Snow's testimony. It is interesting to note that 125 of its 160 stations are salary operated, which certainly offers little opportunity to the independent owner and operator, who, Mr. Snow asserts, is having his independence restricted by the integrated companies. This article further points out that Site does not consider the so-called majors too much competition, but that if an area is overbuilt with 'independents' Site stays out. Site also names its toughest competition, and none of the so-called major oil companies are included in this list. The tremendous expansion and market penetration of the private brand stations in the past 20 years, is well known to everyone familiar with the oil business.

"On page 2489 of the record Senator O'MAHONEY asked Mr. Snow 'The evidence before this committee in the study of the international aspects of oil and the MEEC operations discovered that the 8 major—8 of the major companies which constitute the Middle East Emergency Committee, own and operate 239,000 filling stations in domestic United States, which is a pretty large proportion, is it not, of the total?

"'Mr. SNOW. Yes. It certainly is.'

"I am positive that the great and good friend of the independent oil man, Senator O'MAHONEY, will want to correct the record in this instance. The number of service stations in the United States as stated by the 1954 Bureau of Census census of business was 181,734.

"The only reference that I have found in which Mr. Snow has referred to the number of stations or the number of dealers was in his statement filed in the 1956 Kefauver Committee hearings, in which he referred to the number of dealers as 'nearly 200,000 supposedly independent businessmen.' (Transcript, p. 656.)

"Mr. Nerlinger, however, has referred to the number of dealers more recently. He testified on April 11, 1957 before the Roosevelt Subcommittee in response to a question from Mr. Nellis as to the number of service-station operators, 'My best recollection is that the Commerce Department's Bureau of Census, I think it was for 1954, listed approximately 188,000 service-station operators in the United States.'

"Mr. Snow refers to the substantial cost of station construction, and points out that it is difficult to procure loans on service stations without a lease from a major oil company or a substantial company, with the supplier guaranteeing the repayment of the mortgage. It has been my experience that the supplying companies would be more than willing to have the retail dealers build their own stations at their own expense, rather than have the supplier tie up substantial sums of money in service stations. Few dealers are able to finance such construction, and the fact that the suppliers have assisted them in the financing is the only thing that has enabled the service-station operator to exist as an independent businessman. Far from condemning the so-called major oil companies for assisting these dealers in going into business for themselves, it appears that they should be commended for rendering the assistance required to enable a man to start his own business.

"The contention that the major integrated companies are in a position to make economic warfare on the independents blindly overlooks the realities of the situation. Without these independent businessmen selling their products at retail, the integrated companies would have only a few small outlets for the sale of their products. The assertion that the integrated companies desire to drive the retailer out of business is absurd on its face. I have never heard of a seller that wanted to destroy his own customers.

"Senator KEFAUVER, in response to your question asked at page 2502 of the record, 'Mr. Nerlinger, can either of you gentlemen figure any legitimate reason for the opposition of these so-called jobbers against this legislation, aside from the campaign that has been put on by the major oil companies?", Mr. Snow stated that he had no explanation for the opposition of the jobbers to S. 11, other than the fact that they have been influenced by the major oil companies. The jobbers have spoken for themselves in this matter before your committee, in vigorously opposing this bill, and as a jobber I wish to have it clearly understood that I am unalterably opposed to this bill and that no one, major integrated oil company or otherwise, has influenced me or dictated this decision to me. It is clear to me that the passage of this bill will disenable the jobber to continue to exist in the petroleum business, and this is sufficient reason for all jobbers to express their emphatic opposition to the bill. I do not consider myself a 'sitting duck for the big oil companies' as you, Senator KEFAUVER, characterized the many oil jobbers in this country. You also stated that 'the big oil companies can eliminate them (jobbers) any time they want to.' When that day comes, there will be so many treble damage suits filed that the Federal court dockets will be clogged for years to come. Even Mr. Snow recognizes the substantial investment for a small business, which the jobbers have, and I strongly resent the effort of those sponsoring this bill to destroy my investment and livelihood. If this bill is passed, the jobber won't be a 'sitting duck,' but a dead duck with no business.

"Senator KEFAUVER, you also stated that the jobbers 'are in greater need of the protection of this bill than you people (dealers) are.' I, along with thousands of other jobbers, have managed to get along in this highly competitive business for a number of years without the paternalistic and misguided attempt at assistance evidenced by S. 11. This bill will not afford protection to the jobber, but will go a long way toward destroying all of us.

"This bill should not be supported on the basis of reckless, unsupported opinions of persons unfamiliar with the aspects of the oil business on which they express their opinion, and should not be held forth as a cure for nonexistent ills, which would not be cured by this bill even if they did in fact exist."

Very respectfully yours,

B. L. MAJEWSKI

Baseball and the Antitrust Laws

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. ALLOTT. Mr. President, recent Supreme Court decisions have expressly indicated that legislation is needed with respect to the application of antitrust laws to professional sports. As a part of my study of this matter, I have asked the Library of Congress to prepare an analysis of the legal and practical issues involved. Mr. Spencer M. Beresford, of the American Law Division of the Library, has been of very great assistance in preparing the comprehensive analysis which I here submit so that it may be available to the many other Congressmen and the committees of both the Senate and the House now working on this complicated and difficult subject.

I have not yet completed my consideration of this problem, and consequently am unable to recommend a specific approach for its solution. It seems clear to me that either complete coverage under the antitrust laws or complete exemption from them is unworkable. The solution requires a sound, flexible, and reasonable application of the antimonopoly regulations in such a manner as to allow the continuance of these great American pastimes within the framework of our laws. This requires reconciling our longstanding policy against monopolies and unfair competition with the peculiar economic requirements of organized baseball and other professional team sports.

This study sets forth the basic problem, and suggests some solutions which I believe to be worth further consideration in our search for the best means of protecting the public interest and the rights of the players and the club-owners.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement, Baseball and the Antitrust Laws, which was prepared by Mr. Spencer M. Beresford.

I am informed by the Public Printer that the statement is estimated to make 3¼ pages of the RECORD, at a cost of $250.25.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BASEBALL AND THE ANTITRUST LAWS

This report advances suggestions for preserving professional baseball, and other team sports, while at the same time protecting the players and the public from the usual adverse effects of monopoly.

I. CONCLUSION

There is a large body of literature on this subject, including the series of hearings conducted by the House Antitrust Subcommittee. An attempt has been made to summarize the salient data and opinions contained in this literature, indicating disagreement wherever it exists, and stating reasons on both sides whenever a choice is made between conflicting views.

The conclusion reached in this report is that legislation is needed to amend the Federal antitrust laws so that they will apply to organized professional baseball and other team sports (football, basketball, and hockey), with the following exceptions:

A. Playing rules and the scheduling of games.

B. The organization of leagues and associations, provided that they are reasonably responsive to demand (e. g., in geographic distribution) and that unreasonable barriers are not raised against entry by potential competitors.

C. Reasonable agreements and practices restricting the rights of clubs, leagues, or associations to operate within specified geographic areas.

D. Reasonable agreements and practices restricting the employment of players—provided, however, that farming, blacklisting, and the drafting of a player or the assignment of a player's contract without his consent shall not be excepted.

These exceptions are believed to be justified by the peculiar business conditions of professional team sports. They, nonetheless, are limited by the requirement that they must be reasonable, because they would otherwise be open to abuse. Any other monopolistic practice, such as a restrictive broadcasting agreement, would be an antitrust violation per se. Whether a given practice or agreement was reasonable would be decided ultimately by the courts.

Legislation rather than judicial decision is needed, not only because the courts have already taken the position that baseball is wholly exempt from the Federal antitrust laws and that other professional team sports are not exempt at all, but also because judicial decision would necessarily be retroactive in its practical effects.

II. BACKGROUND

A. Organized baseball

Organized baseball denotes a vast entity consisting of nearly 400 professional baseball clubs divided into 2 major and about 50 minor leagues. This entity is governed by certain agreements and a set of rules administered by a so-called commissioner. The principal agreements are the major league agreement, the national association agreement (minor leagues), and the major-minor league agreement. (The texts of these agreements along with related rules and other matters can be found in the Baseball Blue Books published by the Heilbroner Baseball Bureau.)

The economic importance of organized baseball is impressive. Total receipts are on the order of $100 million a year. This is more than the receipts of all other professional team sports combined. (The major leagues account for more than half the receipts of organized baseball.) Nearly 10,000 players engage in approximately 30,000 games a year before more than 50 million spectators.

Although the restrictive economic practices of organized baseball are numerous and complex, their principal features can be described fairly concisely.

1. Organized baseball has cornered the market for skilled ballplayers by means of the uniform player contract and the player lists (including blacklists). The result has been accurately stigmatized as monopsony in manpower (62 Yale Law Journal 576).

Clubs are forbidden to hire any player unless he signs the uniform player contract. This is a 1-year employment contract with a renewal clause enabling the club to renew the contract unilaterally for another year. The renewal clause is widely known as the reserve clause (because the club reserves the right of renewal). Since the renewed contract will be identical with the old one, it will also contain a reserve clause, and can in turn be renewed, and so ad infinitum. (In practice, it appears, a player normally signs a new contract containing a reserve clause every year.)

By signing the uniform contract, a player agrees to recognize the authority of the commissioner, and abide by the rules of organized baseball.

The uniform contract may be unilaterally terminated or assigned by the club, but not by the player. The player cannot play for any other club unless his contract has been assigned or he has been released. (Major league rules 3 (a) and 3 (d); major-minor league rules 3 (a) and 3 (d); national association agreement, secs. 15.01 and 15.04.)

It is fairly generally agreed that this system of employment eliminates effective competition for the services of players already under contract. Critics of the system have stated that there is complete absence of equality in bargaining position between clubs and players. Certainly a player under such a contract has little freedom to change or to bargain with his employer (club), and is doubtlessly paid substantially less than he would be paid in a free labor market.

On the other hand, it is probably true that the reserve clause enables the poorer clubs to keep in the running. Uniform player contracts were adopted, in 1879, for the avowed purpose of equalizing the playing abilities of the different clubs. If the reserve clause were abolished, it is probable that the playing abilities of the clubs would become more unequal, the richer clubs getting a higher proportion of the better players; and that players' salaries, while generally increasing, would also become more unequal. Some clubs, especially in the minor leagues, would probably be put out of business.

2. Player lists are submitted annually by each club to the commissioner, and includes the names of players who are ineligible for employment in organized baseball (e. g., for "jumping" their reserve clauses). Other clubs are forbidden by the rules even to participate in any game or exhibition in which any blacklisted player also participates. (Major league rule 4 (a); major-minor league rule 4 (a); national association agreement, sec. 16.01.)

3. The "farm system" supplements the uniform player contract and the backlists through a vertical integration of the labor supply, enabling the major-league clubs to control most (allegedly over 90 percent) of the Nation's ballplayers. A "farm" is simply a club in a lower league which is owned or otherwise controlled by a major-league club. The purpose of the farm system is to give the major-league club more scope in acquiring and disposing of skilled players.

Critics of the farm system have said that the reserve clause is most pernicious on the "farms," where players can be kept indefinitely.

Without the reserve clause (or some similar device), the farm system would collapse, because it would have lost its reason for existing.

4. These restraints on the labor market are somewhat mitigated by the so-called "waiver" and "draft" rules. The waiver rule provides that a player may not be assigned to a lower league till the other clubs in his league have had a chance to "buy" him. (Major league rule 10 (b); national association agreement, sec. 23.02 (a).)

The draft rule enables any club to compel clubs in lower leagues to sell their player contracts for a fixed price. The effect of this rule is very slight, however, because of the limitation that only one player per year may be drafted from a class A or higher club. (Major league rule 5; major-minor league rule 5; national association agreement, sec. 27.)

5. Apart from labor restraints, the restrictive economic practices of organized baseball consist chiefly in (a) territorial agreements and the division of markets, (b) restrictions on entry into the baseball business by potential competitors, and (c) re-

strictive agreements with respect to radio and television broadcasts and other promotional activities.

These practices are considered as serious in their economic effects as the labor restraints, but simpler and easier to control in practice. Hence, though their importance is emphasized, they will be discussed only briefly.

Since restrictive broadcasting agreements have been suspended since 1951, we need not consider them here except to note that they are monopolistic by universal admission.

(a) Territorial agreements and the division of markets are also clear-cut monopolistic practices. The geographic distribution of major-league clubs, for example, does not conform even roughly (if it ever did) to the distribution of population or income. Los Angeles, the third city in the country, has no major-league club, and Detroit, the fifth city, has only one. Yet Boston and St. Louis until very recently had two apiece. The present maldistribution of franchises is not only uneconomic but is harmful to baseball as a game. It is the main cause of existing inequalities in the playing abilities of the different clubs, and tends to perpetuate and increase these inequalities by favoring the clubs in the wealthier and more populous cities.

(b) It is not practicable to establish new major-league clubs. The number of clubs in each league is fixed at eight—having been chosen for convenience after considerable trial and error. An entire new league would be prohibitively expensive to establish, and would be greatly hampered by the tight control which the present leagues exercise over the supply of ballplayers. Nor can existing franchises be moved, except under extraordinary circumstances; for major-league rule 1 (c) provides that major-league circuits shall not be changed without unanimous consent of the clubs in the same league and approval by a majority of clubs in the other league.

Potential competitors not only find it virtually impossible to join organized baseball; they cannot even play against clubs that are already in it. All clubs in organized baseball are forbidden to participate in any contest or exhibition in which any outside participant appears. (This is rule 1. Major-league rule 1; major-minor league rule 1; national association agreement, secs. 10.06–.08 and 30.03 (a).)

6. During the past 10 years, various concessions have been made by organized baseball under duress—notably under the threat of competition from the Mexican League, and under pressure from the Justice Department. Concession to players include a salary minimum (major leagues only), a limitation on salary cuts, pensions, and a player-representation plan.

On October 8, 1951, the major leagues rescinded their agreements restricting competition in the sale of radio and television rights. The old rule (major league rule 1 (d) (2)) reads as follows:

"No major-league club shall consent to or authorize a broadcast or telecast (including rebroadcast or network broadcast) of any of its games to be made from a station outside its home territory and within the home territory of any other baseball club, major or minor, without the consent of such other baseball club."

Home territory extended 50 miles from the center of the ball park.

In recent years some flexibility has been shown in the geographic distribution of franchises. Clubs have moved from Philadelphia to Kansas City, from St. Louis to Baltimore, and from Boston to Milwaukee. Nevertheless, over the period of roughly 50 years since the major leagues were formed, their geographic pattern has proved to be very rigid.

The concessions which organized baseball has thus made, though substantial, have been granted as matters of grace, were self-imposed, and are terminable at pleasure.

B. Judicial decisions

1. Baseball

(a) The parent case is *Federal Baseball Club of Baltimore* v. *National League of Professional Baseball Clubs* (259 U. S. 200 (1922)), in which Justice Holmes held for a unanimous Court that organized baseball is not subject to the Federal antitrust laws because (1) a baseball game is a local affair, and hence not interstate, (2) "personal effort, not related to production, is not a subject of commerce" (p. 209).

These are evidently alternative reasons and would be separately sufficient.

Both reasons given by the Court have since been completely undermined.

A baseball game may be local to those who look only at the ball park. But the promotional activities of organized baseball (notably broadcasting and motion pictures) have grown to such proportions as to make it unmistakably interstate. There are many other interstate features—e. g., the nationwide market for baseball players.

Furthermore, the "interstate" concept has been greatly broadened by the courts since the Federal Baseball case was decided; e. g., *Mandeville Island Farms, Inc.* v. *American Crystal Sugar Co.* (334 U. S. 219 (1948)) (agreement by local sugar refiners to pay uniform prices to local beet growers held violation of Sherman Act).

The Court's second reason, that services to ultimate consumers are not "commerce," has also been overturned by later decisions; e. g., *U. S.* v. *South-Eastern Underwriters Ass'n* (322 U. S. 533 (1944)) (holding that insurance is "commerce" within the meaning of the Federal antitrust laws).

Thus, the foundations on which the Federal Baseball decision was explicitly based have long since been destroyed. Although other legal objections could be raised today against the subjection of organized baseball to the Sherman Act in its present form, they do not seem substantial. Specifically, it could be argued that the restrictive practices of organized baseball do not raise prices to ultimate consumers, and are not monopolistic at all but merely monopsonistic restraints on labor (baseball players). But, in addition to labor monopsony, a number of truly monopolistic practices are involved—e. g., the division of markets, restrictive broadcasting agreements. Artificial barriers are raised to entry into the business by a new club or league. The supply of baseball games is artificially limited, and the unit cost to the ultimate consumer is increased. Besides, the common-law concept of "restraint of trade" included restraints on employment. The United States courts have adopted this view. (*U. S.* v. *American Medical Ass'n.*, (110 F. (2d) 703 (D. C., D. C., 1940), cert. den. 310 U. S. 644 (1940)).)

Restrictive labor practices closely similar to these prevalent in organized baseball were involved in *Anderson* v. *Shipowners Ass'n. of the Pacific Coast* (272 U. S. 359 (1926)) (employers who refused in concert to deal with prospective employee held liable under Sherman Act). In that case, a combination of Pacific coast shipowners allegedly fixed the wages of seamen, assigned them to particular ships, and blacklisted those who disobeyed its rules. The Court's decision that such practices violate the Sherman Act would seem to apply with equal force to the labor monopsony in organized baseball.

It is nonetheless arguable that the Federal Baseball decision was at least partly justified for practical reasons because of the peculiar economic conditions of the baseball business.

(b) The Federal Baseball decision was not directly challenged until 1949. Then organized baseball was jolted by the related cases of Gardella and Martin, who dared to play for higher bidders. Gardella was blacklisted for 5 years, for playing with the Mexican League. The district court dismissed his complaint, following the *Federal Baseball* case (79 F. S. 260 (D. C., N. Y., 1948)). But the Second Circuit Court of Appeals reversed and remanded (*Gardella* v. *Chandler* (172 F. (2d) 402 C. C. A. 2, 1949)); see also *Martin* v. *National League Baseball Club* (174 F. (2d) 917 (C. C. A. 2, 1949)).

In the Gardella case, Judge Learned Hand took the view that the radio and television aspects of organized baseball may "mark the business as a whole" sufficiently to justify antitrust regulation (p. 408). Judge Frank agreed, pointing out that the precedents on which the Federal Baseball case relied had since been overruled (pp. 408, 409). Judge Frank called the reserve clause monopolistic; Judge Hand refrained from passing on it, but said that he did not mean to disagree on this point.

The Gardella and Martin cases were both settled out of court.

(c) The next major development involved three baseball-player cases which were all dismissed by the lower courts, on the authority of the Federal Baseball case: *Toolson* v. *N. Y. Yankees* (200 F. (2d) 198 (C. C. A. 9, 1952)), *Corbett* v. *Chandler* (202 F. (2d) 428 (C. C. A. 6, 1953)), *Kowalski* v. *Chandler* (202 F. (2d) 413 (C. C. A. 6, 1953)).

The Supreme Court disposed of all three together in *Toolson* v. *N. Y. Yankees* (346 U. S. 356 (1953), rehearing denied, 346 U. S. 917 (1953)), in the following words:

"Without reexamination of the underlying issues, the judgments below are affirmed on the authority of Federal baseball * * * so far as the decision determines that Congress had no intention of including the business of baseball within the scope of the Federal antitrust laws" (p. 357).

Justices Burton and Reed dissented, urging that the popularity of organized baseball "increases, rather than diminishes, the importance of its compliance with standards of reasonableness comparable with those now required by law of interstate trade or commerce" (p. 385).

Considerably greater light was thrown on this decision by the opinion handed down 2 years later in *Radovich* v. *National Football League* (25 L. W. 4152 (U. S. 1957)). The Court distinguished and explained the Toolson case as follows:

"In Toolson we continued to hold the umbrella over baseball that was placed there some 31 years earlier by Federal baseball. The Court did this because it was concluded that more harm would be done in overruling Federal baseball than in upholding a ruling which at best was of dubious validity. Vast efforts had gone into the development and organization of baseball since that decision and enormous capital had been invested in reliance on its permanence. All this, combined with the flood of litigation that would follow its repudiation, the harassment that would ensue, and the retroactive effect of such a decision, led the Court to the practical result that it should sustain the unequivocal line of authority stretching over many years" (p. 4153).

But "were we considering the question of baseball for the first time upon a clean slate we would have no doubts" (i. e., that organized baseball is within the scope of the Federal antitrust laws) (p. 4154).

At last the exmption of organized baseball from the Federal antitrust laws was explicitly justified on practical grounds alone, and admitted to be an anomaly in the law.

2. Other Professional Team Sports

Baseball is widely regarded as the most monopolistic of professional team sports. Hockey is probably second, being organized much like baseball and having a farm system and player contracts with reserve clauses.

football and basketball are relatively competitive.

Although at the present time baseball alone is exempt from the Federal antitrust laws, no reason is known or appears to have been advanced for any difference in treatment between baseball and other professional team sports.

The courts might well have held all professional sports exempt from the Federal antitrust laws, either on the reasoning of the Federal baseball case that they are local affairs not involving the production of goods, or conceivably on the ground of congressional intent advanced in the Toolson case. In fact, they treated baseball as unique. In cases involving other professinal sports, they were less concerned to explain why those sports were subject to the Federal antitrust laws than to explain why baseball was not.

In *U. S.* v. *International Boxing Commission* (348 U. S. 236 (1955)), the Supreme Court reversed a decision based upon the Federal Baseball and Toolson cases, and held that those cases apply to baseball only. Professional boxing was held to be within the scope of the Federal antitrust laws because of its promotional activities (notably the fact that a substantial part of its revenue was derived from the interstate sale of radio, television, and motion-picture rights).

It seems to follow from this decision that the promotional restraints of all professional sports, including baseball, should be subject to the Federal antitrust laws. It does not necessarily follow, however, that the player-contract restrictions of professional team sports should also be subject to those laws; different treatment for team sports could be justified on the ground that they require some limitation of playing competition among clubs and leagues.

But, in *Radovich* v. *National Football League*, supra, the Supreme Court held that professional football was within the scope of the Federal antitrust laws. (Radovich, who had been under contract to a National League football club, was blacklisted for playing with a club outside the league.)

III. DISCUSSION

The problem is to reconcile the general policy against monopolies and unfair competition with the peculiar economic requirements of organized baseball and other professional team sports.

A. It is generally knowledged that the present organization, agreements, and practices of organized baseball lead to the usual undesirable consequences of monopoly, both for the players and for the consuming public. In particular, they tend to produce the following results:

1. Reduce and equalize competition among clubs for players already under contract.

2. Deprive each player already under contract of freedom to choose his employer or his place of work.

3. Reduce and equalize players' salaries. (Although the median major-league player is paid a good salary ($10,000 to $15,000 a year), his minor-league counterparts are not (roughly $2,000 a year in class D leagues)).

4. Freeze the present geographic maldistribution of club franchises.

5. Prevent the entry into the baseball business of new leagues, clubs, etc.

6. Reduce the supply of baseball games, and raise the prices paid by spectators.

B. On the other hand, there is fairly general agreeemnt that some restraints on competition are justified by the peculiar economic conditions of professional team sports. The blanket application of the Federal antitrust laws to organized baseball would probably wreck it. Cooperation among competitors is required to produce a marketable product.

Note that this reasoning does not apply to individual sports such as golf or boxing. Nor does it apply to any restraints on competition which do not promote strictly necessary cooperation or equality of playing ability among different clubs.

C. The problem is complicated by contradictions between baseball as a business and baseball as a game. Restrictive territorial agreements, for example, are not strictly necessary forms of cooperation, nor do they promote equality of playing ability among different clubs (in fact, quite the contrary). Yet it is arguable that they should be permitted, within reasonable limits, because of public loyalty to hometown clubs and players and public belief in the loyalty of players to their clubs.

D. Similar considerations as to public loyalties and beliefs support restrictions on the employment of players. Such restrictions are independently justifiable, since they promote equality of playing ability among different clubs. The point here is that they also bind a given player to a given club, and so help to preserve public confidence in baseball as a game. It is concluded that they should be allowed within reasonable limits. In determining what limits are reasonable, the public (spectator) interest should be balanced against the liberties and economic interests of the players. Everyone would probably agree that players should be paid (roughly) in proportion to their services, should have reasonable opportunities for advancement, and should be treated fairly (i. e., without discrimination). It follows that the waiver and draft rules shall be permitted if universal, at least if no draft or waiver prices are charged, but that "farming" and "blacklisting" should be prohibited, and that no player should be drafted, or his contract assigned, without his consent.

E. If restrictive employment practices in organized baseball are thus relaxed, one result will admittedly be a tendency for the richer clubs to get a higher proportion of the better ballpayers. This undesirable tendency will be partly counteracted by limitations on territorial agreements and on the division of markets. In addition, it will probably be necessary to make compensatory changes in the employment conditions of ballplayers. Universal waiver and draft rules and the abolition of waiver and draft prices have already been suggested. Bonuses for new players should probably be prohibited too; and both minimum and maximum salaries should be set by agreement in each league. Other modifications will no doubt be worked out by trial and error. For example, the unionization of ballplayers would facilitate the setting of salaries, and would probably improve the players' employment conditions in other ways. (However, it offers no general solution for the problems of baseball, since it would probably have no effect, for example, on the maldistribution of club franchises. Furthermore, unionization is considered a rather unlikely development, in view of players' attitudes toward it in the past.) Player contracts of more than a year might be adopted An impartial board of arbitration might be established, to set salaries and perhaps even to assign franchises. Sealed competitive bids for players' services might be submitted annually, for acceptance or rejection by the players themselves. In short, while it is impossible to foresee or prescribe all the specific modifications of employment practices in organized baseball which could and should be adopted under freer and more competitive conditions, it is evident that a number of suitable devices are available to accomplish all the desired results.

IV. OTHER POSSIBLE SOLUTIONS

In arriving at the conclusion set forth at the beginning of this report, it was necessary to consider other possible solutions. These will now be briefly discussed, in the interests of clarity and convenience:

A. Subjecting professional baseball (and other team sports) to the antitrust laws without any exemptions was rejected at an early stage, since there is widespread agreement, among apparently disinterested observers as well as industry spokeamen, that the result would be to spoil the game and wreck the business. It was, therefore, concluded that some restraints on competition were justified by the peculiar economic conditions of professional team sports. This conclusion is borne out both by theoretical considerations and by the historical experiences of American baseball which led to the adoption of uniform player contracts and other restrictive practices.

B. Exempting professional baseball (and other team sports) from the Federal antitrust laws altogether was also quickly rejected, since a blanket exemption would condone a number of restrictive practices which are almost universally condemned as abuses. (The most flagrant are the division of markets, the exclusion of potential competitors, restrictive broadcasting agreements, and player blacklisting.) This "solution" also seemed contrary to the long-standing policy of establishing either competition or governmental control as the ruling principle of each area in the American economic system.

C. The intermediate solution of qualified or limited exemption from the Federal antitrust laws was therefore adopted. This left open the questions of scope—i. e., what specific practices should be exempted—and of means:

1. As to scope, it was decided that the Federal antitrust laws should apply generally to professional team sports, except for such reasonable agreements and practices as were necessary either to promote equality of playing ability among different clubs or to maintain public loyalty and confidence. The specific results of applying this general principle are spelled out in the "Discussion" section of this report.

2. As to means, three main alternatives have been proposed in previous discussions of this subject:

(a) A comprehensive and detailed statutory code of conduct. This was considered impractical. Such a code would require superhuman foresight and would necessarily be extremely long and detailed. Furthermore, in the absence of superhuman foresight, it would need to be revised continually.

(b) A Federal regulatory commission. Although a formally acceptable solution, this was soon rejected in view of probable administrative difficulties and the almost universal expectation of strong public disapproval.

(c) The third alternative of a statute couched in relatively general terms, to be applied by the courts, was therefore adopted. Within this framework, specific types of restraint were classified as wholly exempt, exempt unless unreasonable, or violations per se—in accordance with their tendency to lessen competition, on the one hand, against their contribution to necessary cooperation, equality of playing ability, and public loyalty and confidence.

V. PENDING LEGISLATION

Under H. R. 6876 (Mr. KEATING) and H. R. 6877 (Mr. BYRNES), the Federal antitrust laws would be amended so as to apply to organized professional baseball, football, basketball, and hockey, except with respect to the playing rules of the game, the organization of leagues and associations, contracts between leagues and between clubs fixing their rights to operate within specified geographical areas, and the employment of players. (Note that these matters would be wholly exempt.) Section 2 of each bill expressly preserves the rights of players to bargain collectively.

H. R. 5307 (Mr. HILLINGS) and H. R. 5319 (Mr. CELLER) would amend the Sherman Act alone, by adding a new section 9 as follows:

"The words 'trade or commerce' as used in any provision of the antitrust laws shall in-

clude the interstate business of organized professional baseball."

H. R. 5393 (Mr. HARRIS) would amend the Federal antitrust laws so that they would not apply to organized professional baseball, football, basketball, or hockey.

Petition of Taxpayers' Educational Association, Inc.

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. BYRD. Mr. President, I have been very much impressed by a petition which has been presented to me by the Taxpayers' Educational Association, Inc., a nonprofit organization with headquarters at Austin, Tex., of which Mr. Gene O. Parker is president, and Mr. E. Clay Lafield is executive director.

This petition has been circulated in 43 States and contains many thousands of names. It is the largest I have ever received, and it is still being circulated.

I commend to the Senate the objectives of this petition and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

PETITION TO MEMBERS OF CONGRESS OF THE UNITED STATES

We the undersigned taxpayers hereby exercise our rights as citizens to petition Members of Congress, pertaining to Federal taxation.

Whereas we believe present Federal tax rates are so excessive and confiscatory and are detrimental to the welfare of our Nation, as to eventually destroy our national economy.

Therefore we believe Congress can reduce Federal taxes by approximately $10 billion, if they will put into effect by legislation the following recommendations:

1. Cut waste and extravagance in Government spending as recommended by the Hoover Commission, especially budgeting and accounting. This alone is estimated to save $5 billion annually.

2. Equalize the tax burden by taxing, at the same rate corporations are forced to pay, all organizations such as cooperatives, mutual savings banks, building and loan associations, credit unions and Government-owned business corporations, all now competing with taxpaying corporations, yet paying little or no Federal taxes. By plugging these loopholes in taxation, it is estimated to increase revnue by approximately $5 billion annually.

3. Greatly reduce now and soon eliminate foreign aid.

4. We the taxpayers respectfully request Members of the United States Senate and the House of Representatives to consider and pass such legislation as may be necessary to accomplish the above recommendations.

5. Use these savings and increased revenue to reduce Federal taxes.

Col. James Claude Kimbrough, an Outstanding Public Servant

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. KEFAUVER. Mr. President, I think it is well to give due recognition to the life and work of our outstanding public servants. Col. James Claude Kimbrough, who died in August of last year, was such a public servant. Colonel Kimbrough gave his life from 1921 until his death to the Medical Corps of the United States Army. Because he specilized in urology and became one of the top urologists in the United States, he was not under our system of promotions, and was not promoted to the rank which he deserved. This situation is the basis of one of the criticisms many of us have made of the system of promotion. The facts in this case demonstrate the devotion of this man and of other specialists of their fields to their service.

It was my great pleasure to have known Colonel Kimbrough practically all of my life, as we came from the same small town in Tennessee. I was very proud he was one of my kinsmen. Colonel Kimbrough performed such remarkable service in the Medical Corps that when his time for retirement was reached, the Congress of the United States passed a special bill making him a lifetime consultant at Walter Reed Army Medical Center, so he could continue his usefulness to his country and to his profession. That was one of the two bills for such a purpose ever passed. In the bill the Congress gave approval to this language:

That in recognition of the outstanding service and contribution made to the science of medicine and surgery by Col. J. Claude Kimbrough, Medical Corps, United States Army, retired, and to provide that his mature professional judgment and long experience may continue to remain available to the public service, the President is hereby authorized to designate the said Col. J. Claude Kimbrough, upon his retirement from the active list, as military consultant in urology at Walter Reed Army Medical Center, Washington, D. C.

Mr. Miley B. Wesson has prepared a biography of Colonel Kimbrough, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the biographical sketch was ordered to be printed in the RECORD, as follows:

JAMES CLAUDE KIMBROUGH, 1887–1956

James Kimbrough was the father of modern urology in the United States Army. Prior to his advent the genito-urinary service was practically limited to the treatment of venereal diseases.

He was born in Madisonville, Tenn., on November 5, 1887, received his bachelor of arts degree from Hiawassee (Tennessee) College in 1909. For 1 year he taught school in Tunnel Hill, Ga. Then he was principal of the Hot Springs (Va.) High School until he entered Vanderbilt University, where he graduated in medicine in 1916. Following a year's internship at St. Thomas Hospital, Nashville, World War I being in progress, he was assigned to active duty as a first lieutenant in the Medical Corps, United States Army, July 20, 1917, where he served in Germany and France for 41 months, and was advanced through grades to colonel in 1943.

On April 19, 1919, Gen. John J. Pershing cited him for exceptionally meritorious and conspicuous services at base section No. 1, France, American Expeditionary Forces, and as an expression of appreciation of those services the Secretary of War directed a Purple Heart decoration.

Since 1921 he served almost exclusively as chief urologist in various Army hospitals:

1921–25: Fort Sam Houston.
1925–26: Army Medical School (honor graduate) and Medical Field Service School.
1926–27: Letterman General Hospital.
1927–28: Mayo Clinic (4 months) student.
1928–30: Letterman General Hospital.
1930–34: Walter Reed General Hospital.
1934–37: Fort Sam Houston.
1937–38: Sternberg General Hospital, Manila.
1938–42: Walter Reed General Hospital.
1942–45: Chief, Professional Services Division, Office of Chief Surgeon, European theater of operations, World War II; he was awarded Bronze Star Medal.
1945–46: Percy Jones Convalescent Hospital, commanding officer.
1946–48: Walter Reed General Hospital.
1948–56: Walter Reed General Hospital.

On April 30, 1946, he was given a Legion of Merit; and the citation read: "Col. James C. Kimbrough performed exceptionally meritorious service from April to December 1945 as commanding officer, Percy Jones Convalescent Hospital, Fort Custer, Mich. He reorganized and enlarged the hospital during a critical period, and solved the difficult problems of staff and patient morale (gonorrhea and AWOL) peculiar to convalescent hospitals. He instituted a program of intensive patient education and participation in treatment and reconditioning by which the rate of recovery to duty status as opposed to disability discharge was greatly increased. Colonel Kimbrough raised the general standards to such a degree that this hospital became the outstanding one of its type."

On August 31, 1948, having reached the statutory age, he was retired but immediately was recalled to active duty.

On May 27, 1953, he was designated by Congress as permanent consultant in urology

at the United States Army Medical Center, and the bill was promptly signed by President Eisenhower. Only once before has such special legislation been enacted, and that was in 1935 for Col. William I. Keller, who was not only a good surgeon but functioned as a diplomat during a difficult period. Hence, his case did not exactly parallel that of Colonel Kimbrough.

Prior to World War I the Reserve doctors were not considered seriously by the regular medical corps. Those who joined in 1914 were all given the same rating, first lieutenant (even William J. Mayo).

In the AEF the surgeons in the Reserve Corps were formed into mobile operating teams. It was generally known that the Germans would attempt to break through to Paris and our first initiation into war would be at Chateau Thierry. However, the Chief of the Army Medical Corps ignored all importunities and preemptorily refused to send any of the teams to that area until hostilities started. Then it was too late, there being no available transportation, soldiers, guns, and ammunition having priority. As a result the wounded lay out in the fields without any medical care or food for several days.

The Reserve Corps doctors were furious, and there was much loose talk about courtmartials. Wise counsel prevailed. Dr. J. M. T. Finney and William S. Thayer (both professors at Johns Hopkins) were placed in complete charge of surgery and medicine, shortly thereafter being made brigadier generals; Colonel Keller was made liaison officer from the Regular Army. He was a good surgeon, but here he proved that he was also a real diplomat at a psychological moment, and his services as such entitled him to the highest Army honors—hence his special congressional bill.

In 1952 the American Urological Association for the first and only time awarded a plaque which read, "Presented to Dr. James C. Kimbrough in recognition of his contributions to the advancement of science and practice of urology and for his efforts in promoting pleasant working relations between civilians and military medicine."

In the Surgeon General's Office Dr. Kimbrough was the first doctor rated as an A urologist. He joined the American Urological Association in 1931; was elected an honorary member of the western section of the American Urological Association in 1951; was president of the mid-Atlantic section of the American Urological Association in 1955–56 (the first time any urologic section had ever conferred such an honor on an Army doctor). He was made a diplomat of the American Board of Urology in 1947; president of the Washington Urological Association in 1949–50; American Medical Association, 1917; Fellow of the American College of Surgeons, 1924; Royal Society of Medicine, London (Hon.), 1944; Academie de Chirurgie, Paris (Hon.), 1945; Alpha Omega Alpha; Mason (32d degree), and Shriner.

The Army postgraduate refresher course in urology has been named in his honor, "because he singlehandedly established urology as a specialty in the Army and raised it to its present high plane."

Dr. Kimbrough exemplifies the truth of the adage that in order to be a good doctor one must study, and the easiest way to bring that about is to write papers. He published 60 papers in 11 different medical journals; hence, the subject matter was varied.

He was a dynamic speaker and for that reason was much in demand and was a regular attendant at many national and local conventions. Believing firmly that it was good public relations for the Army doctors to attend the scientific meetings in uniform, he was irritated when his Army confreres appeared in civilian clothes. Jim usually had a front seat and took copious notes of all papers he thought worthwhile. Then when he went home his house staff was called together and given a briefing of all that had transpired.

He was an avid reader of all types of good literature, had a phenomenal memory, and could quote verbatim long poems. Following a convention in San Francisco, Jim was a guest at a dinner party at Trader Vic's. The host bought a cookbook for one of the ladies. Jim asked to see it first, opened the book, and said, "Here is an old favorite," and started to read Casey Jones. The lady happened to also have a good memory and finally she called his attention to an omission; Jim turned back some pages and admitted that he had overlooked two lines and continued to read at intervals over a period of an hour or more. When she finally got her book she examined it carefully and could find only recipes. When last I saw her in New York, she was still mystified as to how a man could have such a memory.

Dr. Kimbrough proved himself a true diplomat while he was Chief of the Professional Service Division, E. T. O. When Sir Henry Tidy, president of the Royal Society of Medicine, conferred an honorary fellowship on Colonel Kimbrough he spoke of "one who had a suitable and kindly disposition proven by the fact he directed a diversified and motley group of independent scholars who, peculiarly, from the British point of view, spoke of him as 'Uncle Jim.' "

Jim had an uncanny flair for rapidly judging the merits of any proposition. He always referred to it as "Tennessee hillbilly" commonsense. However, his judgments and prognostication were usually confirmed by subsequent happenings.

"Big Jim" was a welcome addition to any gathering, be it social or scientific. At the social hours Jim always enjoyed himself and often said that if he went home with his dress shirt "messed up" his wife would know that he had had a good time. No matter how late he retired he would be up before 6 a. m. alert and clear eyed. When he was on duty he visited all of his sick patients before going to the surgery, and when possible he liked to start operating before 8 a. m.

Dr. Kimbrough was so disciplined that he believed in carrying out orders as quickly as possible. When he was directed to move the Professional Service Division of the E. T. O. to Paris he arrived before the German Army was evacuated and 24 hours before the advance party of the allied troops. So, he insisted that he captured Paris.

He died August 19, 1956, at the age of 68 of cancer of the lungs with metastases. He is survived by a wife and daughter.

Encouragement of the Nation's Arts

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. MURRAY. Mr. President, earlier this month 400 men and women prominent in the arts and public life signed an appeal to Congress asking that bills establishing a Federal Advisory Council on the Arts be enacted during the present session of Congress. I ask unanimous consent that a copy of this appeal to Congress and the names of the eminent citizens who have signed it be printed in the Appendix of the RECORD.

I also ask unanimous consent that a statement by our former colleague, the Honorable Herbert H. Lehman, of New York, reaffirming his continued intense interest in legislation to establish a Federal Advisory Council on the Arts, be printed in the Appendix of the RECORD.

There being no objection, the petition and statement were ordered to be printed in the RECORD, as follows:

ENCOURAGEMENT OF THE NATION'S ARTS—
AN APPEAL TO CONGRESS

President Eisenhower in 1955 declared that "the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities." He recommended "the establishment of a Federal advisory commission on the arts in the Department of Health, Education, and Welfare." Last year a bipartisan bill to carry out this recommendation passed the Senate, but the House failed to take action.

The President's 1957 budget message again requested action by Congress. Senators and Congressmen of both parties have introduced bills for this purpose:

S. 1716 by Senator H. ALEXANDER SMITH, Republican, New Jersey, cosponsored by Senators JAMES E. MURRAY, Democrat, Montana, IRVING M. IVES, Republican, New York, THOMAS C. HENNINGS, JR., Democrat, Missouri, JOHN SHERMAN COOPER, Republican, Kentucky, and JACOB K. JAVITS, Republican, New York; S. 930 by Senator HUBERT H. HUMPHREY, Democrat, Minnesota, cosponsored by Senator PAUL H. DOUGLAS, Democrat, Illinois, and JACOB K. JAVITS, Republican, New York; H. R. 6374 (identical to S. 1716) by Congressman STUYVESANT WAINWRIGHT, Republican, New York; H. R. 6642 (identical to S. 1716) by Congressman EDITH GREEN, Democrat, Oregon; H. R. 3515 by Congressman FRANK THOMPSON, JR., Democrat, New Jersey; and H. R. 1089 by Congressman EMANUEL CELLER, Democrat, New York.

The primary purpose of a Federal Advisory Council on the Arts is to propose methods to encourage private initiative and its cooperation with local, State, and Federal departments or agencies to foster artistic creation and appreciation and the use of the arts both nationally and internationally in the best interests of our country. The Council would upon request advise Federal departments and agencies which administer art programs, exclusive of those areas of responsibility of the Commission of Fine Arts.

These bills no not request subsidies for the arts and require only modest appropriations for administrative expenses.

Effective international use of the arts is a permanent policy of our country, but the United States lags behind 38 nations in considering the development and enjoyment of cultural resources a matter of concern to the Government. As workdays shorten and life expectancy lengthens the arts will play an ever more important role in the lives of our citizens.

We urge that this legislation be favorably considered and enacted by this session of Congress.

The appeal to Congress was signed by the following artists and distinguished citizens interested in the arts:

Music: Maurice Abravamel, Salt Lake City, Utah; Rose Bampton, New York, N. Y.; Samuel Barber, Mount Kisco, N. Y.; S. L. M. Barlow, Floyd G. Blair, New York, N. Y.; Theodore Bloomfield, Portland, Oreg.; Percy W. Brown, Cleveland, Ohio; John Brownlee, New York, N. Y.; Dean Robert Choate, Boston, Mass.; Norman Dello Joio, Leonard De Paur, New York, N. Y.; Willard Fejfar, Vermillion, S. Dak.; Arthur Fiedler, Boston, Mass.; Rudolph Ganz, Chicago, Ill.; Ira Gershwin, Beverly Hills, Calif.; Boris Goldovsky, Brookline, Mass.; Vladimir Goischmann, St. Louis, Mo.; Howard Hanson, Rochester, N. Y.; Guy Fraser Harrison, Oklahoma City, Okla.; Margaret Hillis, New York, N. Y.; Helen M. Hosmer, Potsdam, N. Y.; Edwin Hughes, New York, N. Y.; Thor John-

son, Cincinnati, Ohio; Henry Kaiser, Washington, D. C.; Milton Katims, Seattle, Wash.; Mrs. Serge Koussevitzky, Lenox, Mass.; Josef Krips, Buffalo, N. Y.; Vanett Lawler, Washington, D. C.; George London, New York, N. Y.; Robert Millonzi, Buffalo, N. Y.; Howard Mitchell, Washington, D. C.; Dimitri Mitropoulos, Douglas Moore, New York, N. Y.; Charles Munch, Boston, Mass.; Patrice Munsel, New York, N. Y.; Eric Oldberg, Chicago, Ill.; Lily Pons, Muriel Rahn, New York, N. Y.; Fritz Reiner, Chicago, Ill.; Regina Resnik, New York, N. Y.; Hans Schweiger, Kansas City, Mo.; Robert L. Shaw, Cleveland, Ohio; Boris Sokoloff, Minneapolis, Minn.; Henry Sopkin, Atlanta, Ga.; Eleanor Steber, Risé Stevens, New York, N. W.; Reginald Stewart, Baltimore, Md.; Polyna Stoska, William Strickland, Gladys Swarthout, New York, N. Y.; George Szell, Cleveland, Ohio; Blanche Thebom, Luben Vichey, New York, N. Y.; J. F. Williamson, Princeton, N. J.

Drama: Donald Cook, Clarence Derwent, John Emery, Alfred Harding, New York, N. Y.; Helen Hayes, Nyack, N. Y.; Celeste Holm, New York, N. Y.; Glenn Hughes, Seattle, Wash.; Judson Laire, Pleansantville, N. Y.; Lawrence Langner, Howard Lindsay, Joshua Logan, Clare Boothe Luce, New York, N. Y.; Kenneth Macgowan, Los Angeles, Calif.; Raymond Massey, Georgetown, Conn.; Gilbert Miller, Paul Muni, Frederick O'Neal, Edward G. Robinson, Robert C. Schnitzer, Lewis M. Simon, New York, N. Y.; Robert L. Snook, Sioux Falls, S. Dak.; Lucia Victor, Blanche Yurka, New York, N. Y.

Dance: Ruthanna Boris, John Butler, Lucia Chase, Janet Collins, Andre Eglevsky, Frank Hobi, Tilda Morse, Mary Ellen Moylan, Ruth St. Denis, Bentley Stone, Oleg Tupine, New York, N. Y.

Literature: Conrad Aiken, Brewster, Mass.; Van Wyck Brooks, Kenneth Burke, New York, N. Y.; Henry Seidel Canby, Deep River, Conn.; Stuart Chase, Georgetown, Conn.; Marc Connelly, Malcolm Cowley, Rachel Crothers, New York, N. Y.; Dr. William S. Dix, Princeton, N. J.; James T. Farrell, Alfred Kreymborg, New York, N. Y.; Roger H. McDonough, Trenton, N. J.; Marianne Craig Moore, Brooklyn, N. Y.; Reinhold Niebuhr, New York, N. Y.; W. STATEMENT OF HERBERT H. LEHMAN

More and more Americans are becoming aware that the welfare of our Nation's arts is an important matter for the concern of Congress. There is an increasing realization that the Federal Government of the United States gives less recognition to the role of the arts in our national life than any other major nation or even many small nations.

An act to stimulate artistic and cultural endeavor and appreciation, with adequate safeguards to preserve freedom of expression in the arts, will serve the interests of the Nation as well as those of the arts it would promote. I firmly believe that such legislation will increase artistic and cultural creativity and enjoyment. I am confident that the legislation now under consideration will receive the broadest kind of support not only from organizations concerned with the arts but also by the many thousands of Americans who turn to the arts as an indispensable part of their pursuit of happiness.

I feel more strongly than ever that we have tragically neglected the encouragement and development of the arts in this country. A Federal Advisory Council on the Arts would be helpful to the Nation, both in the domestic and in the international fields. I very greatly hope that a bill similar to the legislation which I proposed in 1956 will be enacted in this session of Congress.

Criticism of the Supreme Court

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 1, 1957, issue of the State, of Columbia, S. C. The editorial, entitled "Should Wake Up," is one of a number of editorials this outstanding newspaper has been printing almost daily for the past several years in an effort to warn against the trend of the Supreme Court decisions which would destroy constitutional government and the rights of the States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD WAKE UP

The United States Supreme Court needs to know that criticism of its acts is not sectional.

And if the members of the once-august body read the newspapers they should by now know it is not just the South that is rising up in indignation at the Court's abuse of power.

We were glad to note that the president of the Attorneys General Association of the United States, Louis C. Wyman, has spoken out critically of the Court. He did so at the association's annual meeting, and he is from New Hampshire. He said the Court's ruling in which it overturned a group of convictions under the Smith Act "set the United States back 25 years" in its efforts to control communism. He suggested that Congress step in and take legislative action to trim the Court's power and undo some of its damage.

The State has long been bemoaning the decline of the Court and urging Congress to assume its authority, granted in article 3 of the Constitution, to regulate the Court's authority. Perhaps if a sufficient number of people become aroused Congress might wake up before it is too late.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. YARBOROUGH. Mr. President, a very lucid editorial in the Washington Evening Star of July 2, 1957, has cut through the rhetorical fog buried in the Wright commission report. This editorial is opposed to the muzzling of the press as proposed in the Wright commission report.

This editorial serves as still another warning flag of the dangers in suppressing the coveted freedom of the press, and is entitled "Dark Chapters."

Mr. President, I therefore ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DARK CHAPTERS

Loyd Wright, Chairman of the Commission on Government Security, has come forward with what he considers to be documentation in support of the proposal to make it a crime to disclose secret information. It is not an impressive presentation.

Mr. Wright makes one statement with which we are in full accord. He says that the members of his Commission "do not believe that journalists will claim a special immunity over their fellow citizens." We do not think that journalists will claim such a right, nor do we think they should have such a right. But it does not follow that the Commission is on sound ground in urging that disclosure of classified information by anyone be made a crime. The following excerpt from Mr. Wright's own statement bears on this point:

"During the past week I requested the responsible official [in the Pentagon] to release a part of this [improperly divulged] information which, in my opinion, no longer required secrecy. I had hoped enough might be resurrected from the grave of unwarranted continuing classification to demonstrate to the American people the disastrous consequences that flow from an individual's taking the law into his own hands. I regret to report that this request for declassification was denied and that the information is apparently entombed forever, with the final rites of classified burial, in the bureaucratic graveyard of a maze of files, never to be disseminated to the American people who are entitled to know the full details of these dark chapters of betrayal."

Rhetoric aside, what is Mr. Wright saying here? He is saying that the continued classification of this material is unwarranted. He is saying that information which no longer needs to be kept secret is being entombed by the authorities in a bureaucratic graveyard. He is saying that the American people are entitled to this information, but that it will never be made available to them. Nevertheless, if anyone should disclose any of this improperly classified information, he might be sent to jail for 5 years or fined $10,000, or both, under Mr. Wright's proposal. This is one reason why we are not favorably impressed with his jail-and-fine idea.

A Better System To Name a President

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. MUNDT. Mr. President, our constitutional forefathers envisioned and enjoyed an electoral process for naming the President of this Republic whereby each citizen would have equal voting opportunity and authority. For several elections, therefore, there was no such thing as the "bloc voting" of electoral votes which was evolved by power-seeking politicians seeking to enhance their personal power by getting control of a solid bloc of electoral college votes which added the votes of the loser to the votes of the winner to gain influence for large States in the final verdict.

Senate Joint Resolution 113, introduced last week by myself, Senator THURMOND, Senator MANSFIELD, and Senator SMITH of New Jersey, proposes to return America to its original concept of electoral college voting. This proposal is very similar to our earlier so-called Mundt-Coudert amendment, but it eliminates the possibility of gerrymandering. Thus, our proposal would restore to the people the equal right to name their Presidents, and I trust it will be adopted by the Senate and the country.

I call attention to an editorial from the pen of Fred C. Christopherson, editor of the Daily Argus Leader of Sioux Falls, S. Dak., the largest and most influential newspaper of the two Dakotas. Its support of our electoral reform amendment is most encouraging. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BETTER SYSTEM TO NAME PRESIDENT

For some years there has been agitation about the electoral college method of naming a President of the United States.

As it is now, all of a State's electors vote for one candidate even though he might have carried the State by only a few votes.

Assuming, for example, that a State has 30 electors and 10 million ballots were cast by the voters. The vote was, let us say, 5,200,000 for candidate A and 4,800,000 for candidate B. Under the existing system, candidate A would receive all of the State's 30 electoral votes.

Many persons have felt that there should be a change to permit a reflection in the national tabulation of the wishes of the 4,800,000 voters who marked their ballots for candidate B. There's a good reason for this contention.

And actually it is a goal that can be achieved quite readily. Senator KARL MUNDT, of South Dakota, this week advanced a proposal that, if adopted, would provide an adequate answer.

The number of electors in each State is determined by the total of its members of Congress. South Dakota has 2 Senators and 2 House Members and, in consequence, we have 4 electors.

MUNDT's proposal is that each voter, wherever he may reside, will vote for 3 electors—2 representing his Senators and 1 his Member of the House. Thus the electoral vote within a State might be divided, as it very likely would be in the hypothetical example we presented earlier in this comment.

Such a change requires, of course, an amendment to the United States Constitution. It is so reasonable, however, that it is difficult to see why any substantial objection should be presented.

Supreme Court Relied on Secret Witnesses

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Supreme Court Relied on Secret Witnesses," written by David Lawrence, and published in the Augusta (Ga.) Chronicle of July 1, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPREME COURT RELIED ON SECRET WITNESSES

(By David Lawrence)

WASHINGTON.—The Supreme Court of the United States doesn't practice what it preaches.

From time immemorial it has been a rule of law that, when an expert witness testifies in court, he must be present for cross-examination by the other side.

The Supreme Court has just said, moreover, that, when the FBI puts on a witness in a criminal case, the other side must have access to anything and everything about the witness which is in the files of the law-enforcement agency so that the credibility of such a witness may be tested in court.

But the Supreme Court of the United States doesn't allow this in its own proceedings. Thus, the famous decision on school integration violated all the rules of modern courts by declaring that it was based on the "authority" of witnesses who never were revealed in court at all.

Some of these "witnesses" were connected with Communist-front organizations, and one of them was a Swedish Socialist who bitterly criticized the American Constitution. The lawyers for the several sovereign States who argued the case before the Supreme Court were not told that the court had any secret witnesses or experts up its judicial sleeves. Only when the decision was printed did the American people learn what witnesses had influenced the Supreme Court's conclusions.

Today one of the bitterest controversies in American history has grown out of the same Supreme Court decision, which says candidly that its ruling was based on information derived from certain experts.

The decision says that "whatever may have been the extent of psychological knowledge" at the time (1896) that the opinions (*Plessy* v. *Brown*) was handed down which permitted "separate but equal" school facilities, the new finding "is amply supported by modern authority."

The Supreme Court, in its opinion, then cited six "authorities" and said in a footnote: "And see generally Myrdal, 'an American dilemma' (1944)."

Senator EASTLAND, of Mississippi, Democrat, chairman of the Senate Judiciary Committee, has placed before the Senate a resolution containing information which nobody was evidently permited to place before the Supreme Court during the time the case was being argued. He says that a "provisional investigation of the authorities upon which the Supreme Court relied reveals to a shocking degree their connection with and participation in the worldwide Communist conspiracy, in that Brameld and Frazier, listed in the group of six authorities, have no less than 28 citations in the files of the Committee on Un-American activities of the United States House of Representatives revealing membership in, or participation with, Communnist or Communist-front organizations and activities."

Mr. EASTLAND pointed out that Myrdal, the Swedish Socialist, declared—in the book cited by the Supreme Court—that the United States Constitution was "impractical and unsuited to modern conditions" and that its adoption was "nearly a plot against the common people."

Senator EASTLAND added that the citation of these "authorities" clearly indicates "a dangerous influence and control exerted on the Supreme Court by Communist-front pressure groups and other enemies of the American Republic and individual members thereof that is inimical to the general welfare and best interests of the Republic."

Mr. EASTLAND said he was convinced the Supreme Court has been "indoctrinated and 'brainwashed' by leftwing pressure groups."

Whether one does or does not agree with Mr. EASTLAND's contentions, the fact is that nobody could cross-examine the "authorities" cited by the Supreme Sourt nor introduce other experts to present a contradictory interpretation. For the Court didn't tell anybody who is "witnesses" were.

One Who Has Reuther's Number

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George Todt, which appeared in the June 26, 1957, issue of the Valley Times. The article deals with a recent article entitled "Reuther Versus the Workingman's Freedom," written by the able and distinguished junior Senator from Arizona [Mr. GOLDWATER].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION

ONE WHO HAS REUTHER'S NUMBER

"Hypocrisy is the language which vice renders to virtue"—La Rochefoucauld.

"In the single instance of the strike against Kohler in Wisconsin," said Senator BARRY GOLDWATER, of Arizona, "Walter Reuther and the UAW have done more damage and violence to freedom than was accomplished by all the peculiar financial transactions of Teamster President Dave Beck."

Writing in the May 18, 1957, issue of Human Events, a Washington, D. C., newsletter well worth its subscription price, Senator GOLDWATER has come up with a remarkable piece of writing entitled "Reuther Versus the Workingman's Freedom."

In his dynamic exposition of the facts, the young Arizonian beards labor's lion in his Detroit UAW (United Auto Workers) den. He pulls no punches and he lays it right on the line. I waited awhile to tell my readers about this one to see if Mr. Reuther would make a stirring reply. To date: Not one yip out of Walter. Does Senator GOLDWATER have his number?

I think he does. For this is what he puts on the line to the labor boss—and it is easy to see why it must be dynamite in more ways than one to Mr. Reuther:

"I suggest to Walter Reuther that he seriously and carefully ponder the position in which he finds himself. He can be a leader of labor and obtain for labor, through collective bargaining, those things to which it is entitled—or he can become the leader of a political movement. I suggest that he cannot be both at the same time, because if he tries to do this he most certainly will destroy the very house for which he speaks in such passionate terms—the house of labor."

In this contention, Senator GOLDWATER is in fundamental agreement with the late Samuel Gompers, the grand old man of labor. The latter stood consistently against compulsory or political unionism. In 1924, speaking before the American Federation of Labor convention, Sam Gompers had this to say:

"I want to urge devotion to the fundamentals of human liberty—the principles of voluntarism. No compulsion. If we seek to force we but tear apart that which, united, is invincible * * *." It appears that Mr. Reuther has traveled long away from the man who urged such an ethical stand for labor. But not Senator GOLDWATER. Consider his words:

"The strike against Kohler has been given only passing attention by the liberal press of our Nation. It is perhaps hardly newsworthy because these same tactics of brutality and violence have been used so many times in the past. The strike has continued for 3 years. The union, under the direction of Reuther, and through his lieutenant, Emil Mazey, has used every method ever employed to win a strike. It has used violence, it has brought in goons to instill fear. More than 700 acts of violence and vandalism against nonstrikers, including brutal beatings, shotgun blasts into windows of homes, and dynamiting of homes have been reported since the strike began.

"Is this America? Where force and violence can be used with impunity to destroy the peace, to impose the will of one man upon a community or upon a manufacturing plant?"

Reprints of Senator GOLDWATER's devastating and hard-hitting attack upon Mr. Reuther's position with regards to political

unionism can likely be secured after corresponding with Human Events, according to its terms. The Washington, D. C., address is: 1835 K Street NW., Zone 6. Frankly, this newsletter is worth subscribing to—it calls a spade a spade.

Meanwhile, a month has passed by since Senator GOLDWATER indicated that it is high time to get off the carcass of Dave Beck and ask Walter Reuther a few questions, too. But so far, no move to call Mr. Reuther to the McClellan committee—at least not yet.

We must ask ourselves why? Thus far we have only heard of corruption—financial, political, or otherwise—from the labor bosses who contributed to the GOP campaign last year. Will this predilection for labor bosses close to the Republicans preclude the predominantly Democratic investigating committee from hauling Mr. Reuther before it?

If this ultimately proves to be the case, the public will understand the true reason behind it: for it is Mr. Reuther, not Mr. Beck, who might make good on a boast to blow the lid off Washington if he wanted to do so. Nobody knows better than he does just who were given the benefit of COPE (AFL–CIO Committee on Political Education) funds in the past political wars. Were they Republicans? Were they Democrats? Well, just who were they?

Record of the Oregon State Legislature in 1957

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 3, 1957

Mr. NEUBERGER. Mr. President, the Oregon State legislative session of 1957 is concluded. Its record is now part of the history of our State. Many of us believe that this legislative session enacted much far-reaching legislation which will be of benefit to Oregon in the years ahead.

This opinion was confirmed by George Brown, legislative director of the Oregon State Labor Council, AFL–CIO, during a recent address which Mr. Brown delivered in the city of Portland. I think it is significant that he described the recent legislative session as "the best in history, judging by what it accomplished for the wage earner and his family, for the consumer, the school student and teacher, the taxpayer, and the average citizen."

For the information of my colleagues in the United States Senate, the house of representatives in the 1957 legislature consisted of 37 Democrats and 23 Republicans. The State senate was a 15 to 15 tie between Democrats and Republicans. In both chambers, this represented the largest Democratic membership in many decades—indeed, since 1878.

Senator Boyd Overhulse, of Madras, Oreg., was president of the senate, while Representative Pat Dooley, of Portland, Oreg., served as speaker of the house of representatives.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregon Labor Press of June 28, 1957, which details the address delivered in Portland by Mr. George Brown, who helped to represent labor at the recent legislative session.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUMMARY OF 1957 SESSION: LEGISLATURE IS CALLED THE FINEST IN HISTORY

"The 1957 session of the Oregon Legislature was the best in history, judging it by what it accomplished for the wage earner and his family, for the consumer, the school student and teacher, the taxpayer and the average citizen."

These words of summary were spoken by George Brown, legislative director of the Oregon State Labor Council, AFL–CIO, at the conclusion of noon and evening meetings last Wednesday.

Purpose of the two meetings was to report to the officers and members of Portland-area unions on the accomplishments (and shortcomings) of the legislature which completed its work a month ago. Attendance totaled more than 200 at the 2 sessions—a no-host luncheon at the Three Star Restaurant and an evening meeting in the Labor Temple.

"Let me emphasize," Brown said, "that the impressive gains made in the 1957 session were not just selfish gains for organized labor. The benefits of this legislative program will be shared alike by all wage earners, union and nonunion, and by their families.

"To a great extent, the election of this liberal and farseeing 1957 legislature was the result of an outstanding job done by Oregon labor at the polls in 1956," Brown declared. "When we are successful in electing candidates who are devoted to the interests of all the people, the interests of organized labor automatically will be served."

Reporting on various aspects of the legislative session Wednesday were the four members of the State labor council's staff who represented Oregon unions at the State capitol. They are Legislative Director Brown, Executive Secretary James T. Marr, President J. D. McDonald, and Research Director Tom Scanlon.

It was explained that Scanlon had specialized in following the progress of taxation and education measures, Marr in unemployment compensation and public employees' bills, Brown in workmen's compensation, and McDonald in general legislation lying outside these special categories. "Although," Brown added, "we all pitched in together when something urgent came along."

Here is a brief summary of the accomplishments of the 1957 Oregon Legislature, as excerpted from the detailed reports to Portland unionists last Wednesday:

UNEMPLOYMENT COMPENSATION

Maximum weekly benefits for unemployed workers were raised from $35 to $40, effective July 1. Only three other States have unemployment-compensation rates as high as this.

Social-security benefits will no longer be deducted from State unemployment-compensation payments. In addition, strict provisions for forfeiture of compensation benefits, enacted by the 1955 legislature, were removed from the law.

Employer contributions to the unemployment-compensation trust fund were raised to realistic levels, stopping the drain on the reserve fund.

Unemployment-compensation coverage was extended to State employees, and other units of government (cities, counties, etc.) may obtain coverage if they ask for it.

WORKMEN'S COMPENSATION

Benefits were increased 20 percent for workmen injured on the job, and for the widows and children of men killed in industrial accidents. Brown listed nearly 20 bills passed by the legislature, each making some specific improvement in Oregon's workmen's compensation law.

Compensation rates were increased for both permanent and temporary injuries. An improvement in the red-tag law gives employers an incentive to maintain a safe place of work and to keep accident rates low. New laws safeguard the right of an injured workman to appeal his case, if he feels his compensation is inadequate.

Perhaps most important of all, Brown said, was the change in the definition of an industrial accident. The Oregon law formerly said an industrial accident must be caused by violent and external means. This restrictive definition has been removed from the law.

TAXATION

"It was impossible to reduce taxes when the State was faced with the necessity of a larger budget in the 2 years ahead," Scanlon said, "but the inequities of the 1955 tax program were corrected by the 1957 legislature."

The 45-percent surtax was repealed and was replaced by a more equitable graduated income-tax structure. Dependency allowances were increased from $500 for each dependent to $600. The effect of the income-tax program will be to raise more revenue for budget needs, to reduce taxes on families earning $7,000 or less, and to increase slightly the taxes of families earning more than $7,000 a year.

In no case, Scanlon said, will anyone's State income tax be increased more than $11 a year.

For the first time in Oregon history, a full and realistic withholding tax system will go into effect.

Corporation taxes were increased. Tax rates of manufacturing corporations were kept low, while those of utilities and banks were increased substantially.

EDUCATION

Basic State support for school districts was raised from $80 per child to $95, at a cost to the State of $15 million. The long-sought school-district reorganization measure was enacted into law.

Teacher-tenure laws were extended and improved. A salary increase of 25 percent, long overdue, was voted for the faculties of State college and universities. A community college measure was enacted, assuring that these colleges can have some State support and will conform to State standards of instruction.

STATE EMPLOYEES

The 1957 legislature earmarked $10 million to raise the pay of State employees—and most of it will go to State workers in the lowest pay grades (some of whom now receive as little as $156 per month).

Another new law protects State employees against being fired unjustly. This law requires that the employee must be reinstated in his job if the State civil-service commission finds that he was unjustly discharged. (Under the former State law, his superior could refuse to rehire him.)

As previously noted, State employees were brought under coverage of the unemployment-compensation law.

MEAT INSPECTION

Culminating 20 years of effort by labor and consumer groups, the 1957 legislature enacted Oregon's first compulsory meat-inspection law. Also passed was a voluntary poultry-inspection law. Both will protect the consumer against unsanitary and diseased meats.

ELECTION LAWS

Oregon's cumbersome and inadequate election code was given a general overhaul. Provisions against corrupt practices were strengthened. Poll books must now be signed only once. Election-board workers will now get at least $10 a day or $1 an hour. Provisions for absentee voting were improved.

OTHER MEASURES

The 1957 legislature also:

Created a State conciliation service under the State bureau of labor, to aid in the settlement of labor-management disputes.

Made two substantial improvements in Oregon's civil-rights law, forbidding discrimination based on race, color, or creed.

In the field of public welfare, the State's relative responsibility law was amended to provide greatly decreased compulsory payments by relatives of persons receiving public assistance.

Automobile financing charges were limited by law.

Employers will be subject to a fine for failure to pay health and welfare insurance premiums for their employees, if they have contracted to do so.

A new law makes it illegal for employers to require any kickback of wages from their employees.

"In addition to all these accomplishments, and many others not mentioned, the legislature turned its back on all attempts to pass restrictive antiunion legislation," Brown concluded. "This was a remarkable accomplishment, especially in view of the fact that labor was receiving bad publicity from the McClellan hearings during the legislative session."

The Struggle for Freedom in Hungary

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. YARBOROUGH. Mr. President, certainly one of the most outspoken daily newspapers in Texas is the Houston Press. On Thursday last, the 27th day of June, the Press carried a forceful editorial asking that the free world devote a special session of the United Nations Assembly to consider a U. N. special committee's indictment of Soviet Russia for their Hungarian suppression. The heroic struggle of those freedom-loving folk is everywhere enshrined in the hearts of peace-loving men.

Mr. President, this editorial is entitled "Recall United Nations on Hungary Now." It is appropriate on this day before our own birthday of freedom, that we ask the United Nations to do something about the rape of Hungary and the murder of the Hungarian people.

Mr. President, I ask this body to take note of the editorial when it appears in the RECORD. In this free assemblage this is the place to join with the United Nations, and we should condemn the Soviet Union for the greatest tragedy of this decade in the murder of the Hungarian people.

Mr. President, I ask unanimous consent to have this courageous editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RECALL UNITED NATIONS ON HUNGARY NOW

Twenty-four member nations have agreed that the United Nations General Assembly should be reconvened as soon as it is practicable to do so to consider a U. N. special committee's indictment of Soviet Russia's brutal suppression of the Hungarian revolution.

The United States House and Senate simultaneously adopted a resolution urging the same action.

This was especially appropriate coming on the same day that Izvestia, the Soviet Government newspaper, denounced the U. N. report on Hungary as "this insipid concoction" and accused the United States of using it to distract public attention from the really important questions.

There is no more important question in the world than making sure that every man, woman, and child be acquainted with the true story of what happened in Hungary last fall. The U. N. report tells that story in all its gruesome detail.

It is the duty of the U. N. Assembly to be the forum before which this damning indictment of Soviet Russia is debated and broadcast to all the world. And it should be done at once—not thrown into the hopper with dozens of extraneous issues next fall.

The least the free world can do is to devote a special session of the U. N. Assembly to telling the Hungarian survivors that their heroic struggle to be free of Kremlin monsters is not forgotten—and will not be forgotten while freemen live.

Philosophy of the Present Supreme Court Undermining National Security and Federal-State Relations

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial entitled "Others See It Now," which was published in the July 25, 1957, edition of the Augusta (Ga.) Chronicle. The Chronicle, which was established in 1785, is one of the South's oldest and most distinguished daily newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OTHERS SEE IT NOW

It is finally dawning on Americans everywhere, not just those who live in the South, that the philosophy of the present Supreme Court is undermining national security and Federal-State relations.

Heretofore, people in other sections of the United States had not been too greatly concerned because, in the desegregation decision, it was the South's ox that was being gored. The furor raised below the Mason-Dixon line fell mostly upon deaf ears; it was regarded as the painful cries of people from a section of the country who were upset by the racial implications of the decision.

But now others elsewhere are becoming disturbed by the whole series of weird and dangerous decisions rendered recently by the Court.

Among those is Louis C. Wyman, of New Hampshire, president of the National Association of Attorneys General, who yesterday told members of his association that decisions by the Supreme Court have set the United States back 25 years in its effort to control communism.

"It is tragic to see the judicial undermining of national security and Federal-State relations, as well as the very foundation of a free America's right to protect itself," said President Wyman.

States' rights are also being placed in jeopardy, he said.

That's what the South has been telling the rest of the Nation ever since the desegregation decision. Now that someone else's ox is being gorged, northerners are beginning to recognize the truthfulness of the southern argument.

President Wyman recommended that his association take these steps if the Court continues with the type of decision that has been handed down of late.

Clarification of the 10th amendment to protect States' reserved powers in more certain terms.

Giving the State a greater voice in confirmation of appointments to the Supreme Court than now exists through the United States Senate.

Enactment of laws designed to insulate against judicial legislation in derogation of State sovereignty.

Preparation of legislation designed to undo as great a portion of these recent decisions as is possible short of constitutional amendments.

The gentleman from New Hampshire is eminently correct. The South's cry against the Court's usurpation of power is no longer sectional; it is beginning to take up in other sections of the land.

The Vital Role of the Wisconsin State Laboratory of Hygiene

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. WILEY. Mr. President, we have read and heard a good deal in recent days about what is called Asiatic flu—the virus which apparently started in Hong Kong or Red China and which has now jumped the Pacific and resulted in quite a few cases in various parts of the world.

Man's never-ending battle against scourges like this proves again how close we are to our neighbors.

Germs can cross the Pacific and the Atlantic. So can bombs, and so can ideas.

We are fortunate indeed to have in the World Health Organization an outstanding group of men dedicated to the world's physical betterment. It is for us now to match its efforts by progress in the spiritual field, as well.

In turn, in our own land, there are many vital instruments to strengthen man's fight for the perfect health which he was meant to enjoy. One of the fine such instruments is the pioneering Wisconsin State Laboratory of Hygiene which is now 54 years old.

I send to the desk an excellent write-up from the May 1957 issue of the Wisconsin Medical Journal, describing the laboratory's work. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE LABORATORY OF HYGIENE CONTINUES TO GROW—RESEARCH FINDINGS VARIED, COVER WIDE RANGE OF MALADIES

MADISON.—All in the day's work at the State laboratory of hygiene:

Virus research, early detection of cancers of the cervix and uterus via Papanicolaou smears, exploring ways to further control syphilis, studies of animal disease, water purity tests, diagnosis of various diseases from blood samples, fungus infection tests, parasitic intestinal diseases, and many, many more.

Back in 1910, when the laboratory was only 7 years old and housed in a single small room in the basement of agricultural hall on the University of Wisconsin campus, the study of epidemic disease was in its infancy. The laboratory that year examined only 7,000 specimens. In 1914 the total was 8,000.

In 1956, in new quarters and with a staff of 90 persons, highly trained and efficient, the laboratory received 541,923 specimens from physicians, public health officers and nurses, veterinarians, sanitary engineers, park superintendents, sanitarians, and others. Specialists conducted 943,415 examinations, almost 200,000 more than in 1954.

When the new laboratory was dedicated in 1953, it set forth this goal:

"Expanded programs of diagnosis, intensified studies of infectious diseases, and improved health for all citizens of Wisconsin."

Authorities in this and other States, of the State board of health, the University of Wisconsin Medical School, the State Medical Society of Wisconsin, and others, tell you the Wisconsin laboratory is in the forefront in any listing of institutions of its kind.

A walk around the laboratory gives a person the feeling he is in the middle of a beehive, with varied activity on all sides. There's elbowroom now, something that wasn't true of its room in agricultural hall but then, there weren't as many demands made upon it either.

A-1 LEADERSHIP

The director of the laborator is Dr. William D. Stovall, a past president of the State medical society. With the laboratory since 1914, Dr. Stovall agrees its various testing programs have made significant progress in early detection of disease. He cautioned, however, that scientific research is a continuing process, and not a niche for complacency.

"Once we've discovered the cause of a disease, we cannot and do not rest," he said. "Rather, we must be constantly vigilant lest the diseases we have already under control break their barriers and again cause serious health problems. We cannot let down our defenses."

Dr. Stovall looks back on the past decade or two with considerable satisfaction. He has seen typhoid, cholera, malaria, diphtheria and a number of other maladies fall before the onslaught of modern medical methods.

RESULTS APPARENT

Just a few years ago, many cases of a disease (caused by the coxsackie virus) closely resembled polio. It was impossible to treat all of the suspected cases as polio because hospitals didn't have room. If proper treatment is not given true polio cases, of course, serious crippling stages inevitably follow.

The coxsackie virus can now be separated by laboratory tests. It was done in the State Laboratory of Hygiene.

CANCER TEST

The laboratory sprang into the spotlight last year when it was commissioned by the Federal Government to handle an expanded program of cancer detection, which involved the Papanicolaou smear test. Under the plan, the specimens taken from female patients and sent in by their physicians were checked in from eight counties. This later was expanded to 14 counties.

Purpose of the program is to detect early cancer of the cervix and uterus.

TO SAVE LIVES

All Wisconsin physicians, however, were invited to submit smear slides for appraisal by the laboratory technicians.

The 1956 record sheet shows 26,443 specimens which involved 70,185 examinations.

"Frankly, such an ambitious health program has not been undertaken in Wisconsin since the successful drive against syphilis," Dr. Stovall commented. "Cancer can be treated successfully surgically—if it is found in time. A concentrated screening program for the early diagnosis will undoubtedly save many lives."

The program started with the theme: The Doctor's Office—A Detection Center for Cancer.

CAREFULLY PLANNED

Physicians were supplied with equipment for collecting the smears. Instructions went out with each mailing carton, with complete details as to how the smears were to be made, how they were to be fixed and returned.

After the medical doctor takes a smear in his office, the material is placed on a slide. To prevent it from drying, the slide is immediately plunged into a bottle containing 95-percent alcohol.

In the laboratory, each slide passes through 21 different chemicals. The cells in the material absorb differently various dyes, depending on whether they are normal or cancerous.

The trained technician—and Dr. Stovall's initial headache on this Papanicolaou program was finding a number of qualified, skilled technicians—looks for several definite things when the slide slips under his microscope. The color, shape, size, and ratio between cytoplasm and nucleus in each cell are observed meticulously. In most instances, the presence or absence of cancerous cells can be seen easily, and the physician is quickly notified.

If the results of the examination are positive, or if there is some doubt, the laboratory recommends that a biopsy, an actual examination of tissue, be made. The family doctor takes over at this point.

This is just one phase of the work done at the laboratory.

How about the future?

"The next 50 years will show medical successes that will equal or eclipse those of the past," Dr. Stovall predicts. "The diagnosis of cancer is a field in which we expect tremendous advances. But that's just one field. Many of the diseases that are now mysterious will be conquered.

"We will continue our fight against all of the diseases we recognize as serious threats to the health of Wisconsin's people. Our work was—and is—based on the application of laboratory tests which tell us where the disease is, how many cases there are, and what methods are to be used in prevention and treatment."

It's a fighting spirit that all knowing people commend.

Centennial of Civil War

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 3, 1957

Mr. BRICKER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the February 6, 1957, issue of the Roanoke World-News relative to the proposed nationwide centennial celebration of what is commonly known in the North as the Civil War, and in the South as the War Between the States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CENTENNIAL OF OUR CIVIL WAR

(By M. Carl Andrews)

Virginians generally should join in approving a bill now before Congress to coordinate plans for nationwide centennial celebration of what is commonly known in the North as the Civil War and in the South as the War Between the States.

Come next April it will be 96 years since the first shots were fired on Fort Sumter in Charleston Harbor. It will be 92 years since Lee surrendered to Grant at Appomattox.

A lot of water has flowed under the bridge of time which once again linked the principals of fratricidal strife. Sons of South and North alike have fought shoulder to shoulder in four major wars and in many minor skirmishes since April 9, 1865.

Only three men of the vast army that wore the gray now survive. The last man of the Grand Army of the Republic died last year. All too soon the words of the poet will be true:

"The muffl'd drum's sad roil has beat
The soldier's last tattoo."

It is appropriate that plans for a 100th anniversary observance should be sponsored by sons of North and South alike, among them Virginia's A. WILLIS ROBERTSON.

It was here on Old Dominion soil where the first and last battles were fought, where the Confederacy made its proudest stand, that such a celebration inevitably will center. We, more than any other State, should be prepared well in advance of 1961.

Senator BRICKER, of Ohio, who authored the original measure, quickly settled with Senator ROBERTSON and Senator THURMOND, of South Carolina, over the name designation of that conflict. At any rate the North long since ceased calling it the War of the Rebellion. The South gradually has weakened on insisting about the War Between the States. As the years slip past Civil War has become acceptable to both even though it was the most uncivil, bloodiest struggle of history until World War I came along.

The Senate resolution would create a 17-man commission to coordinate plans of local and State agencies. This is fortunate because all of the States existing between 1861 and 1865 undoubtedly will be making their own plans. It follows closely the pattern set by the Federal Government in cooperating with Virginia in the 350th anniversary of Jamestown this year.

Virginia will gain vast experience from this celebration for use in a Civil War centennial. Rather than being concentrated in the small Williamsburg-Jamestown-Yorktown triangle, the 1961 program would be statewide in nature. Hundreds of localities will want to have their own special remembrance.

The recent rash of novels, biographies, and histories stemming from that great conflict serves as an excellent background to a centennial. Interest has always been high. It was just about the last big war with any romance. Seldom, if ever, have the people of the losing side held so high the love, ideals, and principles for which they fought and cherished them even more in defeat.

A centennial will encourage renewal of that devotion and inspire refurbishing of monuments. I recall in particular the time-erased wording on a memorial at Chancellors-

ville in the heart of the wilderness, that bloody site where Stonewall Jackson, the war's most brilliant general, was killed accidentally by his own men. There must be many others in need of repair.

Nothing better typifies the achievement of full unity like the recent restoration of old Appomattox Courthouse. For decades Virginia and the South wept at the name—wanted to obliterate it. The town died and was largely forgotten.

A modern highway (Route 24) now has placed it within easy reach of every motorist. The last battlefield and the town have been made a national park. A bypass has added to the stillness at Appomattox.

But there is restored the home of McLean where the war ended. (Not many know the conflict started in this same man's front yard at Manassas and he moved south to get away from the fighting.) Remaining buildings have been preserved. All are open to daily inspection. Tourists now come by the thousands each year. Even Virginians and other southerners pause to remember.

Last year I persuaded Raymond Moley and his wife to return to Washington and New York by that route. They had never seen the hallowed spot and did not realize it was so close. He was grateful for being guided there. If you haven't had his experience you ought to take time out someday and make a pilgrimage.

By all means, let's have a real national observance of this great anniversary. Perhaps we may even see an upsurge for return to fundamental principles of States rights and individual freedoms. The war wasn't fought over slavery, remember.

Pennsylvania Dutch Celebrate

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Pennsylvania Dutch are holding a celebration at Kutztown this week. Such things as apple-butter boiling, quilting, buttermaking, glassblowing, threshing with flails, blacksmithing, wheelmaking, and embroidering will be on view.

Please "koom und breing die friend mit."

I ask unanimous consent that an article dealing with the celebration be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENNSYLVANIA DUTCH CELEBRATE

KUTZTOWN, PA.—Residents of Somerset County will demonstrate the ancient art of maple-sirup manufacturing at the Eighth Annual Pennsylvania Dutch Folk Festival here, which begins Wednesday and continues through July 7.

Pennsylvania Dutch from the western part of the State also will show how they make schpatsa, the Dutch version of maple-sirup candy.

The sugar and candy makers will be among scores of Pennsylvania Dutch craftsmen who will be on hand at the festival to exhibit skills and arts handed down from generation to generation by the Pennsylvania Dutch.

Such things as apple-butter boiling, quilting, buttermaking, glassblowing, threshing with flails, blacksmithing, wheelmaking, and embroidering will be on view.

There will be potters, silversmiths making Pennsylvania Dutch jewelry, spinners, weavers, violinmakers, and even a "hex" sign-painter.

Kutztown, a tiny community on Route 222 between Reading and Allentown, will become the capital of the Pennsylvania Dutch world during the festival. More than 50,000 persons from every State in the Nation and foreign countries are expected to attend.

In addition to watching the craftsmen at work, visitors will have an opportunity to savor foods which have made the Pennsylvania Dutch famous.

Such delights as gawrda-waigle, hoffa, cuppli, oler and balle kase will be in plentiful supply. Pennsylvania Dutch women from neighboring farms also will cook mountains of schnitz und gnepp, butt boi, snavely sticks, rivvel soup, schmear kase and shoofly pies. Meals will be served to the public in large tents under the auspices of churches and granges.

In reviving the oldtime traditions and customs of the Pennsylvania Dutch, treasured heirlooms and antiques will be exhibited, many for the first time. Rare furniture, some dating back to pre-Revolutionary War days, will be on view.

A 2-hour pageant depicting Pennsylvania Dutch farm life will be presented July 4, 6, and 7. A 2-day seminar on all phases of the region's folklore will be held July 3 and 5.

Another unique feature of the festival will be jigging and hoedown contests to select the champion square-dance teams of the Pennsylvania Dutch country.

With everything in readiness, the Pennsylvania Dutch now are inviting the public to "koom und breing die friend mit."

The Need for the Parity Principle

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. YARBOROUGH. Mr. President, this morning I received a letter from Mr. Marvin Montgomery, of Perryton, Tex. Mr. Montgomery is a farmer by occupation and, like most of our good farmers, he is acutely interested in what we do here in Washington regarding farm legislation.

Mr. Montgomery was kind enough to send me a copy of an editorial which appears in the July 1957 edition of the Progressive Farmer, one of the great farm publications of America. This editorial clearly shows the grave need for retention of the parity principle. I commend the magazine for the editorial. I have long advocated the parity principle, and believe it to be the soundest solution to our agricultural problem.

I should like to read the last paragraph of the editorial:

Secretary Benson has not proved that the parity principle has failed. He has simply proved that there has been too much looseness in enforcing or carrying out the parity principle. We ought not to end parity. We ought to mend parity. A vigorous fight by farmers at this time may save the parity principle, even though it may be necessary to change the methods by which fair or parity prices are obtained. If we do not save the parity principle, farm prices may drop to bankruptcy figures any year.

I ask unanimous consent to have the entire editorial published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S KEEP THE PARITY PRINCIPLE

A new crisis seems to be developing in American agricultural legislation. The important lesson for all farmers from our standpoint is this: By all means let's fight to maintain the principle of fair parity prices for farm products.

To begin with, we may need to go back to the A B C's of the whole parity problem. In 1920, a sudden and calamitous drop in prices of farm products brought bankruptcy to thousands of farmers both in the South and the West. But, as had often been the case, prices of what the farmer bought did not drop much as compared with prices of what he had to sell. In Congress and eleswhere, farmers started a great campaign for what they called equality for agriculture. Three basic facts were emphasized:

1. Manufacturers were protected by high tariffs. These tariffs prevented foreign products from coming into America to lower prices as fixed by American business.

2. Labor unions, although not so powerful as they now are with their minimum wage and collective security acts, nevertheless could hold up wages in large measure by strikes.

3. But farmers had no way to get or keep fair prices for their products. What they grew was thrown on the open market with no price tag affixed and with every farmer in competition with every other farmer.

To remedy this situation, a nationwide campaign for cooperative marketing was carried on. Many farmers joined, with highly helpful results. But not enough of them worked together to enable agricultural producers to fix prices as business had usually been able to do. Nor can they yet do so. But the great 1920 collapse in farm prices had also brought on a business depression. Consequently, many business and professional men were willing to join farmers in asking, "What can we do to prevent farm income from dropping unjustifiably? How can farm purchasing power be kept up and the farmer's standard of living maintained?" Economists and others made profound research studies. "Back in the years before 1909–14—just before the First World War," it was said, "farm prices were reasonably satisfactory as compared with prices of what farmers had to buy. Would it not be to the benefit of farmers, laborers, and businessmen to have the Government keep farm prices in about the same level of equality with other prices as was the general rule in 1909–14? Let's compile a list of the most important things for which farmers have to spend money. Then let's so control prices that a bale of cotton, a bushel of wheat, or a hundredweight of pork will buy about as much farm equipment, machinery, fertilizer (and everything else the farmer buys) as it did in this 1909–14 parity period."

How to do this? It was agreed that the Government would guarantee farm prices up to this point, and would buy and store farm products which failed to bring the full parity price just indicated. At the same time, however, it was realized that the Government could not pay parity prices to farmers unless farmers would agree not to flood the market with unwanted surpluses. Hence, the programs for acreage allotments, production controls, etc., were set up.

Such, in brief, are the A–B–C principles of our parity-price programs. Now it is being said that the policy of guaranteeing parity prices—or even 90 percent of parity—

has failed. Secretary of Agriculture Benson virtually calls for the ending of all price supports in his recent letter to Senator ELLENDER, chairman of the Senate Agriculture Committee. And Mr. Benson goes to great length to explain just where production controls have failed and why price supports must fail, also.

The Secretary's analysis, however, contains enough material to knock out his own arguments. For year after year he quotes figures which show that the allotments by which farmers were asked to control production were far too high. Each year many farmers, dealers, warehousement, etc., demanded larger acreage allotments for tobacco and cotton, for example, than the market prospects justified. Congress and the Department of Agriculture yielded to pressures they should have resisted. The result is seen in the excessive surpluses that have accumulated and which have forced prices of many farm products below production costs.

Secretary Benson has not proved that the parity principle has failed. He has simply proved that there has been too much looseness in enforcing or carrying out the parity principle. We ought not to end parity. We ought to mend parity. A vigorous fight by farmers at this time may save the parity principle, even though it may be necessary to change the methods by which fair or parity prices are obtained. If we do not save the parity principle, farm prices may drop to bankruptcy figures any year.

Power Policy and Tax Writeoffs

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 3, 1957

Mr. CARROLL. Mr. President, several days ago I received unanimous consent to have printed in the RECORD two very excellent newspaper articles written by a very competent editorial writer for the Denver Post, Mr. Robert H. Hansen. In addition to being an editorial writer, he is a very skillful reporter.

On June 25 he wrote an article under the title "Public Pays Writeoffs Tab." This is a very penetrating analysis of an issue which is before this body and the other body of Congress at the present time, and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUBLIC PAYS WRITEOFFS TAB
(By Robert H. Hansen)

The old saying: "It takes money to make money," was never more true than it is with fast tax writeoffs.

That's how, for example, the $65 million Idaho Power Co. writeoffs for 2 Hells Canyon dams could have been pyramided into a net benefit of $339 million at the end of 50 years—more than 3 times the entire cost of the dams.

How can this be? Who pays the bills? And who gets the benefits?

The multi-billion-dollar benefits of fast tax writeoffs result from simply putting money to work, under the multiplication effects of compound interest.

MORSE SUMS UP ISSUE

As Senator MORSE replied 3 years ago to claims that fast tax writeoffs are really of little benefit to industry and that compound interest really isn't involved:

"In the name of commonsense there is no reason why interest earnings on tax savings should not be put to work and thereby compounded, just as any other investment funds."

The public pays the tab—running into many billions of dollars, too, in higher taxes, added Government interest, and inflated prices.

Big business harvests the benefits, together with stockholders who cash in on tax-free dividends.

If necessary subsidies are to stand on their own merit, if the tax laws are to apply fairly to all, and if Congress is to maintain tight control over Government revenue and spending, then peacetime use of wartime fast tax writeoffs must be wrong.

There are those who still insist that fast tax writeoffs serve defense purposes, and who doubt the fairness of figuring compound interest in estimating their worth. Others deny there is any discrimination and say small business enjoys equal fast writeoff rights and benefits with big business. And some argue simply that the fast writeoff program is all but over now anyway, so why worry about it.

Let's see.

More than 22,000 fast tax writeoffs in 229 fields of industry have been issued since the start of the Korean war. They cover new or expanded facilities exceeding $38 billion, of which $23 billion can be deducted on corporate income tax returns over 5 years.

ONE-THIRD SINCE END OF KOREAN WAR

One-third of this program has developed since the end of the Korean conflict—totaling over $7 billion in writeoffs during 3 years of peace, compared to $5.7 billion in all of World War II.

From Alaska to Cuba, almost every kind of industry from steel to porcelain, newsprint to guided missiles, has been included at one time or another.

In Colorado, $92 million worth of fast tax writeoffs have been granted to 49 companies since 1950. Colorado Fuel & Iron Corp. leads the list with 27 writeoffs for $26 million. Gates Rubber Co. got 6 writeoffs for $8,327,000 and Public Service Co. received 4 certificates for $21 million.

Other Colorado writeoffs, all in the name of national defense, covered railroads, trucking companies, crop elevators, oil and gas facilities, mines, smelters, ammunition, steel scrap, metal products and ordnance supplies.

The fast tax writeoff program right now is not what it once was—but it is specifically designed to be reopened periodically by a simple order from the Office of Defense Mobilization. That is the way it has operated in the past and will in the future unless Congress calls a halt now.

After a $13 billion avalanche of fast writeoffs in 1951 and 1952, the program dropped off sharply until the end of 1954. Then it picked up, until the 1951–52 peak was reached again in late 1955 and early 1956, when $3.4 billion in writeoffs was approved in 6 months.

WARNING OF TAXATION GROUP

Last December, the staff of the Joint Committee on Internal Revenue Taxation warned:

"There is, at least, a general impression that the major function of emergency amortization has already been accomplished and that from now on certification will be limited to a few exceptional items such as a plant for building some new type of guided missile that may be developed.

"The objectives of the emergency amortization program since 1950 raise a serious doubt about this kind of forecast. Much of the present program is directed at inducing an increase of capacity in areas that have a large civilian demand, such as freight cars and electric power."

So far this year, up to May 10, another 235 fast tax writeoffs were approved for $581 million, and 257 more applications for $688 million were pending. Another $4 billion in writeoffs have been rejected.

This, then, would seem to belie the contention that fast tax writeoffs are already dead. Particularly so when coupled with the steel industry campaign in the last half of 1956 to open up the steel program again for another $2.4 billion in writeoffs, or the current pressure airlines are bringing to get writeoffs of another $1.4 billion for civilian jet airliners.

Now, about the discriminatory aspects of fast tax writeoffs and the favoritism shown to big business.

In 1951, the House Committee on Expenditures in the Executive Departments scored the "shovel in the barrel" approval of $500 million in steel writeoffs during the first 9 days of the program. The committee said only the alert big steel companies with high-powered legal technical and accounting staffs could get into the act before the program was suddenly filled and suspended.

"By the time the small, independent businessman realized the law and the procedure, his opportunity to participate had passed," the committee declared.

OPERATIONS LITTLE CHANGED

Similar charges have since been made by the Senate Small Business Committee and various other bodies. Today, however, the program still operates in much the same way.

While there has been some increase in small business participation, the Attorney General's Office last year in one or two critical reports on the fast writeoff program concluded:

"The major companies, nevertheless, have received by far the larger share. In many instances, in fact, there may be no practical alternative. Nevertheless, the need to preserve the free competitive basis of our industrial economy is also urgent.

"That need is served only if incentive grants of any type go primarily to the smaller companies, except where immediate defense necessity otherwise requires."

Senator KEFAUVER, Democrat, of Tennessee, and his Antitrust Subcommittee have established that no small business received fast tax writeoffs in the electric power industry. The $3.3 billion in writeoffs for private utilities since 1950, he calculated, will be worth $5 billion over 33 years.

Just the 96 fast tax writeoffs issued since January 1, 1955, to private power companies, it was estimated, will cost the taxpayers $778.3 million and benefit the utilities by $2.6 billion over a 50-year period.

CERTAIN BUILT-IN BIAS

Last December the joint revenue committee staff report said it is a striking thing that fast tax writeoffs for electric power go only to private utilities, not publicly owned companies. The whole program, it added, has a certain built-in bias against small business.

And only last month Treasury Secretary Humphrey, supporting repeal of fast tax writeoffs, testified:

"Because rapid amortization is not applied universally, it could create a competitive imbalance in the sound, vigorous growth of our free economy. * * *

"First there is the stimulating effect which can temporarily add to inflation, with the possibility of a lag later. Then when rapid writeoffs are permitted for facilities which will be largely used to supply eventual regular civilian demand, there inevitably will be dislocations and unfair advantages between whole industries—and individual companies within an industry.

"Most of the total has been of this type."

Principal beneficiaries of tax-credit windfall—Who got fast tax writeoffs, by industry, 1950–56

	Number of write-offs	Amount
Manufacturing industries:		
Primary metals	1,715	$3,900,000,000
Chemicals	1,060	1,600,000,000
Petroleum and coal	621	1,700,000,000
Transportation	2,423	815,000,000
Machinery	8,150	515,000,000
Pulp, paper, board mills	117	419,000,000
Electrical equipment	1,211	322,000,000
Ordnance	1,116	229,000,000
Other	2,064	697,000,000
Nonmanufacturing industries:		
Utilities and sanitation	920	2,800,000,000

Recently Discovered Letters Written to Citizens of Rhode Island by Thomas Paine

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, July 3, 1957

Mr. JAVITS. Mr. President, tomorrow, July 4, will be the 181st anniversary of the Declaration of Independence. It is fitting at this time to bring to the attention of my colleagues in this body the story of the recently discovered letters written, at the request of George Washington, to the citizens of Rhode Island by Thomas Paine, the author-hero of the American Revolution, of whom his contemporary, General Lafayette, wrote: "Free America without her Thomas Paine is unthinkable."

I ask unanimous consent that the article by Joseph Lewis, founder of the Thomas Paine Foundation, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX LETTERS WORTH 10,000 TIMES THEIR WEIGHT IN GOLD

(By Joseph Lewis)

It is now the considered judgment of history that it was Thomas Paine's pamphlet Common Sense which aroused the American Colonies to rise in rebellion against the tyranny of the English Crown. And it has been equally established that during the trying days of the Revolution Thomas Paine's Crisis Papers—the first one beginning with these immortal words, "These are the times that try men's souls"—which appeared during the 7 long years of struggle for independence, saved Washington's army from certain and imminent defeat.

No one realized the importance of Paine's writings during these critical times more than Washington himself. When the first number of the Crisis appeared, the Commander in Chief had it read to his army. If Paine's words inspired Washington with renewed courage, he felt that it would have the same effect upon his soldiers. He was right. It did.

But these were not the only services that Paine contributed during the war for independence. It would take too long to recount the other valuable help which he rendered, "over and beyond the call of duty," in our fight for freedom.

Thomas Paine became truly the torch bearer of the American Revolution, and whenever a problem arose, if he did not anticipate a solution, he was called upon to find a remedy.

Such was his influence at that time that General Von Steuben said, "A pamphlet by Thomas Paine would do more good than all the resolutions of Congress in prose or verse."

As the bitter conflict of the war continued, the problem of finance became a serious one. How to raise money to carry on the struggle was the most pressing issue of the day. While victory was in sight, disaster was about to overtake the country for lack of funds. Congress sought means and methods by which to raise money. In desperation, it passed a resolution calling upon the different States to impose a 5-percent tax on all imported merchandise, the revenue to be devoted solely for national defense.

"In Congress, February 3, 1781.

"*Resolved*, That it be recommended to the several States, as indispensably necessary, that they vest a power in Congress to levy, for the use of the United States, a duty of 5 percent ad valorem, at the time and place of importation, upon all goods, wares and merchandise, of foreign growth and manufactures, which may be imported into any of said States, after the 1st day of May 1781; except arms, ammunition, clothing, and other articles imported on account of the United States, or any of them, and except wool cards, and cotton cards, and wire for making them, and also except salt during the war: Also a duty of 5 percent on all prizes and prize goods, condemned in the court of admiralty of any of these States, as lawful prizes.

"That the moneys arising from these duties be appropriated to the discharge of the principal and interest of the debts already contracted, or which may be contracted, on the faith of the United States, for supporting the present war. That the said duties be continued until the said debts shall be fully and faithfully discharged."

The State of Rhode Island objected to this 5-percent tax. When the Rhode Island Assembly convened in the fall of 1782 it rejected unanimously this urgent request of Congress, despite the fact that the other 12 States had approved it.

A critical situation arose.

Could any State refuse to abide by an act of the National Congress?

Did the State have the right to ignore such a request?

Could it be forced to comply?

Could the State claim sovereignty and secede from the Union?

Was such a tax the beginning of a super national Government at the expense of States rights?

Arguments on both sides gained enthusiastic adherents.

The case of Rhode Island presented a grave problem to the new Government.

Should the militia be sent to force the acceptance of the impost tax?

What was the solution to this perplexing question?

What was to be the nature of the new Government?

Political differences began to appear. The bitterness of partisan politics was becoming manifest. The selfish and the unscrupulous saw untold possibilities in our separation from England, and lost no time to take full advantage of the opportunities presented.

"Money was too precious to flitter away on national defense. We can defend ourselves," said many.

Any new laws that interfered with their aggrandizement were bitterly opposed.

The welfare of the country and the consideration of the Republic was subordinated to personal profit and political preferment.

So concerned were the leaders of the Revolution at this critical situation that Washington himself declared that unless Rhode Island agreed to the impost tax, "the blood which has been spilt, the expense that has been incurred, and the distresses which have been felt, will avail us nothing; and that band, already too weak which holds us together, will soon be broken; when anarchy and confusion must prevail."

And James Madison saw ever more ominous results. He predicted, "the breakup of the Confederacy, the formation of Northern and Southern Confederacies, and civil war between the two."

Another menacing aspect reared its ugly head.

Unless Congress secured enough money to pay the soldiers, demobilization was impossible, and an irresponsible military dictatorship was in the offing.

There was only one man who stood between the establishment of the Republic and disaster.

Washington remembered the words, "These are the times that try men's souls," and sent for Thomas Paine. Washington, Robert Morris, and Robert Livingston, at the princely sum of $800, commissioned Paine to start immediately "informing the people and arousing them into action," regarding this serious situation.

Thomas Paine was the only man in this country at that time who had the proper concept, the ability, and the knowledge of "informing the people and arousing them into action."

Only Thomas Paine knew the vital necessity of the solidarity of the States. He knew that only by being united could a stable government be established, and the success of the new Republic assured.

Since the idea of the United States of America, and the representative system of government came from the brain of Thomas Paine, he was extremely sensitive to any breach that might destroy this new idea of government.

These words of Paine's are particularly significant at this time. He said:

"The independence of America would have added but little to her own happiness, and been of no benefit to the world, if her government had been formed on the corrupt models of the old world. It was the opportunity of beginning the world anew, as it were; and of bringing forward a new system of government in which the rights of all men should be preserved that gave value to independence."

And so, Thomas Paine jumped on his horse "Button," or borrowed one, or went by coach, and started on a 500-mile journey to face and solve another crisis that loomed so menacingly to the foundation of the edifice which he was struggling so hard to establish in the New World.

He began writing a series of letters to keep Rhode Island within the Union. The first one appeared in the Providence Gazette and Journal in January 1782. It was signed, "A Friend of Rhode Island and the Union." The last one—six in all—appeared in July 1783.

As the public is little acquainted with the contents of these letters, with their sentiments expressing the political philosophy of Paine, as well as the fundamental principle underlying the establishment of this Republic, I think a few extracts are well worth quoting here.

Paine wrote:

"In this country, where every State is interested alike in the event of the war, and almost every man in it stands in the same predicament, there ought to be no occasion

for persuasion; and I might as well expect that the citizen of Rhode-Island should undertake to persuade me to my duty, as that I should endeavor to persuade him.

* * * * *

"Every man in America stands in a two-fold order of citizenship. He is a citizen of the State he lives in, and of the United States; and without justly and truly supporting his citizenship in the latter, he will inevitably sacrifice the former. By his rank in the one, he is made secure with his neighbors; by the other, with the world. The one protects his domestic safety and property from internal robbers and injustice; the other his foreign and remote property from piracy and invasion, and puts him on a rank with other nations. Certainly then the one, like the other, must not and cannot be trusted to pleasure and caprice, lest, in the display of local authority, we forget the great line that made us great, and must keep us so.

* * * * *

"When the cause of America, like a new creation, rose into existence, it had something in it which confounded and yet enraptured the world. The boldness of the attempt, and the extent of its consequences, overawed the conjectures of mankind. A 5-percent duty, levied for our support, either on land or commerce, would not then have swallowed up our attention, or produced a debate dishonorable to our patriotism. The defense of our country against an unprincipled and powerful enemy, the establishment of our natural rights, the exalting the human race to their original freedom, and guaranteeing the blessings of civil government, were the great objects of our heart, and we were a united, though a suffering people.

"Why is it that so many little cares, unworthy our greatness and injurious to our peace, have stolen upon our better thoughts? Are we tired of being successful? Is our domestic liberty of less value than formerly, or are we disposed to surrender to contention that which the enemy could never take from us by force?

"It would perhaps be quite as well were (we) to talk less about our independence, and more about our Union. For if the Union be justly supported, our independence is made secure. The former is the mother, the latter the infant at her breast. The nourishment of the one is drawn through the other, and to impoverish the mother is famishing her offspring.

* * * * *

"Besides, the European world, or any place we may trade to, knows us only through our national sovereignty, as United States. Any infringement on our rights of commerce must be lodged before the United States, and every redress for any such injury must come to us through that line of sovereignty; consequently the regulation of it must reside in the same power.

"The United States are likewise accountable to foreign powers for all misconduct committed under their flag; and, as it is their flag which privileges our commerce abroad and on the seas, it cannot, therefore, be expected that the United States should be thus accountable on the one hand, and afford protection on the other, to all the rights of commerce, without receiving an aid and assistance from it.

"I come now to consider a very striking injury that would accrue to Rhode Island by not coming into the measure with the rest of the States.

"The fidelity, patriotism, and well-affected disposition of Rhode Island has never been made the least question of; neither does her present dissent proceed from any source of that kind, but from a misrepresentation of it on some part, and a misconception of it on another.

"In the course of the debate she has taken up an idea, warranted by the Articles of Confederation, that each State has a prerogative to furnish its quota by such means as best suits its conveniency, and in this she is right. But the mistake is that the 5-percent duty is not of the nature of a quota, and that for the reason I have already mentioned, namely, that trade is not local property, but is diffused over and promiscuously drawn from all parts, beyond as well as within the State. Neither is she called upon, in the character of an individual State, for a particular thing limited like direct property, within her own jurisdiction only, but in her united character, to concur in a measure common to all the States, and yet the particular property of none."

So persuasive were Paine's words, so unanswerable his logic that after the sixth letter appeared, the people of Rhode Island reversed themselves and immediately passed the resolution asked by Congress to impose a 5-percent impost tax for national defense—and thereby saved the Union.

When did six letters ever accomplish so much? And in so short a time.

No wonder John Adams said that "Washington's sword would have been wielded in vain had it not been supported by the pen of Paine." He was there. He saw it happen. He knew.

There does not exist, to my knowledge, a more dramatic illustration when the pen proved to be mightier than the sword, than the effect produced by the six letters which Thomas Paine wrote to the citizens of Rhode Island.

I cannot help but feel that, if during the administration of Abraham Lincoln there had been a Thomas Paine whom Lincoln could have commissioned to write 6 letters or 60 letters or 600 letters or 6,000 letters to the people of the Southern States on the importance of the preservation of the Union and the abolition of Negro slavery, there would have been no Civil War.

The Importance of Foreign Students in the United States, and of United States Students Abroad

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 3, 1957

Mr. WILEY. Mr. President, one of the most significant factors in international relations today and tomorrow is the welcome presence in this country of 40,666 foreign students and the presence abroad of 9,887 American students.

No one can now foresee the tremendous role which these youngsters will be playing in the years ahead, in communicating to others what they have studied, seen, heard, and lived in the course of their studies in a different land.

That is why it is always a particular pleasure for me to visit with foreign student groups here in our land.

It is why I welcome the important work of the Institute of International Education, the work of International Student Houses here and in other cities, and the work of the vast variety of other American groups and centers which contribute in many ways to the hospitality of foreign students in our land.

CONSTRUCTIVE WORK OF EMBASSIES

Foreign governments in turn are keenly aware of the opportunities and challenges of this subject. Here in Washington, one of the principal tasks of many of the embassies is to contribute to and facilitate the studies of the large foreign student contingents in our country. The embassies rightly regard this as one of their most important tasks.

I know that this is the case with our friends in the Indian, the Korean, the Iranian, and other Embassies.

Moreover, many of the ambassadors, the minister counselors, and cultural counselors make numerous speeches before American college audiences in order to help familiarize folks on the campuses with the background of the countries which they represent.

UNIVERSITY OF WISCONSIN HAS MANY FOREIGN STUDENTS

In Madison, the University of Wisconsin has been host to a vast assembly of students from abroad. We are proud of this heavy foreign contingent, and I know that Madison is playing an extremely effective role in foreign policy in this respect.

But what it does for these foreign students, it does spontaneously, because it regards the student, whatever his nationality, as a seeker of truth. It welcomes the student, whatever his origin, into all activities of academic and campus life.

ANSWERING MISINTERPRETATIONS

Madison recognizes, as does every college town, that when foreign students come here, they can see with their own eyes, and hear with their own ears, the "real America."

In turn, when our youngsters study abroad, they can get a better idea of the truth in foreign countries.

Each student, in turn, can help to answer misinterpretations and misunderstandings.

Each can, in friendly, frank exchanges, discuss the viewpoints of the respective countries.

We are all aware that there are, unfortunately, a tremendous amount of misunderstandings. We do not know enough about foreign lands, and foreigners do not know enough about us.

WE MUST LEARN MORE ABOUT THE EAST

We have an especially great deal to learn about the East, about the countries of Asia and the Middle East, and Africa, as well.

These Asian-African lands are coming into their own. If we are to have the fullest friendship with them, then we must understand the facts about them, and they about us. That was one of the points brought out in various meetings of the Washington Educational and Cultural Attachés. This is a fine group, to which I have previously referred in the RECORD.

I send to the desk now the text of an article on the theme of minimizing misunderstandings. It was written by Malvina Lindsay, in the July 1 issue of the Washington Post and Times Herald. Its

title is, "Window on Asia is Still Murky." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WINDOW ON ASIA IS STILL MURKY

(By Malvina Lindsay)

Americans increasingly find themselves in a goldfish bowl in which they are being observed by the world's youth. But, like goldfish, they are seemingly neglecting to observe their observers.

Thirty years ago students throughout the world flocked to Western Europe to study. But today, according to a National Science Foundation report, there are annually as many students of other nations in the United States as there are foreign students in all the universities of Western Europe.

A majority of the 36,500 foreign students here are from Asian countries. Excepting Canada, the largest number is from India.

Yet knowledge here of India, indeed of all Asia, is meager and distorted. One reason is that American culture has its roots in Europe. Also Europe is first choice with Americans who go abroad to study. And American tourists make Europe their stamping ground.

Much light is thrown on American misconceptions of India—the world's largest Republic in point of population—by a study, What American Students Think About India, made by Dr. Palayam M. Balasundarum, visiting scholar at Columbia University.

Four hundred students at 12 leading northeastern colleges were questioned in the survey. In general the results were encouraging. Most of the students were objective in their judgments, aware of their ignorance, eager to improve their understanding of a country so important to the democratic world.

In some colleges where there had been contacts with sister colleges in India, or where Asian area studies were included in curriculums, much accurate knowledge of India's political and social development was manifested. But the misconceptions that existed among students in 12 of the country's highest ranking colleges scholastically were a clue to the far greater amount of ignorance concerning India that must exist among citizens generally.

Many an American concept of India was expressed by a Princeton senior who, when asked what associations came to him with the word "India," replied, "It is exotic; people are poor for the most part; it has a lot of tigers."

The highest number of students questioned associated Gandhi and Nehru with India. The second ranking linage was of India's social and religious institutions. Yet only 2 percent of the students mentioned Indian villages, although 8 out of 10 Indians live on the land and depend on agriculture.

The students were slightly more favorable than unfavorable to India's foreign policy—those with the most factual information being the most favorable. Two hundred and fifty-four did not object to intermarriage. Those who did object did so chiefly on difficulties of cultural adjustment rather than racial grounds.

The survey revealed great desire by the students to improve their knowledge of India. A Cornell student said, "As the future leaders of our country, it is appalling to think that we are so poorly informed on such a vital subject as India."

Dr. Balasundarum feels that one of the chief gaps in American knowledge of India that the survey revealed was that concerning India's rural community development, which is an integral part of the first and second 5-year plans. For on this depends largely the raising of Indian standards of living and the nation's future destiny.

In his conclusions Dr. Balasundarum says that mass media information concerning India that goes beyond the spot-news level or personality coverage is greatly needed in this country. Also needed is more accurate teaching about India in grade and high schools, as well as in colleges. Especially recommended is more social and cultural contact of Americans with the Indian students here.

Such contacts between East and West need to be increased in every college and in every community in which there are Asian students. Social get-togethers are helpful, but also needed are cultural meetings in which discussions can reach a deeper level.

Establishment of the Society of Brothers at Gorley's Lake, Pa.

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 3, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Pittsburgh Sun-Telegraph of Sunday, June 23, published a most interesting editorial entitled "They Were Not Reds."

It seems that the Society of Brothers, a North Dakota organization devoted to communal living, has purchased what is known as Gorley's Lake, a beautiful lake in southwestern Pennsylvania, and a well-known hotel, with 80 rooms, and 110 acres of land. It is the plan of this society of 150 members—men, women, and children—to use the hotel for the manufacture of educational toys for institutional use. This group is absolutely opposite to the atheist plan of Russia. This is not the first time organizations of this kind have settled in Pennsylvania. Similar groups are Ephrata Cloister, at Ephrata, Pa.; and the Harmony Society, at Old Economy. In Pennsylvania there were many other groups with fine intentions, but all have failed. Economists and those sincerely interested in the improvement of the station of man have tried many things, but nothing has succeeded as well as the free enterprise economy of the United States.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY WERE NOT REDS

The Society of Brothers, a North Dakota organization devoted to communal living, has bought Gorley's Lake in Fayette County with its 80-room hotel and 110 acres of land.

The society's 150 members—men, women, and children—will move to Gorley's Lake and use the hotel for the manufacture of educational toys for institutional use.

This unusual announcement seems more like a news item of the early 19th century.

We had many such experiments in communal living at that earlier period.

The one with which Pittsburghers were most familiar was that of the Harmony Society, which in 1805 founded Harmony in Butler County and 20 years later established a new colony at Economy (now Ambridge) in Beaver County.

This and many other experiments in communal living are described authoritatively by Charles Nordhoff in The Communistic Societies of the United States, published in 1874.

An intimate view of the beliefs and manner of life of the Harmony Society can be obtained in the historical pageant Man's Reach which is to be given at Old Economy, now a State museum, this summer.

The word "communistic" has acquired a sinister meaning.

But communism, as practiced by the Harmoney Society and similar groups, was vastly different from the communism of Red Russia.

The Harmonists were not Reds and would have abhorred everything for which present-day Communists stand.

Unlike the atheistic Reds of today, the 19th century American Communists were deeply religious and all their beliefs and actions were based on Christian doctrine as they interpreted it.

The Harmonists were premillennialists who believed that the millennium was near and would be introduced by the personal return of Christ.

They practiced communal living because that was the way of life of the early apostles, as described in Acts II: 44 and 45.

"And all that believed were together, and had all things common.

"And sold their possessions and goods, and parted them to all men, as every man had need."

But although the members of the Harmoney Society had all things in common, the society was not hostile to free-enterprise capitalism. Far from it.

The society was among the pioneers in the development of western Pennsylvania's oil resources and had much to do with the founding of Tidioute in Warren County.

The Harmonists built the Pittsburgh & Lake Erie Railroad and one of their members was its first president.

They were active in the building of Beaver Falls and were heavily interested in Pittsburgh industries and banks.

Communal living, as the subject of American experiments, and Red communism are as far apart as the poles.

It will be interesting to see how the experiment at Gorley's Lake turns out.

Veterans of World War I

EXTENSION OF REMARKS

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I wish to discuss the veterans of World War I.

A great many of my constituents in the 11th Congressional District of California have expressed deep concern that there is not at the present time in existence an organization which would represent exclusively the veterans of World War I, a group of individuals who have truly proven their allegiance to their country. I wish to mention especially the following among my correspondents: J. R. McDonald, Herbert E. Vandervoort, Mr. and Mrs. Walton Harris, Ward E.

Bettinger, G. A. Betz, Wesley Clark, Hiram B. Smith, Fred Farlow, all of Stockton; Roy A. Filloon, commander of Stockton Barracks of World War I Veterans; Manuel D. Kappos and Nick Vakakis, of Lodi; E. L. Healey, of Manteca; F. G. Patterson, commander of Modesto Barracks of World War I Veterans; Philip O'Brien, commander of Turlock Barracks of World War I Veterans; and Vic Sanders, adjutant of Riverbank Barracks of World War I Veterans.

As the Civil War differed from the Spanish-American War, World War I in turn differed from World War II and the Korean conflict.

The veterans of each war have special viewpoints, interests, and identities that separate one from the other. Each group speaks for its own generation. Each group has unique memories and loyal comradeship that cannot be shared fully and freely with veterans of other wars.

Today, 39 years after the end of World War I, we still do not have an organization to represent exclusively the veterans of World War I.

I urgently request official recognition for the veterans of World War I, as well as congressional approval of a national charter for this nationwide organization, whose objectives are admirable, as well as patriotic, and whose membership has contributed greatly to the strength, freedom, and prosperity of our great country.

A national charter would advance the cause of this worthy organization; I feel the veterans of World War I have earned this honor.

Trial by Jury

EXTENSION OF REMARKS
OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 28, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following address to the Mississippi State Bar Association made by the Honorable W. S. Henley, the newly-elected president of the organization:

— TRIAL BY JURY

Ladies and gentlemen of the Mississippi State Bar.

I

The subject of trial by jury is, in my opinion, the most vital issue before the American public today. We are being awakened to past encroachments and far greater threats for the future to this inherent right of every citizen. On the other hand, we are told that if the judges are not permitted to enforce the criminal laws by injunctions and citations for contempt without the right of a jury trial, this will result in anarchy.

Let us consider this issue briefly in the light of history and of the opinions of leading statesmen and great leaders of the bar in the past.

II

Historians disagree as to the origin of trial by jury. Some writers insist that the jury was of pure Anglo-Saxon origin and attribute it to Alfred the Great who reigned from 871 to 901. Others attribute its origin to various sources, including the Franks, the Normans, and the Celts.

The true answer appears to be that forms of trial resembling the jury system are to be found in the primitive institutions of practically all nations. Our ancestors' sense of justice and fair play developed long before their civilization had advanced sufficiently to preserve a written record of trials.

III

The jury system as it is known to the common law developed in England from the 11th to the 16th Century. In 1085, William the Conqueror used the jury system, as it then existed, in compiling the Domesday Book.

Originally, a jury trial was not a right but a privilege to be granted or withheld as a favor of the king. Henry II, a wise and just king who reigned from 1154 to 1189, encouraged trial by jury to make his royal courts more efficient and more popular than the courts of the feudal lords, which were not permitted to use juries. King John exacted expensive presents from those seeking trial by jury. However, under article 36 of the Magna Carta granted at Runnymede in 1215, such writs were no longer to be sold and bought but given as of right.

Kings and their ministers who considered a jury's verdict unjust preferred charges against such jury and tried them before the Star Chamber Court which operated without a jury. Such proceedings became so oppressive and infamous under Charles I that the Star Chamber Court was abolished in 1641, and the King was beheaded for his oppressive acts. The right to punish jurors for verdicts considered to be unjust was abolished by Parliament and the remedy of granting a new trial substituted therefor.

Embracery, consisting of corruption of a jury, was a statutory offense in England as early as 1360, but the prosecution thereof was so rare that when a case occurred in 1891, no precedent could be found upon which to draw an indictment.

In many early trials, judges intimidated juries. We have the familiar account of "Bloody" Judge Jeffries who, being displeased with the verdict of a jury, caused them to be placed in a cart, carried outside the city limits and dumped into a ditch. Regardless of whether the jury's authority was challenged by the crown, judges or by Parliament, the power of juries always eventually prevailed due to the confidence of the people in their verdicts.

Courageous and able leaders at the bar such as Bacon, Burke, Coke, Erskine and others too numerous to mention have led in the struggles to place unlimited trust in the verdicts of juries, and public opinion sustained them and enabled the jury system to become the most dependable known method of trial.

In one of his sublime orations Edmund Burke declared that the whole state and power of England, her King, Lords and Commons, her Army and Navy were ordained and established for the purpose of getting 12 honest men into the jury box; in other words, to do justice between man and man, and to abolish force between individuals.

IV

Wherever English people migrated, they carried the jury system with them as one of their inherent rights. This resulted in the jury system being established throughout a large part of the world, including America, Australia, New Zealand, India, and South Africa. Our colonial courts recognized the right to a trial by jury at a very early date in a case by the Supreme Court of Pennsylvania.

In 1765 the British Parliament, at the instigation of King George III and his minister, enacted the Stamp Act and placed its enforcement under the Court of Admiralty, thereby depriving the American colonists of trials by jury in the matter of its enforcement. This aroused the resentment of the American colonists and on October 19, 1765, 9 of the 13 Colonies met in New York and adopted the Colonial Declaration of Rights to the effect that "trial by jury is the inherent and invaluable right of every British subject in these colonies," and condemned Parliament for depriving the colonists of such rights.

Thomas Jefferson in the Declaration of Independence charged George III with tyranny and usurpations in that the American colonists had been "deprived in many cases of the benefits of trial by jury. Our ancestors realized that the best part of our inheritance from England was the right to trial by jury, without which their liberty could not be preserved.

V

Section 2 of article III of the Constitution provides: "The trial of all crimes, except in cases of impeachment, shall be by jury." Randolph and Mason did not regard this provision as adequate protection and refused to sign the Constitution.

At the Virginia Constitutional Convention strenuous objection was raised by Patrick Henry and others to the ratification of the Constitution on the ground that trial by jury should be more clearly and more fully guaranteed. The history of the efforts of tyrannical Kings and of Parliament to deprive the English people of the benefits of trial by jury and of encroachments thereon was cited as a warning to the people of Virginia as to what might happen here. Patrick Henry in discussing this said: "I know of no way of judging the future but by the past."

As a result the Bill of Rights was prepared to be offered as amendments to the Constitution. Amendment 5 provides for indictment by grand juries. Amendment 6 provides that "in all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed * * *." Amendment 7 provides for juries in civil suits at common law where the value in controversy shall exceed $20.

Jefferson advised the Virginia Convention to defer ratifying the Constitution until the proposed amendments were first adopted. However, upon the assurance of John Marshall, George Washintgon and others that the amendments would be promptly adopted, the Virginia Convention ratified the Constitution by a very close vote. The tradition of flagrant abuses of power by judges caused the makers of the constitutions and the legislatures in nearly all of the States to exercise diligence in undertaking to see that the right of trial by jury was preserved for the benefit of all those whose liberty might be placed in jeopardy in any manner.

VI

We have grown up in an age when trial by jury is taken for granted. Little do we realize the struggles and sacrifices endured by our ancestors to enable us to enjoy this great privilege. Nor do we stop to analyze what this privilege means to us.

The jury uses its commonsense in analyzing facts and weighing the evidence; the composite judgment of 12 laymen drawn from all walks of life is far more likely to represent the truth, than the judgment of one more judges. The American system of government is based upon a proper separation of powers. Judges are able to perform their duty more efficiently by having the same confined to questions of law.

The jury system is the last vestige of pure democracy. No other part of our system of government comes as close home to the citizen as service upon a jury. There can be no more wholesome patriotic experience. It

has served to keep our democratic form of government alive, active, and vigorous. It is indeed government of the people, by the people, and for the people. Without it, democracy would be doomed to perish from the face of the earth.

Joseph Choate, one of the greatest American trial lawyers, in delivering his annual address as President of the American Bar Association on August 18, 1898, stated:

"The truth is, however, that the jury system is so fixed as an essential part of our political institutions; it has proved itself to be such an invaluable security for the enjoyment of life, liberty, and property for so many centuries, it is so justly appreciated as the best and perhaps the only known means of admitting the people to a share, and maintaining their wholesome interest in the administration of justice; it is such an indispensable factor in educating them in their personal and civil rights; it affords such a school and training in the law to the profession itself; * * * that there can be no substantial ground for fear that any of us will live to see the people consent to give it up."

He warned members of the bar against tinkering or tampering with trial by jury.

"For I cherish, as the result of a life's work nearing its end, that the old-fashioned trial by a jury of 12 honest and intelligent citizens remains today, all suggested innovations and amendments to the contrary, the best and safest practical method for the determination of facts as the basis of judgment of courts, and that all attempts to tinker or tamper with it should be discouraged as disastrous to the public welfare."

VII

Trial by jury, as it is known in America and England, has never been permitted in countries controlled by dictators.

In ancient Rome the jurors were selected exclusively from the senators. Wherever the Roman or civil law prevails, jury trials, as known to common law, are not matters of right.

In a Russian trial, whether civil or criminal, there is no jury and no rules of evidence. Witnesses are not sworn since the state is atheistic. Almost anything is admitted in evidence, including hearsay. No objections to questions are made.

In his address to the Reichstag, on July 13, 1934, Hitler in excusing himself from resorting to a bloody purge, said:

"If anyone faces me with the reproach that we should have used the regular courts for trial, I can only answer that in that hour I was responsible for the fate of the German Nation, and therefor I myself was the German people's supreme tribunal."

It is one of the saddest facts of history that the fate of the German Nation might have been different if justice had been administered by the people instead of being centralized in the hands of a dictator.

If we preserve, unimpaired, trial by jury, what has happened in Germany and Russia may not be repeated here. We, therefore, should always cherish and forever preserve in America the sacred right of trial by jury.

Winston Churchill in his History of the English Speaking Peoples, volume 2, page 186 states:

"Trial by jury of equals, only for offenses know to the law, if maintained, makes the difference between bond and free."

VIII

Today we are faced with the greatest threat to the right to trial by jury that has existed at any time since the adoption of the Constitution. This has come about in a very subtle manner by the extension of the jurisdiction of courts of equity so as in effect to invest them with the enforcement of criminal laws.

At the time of the drafting of the Constitution, courts of equity had never been vested with power to enforce the criminal laws and the Founding Fathers did not deem it necessary to provide a constitutional guaranty for trial by jury in equity.

By a gradual process of authorizing the enforcement of criminal laws by injunction, courts of equity have been vested with concurrent jurisdiction to enforce criminal laws and are gradually usurping the police power of the State and Nation.

Beginning with the Interstate Commerce Commission Act of 1887, Congress has adopted 28 statutes vesting the right in Federal judges to enforce various criminal laws by injunction. This encroachment has been gradual and limited to the field covered by each specific act. Nevertheless, many statesmen and leaders of the bar have issued warnings against such encroachments.

S. S. Gregory, president of the American Bar Association, in his address to the association in 1912, had this to say:

"To say that the commission of an offense against the laws of the United States or at common law may be enjoined, and then the person charged with the commission of that offense may be tried upon information for contempt without a jury, is a clear evasion of these salutary constitutional guaranties. * * *

"Where the law prohibits an act, the effect of enjoining against its commission is merely to change the procedure by which the guilt of the person charged with doing the act thus prohibited shall be ascertained and his punishment fixed. By enjoining against the commission of crime and then proceeding on a charge of contempt against those accused of committing it, the administration of the criminal law is transferred to equity and the rights to trial by jury and all other guaranties of personal liberty, secured by the Constitution, are pro hac vice destroyed."

The real question involved is whether trial by jury shall be retained in all essentially criminal prosecutions in the Federal courts.

IX

The pending civil-rights bills multiply by many times the existing encroachments upon the right to trial by jury. The Attorney General has furnished the Senate Judiciary Committee with a list of 25 specific civil rights to which the law would apply with the comment: "This list is merely illustrative and does not attempt to include all civil rights." The field is so vast that it is proposed to set up an entirely new division in the Department of Justice to prosecute the multitude of cases contemplated.

It is claimed that the proposed legislation would be more effective than the time-honored method of trial by jury. This same reason was given for the establishment of the Court of Star Chamber. Originally the jurisdiction of the Court of Star Chamber was invoked in cases where it was thought that juries might not convict. History records the results. Its methods grew to be cruel and tyrannical. The lesson taught by the history of the Star Chamber is that the rights and liberties of the people would not long survive in any country where the administration of law is committed exclusively to the boundless discretion of one person.

The present day government by injunction is an attempt to revive the methods of Star Chamber Court. The commission of crimes is defined by statute but when a judge takes over the function of the criminal court, a decree of the judge is substituted and often enlarges the statute by interpretation. In proceedings for contempt for an alleged violation of an injunction, the judge is the lawmaker, the injured party, the prosecutor, the judge, and the jury. It is only natural that under such circumstances, the proceedings may be effective notwithstanding it is contrary to the basic concepts of the fundamental rights of every American citizen.

Two persons may be charged with identically the same act alleged to be a crime—one is given the benefit of a trial by jury, and the other is tried by a judge without a jury because the court has issued an injunction commanding all persons to obey the law. While there is a technical distinction as a practical matter, the liberty of each man is placed in jeopardy and one enjoys the benefit of his basic right, and the same right is denied the other.

It is contended that the pending proposal to amend the civil rights legislation so as to guarantee trial by jury for contempts committed out of the presence of the court—grants a new right not originally enjoyed in a court of equity. Mr. Justice Sutherland in delivering the opinion of the United States Supreme Court in the case of *Michaelson* v. *United States* (266 U. S. 42, 69 L. ed. 162, 45 Sup. Ct. 18) in dealing with the history of permitting trial by jury in criminal contempt proceedings states:

"So truly are they crimes that it seems to be proved that in the early law they were punished only by the usual criminal procedure."

The fact that there have been repeated encroachments upon the right of trial by jury since 1875 does not justify further encroachments on a wholesale basis. We should revert to the fundamental basic concepts of liberty and preserve the spirit as well as the letter of the Constitution.

We should remember that the same argument is being made today as was made in the times of the Star Chamber Court. William Pitt said: "Necessity is the argument of tyrants. It is the creed of slaves." Unlimited power is apt to corrupt the minds of those who possess it.

There is no limit placed upon either the fine or imprisonment that may be imposed by a judge for violation of criminal contempt. The Star Chamber Court was repeatedly used for political purposes. It cannot be denied that politics and emotionalism actuate those who would resort again to star chamber procedures.

Under the provision of section 402 and section 3691 of title 18 of the United States Code where an indirect contempt of court is also a violation of a criminal law, jury trials are granted but such provisions do not apply to contempts committed in disobedience of any lawful writ, process, order, rule, decree, or command entered in any suit or action brought or prosecuted in the name, or on behalf of, the United States.

Why should the citizens be entitled to a jury trial in a case brought or prosecuted by an individual and not entitled to a jury trial in a case prosecuted in the name of the United States? The history of the struggle to preserve our liberties demonstrates that the greater the power of the prosecutor, the more necessary is the protection of a trial by jury. If an exception in favor of the Government is sound in a contempt proceedings, it would logically follow that trial by jury should be abolished in every criminal case where the Government prosecutes.

In the pending civil-rights legislation, the Attorney General of the United States is vested with power to institute and to prosecute suits on behalf of any person whose civil rights he believes to be violated without due request and even without the consent of such party. The United States Government is not the real party in interest, yet by virtue of assuming to bear the cost and the burden of litigation on behalf of any minority group, it would automatically circumvent and deny the right to trial by jury.

X

On January 4, 1956, in the case of *McSwain* v. *County School Board of Education, Anderson County, Tenn.*, Judge Taylor entered an order requiring and directing the discontinuance of racial segregation in the Clinton, Tenn., high school.

On December 5, 1956, an order was issued

for the attachment of 16 individuals charged with violating the decree of the court in that (I quote from said order):

"That said individuals have organized or joined a White Citizens Council aimed at preventing the effectiveness of integration; have engaged in picketing and congregating in the immediate vicinity of the school building for purposes of intimidation and other devices for prevention of the effectiveness of integration."

Said persons charged with criminal contempt immediately requested a speedy jury trial. The United States intervened in said cases apparently for the purpose of preventing the defendants from obtaining a jury trial. However, the public was alerted to the danger of this procedure by an editorial of David Lawrence in the U. S. News reading in part as follows:

"The American people must stand aghast at the edict by a Federal judge that anyone who speaks his mind in urging nonattendance at a mixed school in Clinton, Tenn., may be guilty of contempt of court.

"This means that, without a trial by jury, citizens in supposedly free America can be put in jail for their utterances. Free speech is thereby squelched and thought control imposed."

Subsequently it was agreed that the defendants in this case might have a jury trial. We should not be misled. This agreement has not set a precedent for future cases. On the contrary, it was probably done to placate public opinion and to lull us into a false sense of security.

XI

It has always been the privilege and duty of members of the bar to uphold the rights and liberties of American citizens whenever threatened. Thirty-two of the thirty-seven persons who signed the Constitution were members of the bar.

The right to trial by jury is a matter of special interest to lawyers. If the right to trial by jury is to be preserved to posterity in its full vigor and in the spirit intended by those who drafted the Constitution and the Bill of Rights, it behooves us to put forth every effort in our power to turn back the threatened encroachments and to do everything in our power to preserve unimpaired the guaranties of trial by jury.

The privilege that we enjoy of appearing before juries in the arena of justice places on us a grave responsibility to our fellow citizens and to posterity in these troublesome times.

I conclude in the language Thomas Jefferson used in his first inaugural address.

"Freedom of religion, freedom of the press, freedom of person * * *; and trial by juries impartially selected—these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation. The wisdom of our sages and the blood of our heroes have been devoted to their attainment * * *; and should we wander from them in moments of error or alarm, let us hasten to retrace our steps and to regain the road which alone leads to peace, liberty, and safety."

Needs of Positive Program for American Indians

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an address by Dr. Sol Tax, chairman of the department of anthropology of the University of Chicago, at the meeting on May 4, 1957, of the Central States Anthropological Society at the University of Wisconsin, at Madison, as follows:

TERMINATION VERSUS THE NEEDS OF A POSITIVE POLICY FOR AMERICAN INDIANS

When we discuss Indian Affairs we seem always to be asked to be for or against some symbol. In this case the symbol is "termination." I am asked to be for the past century of keeping Indians dependent, or for ending the assistance which the Federal Government has considered an obligation to the Indians. As an anthropologist I am against magical thinking and false dichotomies alike. I must refuse to accept either horn of the dilemma as it is posed.

The anthropologist applies the knowledge he has of all of the facts in the situation that he studies, attempting to find the solution which best suits the whole. In the case of our Indians we have to consider (1) the general culture of the United States, with its conflicting values; it is neither uniform nor changeless; (2) the social, cultural, and political situation of Indians; it is far from uniform from group to group, and within any group there are conflicts and differences; (3) the views of the Congress of the United States; and (4) the views and politics of our oldest Bureau, the United States Bureau of Indian Affairs.

For the past years the study of these problems has been a consuming interest of a growing group of us at the University of Chicago. The results we are getting are products of many minds. Gradually the whole scope of the problem has unfolded. We have been a problem-solving group, our research directed to discovery of all the factors, but also at any point the best way in which they might all be reconciled.

Our present conclusions are embodied in this discussion. I should like to emphasize that these are not our opinions or personal preferences; they are what we conclude are, as of May 1957, the constructive answers to problems. We believe in them, of course, because we believe in the best answers to problems. But they should be thought of not as our personal preferences—we hope we are honest scientists—but rather as our assessment of the total picture as we analyze it.

Obviously I cannot develop whole complex propositions in these few minutes; I shall simply do three things:

1. Mention briefly the kind of dilemma the United States democracy has always faced with respect to American Indians;

2. Mention briefly the major problems faced by Indians, so that we can ask how in any local instance Federal or State policies do or do not lead to constructive solutions; and

3. Indicate the direction we conclude must be taken if we are ever to reach constructive solutions.

Through all our history, States as well as the Federal Government have been frustrated in their efforts to solve the problems of the American Indians. We have vacillated between (1) a policy of starving the Indians into throwing in the sponge and getting lost in the general population and (2) a kinder policy of helping them to get themselves ready to leave Indian ways and get lost in the general population. In either case they would be off our consciences, and finally out of our pocketbooks.

Both policies have failed. When we have followed the first policy and thrown them into the water to sink or swim, we have found that the Indians neither sink nor swim; they just float and remain the same problem. When we have followed the second kinder policy, we have found that Indians do not in fact do the things that will lead to their disappearance. They do not want to get lost.

The kind policy will only work if we have the patience to continue to use our resources to help Indian communities to adjust to the national economy freely and in their own way. But their own way might not be to get lost at all. Every man and woman has the personal problem of deciding what sort of person he wants to be. Some Indians may want to become white men in their allegiance and their ways; this ought to be their right. But many Indians want to maintain their Indian values and allegiance, and many Indian communities want to maintain for their posterity the identity and heritage that were given to them. In the American system this equally is their right.

It is not for any white man, or Congress, or the Indian Bureau to demand that Indians either remain Indians or stop being Indians.

It is a challenge which has never been met in the United States to help the Indians to adjust economically and socially to American life so that they actually become financially independent. We cannot begin to solve the problem unless we first recognize that Indians have a right to make this adjustment as Indians.

Leaving them free to make their own choices removes the great block to constructive change. What folly it has been to demand that Indians cooperate in plans for making them into something they do not want to be. What an interesting challenge, on the other hand, once the block is removed, to develop with them ways to that greatest freedom which comes with economic independence.

The Indian policy that has most recently been with us has been the sink-or-swim policy, the way less in accord with our democratic morals, the way that has never worked and never can. It does not get Indians out of our pocketbooks; indeed this un-Christian policy (as President Eisenhower once called it) requires more money rather than less—and it certainly doesn't get them off the conscience of the Nation.

The present policy, aimed at the disappearance of the Indians, is a double-edged sword. The Government, like any overprotective parent, demands that the Indians manage their own affairs, but on the grounds that they do not know how never lets them try, and becomes more than ever sure that they are incompetent to do so. The Government says to Indians, in effect, "As long as we pay the bills, we shall manage your communities. If you think you are competent to manage your own affairs, then cut yourself off from the financial assistance as well. Money to live on, or freedom; you cannot have both, so take your choice." But the Indians have not the resources for the medical and educational and developmental needs of their communities. So they must choose the continued governmental interference in their local affairs. This satisfies nobody and gets nowhere. Congress, frustrated, then attempts to use force or bribery to induce Indian communities to make the other choice.

The title of this discussion is "The General Problem of Indian Termination." It is put forward as a controversial subject, like those we hear discussed on Sunday TV programs. It is like a discusison of the subject, "Should we repeal the Taft-Hartley labor bill?" To the participants on the program the Taft-Hartley bill is a symbol of either a great reform in labor relations or, conversely, a symbol of oppression. To the prounion members of such a panel it represents everything bad—legal strikebreaking, a less advantageous bargaining position for unions, and so on. To the more conservative members it represents everything good—the right to work without interference, reform of labor racketeering, etc.

The word "termination" is just such a symbol. To its proponents it represents a great reform in Indian affairs. To its opponents

it represents a dangerous trend. Those Congressmen and members of the Indian Bureau who have recently been proponents of termination see it as a way to free Indians from control by a Federal bureau and give them an opportunity to integrate with the rest of the country. Indians and others who have been opposing this recent trend in Indian affairs view termination or withdrawal as a symbol of everything bad: the breaking of treaty rights, the loss of land, and the destruction of the Indian as a distinct people.

Since, as social scientists, we are supposed to think analytically and not symbolically, we must ask just what the word "termination" means in this discussion. Does it mean freeing the Indian from control of an outside agency? Does it mean the taking away from Indians of needed services? Does it mean giving up Indian self-government and coming under State juridsiction? Does it mean land allotment? One could go on for an hour listing items, but the main point to get across here is that we need to get back of this vague symbol and really define what we are talking about when we speak of termination.

Now, just as it is not profitable to talk aboue the Taft-Hartley law without talking about the economic structure of capitalism and the whole context of labor-management relation, so it is not profitable to talk about termination without talking about the whole context of Indian affairs. One salient feature of this context seems to those of us who have studied the situation to be of overwhelming importance: that is simply that the American Indian tribes still in existence are communities that have existed for a long time and will probably continue to exist. Moreover, they want to continue to exist; usually they want this very strongly.

It is not in the American tradition to deny the right of a community to exist if it wants to, nor to deny it a fair freedom to live as it wishes. When the chips are down, the American democracy will insist that if the Indians want it that way, Indian communities should be allowed to exist as self-respecting, distinct communities with distinct values and ways of life provided they maintain a reasonable standard of health and of living and are no threat to others.

Any particular termination program should be measured against this general problem of the maintenance of the Indian community. I have listed seven problems of the Indian community that any program must deal with. Let me run through these seven points quickly.

1. Land: Does the termination program leave the community an adequate land base? Every time termination is mentioned to Indians they see before them the specter of the land swindler. An adequate land base means not only land as an asset in the economy, but land as a base for community life. Does the program provide a way for the community to hold land and still permit individuals who want to leave the community to do so, with a share of the tribal estate, but in such a way as not to endanger the rest of the community?

2. Civil rights: Does the termination program allow the individual Indian the same civil rights as any other citizen? When the Bureau of Indian Affairs withdraws, will some other agency be administering to and making decisions for incompetent Indians as before?

3. Services: Does the program fill the needs for education, health, etc., which appear necessary on the principle established in modern society that these are services which must be provided for any community, independent of who pays the bill?

4. Economic development: Does the program provide for development of the resources of the community so Indian families wherever and wherever possible can live at a decent standard of living in their home communities? Again on the accepted principle that this is not simply for the benefit of the Indian communities but for the good of the larger society, which cannot tolerate very many economic "black spots"?

5. Community affairs: Does the termination program allow the people of the community to run their own affairs? Will they be permitted to make themselves all of the decisions that American individuals and local communities normally make in the course of time? Will the Indians or some outside agency have the last word in a tribal development program? Who will make the ordinary day-to-day decisions: to hire the janitor for the local school or the doctor in the clinic; to take care of the school bus and hire or fire the schoolteacher? To put the question in reverse, but meaningful terms, does the termination program assure that when a teacher in the Indian school sets out to build a career she will seek to please not some outside agency, but the Indians of the local community?

6. Way of life: Does the termination program allow a community to keep its own way of life to the degree that it wishes within the broad limits permitted all groups in a democracy? Will they have the same right to their religion and cultures as the Poles in Chicago or the Cajuns in Louisiana?

7. Self-determination: Does the termination program allow the community to decide its own destiny? Besides the fact that in America self-determination for individuals and communities is a strong value, this is perhaps the overriding question to ask because it is very unlikely that any program can succeed if the people involved do not understand and like it, even if administrators work wisely and carefully with the community and even if the program is otherwise good.

So here are seven questions to ask about the so-called termination program. For a program to be good it must fill these criteria and seem likely to provide the best answers to the general problems of most American Indian communities. Does the termination program provide for an adequate economy? Will the program allow the people of a community to run their own affairs? Does it protect civil rights? Does it provide for needed services to the community? Can a community maintain it's own way of life under the program? And, finally, does the program allow the people of the community a voice in deciding the destiny of their own community?

If not, not only will the program not help matters but it will add a new tragic chapter to our history of mistakes with respect to our American Indians. Perhaps the major disastrous effect of the denial of the right of a community to make its own decisions is the psychological immobilization of the people. At Tama, Iowa, where we are involved in a project, just such a situation has arisen. To the Mesquakie Indians the relationship between themselves and the Federal Government is a symbol to them that they, the Mesquakie, will survive as a distinct community. Government withdrawal means withdrawal of recognition of the tribe and its death. This is so threatening that it is hard for the Indians to think of any change or any program because any move might lead in the direction of Government withdrawal. They are "stuck on high center," so to speak. A good example of great harm done to a people by tampering with their destiny is that of the Five Civilized Tribes of Oklahoma. From a prosperous people working out a satisfactory adjustment with the white man they have, in 50 years' time, become a poverty-stricken, threatened people who withdraw from the white man. This condition was caused by a hasty and clumsy termination program. We cannot afford to repeat such mistakes.

It is clear that at least the Menominee and the Klamath termination programs do not fulfill these conditions. Therefore, they are harmful. But is the alternative to go on as before? Do we simply return to the policy of paternalistic Government management of these communities? Indians and friends of the Indians have been so committed to fighting against termination that all their energies have been taken up in negative proposals. But it is not too much of a choice between termination in its worst form and the present system.

We need an entirely new approach. We need to separate the two problems, the money which the Indians need for their community services from the way the money is used.

I doubt that responsible Americans will want to interpret our policy as one which is importantly influenced by a desire to save money to the detriment of our Indians and in violation of our traditional and moral obligations. It has been and should be our policy to make it unnecessary to provide special services, hence to make Indians independent. But until this is accomplished, the money must be provided because it is needed and because it is part of a historical obligation that our people have always recognized. Therefore, the first plan of any policy must be to assure Indians that we shall continue to provide in the Federal budget the money needed to continue present Indian services.

Our studies show first that most Indian communities cannot provide themselves with needed social services; and second, that most Indians are afraid of being under State jurisdiction and most States are not eager to take over such a financial responsibility. It follows that the first part of a constructive policy is that Federal financial assistance must continue. But with one great change: Indian communities should be allowed to run their own affairs, to administer their own social services as every local community does. What the Federal Government has done over the years is manage local Indian affairs from outside, and on seeing the inevitably bad results of such folly we now impatiently attempt to dump them in the laps of the States. This solves nothing, and indeed the threat is paralyzing. The truth is that if Indian communities are over to develop and make satisfactory adjustments, they must be helped to manage their own affairs.

Congress does not like the idea of Indian communities' being controlled by a government bureau. Neither do the Indians. At the same time, if Indians cannot pay for their own social services, someone has to—whether State or Federal governments. But why, if we want to get rid of the overcontrol of Indian communities must we, also, cut off needed subsidies. In some manner the administration of and the subsidy of Indian community services (like health and education) must be separated. Just as farmers who receive large subsidies from the Federal Government are still permitted to run their farms and make their own mistakes, so could it be with Indian communities. If then, finally, we (1) stop frightening Indians by threatening to dissolve the symbolic relationship so important in Indian eyes between the Federal Government and themselves; (2) continue Federal subsidies where necessary; but (3) remove the traditional over-administration and control of Indian affairs (even if this takes drastic revision of Federal Indian laws) and allow Indian communities to decide their own destinies, it seems to us certain that there will occur an Indian development and adjustment of a kind we have never seen. Should it surprise us that the right way turns out to be the way that fits American values of freedom and local self-determination.

Appendix

Contract Authorization in Federal Budget Procedure

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. CANNON. Mr. Speaker, as a major contribution to the discussion of budgetary procedures now pending before the Congress and its committees, I am including in the CONGRESSIONAL RECORD an article on the subject by George Y. Harvey, of the department of political science at the University of Missouri, reprinted from the last issue of the Public Administration Review, volume XVII, No. 2, spring 1957.

Mr. Harvey served as clerk and staff director of the House Committee on Appropriations for many years and is more intimately acquainted with the subject and knows more about congressional appropriations and Federal budgetary procedures than any other man in the Nation today.

I take particular pleasure in submitting for the attention of the Congress this timely and authoritative discussion by one so eminently qualified to speak from first-hand knowledge.

The article follows:

CONTRACT AUTHORIZATION IN FEDERAL BUDGET PROCEDURE

(By George Y. Harvey, department of political science, University of Missouri)

The budget of the United States, as submitted to Congress, in reality is 2 documents in 1. First, it states the amount of revenues estimated to be received and the amount anticipated to be expended during the fiscal year. Second, it authorizes the various agencies of the Government to operate for the fiscal year and sets the amount for which they may obligate the Treasury in carrying forward their programs.

It is this second part of the budget that requires annual action by the Congress. It is submitted to the Congress annually and is acted on by the Congress annually, but there its annual character ceases. Purportedly it is a budget for a particular fiscal year and is thought of as representing the cost of operation of the Government during that year, but it is not that simple. It includes funds for the completion of projects and programs begun in previous fiscal years; for the payment of items due because of the operation of laws authorizing agencies to carry on activities that are not related to any fiscal year, except as it may be possible to compute the cost thereof for the year; and for the beginning of projects that may take years to finish.

During the past decade the accounting and budgeting processes of the Federal Government have been the subject of continual and highly controversial discussion, with many ideas for improvement advanced. Constantly recurring in these discussions is the question of control of balances carried forward. Year after year, estimates have been presented by the executive agencies and accepted by the Congress, but the failure of executive agencies to carry out their programs as originally scheduled has resulted in accumulation of great sums on their books. These balances have reached a size where they are properly the concern of all who seek to improve the budgeting methods of the Government.

The Commission on Organization of the Executive Branch of the Government (second Hoover Commission) dealt with this problem under the heading "Restoration of Congressional Control of the Purse."[1] It recommended "that the executive budget and congressional appropriations be in terms of estimated annual accrued expenditures, namely, charges for the costs of goods and services estimated to be received." To effectuate this change "the Congress would give the agencies contracting authority in terms of the dollar amount required for orderly forward contracting beyond the budget year." This proposal, made by the task force on budget and accounting, was accepted by the commission without change.[2] Although the task force gave a more detailed explanation of the need for some change in the system, neither the task force nor the commission gave an acceptable explanation of how the change from outright appropriations to contract authority would cure the defects complained of.

THE PROBLEM OF CARRYOVER FUNDS

The task force called attention to the large carryovers unexpended at fiscal year end, ranging from $11.5 billion in 1950 to a high mark of $78.4 billion in 1954. It pointed out that substantial amounts of these funds remained unobligated, free money available to the agencies for obligation in future years, reaching a total in 1 year of more than $22 billion. Attention was also called to the fact that frequently the amounts of obligations reported were overstated.

This information was not news to the House Committee on Appropriations, where the question of invalid obligations had been raised many times. The task force drew much of its data from an investigation by the Comptroller General made at the request of the committee in 1954. At that time the committee secured enactment of legislation to correct the situation to the extent possible in dealing legislatively with such an intricate administrative matter. The question of carryover funds relates largely to the Department of Defense. In fact the task force mentions only that department in its analysis.

The task force recognized two categories of Government programs to be financed and recommended that the new concept of forward contracting authority be applied to both. The first is the group of programs which involve long lead time between the placing of orders and the delivery of goods, these programs being financed largely out of continuing appropriations not limited to 1 year. The second is the regular annual part of the budget which provides operating expenses for the various agencies out of which salaries and other current expenses are paid. Both the commission and the task force are vague as to just how the concept of forward contracting authority would apply to the purely annual part of the budget, but it would seem that the proposal is so close to the present system as to constitute a distinction without a difference.

The problem therefore narrows down to the defense procurement appropriations requiring long lead time and the question is: Will the change to contract authority to cover the lead time and the provision of appropriations as needed to liquidate such contracts produce a better controlled budget? The commission accepts the thesis that it will, with this statement in the preface to its report: "* * * within an effective budgeting system lies the restoration of the full control of the national purse to the Congress."

THE POINT OF CONTROL

The paramount question for the Congress to consider is the point of control—that point at which authority is vested in executive agencies to proceed with their programs and commit the Government to the costs thereof, thereby resulting ultimately and inevitably in expenditure by the Treasury. If it is to accomplish its mission, the executive agency must be clothed with enough authority to make firm and binding contracts which commit the Government irrevocably, so that there will be no question of payment. Any lesser authority obviously would be worthless. The current practice is to make an appropriation, stating its purposes and limiting its use as the Congress may determine. Such appropriation carries full authority to enter into contracts and do all the things necessary to carry out the particular program, including the money to pay the bills when properly rendered.[3]

Contract authority, to be effective, must include all of the elements now included in an appropriation except the one step of making funds available for payment. The failure of Congress to make appropriations for the liquidation of contracts entered into pursuant to such authority would only result in deficiency requests and ultimately, if moneys were not appropriated, in court judgments. Control of expenditures would move to the executive branch at the time contract authority was granted, with the Congress required to take a second—and purely ministerial—action to provide money for payment.

WHAT CONTRACT AUTHORIZATION IS

An appropriation is a two-phased proposition. First, it establishes on the books of the operating agency an account against which obligations may be incurred. Second, it establishes in the Treasury an account through which cash may be made available when necessary to liquidate obligations legally incurred.

Contract authorization is identical with the first phase of appropriation. The appropriation for the liquidation of obligations incurred against contract authorization must be provided in a separate law and carried in separate accounts. All expenditures out of the appropriation will be for purposes of the contract authorization and all tests of legality will be in terms of the contract authorization.

It is not necessary to speculate on the net effect or true nature of contract authorization. It is as old as the Government itself, the first such authorization having been voted by Congress in 1789.[4] In 1942 Congress enacted contract authorizations totaling more than $19 billion. During World War II, and in the immediate postwar period,

Footnotes at end of speech.

Footnotes at end of speech.

contract authorization in lieu of direct appropriation enjoyed quite a vogue both in estimates submitted in the budget and in appropriation acts. It was experience during this period that led the Committee on Appropriations of the House and the Bureau of the Budget to eliminate contract authorizations from the budget and the appropriation acts in 1950.

A recent book by two leading accountants who have had wide experience in the Federal Government has the following to say about contract authorizations:

"Contract authorizations, in effect promises of future appropriations, confer authority to incur obligations during a single fiscal year by permitting the granting of contracts on which no payments (and usually no delivery of goods or services) may be required until after that year. Contracts made under such authority can be legally enforced, and the Congress must, in subsequent years, appropriate whatever amounts (theoretically equal to but in practice generally somewhat less than the original authorization) are necessary to cover them."[5]

The significant words in this statement are "must appropriate." Congress has no discretion, once the contract authorization has been granted. While it is true that the final appropriation might, and probably would, be somewhat less than the amount of contract authorization, this fact is a matter of no importance. The amount of appropriation would approximate the amount of expenditure that would have resulted had the full amount been appropriated in the first instance. An unobligated balance of an appropriation cannot be expended, so the balance would be just as sterile as the balance of a contract authorization.

The Commission and its task force make an impressive case for reducing carryover balances and quite properly view with some alarm the size of the expenditures to which the Government is committed far in advance of the submission of the annual budgets. They also point out that much of each year's budget is controlled by previous acts of Congress. They fail, however, to show how the change to contract authority will improve the control by Congress over the public purse. While the amounts appropriated may be a little closer to the actual expenditures, the relationship between the amounts originally authorized and the amounts finally expended will remain the same.

THE BUDGET CANNOT BE TRULY ANNUAL

The annual budget is not so annual as it may on its face appear to be, even in its most simple parts. For example, a budget item providing for the salaries of employees in a particular bureau or office must be related to the number that are expected to be on the roll at the beginning and at the end of the year. A proposed increase or reduction in force cannot be effected immediately at the beginning of a fiscal year, and the amount of the appropriation must take this fact into account. If the Government closed all of its offices and activities on June 30 and opened on a brandnew basis on July 1, then a truly annual budget would be possible.

It is highly desirable that future commitments be kept to a minimum and that so far as practicable the annual nature of the budget be maintained. Prudence often dictates, however, that long-range commitments be made.

For example, the appropriation, "Aircraft and related procurement, Air Force," which the task force cited as illustrating the large amounts of carryover, cannot be for an annual program. The period from the drawing board to a prototype to a completed fleet of airplanes covers a span of years that varies with the size and complexity of the craft. To carry out a particular program, the Air Force must be in a position to commit the Government to its entire contemplated cost, and the Congress must therefore grant to the Air Force sufficient authority to make a commitment that will be binding on the Government.

It is not important, either to the Air Force or to its contractors, whether this authority is in the form of appropriation or contract authority except as a contract may call for interim payments. Interim payment clauses are not unusual in contracts calling for large outlays of capital over long periods of time, and payments are made for partial work accomplished even though no completed units may have been delivered. To the extent that the Air Force had been granted authority to make binding contracts, it will be in control of the spending program. And, to the extent that appropriations may be necessary to enable the Air Force to meet interim payment demands, it will be necessary for the Congress to appropriate funds in a separate account, probably at the time that the contract authority is granted.

The problems in the aircraft procurement account, however, are not all budgetary. More than once the Congress, after considering all factors, has concluded that, regardless of the picture disclosed by budget figures, more funds must be provided in order to assure the necessary air defense. The budget estimate has sometimes been exceeded. These were policy decisions, made by Members of Congress in the light of their responsibility to the country and on the basis of knowledge of world conditions, going far beyond the limits of books of account.

The present concern is not with such decisions but with the technical aspects of the accounting and budgeting practices of the departments, with a view to furnishing the Congress with more reliable information on which to base its decisions and minimize carryover balances to whatever extent may be possible through improvement of the techniques of budgeting and accounting. The history of the aircraft procurement appropriation and the variation of obligation and expenditure estimates, used for budget-making purposes, from actual results obtained strongly indicate the necessity of a careful study of the planning and development of the program itself leading eventually to a more realistic plan of financing. It is hardly justification for a frontal attack on the basis of the whole budget when the great majority of the items in the budget are now presented on an apparently satisfactory basis.

THE PERFORMANCE BUDGET EFFORT OF 1950

In those parts of the budget where long lead time is not an important factor and, therefore, the change to accrued annual expenditure basis would be practically meaningless, the commission gives as its chief reason for suggesting this basis: "It would place budget appropriations and expenditures on a uniform basis throughout the Government." Any attempt to place the entire budget on a uniform basis, however, involves difficult problems. This fact is well illustrated in the performance budget effort of 1950.

The first Hoover Commission recommended what was termed a "performance budget," and in 1950 the budget for the fiscal year 1951 was prepared by the Bureau of the Budget on an entirely new basis in an attempt to comply with this recommendation. That effort was abortive because uniformity of classification was followed to the point of producing unreal results and because few agencies had the kind of accounting system necessary to support the performance or program concept. The Bureau of the Budget's own budget was the outstanding example of this shortcoming.[6] The Committee on Appropriations of the House had the following to say about the situation:

"In its full fruition it is hoped and expected that the better presentation of data will enable the Congress to appropriate more intelligently and provide funds more nearly in line with actual requirements. This can be accomplished only if the budget data are so directly related to the accounting data available in the agencies as to make possible a close check on cost of operations. Some of the schedules in the budget for 1951 meet this test. Others are so written as actually to result in lessened facility for consideration by the Congress. * * *

"The Secretary of the Treasury, the Comptroller General of the United States, and the Director of the Budget have undertaken a joint program to improve accounting processes in the Government. In this effort lies the success or failure of the performance-type budget. * * * If the new method is to succeed immediate attention must be given to modernization and improvement of accounting systems, and the schedules in the budget must be so written as to provide a basis for proper accounting. * * * The staff of the Committee on Appropriations will discuss the subject in detail with budget officers of agencies and the Bureau of the Budget before the budget for 1952 is formulated."[7]

Remodeling of the budget system was a long and difficult task. After preliminary conferences, it became obvious that no one method would meet all requirements, so the Comptroller General and the Director of the Budget were requested to make a survey of each agency and present an evaluation of accounting and budgeting methods and the degree of integration of the two. It was then necessary to take up each agency's budget and accounting system separately and to make a detailed study that often resulted in the revision of both.

The effort in each instance was to work out a presentation which would have the maximum of accounting support and would supply the Congress with as full information as possible on cost of operations. Wherever modern cost accounting methods were found to be desirable, they were installed. In some instances, where operations were simple and consisted only of direct employment of small numbers of people with usual contingent expense support, the old system of straight allotment accounting proved to be basically as good as any. Most agencies of the Government worked willingly to secure improvement. A few had to be encouraged.

This program was carried into the Department of Defense as well as the other agencies of the Government, but with slower and less satisfactory results. There were various reasons. The job was much larger and more complex. It was worse confused by the fact that the Korean war was underway and a general expansion of the Defense Establishment was beginning.

Questions as to the degree of success accomplished by the various studies and changes in systems would probably provoke some controversy. No one considers that perfection has been achieved. Many of the original systems devised under this program have been remodeled, and each year sees additional improvement as longer experience and changed conditions indicate. A flexible pattern has been adopted that will permit adjustment of the budget of the individual agency to suit its own peculiar needs and to lay before the Congress the best possible information. The second Hoover Commission has placed its stamp of approval on this program.

THE ACCOUNTING IMPROVEMENT PROGRAM

The great secret of success of the accounting improvement program undertaken by the

Footnotes at end of speech.

Footnotes at end of speech.

General Accounting Office, the Bureau of the Budget, and the Treasury Department in 1948 was the immediate abandonment of the old theory of a uniform accounting system for all agencies of the Government. The accountants in charge of that program went into each agency, studied its accounting needs, and proceeded to tailor a system to fit. This program will never be completed, for it is geared to constant review in order to keep the accounting practices of the Government modern. Moreover, each agency has an accounting system written to meet its own requirements and no two of these agencies or systems are exactly alike.

The Government of the United States is a complex thing. It includes retail businesses, manufacturing plants, shipyards, public utilities, insurance programs, research programs, museums, and so on through all of the categories of business and human endeavor. No accountant would attempt to prescribe the same accounting system for the Pennsylvania Railroad and the A & P grocery chain. It would be equally ludicrous to ask the Alaska Railroad and the Post Exchange system of the Army to use the same accounting system merely because they both happen to be operated by the Government.

What is needed, and what to a considerable degree has already been accomplished, is an integrated accounting and budgeting system directly related to the plans and operations of the management of the agency involved. To the extent that this integration can be accomplished, the Congress will receive an intelligible budget proposal and will be in position to act on it with confidence.

Budgeting is not a separate art. A good budget is a natural result of good management and good accounting, and a budget is only as solid as the planned work program on which it is based.

UNREALISTIC ESTIMATES

As stated above, the Committee on Appropriations in 1950 took a positive stand against contract authorization in the annual budget. While it may be argued that it is in the period since that time that the current balances have accumulated, the change to direct appropriations has had nothing to do with that situation. It has been an abnormal period involving the war in Korea and the post-Korea defense program, with a constant clamor for an even larger defense program. Total obligational authority, including both appropriations and contract authorizations, provided for the fiscal year 1950 was $47.3 billion. Obligational authority for the fiscal year 1952 was $92.9 billion. For 1955, it was $57 billion, and balances carried forward amounted to $67.7 billion.

There is plenty of evidence of unrealistic estimating. For example, the Air Force stated in January 1953, that it had available for obligation for "Aircraft and Related Procurement" for the fiscal year ending June 30, 1953, $12 billion, all of which would be obligated; it requested for the next fiscal year, 1954, $6.7 billion, all of which would be obligated during that year.[8] Congress appropriated only $3.5 billion for 1954, yet the Air Force carried forward into 1955 an unobligated balance of $4.6 billion.[9]

It was during that year that the House Committee on Appropriations made the review of outstanding obligations and obligation procedures that resulted in the enactment of legislation[10] that has served to correct the situation to some degree. Some programs, however, may justify the carrying of unobligated balances. For instance, at the time contracts are let for airframes and engines, which require a long period to manufacture, there may be justification in reserving the funds necessary to acquire other equipment that will be required to complete the craft but for which it may not be necessary to let contracts until a later date. The real question to be asked here is whether program planning can be improved upon and more directly related to fiscal requirements.

No mere change in nomenclature—and that is all the change to contract authorization would amount to so far as potential drain on the Treasury is concerned—will affect the situation. If the estimates of the departments have been unrealistic in the amounts they would be able to obligate against appropriations, they would have been equally unrealistic against contract authorization. Liquidating appropriations would have been made on just as unrealistic estimates and the balances outstanding would include both authorization and appropriation overlapping one another.

POSITIVE ANNUAL CONTROL IS NOT FEASIBLE

The proposal of the Commission is, in a sense, a defeatist approach to the problem. It admits the necessity of granting to the agencies authority to make contracts and then attempts to control the flow of expenditures by separate action after contracts are firm. The task force says that "although the Congress and the executive branch may control the level of payments over a period of years, the payments are not effectively controlled annually." That statement is true, and it would remain equally true if the system of contract authorization were adopted. Annual appropriations, under the method proposed by the Commission, would be arrived at by estimating the amount required to meet obligations already incurred with no possibility of control at that point.

The House Committee on Appropriations did not elaborate on its reasons for stopping in 1950 the use of contract authorization beyond saying that it "has resulted in committing the Federal budget to substantial expenditures several years ahead."[11] However, the committee, then as always, was under extreme pressure to find every possible means of securing reductions in appropriations. It was that year trying a method which had long been suggested—including all appropriations for the year in a single bill.

In the prevailing atmosphere the committee would not have prescribed contract authorization if it felt that it offered the slightest hope of holding down eventual expenditures. The men who took that action were thoroughly familiar with contract authorization because they had tried it. Year after year they had enacted law after law granting contract authorization in the hope that they were protecting the Treasury. But the day of reckoning settled the issue. They found that all control of the situation had passed out of their hands at the time they authorized the departments to make the contracts. When it came time to appropriate they had to take the departments' word for the amounts that probably would be due in a given year. To have withheld appropriations at that stage would only have resulted in embarrassment to the contracting agencies and impairment of the Government's credit with the business community.

The question then is: Why did the Hoover Commission recommend a system tried and found wanting over the years? There is not a line in the Commission's report to explain how contract authorization offers any better control over the final expenditure than the present method of appropriation. The House Committee on Appropriations, in the 10 years prior to its decision in 1950 to drop contract authorization and go on a straight appropriation basis, had enacted more than $50 billion of contract authorization. It is only fair to suggest that those who propose to return to this system and extend it to the entire budget should examine the record and show how it worked to the advantage of the taxpayer.

ESTIMATES OF BALANCES NOW AVAILABLE

The budget for the fiscal year 1955, presented to Congress in January 1954, for the first time included estimates of balances to be carried forward beyond the fiscal year. Prior to that time, it had been standard procedure for all agencies to estimate that all funds requested would be obligated by the end of the estimate period. The change was made possible through the improvement in accounting and budgeting methods begun several years previously.

The record of the balances estimated and actually carried over from 1955 to 1956 is shown in the following tabulation:

Carryover	Total (billions)	Obligated (billions)	Unobligated (billions)
Estimated in 1955 budget in January 1954, 6 months before beginning of fiscal year 1955	$50.2	$46.5	$3.7
Estimated in 1956 budget in January 1955, at middle of fiscal year 1955	53.8	40.8	13.0
Actual stated in budget for 1957, in January 1956	52.1	51.7	20.4

While the total amounts originally estimated to be carried over did not vary materially from the total actually carried over, there was a marked shift from obligated to unobligated.

Of the unobligated amount carried over into 1956 ($20.4 billion), $18.2 billion was in the Department of Defense and $2.2 billion in other departments. In the budget for 1958 it is estimated that total carryover from 1958 into 1959 will be $41 billion, or which $8.5 billion will be unobligated. Of that amount, $7.9 billion is in the Department of Defense. These figures indicate that some inroads have been made on the backlog in the 3 years that Congress has had before it statements of balances carried forward. This improvement is the result of orderly, constant attention to details as opposed to a sweeping revolution in system.

The basic problem that should be attacked is the reason for each balance. It would appear that the difficulty lies in lack of coordination between program planning and budgeting. In earlier years there may have been some justification for the program planning arm of an agency not to know enough about the status of outstanding funds to permit a realistic presentation to Congress of future needs. This situation no longer exists, or at least there is no reason for it to exist. Adequate accounting procedures have been, or readily can be, instituted to furnish management with full and complete information as to fund control, so that budgetary requests can be closely related to plans for the future in terms of past performance and indicated capabilities.

THE AIR FORCE SEES ITS NEED

The Annual Report of the Comptroller General of the United States for 1956, issued on December 26, 1956, includes the following statement with respect to the Air Force:

"In accordance with a request by the Assistant Secretary of the Air Force (Financial Management) and the Deputy Chief of Staff (Comptroller), our Office with the assistance of the Air Force, undertook a survey of selected functions and procedures of the Air Force Comptroller's organization and activities. The purpose of the survey was to make recommendations for improvements in organization and procedures and to eliminate duplications, unnecessary records, and in effective correlation of financial data and related matters."

Footnotes at end of speech.

Footnotes at end of speech.

That is the kind of work which in the long run will pay off. Correlation of financial data and related matters and the proper use thereof are the key to the situation. They can be achieved only through the efforts of the persons responsible for the management of the agencies concerned. It is heartening that the civilian and military sides of the upper echelon of management in the Air Force have joined in a request for assistance, looking to improved budgeting and financial management.

The Commission's proposal is a superficial approach that admits the necessity of letting the executive branch have authority to obligate the Public Treasury years into the future, yet includes no provision for improved control. Future financing is necessary within limits, and the job is to find the limits. Intelligent budgeting requires that the executive agencies be vested with sufficient authority to plan their operations into the future. Congress, to meet its responsibilities, must limit that future period as much as possible and retain positive control over it.

But Congress has no executive authority. Congress cannot manage the departments. Congress cannot develop a work program or make a budget. The only weapon available to Congress is to withhold funds and it has done so. In 1947 the United States Maritime Commission was forced to close its doors the last week of the fiscal year and furlough its employees without pay. Such methods, of course, are out of the question where the security of the Nation is at stake.

The Hoover Commission might have rendered great service had it gone to the root of the trouble, sought out the causes of each of the balances, and attempted to find a way of eliminating them. What it offers is a palliative for symptoms when what is needed is heroic surgery to find the cause of disease and eliminate it. Large balances exist in just a few items involving only a few offices of the Government. Each of them could be readily isolated for special study. The House Committee on Appropriations established the pattern for just this approach and through its efforts has made many improvements. This approach is slow, tedious, and wholly undramatic, but it gets results.

Present large balances have grown up during a period of maximum activity in the building of a greatly increased defense force. In order to be assured of maximum results, Congress has found it necessary to grant to the military agencies broad authority and large amounts of money available into future years. The result has been an abnormal fiscal situation. It may be hoped that some degree of normalcy may be restored now that the defense establishment has been enlarged to handle its larger responsibilities. As is always the case in a period of rapid expansion, there has ben a great deal of administrative chaos. Is the request of the Air Force to the Comptroller General evidence that a more orderly day may be in sight.

Hon. Thomas E. Murray

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal dated July 1, 1957:

THE UNLIMITED MANDATE

In his 7 years on the Atomic Energy Commission, from which he retired yesterday, Thomas E. Murray has been an outspoken foe of atomic secrecy—as has this newspaper from the beginning. Mr. Murray has also been an articulate champion of other, and to our mind, wrong causes.

He is in the forefront of those who would make the Federal Government the chief developer of American atomic industry. His thinking on this subject is summed up in the section of his report to Congress reprinted on this page this morning. We publish it because we believe the country should be aware of the argument this powerful group, in and out of Congress, is making.

The argument is that the United States must take the lead in the world's emerging nuclear economy. American private enterprise, it is contended, is unequal to this task. Therefore there must be a vast Government program of reactor building and other atomic activities.

The key here is what one means by "taking the lead" in the world. By any standard the United States has had and has the lead. True, the possibility exists that Britain will temporarily outdistance this country in the actual volume of electricity generated from the atom. Why? Because Britain, like its European neighbors, faces a shortage of conventional fuels and has in effect frozen its atomic reactor designs, at what are generally considered primitive levels, in order to get quantity fast.

The United States faces no such shortage. It is moving more slowly in terms of getting quantity. But it is moving more rapidly in the more important field of technology; the object is to find the type of reactor that will make the atom competitive with other fuels in this country—not Britain or any other nation.

As Mr Murray concedes, American firms have undertaken a variety of ventures in this field, spending a lot of money, time and manpower. Spectacular advances are being made. It seems to us the variety of experimentation now going on is the best possible kind of guaranty that the United States will eventually evolve the most efficient nuclear technology—and so, as a by-product, keep the world "lead."

If, instead, the Government takes the lead with the avowed aim of kilowatt volume, then it seems equally certain we will get the quantity we don't now need rather than the quality on which we should be concentrating. In this way we would be in a fair way to losing the long-term nuclear "lead."

There are other dangers which Mr. Murray dismisses all too casually. To him "socialization" and "public versus private power" are false issues in this case. In fact they could hardly be more real; the public power lobby is propagandizing for all it's worth for a costly Federal atomic industry program. And if having the Government build, own and operate atomic utilities is not socialization, it would be interesting to know what it is.

Curiously enough, though, Mr. Murray's whole argument turns not on economics but on an assumption of political philosophy. In this view the constitutional mandate to "promote the general welfare" now extends to the whole world, or at least the non-Communist part; suddenly it is the United States Government's political and moral duty to lead the world in atomic industrial development.

Is it? By whom was the mandate given? We are not aware that Europe gave it. Indeed some nations would vigorously, and rightly, reject the notion that any such mandate exists. And many Americans might understandably question the idea that the framers of the Constitution had anything of the sort in mind. Such arrogance, happily, was not in their nature.

There is, nonetheless, an implicit mandate in atomic energy as in all natural resources. It is that it be used in the most effective way for the material advantage of man and at the same time in ways calculated to promote, not constrict, man's liberty.

That is something beyond the scope of Government. It will never be accomplished by propounding an unlimited mandate to remake an unwilling world.

In New York, It's Different

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I would like to place in the CONGRESSIONAL RECORD at this time a very timely editorial which appeared in the July 2, 1957, issue of the Tampa Morning Tribune. The editorial is entitled, "In New York, It's Different."

I hope that all of my colleagues will take the opportunity to read this pertinent article and I particularly commend it to the reading of those of my colleagues who have been shedding so many crocodile tears in the past few weeks over the so-called civil-rights legislation. For their reading and careful consideration, I also recommend another pertinent message on this same subject which can

be found in the Bible in chapter VII of the book of St. Matthew.

The editorial follows:

IN NEW YORK, IT'S DIFFERENT

All week we scanned the reports of the NAACP convention in Detroit looking expectantly for a resolution denouncing those die-hard segregationists in New York City who are blocking a proposed city law to forbid discrimination in the rental of private homes and apartments.

There was a resolution charging nine southern States, including Florida, with deliberately defying the Constitution, the Supreme Court and the National Government in the matter of school segregation.

There was a resolution attacking Congressmen and Senators who oppose passage of the so-called civil-rights bill to let the Justice Department supersede State courts.

There was another whacking the White Citizens Councils for fostering an atmosphere of terror and intimidation in the South.

But nowhere in the basketful of resolutions or in the indignant floor speeches could we find a single, solitary reference to the great segregation battle in New York City.

Now, you'd think that an organization which has gone to great trouble and expense to attempt to mix the races in four small schools in Summerton, S. C., would be more concerned with wiping out segregation in 1,800,000 dwellings in New York City, wouldn't you?

Well, no you wouldn't, really. For the NAACP doctrine is that all racial discrimination begins and ends at the Mason-Dixon Line and to confess otherwise would imperil its whole campaign against the South.

The New York City housing fight exposes inconsistency on the part of others than the NAACP.

This proposed city law would do for the house hunter what the FEPC attempts to do for the jobseeker: shield him from discrimination. A landlord could be fined up to $500 for turning down a tenant because of race, religion, or national origin. If he persisted, he could be cited for contempt of court and sent to jail.

The proposal, like the civil-rights bill before Congress, has a political origin. This is an election year in New York City. Mayor Wagner and members of the city council had an eye on the minority bloc votes in issuing pious statements about the need to guarantee to all men the right to live where they please. (Nothing was said, of course, about the right of a private owner to rent to whom he pleases.)

But this was too strong a dose even for a city which has swallowed the FEPC. Landlords and real-estate men—and a goodly number of renters—gagged audibly. Councilmen were deluged with mail, running 3 to 1 against the law. The same New York Times which supports all measures to compel desegregation in the South concluded that this kind of enforced desegregation at home was bad.

In answer to the lofty moral reasoning offered by church and rights groups backing the law, opponents indelicately pointed out certain practicalities. Property values would deteriorate, they said, and mortgage money for new construction would flee to other cities. Furthermore, warned the Times, "the difficulties of enforcement are enormous, nuisance cases would be innumerable and intolerance might be aggravated rather than diminished. * * * Progress must be a matter of education and spiritual growth rather than a consequence of legislation."

These same arguments, made in all sincerity in the South, have been brushed aside as a camouflage for bigotry. In New York City, however, they have exerted enough force to send the open-door housing bill to a committee pigeonhole for further study. It is expected to stay there.

All of which simply proves again that, to a great many of our northern friends, the theory of compulsory brotherhood looks much better down South than it does down the street.

Agriculture's Architects Had Better Hurry

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. MARSHALL. Mr. Speaker, I want to call the attention of the House to an editorial in the July 1957 issue of the Independent Banker, commenting on an address by Secretary of Agriculture Benson before the Minnesota Bankers Association convention in St. Paul:

AGRICULTURE'S ARCHITECTS HAD BETTER HURRY

The editor was among several hundred who heard an address by Secretary of Agriculture Ezra Taft Benson at the Minnesota Bankers Association convention in St. Paul. It was a good talk, well received by his audience.

Though the Secretary has been subjected to more adverse criticism that any other Cabinet officer, he was not on the defensive. He stayed on the offensive by lashing out at and demolishing nine widely held half-truths about agriculture. His presentation was by way of explanation, not of defense.

Mr. Benson did, however, do little more than retill the same old soil. At the beginning of his talk he told the bankers, "I welcome the opportunity to meet with you and share my thoughts regarding the agricultural problems of this great State and this favored Nation." There was a promise of something new and challenging here, but we didn't hear it.

The farm problem, said the Secretary, is one that cannot be oversimplified. He declared, "There are many problems, not one. And for each problem there are many potential remedies, not just one. Most of these remedies are in the hands of individual farmers and their organizations. Better methods, improved marketing, power production costs, better choice of enterprises—these are solutions which may lack political appeal, but they are effective."

The superstructure of production controls and price supports, said Mr. Benson, "is now beginning to sag and creak at the joints. Increasingly, farm people are becoming convinced that some changes need to be made. The architects are assembling to draw up new plans."

We hope that the Secretary has something in mind but gather he is not going to tip his hand until he has talked to the architects and they have incorporated his ideas into a blueprint. We certainly wish the architects had been called in earlier, say about the fall of 1952.

Mr. Benson said the "price structure in agriculture should have flexibility in it—flexibility to go up or down in accordance with market conditions." That would seem to indicate he believes that only the law of supply and demand should govern. But he also said, "I do not propose to eliminate price supports."

And was the Secretary hinting that farmers should take up some other line of endeavor when he observed, "One of the most important components of economic security is the opportunity to change freely from one enterprise to another. Fortunately this opportunity continues for all groups with fewer impediments in this country than in any other country in the world."

Mr. Benson's was a good presentation, but left a lot of questions unanswered. He said there were many problems in agriculture and many "potential remedies." We would have been happier if he had listed a few of these remedies.

Oil Imports

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. ROGERS of Texas. Mr. Speaker, under unanimous consent I insert in the Appendix of the RECORD a concise and clear statement by the Honorable Ernest O. Thompson, of the Railroad Commission of Texas, concerning oil imports. It would be well for the President of the United States to heed the warning of General Thompson in this particular, rather than to appoint a committee to further stall action that is sorely needed in dealing with this most perilous problem.

The statement follows:

OIL IMPORTS

(By Ernest O. Thompson, Texas railroad commissioner, July 2, 1957)

Domestic oil producers are at the mercy of the importers of crude oil and petroleum products.

The importers determine freely and without let or hindrance the quantity of crude oil and petroleum products they wish to import during any given month. The only deterrent is a 10-cents-a-barrel duty on oil and a small duty on products.

For example, if the United States needs, say, 8 million barrels of crude per day to make products, and imports are estimated to be 1 million barrels per day, the only thing that can be done is to subtract that 1 million barrels imports from the total of 8 million barrels needed—leaving 7 million barrels for the domestic producers to supply.

They have imported as much as 1,600,000 barrels of crude and products per day. This takes the domestic market from the domestic producers and forces reduction in production.

There have been years of strong protestation against these constantly increasing imports of crude oil and products; but so long as the importers pay the 10-cents-a-barrel duty, there is nothing done about it.

Appeals have been made to the importers to show restraint, but more and more oil companies of the United States are getting into the importing business.

I feel that total imports of crude oil and products should not exceed 1 million barrels per day on the average. This would furnish the supplement of fuel oil and residuals we need, and would furnish adequate trade balances with other countries we sell goods.

It may turn out that a tariff increase will prove the answer to protect our domestic crude producers, and at the same time raise some revenue.

At all events, the President has been notified by the Director of Defense Mobilization that oil imports threaten to imperil the national security; and the President, under the Reciprocal Trade Act, has appointed a committee of five Cabinet members to check the Director's findings on the broadest possible

study. So perhaps there will be some action taken by the President under the Trade Act of Congress, which says he shall do the necessary things to correct the situation when any commodity is being imported into this country in such quantities as to threaten to imperil the national security.

We are hopeful for speedy relief.

Our "Friends" in Latin America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials from what many, with reason, regard as the world's leading newspaper, the New York Times. Certainly its coverage of and concern for Latin America warrant the highest praise.

I especially commend the following editorial, "The Dominican Mystery," to my few colleagues who insist on calling Trujillo a friend.

The other editorial raises the issue whether we must compromise our moral principles for supposed military and commercial advantages in Venezuela. The problem, as the editorial points out, is that there is a day of reckoning with all tyrannies.

The editorials follow:

THE DOMINICAN MYSTERY

One more step has now been accomplished in the slow but relentless process of unearthing the truth about the disappearances of Prof. Jesús de Galíndez of Columbia University and the young American pilot Gerald Murphy. So far as Generalissimo Trujillo, dictator of the Dominican Republic, is concerned it is a step backward, or at least he has sidestepped. He had been asked by our State Department to lift the diplomatic immunity of the former Dominican Consul General in New York, General Espaillat, so that he could come to the United States to testify. General Trujillo refused.

This is by no means the end of the case. On the contrary, it clears the way for another move by the State Department, working in conjunction with the Department of Justice. Neither in the case of Dr. Galíndez nor of Gerald Murphy can the American Government allow the mysteries to remain unsolved. The Columbia teacher, a distinguished Spanish Basque scholar, was snatched from the heart of New York City on March 12, 1956. Murphy disappeared in the Dominican Republic on December 3, 1956. In the latter case the American authorities are convinced that the Dominicans gave a false version of Murphy's death. The State Department believes there is sufficient evidence to link the two cases.

In the circumstances and considering how greatly public opinion in the Western Hemisphere has been aroused, it is obvious that the matter must be pursued further. The State Department needs no urging, for it is clearly keeping up the pressure. The affair is in the hands of a grand jury in Washington which is developing material furnished by the Federal Bureau of Investigation, the American Embassy in Ciudad Trujillo and the New York police. Something may well come of this investigation during the summer. It is obvious now that we cannot expect cooperation from the Dominican Government.

VENEZUELA'S DAY

We had our Independence Day yesterday and took it for granted that we should celebrate it, as always, in a climate of freedom and democracy. Venezuela has her Independence Day today—146 years after the greatest of Latin-American figures, Simon Bolivar, a native of Caracas, led the revolt against the Spanish. But Venezuela today has no freedom, no democracy, no liberty of any kind. She has one of the harshest, toughest military dictatorships in the Western Hemisphere.

Yet the people of Venezuela have the right to celebrate this day in spirit, for they have shown that they want democracy and freedom. When the military dictator, Gen. Pérez Jiménez, held presidential elections on November 30, 1952, he seemed to have thought everything had been arranged so that he would win easily. To his astonishment and dismay, as the count rolled in, he found that the Venezuelan people knew how to use their ballots. They were voting against him at the rate of 4 to 1, when Gen. Pérez Jiménez stopped the count and later had himself proclaimed victor. The real winner was Jovite Villalba, head of the Republican Democratic Union (URD), now an exile in New York.

Gen. Pérez Jiménez is now preparing to get himself elected to still another term. The real political parties, the URD, the Christian Socialist COPEI, and the Democratic Action Party, which once held power, are united in demanding honest, open, and free popular elections. It is beyond the realm of possibility that Gen. Pérez Jiménez would accede to their demands, for it would be the end, politically speaking, of him and his supporters. It also has to be recognized that the large American oil companies, with their tremendous and profitable investments in Venezuela, do not want to see the present situation disturbed. The same is true of the American defense chiefs who think in terms of the vital strategic importance of Venezuela and her oil to the security of the United States.

Venezuela on her Independence Day is therefore the most prosperous and least free of nations. The lack of freedom is not only a great pity; in the long run it is a serious threat, for a day of reckoning will come and on that day things could go hard for the United States and for American interests which today support an unpopular military dictatorship in Venezuela.

Trading With Communist China Would Be Like Trading With the Devil

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, which appeared in the Belleville, Ill., News-Democrat on June 28, 1957. The editorial, entitled "Armchair Tacticians," follows:

ARMCHAIR TACTICIANS

Let these armchair tacticians and judges pass just 1 month in a Communist prison and court and they will understand that Communist methods are diabolical, a priest told a Senate Internal Security Committee, in defense of American GI's who were turncoats or who broke down under pressure. He is the Reverend Fulgence Gross, of Omaha, who was a prisoner of the Chinese Communists for 6 years and suffered the tortures of hell.

Two more priests just released called Communist methods the work of the devil. The Reverend John Alexander Houle, of Glendale, Calif., and the Reverend Charles J. McCarthy, of San Francisco, were each imprisoned for 4 years. They told of being forced to sit on the bare floor for hours without moving in a room without natural light under an electric light that burned day and night. The floor was extremely cold in winter and excruciatingly hot in summer. After 5 months of this ordeal, they were carried to mock trials more dead than alive. Yet these men of God had the spiritual power to withstand all the brutal mishandling.

It is these same Communist Chinese with whom some of our legislators and businessmen want us to trade. That's not alone trading with the enemy—it's trading with the devil.

Hand in the Dike

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. MOORE. Mr. Speaker, the House Judiciary Committee, of which I have the honor of being a member, has acted to plug the threatened danger to the Nation's security created by the Supreme Court decision in the recent Jenck's case. Appropriate legislation has been prepared and is now in the process of being reported to the House, which will protect the vital secret files of the FBI. Because of the decision of the Supreme Court, this legislation is of the utmost importance, and should be enacted without delay in order to protect the investigative reports of the FBI and other law-enforcement agencies, from being rendered useless.

In connection with this legislation, I would like to call attention of the House to an excellent editorial which appeared in the Wheeling News-Register on June 30, 1957. It indicates the public should be made aware of the inherent dangers created by the Court's recent sweeping decisions, and the need for legislation to correct this threat to the orderly processes of investigation and law enforcement.

The editorial follows:

HAND IN THE DIKE

The legislative and executive departments have moved speedily to meet one of the several problems posed by recent Supreme Court decisions.

With approval of the Attorney General, a bill stipulating that secret FBI files could be opened to a defendant only if and to the extent that they trial judge determined, was promptly referred to and taken up by a House Judiciary Subcommittee.

The Court had ruled that defendants in criminal trials have a right to examine FBI files dealing with witnesses subsequently called to testify in court. The subcommittee, however, deeming this protection inadequate, has approved and passed on to the full committee a more sweeping measure. This provides that Government documents containing confidential information whose disclosure

the Attorney General determined would be prejudicial to the public interest, safety, or security may not be demanded as evidence unless they had been produced in open court to establish a record or to refresh a witness' memory. Even in such cases the matter first would be reviewed by the trial judge who would determine how much should be disclosed.

If such a limitation will meet the constitutional requirement laid down by the Supreme Court, the Government's arm would be materially strengthened by enactment of this legislation. It is one thing to permit a judge to look over the record of preliminary investigations and interviews on which a case is built, and quite another to open these to the view of a man on trial who could use the opportunity to go on a fishing expedition which might lead him far beyond the necessities of the case at bar. And as the Attorney General and the gentlemen sponsoring the legislation are learned in the law and thoroughly familiar with the constitutional situation, it is to be presumed they are confident of the validity of the approach selected. It is sincerely to be hoped so. For if the situation is permitted to stand where the Supreme Court's decisions seems to have placed it, virtually all secrecy is removed from an FBI investigation—and by inference from that of any other law enforcement agency—if that investigation subsequently becomes the basis of a criminal prosecution. Once this cloak of secrecy is lifted many doors now open to police and other investigators are closed. There is nothing better designed to seal the lips of a potential informer than the possibility that his identiy would become known to those he would put the finger on.

Amelia Earhart

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. AVERY. Mr. Speaker, this month 20 years ago, Amelia Earhart, vanished. She has never been heard from since. To date no official Government recognition has been bestowed upon the great woman flyer for her many contributions to the development of aviation in this country.

I have urged that a commemorative stamp be issued by the Post Office Department to honor her for her pioneering role in aviation. This honor would renew in our national memory the courage and daring of Amelia Earhart and would express a Nation's gratitude for her contributions to our welfare and advancement.

I believe sincerely that few women of this century deserve so completely the honor of a commemorative stamp as does Miss Earhart. Her achievements in aviation were phenomenal.

As we pause to recall the famous "last flight" of the Kansas tomboy and the mystery surrounding her disappearance, I again urge the Congress and the Postmaster General to give attention to the issuance of a commemorative stamp in honor of Miss Earhart.

The following editorial recently appeared in the Atchison, Kans., Daily Globe. Mr. Al Bennett, editor, sets forth an account of the last trip. It is time we recognize Amelia Earhart and her outstanding contributions to our Nation. The editorial follows:

TWENTY YEARS AGO

It was just 20 years ago this July that an Atchison tomboy, Amelia Earhart, left Lae, New Guinea, on her flight into oblivion.

Since then a legend has grown, a legend fed by recurring rumors, false reports, and wild hopes. It has been said she was on a secret mission for the Navy, that she was shot down at sea by the Japanese, that she was imprisoned at the Japanese naval fortress on Truk Island.

But in spite of the legend, it is likely that Amelia Earhart missed her island in the Pacific and died at sea. Lawrence Elliott retells the story in a July Reader's Digest article, The Mystery of Amelia Earhart's Last Flight.

Miss Earhart was on a flight around the world with Navigator Fred Noonan. They had flown eastward from Oakland, Calif., arriving at Lae, New Guinea. On July 2, 1937, they left Lae on the longest flight Miss Earhart had ever flown, some 2,556 miles to Howland Island. The target island is only a half mile wide and 2 miles long. It was so flat that its maximum elevation at high tide was 15 feet.

The Coast Guard cutter *Itasca* received several calls from Miss Earhart as she approached Howland Island, but her radio was not operating as it should.

The time for her arrival came and passed. Then came Miss Earhart's voice, "We are circling, but cannot see you."

And a frantic last message, "We are in line of position 157–337. We are running north and south." The words and signal vanished into silence.

Time ran out, and Comdr. W. K. Thompson, skipper of the *Itasca*, launched the greatest air and sea search of the day. But nothing was found. Despite the hopes and rumors that they still might be alive, Commander Thompson believes that they missed the island and died at sea.

In his analysis in the Reader's Digest, Elliott agrees with that belief.

Supreme Court

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. SIKES. Mr. Speaker, I am today introducing two measures designed to curb growing encroachments by the Supreme Court in the fields traditionally and historically reserved to the States and to stop incursions by the Court in the sphere of social and other legislation.

These measures were inspired by the Florida Legislature which passed memorials to Congress recommending passage of the two bills.

One bill proposes "an amendment to the Constitution of the United States which would provide that the powers reserved to the several States by the 10th amendment to this Constitution shall be construed to include, but not be limited to, power to enact laws to promote the public peace, safety, and welfare and to provide for good order, education, and harmonious race relations therein. In these enumerated fields, except where the Congress of the United States by legislation provides expressly to the contrary, the laws of each State shall govern."

The other measure would provide that "the Senate of the United States shall comprise a court with final appellate jurisdiction to review decisions and judgments of the Supreme Court of the United States where questions of the powers reserved to the States, or the people, are either directly or indirectly involved and decided and a State is a party or anywise interested in such question involved and decided. The Senate's exercise of such final appellate jurisdiction shall be under such rules and regulations as may be provided by the Senate, including the time within which appeals shall be taken. A decision of the Senate affirming, modifying, or reversing a decision or judgment of the Supreme Court of the United States shall be final."

After passage by the Congress both would require ratification as an amendment to the Constitution by the legislatures of three-fourths of the States.

The massive invasion by the Supreme Court into the field of sociological experiment and its obvious naivete in decisions dealing with the dangers of communism require that Congress step into the breach before irreparable damage is done.

I Am the Nation

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am happy to have this privilege of inserting one of the best pieces of patriotic advertising that I have ever seen. It appears in the current issue of the U. S. News & World Report and was placed in that publication by the Norfolk & Western Railway, the home office of which is in Roanoke, Va. During this 4th of July week it is fitting and proper to publicize an article of this kind, whether it be in the form of advertising or otherwise, since it calls attention to the greatness and goodness of our country. Although there are doubtless many people who think it is old fashioned and out of date to believe in patriotism, Americanism and nationalism, yet the founders of this country did not think so and those who paid the last full measure of devotion for the continuation of our country did not think so. The article mentioned by me is as follows:

I AM THE NATION

I was born on July 4, 1776, and the Declaration of Independence is my birth certificate. The bloodlines of the world run in my viens, because I offered freedom to the oppressed. I am many things, and many people. I am the Nation.

I am 165 million living souls—and the ghost of millions who have lived and died for me.

I am Nathan Hale and Paul Revere. I stood at Lexington and fired the shot heard around the world. I am Washington, Jefferson, and Patrick Henry. I am John Paul Jones, the Green Mountain Boys, and Davy Crockett. I am Lee and Grant, and Abe Lincoln.

I remember the Alamo, the *Maine*, and Pearl Harbor. When freedom called, I answered and stayed until it was over, over there. I left my heroic dead in Flanders fields, on the rock of Corregidor, and on the bleak slopes of Korea.

I am the Brooklyn Bridge, the wheatlands of Kansas, and the granite hills of Vermont. I am the coalfields of the Virginias and Pennsylvania, the fertile lands of the West, the Golden Gate, and the Grand Canyon. I am Independence Hall, the *Monitor*, and the *Merrimac*.

I am big. I sprawl from the Atlantic to the Pacific, 3 million square miles throbbing with industry. I am more than 5 million farms. I am forest, field, mountain, and desert. I am quiet villages—and cities that never sleep.

You can look at me and see Ben Franklin walking down the streets of Philadelphia with his breadloaf under his arm. You can see Betsy Ross with her needle. You can see the lights of Christmas, and hear the strains of Auld Lang Syne as the calendar turns.

I am Babe Ruth and the world series. I am 169,000 schools and colleges, and 250,000 churches where my people worship God as they think best. I am a ballot dropped in a box, the roar of a crowd in a stadium, and the voice of a choir in a cathedral. I am an editorial in a newspaper, and a letter to a Congressman.

I am Eli Whitney and Stephen Foster. I am Tom Edison, Albert Einstein, and Billy Graham. I am Horace Greeley, Will Rogers, and the Wright brothers. I am George Washington Carver, Daniel Webster, and Jonas Salk.

I am Longfellow, Harriet Beecher Stowe, Walt Whitman, and Thomas Paine.

Yes, I am the Nation, and these are the things that I am. I was conceived in freedom and, God willing, in freedom I will spend the rest of my days.

May I possess always the integrity, the courage, and the strength to keep myself unshackled, to remain a citadel of freedom and a beacon of hope to the world.

This is my wish, my goal, my prayer on July 4, 1957—181 years after I was born.

Freedom Versus Statism: History's Big Switch

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. ROGERS of Texas. Mr. Speaker, I rise today to request unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD the column of my good friend, Wes Izzard, editor of the Amarillo (Tex.) Daily News, which appeared in the June 20 issue of that newspaper.

This most challenging column points out with great literary force the political evolution that is occurring in our generation. It provides much food for thought to those who concern themselves with the best interests of their fellow man—thought food that it would be well for all to consume and digest.

FREEDOM VERSUS STATISM: HISTORY'S BIG SWITCH

There are signs that a gradual transference of political philosophy is taking place in the Western World.

Socialistic Europe is taking a long, calculating look at American style capitalism. Some countries are trying it. West Germany, for one.

Even France and Italy can't ignore the evidence that the greatest prosperity and highest living standards in the world are being produced by capitalism.

In short, the conservative atmosphere, in which free enterprise flourishes, is developing gradually in Europe.

On the other hand, capitalistic United States is moving in the other direction—away from individualism toward statism.

Our courts are setting the political philosophy of the Nation; and the politicians, wooing the high-pressure minority groups, are sponsoring such socialistic legislation as the present civil-rights bill, now before the Senate.

It would be a grim historical joke to find the capitalistic conservatism which has served America so well being gradually transferred to socialsitic Europe, while America turns its back and moves away from the system that has served it so well.

We hesitate to use the terms "conservatism" and "liberalism" in this connection. They mean different things to different people.

The true American conservative, who strings along with free enterprise and constitutional Government, including States rights, is, in the broad sense, a liberal. The cause he espouses is the only new, shining political doctrine the world has known for a thousand years—the only system that has worked.

Socialism, or statism, is a reactionary doctrine. It is as old as government, itself, and has invariably failed.

Yet the Socialists call themselves liberals and refer to the true American constitutional liberal as a reactionary.

The civil-rights bill is a case in point.

Here is a proposed law that would be relatively harmless in the hands of the present administration; but it opens the door of the future to vicious practices that have marked all the dictatorships of state socialism the world has known.

In the name of individual rights, it would create a Federal commission that could try a citizen without a jury on the basis of some snooper's story.

This is state socialism at its worst, masquerading as liberalism.

Attempts by the "we know best" boys to set up in the Federal Government machinery to regulate the lives and the thoughts of American citizens, recall to us the philosophy of Texas' great governor, Jim Hogg.

In his celebrated veto message, killing a Texas law that would have permitted the State's prison system to accept a Federal bounty for the growing of sugar cane, Jim Hogg thundered:

"In the management of her affairs she (Texas) is sovereign, supreme, subject only to the control of the people within her dominion!"

Governor Hogg spoke of the perils of accepting a Federal bounty for sugar—or anything else. He said:

"To accept this bounty for sugar, she would surrender the supervision and inspection of one of her most important industries to the Federal Government. For spoils she would open the way for the invasion and final destruction of her independent autonomy * * *.

"Spies, informers, and irresponsible deputy marshals would swagger and lurk around the farm worse than the locusts of Egypt."

The Governor was tragically prophetic when he added:

"Driftwood on a great stream at first seems harmless. Let it alone, and in time the river's current becomes changed by it, submerging the country all around."

We say Jim Hogg was a liberal. A constitutional liberal. Yet today he would be considered by our self-styled liberals the blackest of reactionaries.

Today, there is no place, politically, for a constitutional liberal—or conservative, if you prefer the newer term—to go.

Both major parties, wooing the loud and well-organized minority groups, have proposed civil-rights legislation that is unconstitutional and dangerous. Each is trying to outdo the other in its obeisance to the new liberalism.

Europe is sick of statism, of socialism, of snoopers. It is looking around for something better. American free enterprise and political conservatism has a slim toehold there.

Through the irony of history, we may live to see the two-way transference of political philosophies across the Atlantic.

The Most Serious Default of Leadership

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PORTER. Mr. Speaker, President Eisenhower's default of leadership has its most serious consequences in connection with our nuclear weapons policies. The following exchange of letters illustrates this point. If we had any basis for believing that appropriate consideration meant anything or that even consideration was being given to these problems relating to the survival of human life on this globe, we might have more cause for encouragement.

Under leave to extend my remarks in the RECORD, I include the following correspondence:

JUNE 7, 1957.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: We, the undersigned Members of Congress, respectfully and urgently call on you to support five steps in the direction of survival in the face of the awesome peril arising from the development of nuclear weapons.

You have repeatedly pointed out the terrifying proportions of the present situation. "Humanity," you said in your September 19, 1956, broadcast, "has now achieved, for the first time in its history, the power to end its history."

Humanity's history may in fact end in the space of a few hours. Three nations have the means to end it. An accident could trip the mechanism of retaliation. A limited war could spiral out of control. The U. S. S. R. could coldly calculate that time is on the side of the free world and that it could win an all-out war even with its back broken by our counterattacks.

We realize that these thoughts are not new to you, Mr. President. You recognize your duty and we recognize ours. We surely agree both on the magnitude and the imminence of the nuclear danger. Here indeed is a brink on which we and all the world teeter. Contemplating the abyss need only occupy a moment. Then our efforts must turn toward regaining our balance and moving to solid ground.

Our long term goal of arriving on this solid ground safely away from the nuclear abyss is of course a workable disarmament agreement and we are encouraged by the vigor of your policies in this area. But results here are too far in the future and today we do not dare rely solely on our enemy's fear of massive retaliation. Fear of mutual destruction is a flimsy basis for balance at the brink of the abyss.

We most earnestly as that you place your full official and personal weight behind the following five measures, all of which are, in our opinion, likely to aid in the survival of mankind, whether of not nuclear war comes.

1. A National Radiation Institute of Health, with sufficient funds to conduct a large-scale research program: There is apparently no scientific doubt that the worldwide radiation generated in an all-out war of H-bombs would be a hazard to life over the whole globe. Scientists also seem to be agreed that the testing of H-bombs involves at least a certain risk. The issue is over the immediacy of the radiation danger—that is, just how many tests the different nations may conduct before the cancer threshold is crossed. This must be measured against the contribution tests make to our military security.

Without now judging this question, however, we feel that the potential danger alone justifies a much greater effort to explore the possibilities for the treatment or, hopefully, prevention of radiation-induced cancer, leukemia, and cell degeneration.

2. Vigorous reassertion of your support of an international Atomic Energy Agency: We believe that the vast majority of the American people are fully behind your dramatic effort to develop peaceful uses of the atom through the United Nations. As Congressmen, we are anxious for the momentum behind these proposals to be sustained.

The exercise of your prestige and leadership will not only ensure the passage of the appropriate legislation. It will also present the proper image of the United States as a nation devoted to using the atom to build a better world.

3. A national shelter program: The policy of mass evacuation, on which the United States planned to rely in a war of atom bombs, is now outmoded by the vastly more powerful H-bombs. A 50-megaton H-bomb can incinerate all life within a radius of 15 miles of the explosion. Within a few days the people who live in the downwind area of fallout will also sicken and die.

Under these circumstances, it appears prudent and imperative to provide some form of shelter for our people at the places where they live and work.

Our capacity to take a blow and keep on fighting is just as important as our ability to deliver one. An adequate system of shelters will therefore give pause to a potential aggressor and make a formidable contribution to our policy of deterrence.

4. Your appointment of a Special Advisory Committee to the AEC vested with authority to declassify data on radiation: We recognize that secrecy about some kinds of data on radiation may be vital to our national security. On the other hand, official silence or even reassurances have on several occasions in the past been followed by contrary evidence from independent scientific sources, for example, the Japanese physicists who analyzed the fallout from our Pacific tests.

Such incidents breed suspicion and an emotional approach toward the tests, making it difficult for the American people to reach a fair judgment. We are convinced that the public has the right to judge the issue for itself. Consistent with security, the people should be given the information they need to do so.

5. Increased emphasis on military formations capable of fighting limited or brushfire engagements: As you have cogently observed, concentration upon massive weapons in the fields of research and delivery can lead to a dead end in strategic thinking.

The enemy is too likely to calculate that we would permit him to retain a modest conquest rather than invoke a nuclear exchange. The only successful counter to this kind of limited attack is the capacity to meet the attack at the spot where it occurs.

To have this capacity we would need very flexible forces armed with both conventional and atomic weapons. We would also need many more troop-carrying airplanes than we now have on hand.

We as Members of Congress want to do our part in averting the suicide of the human race. Each of us whose name is signed below believes that this issue transcends partisanship. We respectfully request your personal attention to these proposals and stand ready to provide additional information.

Sincerely,

CHARLES O. PORTER
(And Six Other Members of Congress).

THE WHITE HOUSE,
Washington, June 12, 1957.

The Honorable CHARLES O. PORTER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PORTER: The President has asked me to thank you sincerely for your June 7th letter, cosigned by 7 of your colleagues, urging him to "place (his) full official and personal weight" behind 5 specific measures which relate to atomic warfare and health hazards and to the character of our Armed Forces. The President asked me to assure you that he will continue his efforts to deal effectively with each of the problems mentioned. He, of course, welcomes the close attention you and your colleagues have devoted to these crucial problems facing our country.

With best wishes.

Sincerely yours,

WILTON B. PERSONS,
The Deputy Assistant to the President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 22, 1957.

The PRESIDENT,
The White House.

DEAR MR. EISENHOWER: I have received General Persons' letter of June 12, replying to my letter of June 7, cosigned by 7 of my colleagues, and I am now writing to ask that you undertake the comment specifically on each of the 5 specific measures set forth in the letter.

I do not need to be assured that you will continue to attempt to do your best to deal effectively with each of these problems and, of course, I know you welcome the close attention of Congress to such problems.

I recognize very well the immense demand of your job and it seems quite appropriate to ask that you take a definite stand on each of these five matters since they are intimately related to human survival in the face of imminent peril.

I hope that you will see fit to reply specifically to my June 7 letter.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

THE WHITE HOUSE,
Washington, June 26, 1957.

The Honorable CHARLES O. PORTER,
House of Representatives,
Washington, D. C.

DEAR MR. PORTER: Further respecting your June 7 letter, my June 12 reply, and your June 22 request for supplementary comments, I have been requested to advise you in respect to the questions raised in the June 7 letter that: (1) The suggested National Radiation Institute of Health will receive appropriate consideration; (2) the International Atomic Energy Agency Treaty has just been ratified by the Senate; (3) Presidential views respecting civil defense needs are reflected in legislation recently considered by the House Armed Services Committee, on which administration witnesses have testified at length; (4) the suggested Special Advisory Committee will likewise receive appropriate consideration; and (5) recent executive branch testimony on the pending defense appropriation and mutual security legislation presents Presidential concepts and programs respecting conventional and nuclear weapons and all other major aspects of our defense efforts.

Your further interest in these matters is appreciated.

With best wishes.

Sincerely yours,

WILTON B. PERSONS,
The Deputy Assistant to the President.

Big Business Like Eisenhower Policy of Sweetness and Light as They Go Blithely on Their Price-Raising Way

---

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith Drew Pearson's column on New Price Rises To Shrink Dollar, which appeared in the Washington Post and Times Herald on July 3, 1957:

NEW PRICE RISES TO SHRINK DOLLAR

(By Drew Pearson)

The increase in the price of steel will not be the only one to help hike the cost of living this summer. It will be followed by a chain reaction of price increases, all further decreasing the buying power of the white collar worker, the farmer, the schoolteacher, the oldster living on a pension, and anyone with a fixed or low income.

Aluminum manufacturers are expected to ask a penny a pound more on August 1, because of a 15-cent-an-hour wage boost. The meat and class industries will increase prices. The price of men's flannels will go up 3 cents per pound, ammonia $8 a ton, and the leading TV manufacturers will try to get $20 more per set.

There's already been a lot of agitation about inflation. But you ain't seen nothin' yet.

NO TAX CUT IN 1958

Most important political effect of the increased cost of steel will not be felt until about next January. This is the period when politicians will try to carry out that long-awaited promise of a cut in taxes.

They won't admit it, but the inside fact is there will be no tax cut.

The reason is quite simple. The increased price of steel, together with other simultaneous, spiraling prices, will add $4 billion to the budget. This just about absorbs the surplus on which both political parties based their promise of a tax cut.

It is no secret that the biggest bill Uncle Sam has to pay is for military hardware.

This is the term given battleships, submarines, tanks, armored cars, trucks, and guns. So when the price of steel goes up, the man who feels it most is the uncle who has to pay for this hardware.

There's another reason why there will be no tax cut. In addition to the $4 billion extra for hardware, another extra billion will be added to the expense of Government because of higher interest rates. Uncle Sam will pay that extra billion just to borrow money.

Messrs. Humphrey and Burgess have hiked the interest rate on Government bonds to the highest point since the depression, with the result that interest on the national debt is also at an all-time high.

IKE GETS KICKED

Twice President Eisenhower has appealed to business and labor to hold down prices and wages, and each time he has been promptly kicked in the teeth by the big business leaders who did so much to elect him. Here are the kicks:

Kick No. 1 came just before and after February 6 when the President publicly stated: "When I said business and labor must exercise and must discharge their authority in conformity with the needs of the United States, I wasn't merely asking them to be altruistic. Their long-term good is involved, and I am asking them merely to act as enlightened Americans.

"Unless this happens, the United States then has to move in more firmly with so-called controls of some kind."

This got a private horselaugh from business. Reason was that next day, Ike's own Secretary of Commerce, Sinclair Weeks, himself a big-business man, figuratively kicked his boss in the teeth. He stated at his press conference that the administration was not considering wage and price controls at all.

Kick No. 2 came from another big-business man, James Zellerbach, to whom Ike had given an important diplomatic plum—the ambassadorship to Italy. As Zellerbach took his post, he increased the price of paper sold by his Crown Zellerbach Co. This hit newspapers and magazines all over the Nation.

Simultaneously, Crown Zellerbach announced the most successful year in the company's 86-year history. Profits went up 13.4 percent over the preceding year. Despite this and despite Ike's appeal to stop inflation, his own Ambassador brazenly added to inflation.

Kick No. 3 came last week when the giant United States Steel Co. jacked up its prices just one day after the President again appealed to keep prices down.

BEHIND THE HORSELAUGH

There's an interesting reason for the business horselaughs regarding the President's warnings. They figure he doesn't really mean them, that he has no idea of ever getting tough.

For instance, business leaders all knew that Ben Fairless, chief power behind United States Steel for years, had been rewarded by Ike. He was appointed Cordinator of the President's Citizen Advisers on the Mutual Security Program.

So business leaders, watching the Eisenhower policy of sweetness and light, go blithely on their price-raising way.

NOTE.—In his last press conference, the President reversed his February 6 warning that there might be wage and price controls He said controls were the way to bring the socialism which Khrushchev predicted for the United States. Many economists say that uncontrolled inflation is a quicker way to bring it. Inflation has already brought socialism to a good part of Europe.

Revise Immigration Laws Now

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mrs. GREEN of Oregon. Mr. Speaker, because I am firmly convinced that there is great need to revise and amend the present Immigration and Nationality Act, I introduced H. R. 3739, at the beginning of this session of Congress.

The need for such action is further emphasized by an open letter, dealing with the revision or repeal of the Internal Security Act of 1950 and the Immigration and Nationality Act of 1952, signed by 71 members of the Oregon Conference of the Methodist Church and furnished to me by the Reverend Olin E. Parrett and the Reverend Edward Terry, both of Portland. In his letter of transmittal, Reverend Terry states:

We believe that such changes as those indicated are necessary steps toward more Christlike legislation in this field. As you know, hundreds of organizations in all walks of life have indicated their belief that basic changes in these immigration laws are necessary if we are to maintain our American ideals of liberty and freedom for all.

I ask unanimous consent that the open letter and list of names attached be printed in the Appendix of the RECORD.

The letter and list follows:

AN OPEN LETTER TO THE MEMBERS OF THE UNITED STATES CONGRESS FROM OREGON

We, the undersigned, join with the millions of other Americans in commendation of those of our Senators and Congressmen, who, understanding the basic evils inherent in the Internal Security Act of 1950 and the Immigration and Nationality Act of 1952 (the McCarran Act and the Walter-McCarran Act, respectively) have called for drastic revision or repeal of these laws.

We feel that the sending into exile by the deportation route of hundreds if not thousands of persons each year on technical grounds, or because of alleged political dissent, is unbecoming a Nation founded by immigrants of varying faiths. This is especially true of those who were brought to America in their infancy, or who have spent their working lives here.

We agree with the findings of former President Truman's commission which submitted a report on the law, January 1, 1953, that the voluminous Walter-McCarran law is "unwise and injurious * * * confusing and in some respects unworkable * * * and that it should be revised from beginning to end."

We feel that the law, in its administration, violates civil liberties and constitutional rights. We are opposed to those provisions which place limitations on the rights of naturalized citizens, and to the national origins quota system, agreeing with Senator Lehman, of New York, that this "is an insult to every one of us."

We believe with the President's commission that the powers of the Immigration and Naturalization Service should be vested in a separate agency of the Government and that grounds for deportation should not be technical or excessive. In the interest of common justice and fair play, of keeping families together and homes unbroken, we feel there should be a statute of limitations and that deportation proceedings should not be taken against any noncitizen after 10 years' residence in this country, or the citizenship of any naturalized citizen be revoked except for fraud.

We commend heartily the efforts of all those Members of Congress from Oregon who are supporting repeal or revision of these laws and urge them to actively continue such support.

American Legion Auxiliary Essay Contest

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. WHITENER. Mr. Speaker, the American Legion Auxiliary of the Department of North Carolina conducts an annual Americanism essay contest.

The results of the contest have just been announced, and I am delighted that a young lady from my congressional district was selected as the winner. She is Miss Alice Doggett, of Forest City, N. C. Miss Doggett is the daughter of Mr. and Mrs. Alton Doggett, of Forest City, and was graduated from Cool Springs High School as valedictorian a few weeks ago.

I am requesting that the excellent essay written by this young lady be inserted in the RECORD, since I believe that it is worthy of the attention of all Americans.

The essay follows:

AMERICA, WHAT DOES IT MEAN TO ME?

In the furl of the flag, in the call of the free, in the hope of the brave, I hear the word "America." America—America. The mere word makes the strings of my heart vibrate. But when I think of all that this word stands for, it enthralls me to depths such as I cannot explain.

If you could see the word "America" defined in a dictionary, you would probably read something like this: "America is a country in the Western Hemisphere were a democratic government based on high ideals and individual rights of its people is practiced." But, to me, an American youth, what do high-sounding words and phrases mean? I do not live by definitions and dictionaries.

America to me is as simple as everyday living. It is walking in the rain, in the sunshine. The raindrops remind me of the thousands of drops of blood that have been shed in many great wars to gain and preserve this great country. The rays of sunshine remind me of the golden dawning this country has known at the end of each war. America, to me, is a country that has gone through many problems and hardships and has emerged the strongest Nation in the world today. She is as complicated as tall smokestacks puffing their smoke from huge manufacturing plants and millions of cars honking in the busy city, as simple as a bird's song or a stream's sighing in her vast woodlands. She is a country of resources of coal, iron, steel, rubber, and many others; a region of vast farmland.

But most important of all, she is a country of people who are freedom-loving and God-fearing. It was these people who made possible the growth of America in the past, and it will be these people who will lead America on to greater glory and expansion.

Yes, I, an American youth, am a part of this great country. With this thought I look up with pride in my heart and whisper through trembling lips, "America, my country, America."

Civil Rights Act of 1957

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. O'HARA of Illinois. Mr. Chairman, again, as the days of June are riding toward the longest day in the year and the beginning of the death of summer, we are enrapt in the emotions attending the passing of an old order and the birth of a new. I feel that my dear friends from the Southland today, as they have before, are standing on the edge of a lost battlefield fighting for something that they believe in but that they know has passed forever.

But, Mr. Chairman, we are making progress. We are marching forward to greater heights to advance the dignity of all men and fulfill the mandates of our destiny.

I remember when I was going to law school we were told that there was a time when people who suffered from wrongs for which there was no remedy went to the king and asked the king to exercise his conscience, to do the right thing even though there was no approach to the right in the existing law. And so came our court of conscience, our court of equity.

There have been wrongs. I do not think any of us doubts that through fear or for other reasons many people of the Negro race in certain parts of our country have not been voting, certainly in the numbers that we would desire and we would expect in proportion to their population. And our Republic cannot exist unless we give to all of our citizens the right to vote. In a representative democracy that is the most sacred of all the rights.

I respect the right to a jury trial. I think no one loves an American jury more than do I; and I have had, in my humble way, the privilege of talking to juries in many cases, and in many States including the great State of Tennessee. But I know the limitations of the jury system. The right to a jury trial means the right to a trial by jurors of your peers and in a climate that is without bias and without prejudice. That is the American concept of trial by jury. And so we have always been very careful to protect the right to trial by jury with the right to a change of venue.

Let a horrible crime be committed in any county or any community and someone who is not popular in that community is suspected and arrested for the crime. Because human nature is what it is, it is conceivable that it would not be possible to have a fair and impartial trial in that county or in that community and a change of venue is granted to another county where such bias and prejudice may not obtain.

In our great State of Illinois we protect that right to a change of venue to the extent that we make it mandatory upon our judges to grant a change of venue when a showing is made merely by affidavit. That I think should be borne in mind.

What is our situation now? We have in a section of our country—and I am not scolding; when you are born and brought up in a social order, it is hard to change; we all fight change from the status quo—so we have in that section a feeling that white supremacy still obtains, that in a world in which the white constitutes a relatively small minority, we can go on living, today as it was yesterday, on the standard of white supremacy.

In the section where that feeling obtains, human nature being what it is, it would be difficult to find a jury that would pass upon the facts and not the law.

The jury is given the determination of the facts, not the determination of the law. In Illinois, when an attorney is examining the prospective members of a jury, he asks if they will reach their decision from the evidence that they hear in the court and following the law as given to them by the judge on the bench. It was never intended that jurors should pass upon the law. Yet it is difficult for the layman to distinguish between what is law and what is fact, and, no matter how conscientious he intends to be in the performance of his duties as a juror and in his respect for his oath, his determination of what is fact and what is law must subconsciously be influenced, and his confusion multiplied, when against the law itself, he is strongly and emotionally opposed.

Once a law of the land is enacted by passage of a bill by the Congress, and signatured by the President, it is effective upon all persons in our Nation. It was never intended by the makers of our Constitution that a law of the land should be submitted to trial by jury so that in one community it would be accepted and enforced and in other communities would be rejected. It is self-evident that government could not continue to function in such a situation.

I should regard it as a splendid tribute to the judicial temperament and integrity of Southern judges, which should not go unnoticed by my colleagues from the southland, that no one from the North in these many hours of emotion-heated debate has raised the slightest question as to how the judges in Southern districts would act in the judicial administration of a law that might not meet with their personal approval. It is hard for me to understand why similar confidence has not more often, in the debate, been voiced by my friends from the South, unless it be that they wish the law itself, and not the facts as they apply to individuals, to be passed upon by laymen and not by judges learned in the law and charged with its interpretation.

Mr. Chairman, I trust that the bill will pass unamended, and that our country will go on in the new day, undisturbed by the passing emotions of a change from the status quo, bravely and wisely meeting in the future as it did in the past the challenges of broadening horizons.

Revision of Federal Firearms Regulations

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. SIKES. Mr. Speaker, I have been receiving numerous letters of opposition to the proposal advanced by the Alcohol

and Tobacco Tax Division, Internal Revenue Service, for the revision of the Federal firearms regulations, scheduled to be effective in the next few months.

If the proposal, as it now stands, is imposed on the firearms and ammunition dealers, it will work serious hardship, especially on the smaller dealers. One point in the proposal requires ammunition dealers to keep complete records on pistol and revolver shells. To maintain these records, it will necessitate additional help, time, and money for most dealers and manufacturers. Information which will be required for these records include: Name of manufacturer, type of shell, caliber and quantity, and, the identity of the person from whom the shell was received and the signature of the person to whom it was sold. This appears to me to be a regulation which is completely unnecessary.

There are other points within these proposals which are causing considerable concern, not only by dealers, but by manufacturers of firearms and ammunition as well.

In view of these and other facts, I have requested that these regulations not become effective until such time as Members of Congress have had ample time to study the revisions proposed and to be heard on them. It is my opinion that additional time is needed for further study by all concerned so that more favorable proposals can be worked out which will be acceptable to those affected.

The Internal Revenue Service has announced that a public hearing will be held on the proposed revision of Federal firearms regulations on August 27. Since Congress probably will have adjourned by August 27, it will not be possible for the greater number of us to be present because of scheduled activities in our own district; therefore, it is my hope that the hearing may be postponed until early in 1958 at which time the Members of Congress who desire to be heard will have an opportunity to do so.

Germany's Eastern Boundary

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, the following article from the May-June 1957 News Letter of the Polish American Congress proves further the validity of establishing Germany's eastern boundary at the Oder-Neisse line:

OFFICIAL GERMAN STATISTICS DEBUNK JUNKERS' LOUD CLAMOR FOR REVISION—"OSTFLUCHT" AND "LANDFLUCHT" CANNOT BE HIDDEN BEHIND A PROPAGANDA FACADE

German territorial revisionism let itself on a wild rampage again. Only this time it's buttressed by official declarations and certain propaganda subsidies of the West Reich. The edge of wild distortions, claims, and contentions is aimed at Poland.

Official sources in the West German Reich are progressively more vociferous in demanding not only the restoration of the 1939 boundaries with Poland, but are clamoring for the inclusion into the Reich the "ancient-ly German provinces," of Poznan, Pomerania, and Silesia, not to mention East Prussia, wherein junkerism was spawned to enmesh European nations in its insane and sanguinary policy of conquests.

When not shouting demands, these revisionists piously claim that the German people need more living space, that the territories they lost as the direct result of their own stupendous aggression are absolutely necessary for German survival.

Without batting an eye, they argue that Poland's recovered provinces east of the Oder-Neisse Rivers constituted a vitally needed granary for West Germany.

And while the Reich's Foreign Minister, Heinrich von Brentano, being a trained diplomat, disclaimed any use of force in effecting the proposed revision of the boundary with Poland, the American Germans went on record as unfettered by political semantics. They quite openly and brutally warned that in order to avoid world war III, Germany must regain territories ceded to Poland under the Potsdam four-power agreement. This, the Germans expressed in a recent resolution addressed to official sources in Washington by the Steuben Society.

Eventually, the Germans are going to trip themselves over their own admissions contained in two words: "Ostflucht" and "Landflucht."

Ostflucht literally means "flight from the east" and Landflucht—"flight from the farms."

Eminent German economists and scientists such as Wilhelm Volz, Prof. Dr. Karl Haushoffer, Prof. Gustav Simolcit, eloquently and with finality rebutted all assertions of fanatical revisionists.

Their painstaking studies and findings, published with the knowledge and consent of German authorities as late as the 1930's, prove that the territories returned to Poland after the World War II, constituted 21.4 percent of German prewar area, yet, they sheltered and fed only 12.4 percent of the total German population.

In national economy, these provinces contributed only 10.7 percent of Germany's income. The industrial capacity of these provinces represented only 4.2 percent of the national figure and only 11.3 percent of the income of the Ruhr district.

The Third (Hitler's) Reich was spending 11.3 percent of national income on armaments alone—and the income of these provinces, was only 10.7 percent of the national total.

Thus, with military and administrative expenditures of the Reich, these provinces were actually liabilities in the financial and economic structure of Germany.

Density of population in prewar Germany stood at 136 persons per square kilometer (approximately 0.386 square mile), while in the provinces east of the Oder, it was only 50 persons per square kilometer, and the agrarian population was only 20.4 per square kilometer.

At the same time, the density of population in Poland reached 92 persons per square kilometer, and the agrarian population stood at 60.9 per square kilometer.

Natural increase of population in prewar Poland was 12 persons per thousand and in prewar Germany only 7.3 per thousand annually.

The density of population in the West German Reich is 188 persons per square kilometer, which about equals the density of the British Isles and is less than that of Holland or Belgium.

But these figures seem only like a preface to the real story.

According to German official statistics and studies by scientists and experts already mentioned—2,800,000 Germans left farms in these territories (Poland's recovered provinces) in the years of 1825–1939. This means that 70 percent of agrarian population in these areas migrated to the industrial cities in central and West Germany.

During that time, the shift of population in all Germany from farms to factories effected only 4,700,000. In other words, considerably more than one-half of German migrants came from the eastern provinces now settled by the Poles.

This Ostflucht resulted in the astounding fact that only 46 people were left on each 100 hectares (250 acres) in Pomerania and East Prussia, which, for European teeming millions had been a sensational development.

Professor Volz candidly wrote about this situation: "The German East has lost in the last 3 generations 1 whole province—population-wise. Here in the East we should be forced to reverse the term volk ohne raum (people without land) to 'raum ohne volk' (land without people). (Geographical and economic study, Leipzig, 1930.)

Similarly, Professor Haushoffer, addressing the 1930 Convention for Political Settlements in Dresden, stated: "We must settle new people in the East, where nations, bursting with vitality, are already pushing westward. Otherwise, within the next 20 years, the Elbe will become Germany's eastern frontier."

The process of voluntary depopulation of these lands had not been reversed even by Hitler's dictum to increase population. For, in these provinces, the Nazi-inspired natural increase reached only 200,000, which means only 2.4 percent of the whole German populace, while in the rest of the Third Reich, birthrate jumped 5.3 percent over the death rate in that particular period.

Moreover, most of the increase in population was, as it has always been, among the Polish autochthonic people, where families of 9 and 10 persons are common.

Junkers' feudal estates were able to operate only by bringing annually some 800,000 seasonal immigrants from Poland to do the farmwork. These peasant workers from Poland did not encounter any linguistic barriers in Prussia, Pomerania, and Silesia. They communicated easily in the Polish language with the Polish autochthons in these areas.

(The original Polish population in these areas have successfully resisted germanization and remained Polish in spite of German attempts to eradicate all traces of Slavic origin of these lands. These autochthons number over 1 million people and are regarded by Prussian revisionists as Germans.)

And now for the granary claims:

Agricultural surpluses in these provinces, despite their scarcity of population amounted to only 3.2 percent in rye, 2.5 percent in potatoes, 4.5 percent in pigs, and 1.5 percent in cattle, according to German 1930 official yearbook.

Confronted with these figures, Professor Volz (ibid.) concluded: "We should debunk once and for all the arrant fable that the East is supplying the Reich, and especially the Ruhr with foodstuffs. The rest of the Reich is either producing them (victuals) itself, or importing them to satisfy its needs. Cold facts are not in accord with theoretical contentions that the German East is the source of agricultural provisions for the Reich."

Landflucht caused a drop in agricultural productivity of the whole Germany by 5.1 since 1913, according to recent studies by Professor Dr. Harmann, of Berlin, who calculated that the West German Republic can easily support 96 million people on its present territory.

Sectionalism Will Save No Water

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. MILLER of California. Mr. Speaker, Californians are presently bedeviled by a water problem that divides the people of our State.

The conservation of water and its proper utilization is indispensable to our economy and to the happiness and the welfare of the people of California.

Water in California produces a paradox. Controlled it is the greatest friend of man, uncontrolled it is one of his worst enemies. We have the demonstrated formula for controlling it if it can only be supplied.

The San Francisco Examiner on Tuesday, June 27, carried an editorial Sectionalism Will Save No Water. It is an excellent exposition of the subject and I include it as part of my remarks.

The editorial follows:

SECTIONALISM WILL SAVE NO WATER

Soon a joint legislative committee will take up the search for the solution to California's great water rights controversy that eluded the legislature at its regular session. We hope the committee can at the outset lay aside the north-south sectionalisms aroused by the water debates, and too often manifest as bitterness in the last days of the session.

Not in memory has sectionalism been as pronounced as it was in those last days. It has not yet reached a danger point. But it can—if embers now cooling after the session are again fanned.

The arousal of sectional fears and jealousies in this instance is all the more to be regretted because the Feather River project, out of which grew the water-rights controversy, is not in the true sense a sectional matter. Nor can it in any sense be called accurately a north-south matter.

THE STAKES ARE TREMENDOUS

This great plan is designed to carry water from northern areas of surplus southward to areas of deficiency. It will alter for all time water rights of incalculable value; it will influence profoundly the destinies of both of the areas that yield the water and those that receive it. With the stakes so tremendous, it was natural and proper that each affected area sought fiercely to protect its interests at every stage of the bargaining in the legislature. Generally speaking the fiercest advocates were those from the least populous, far northern counties and the most populous region south of the Tehachapis.

Perhaps this is why a division that started out as one between surplus and deficient areas came to be popularly and mistakenly regarded as a north-south conflict with the dividing line at the Tehachapis.

How wrong this is can readily be seen from the fact that the deficiency areas most in need of water are not in southern California at all but in the vast central band of the State. The greatest need is in the San Joaquin Valley. The second greatest need is in the south San Francisco Bay area in Santa Clara, San Benito, and Alameda Counties.

Under the FRP as planned by the engineers the areas north of Tehachapis not only would receive water earlier than southern California, but would get a greater quantity. Those who can least afford delay on the FRP are not southern California subdividers, as some seem to think, but San Joaquin Valley farmers whose wells are running dry, and Feather River Valley cities and farms living under threat of another disastrous flood.

Independence Day—1957

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. SMITH of Kansas. Mr. Speaker, yesterday was the Fourth of July. In yesteryears the orators called it Independence Day. Some still call it the Fourth of July; others still call it Independence Day. The fourth day of the calendar in the month of July has lost a great deal of the patriotic fever that was formerly engendered on this day.

Yesterday, to those of you who could number back 40 to 50 years, did you see many flags displayed up and down the streets as you did in your youth? I am afraid if you answered truthfully, you would say "No." Why is this? The answer is very simple: Patriotism in its outward form is not taught and practiced as in former years. But it seems to me in these days of more advocacy, of more Government planning, social-welfare programs, blueprint society, we should again remember not only the Fourth of July, but on every day the first lines of the Declaration of Independence:

We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.

These words of Jefferson in substance just mean this: Mankind everywhere calls out for freedom from every form of oppression.

Those who advocate and those who accept the so-called benefits from a planned blueprint society should remember that whenever you are given a free grant or a gift benefit from any governmental source you from necessity give up part of your freedom, because a government can only take from those that have and give to those who have not.

The basic question we should always ask is this: Are we keeping faith with our freedom? Are we living off freedom produced by our ancestors? And are we doing enough to insure that "the freedom under God" given to us will be inherited by our children?

Recently I read a very fine statement of our ancient heritage. This article is called Independence Day—1957. It is by Lester O. Schriver.

I most heartily commend it to my colleagues.

[From Life Association News for July 1957]

INDEPENDENCE DAY—1957

(By Lester O. Schriver)

When I was a boy and lived on a rock-ribbed Connecticut farm, life was a very rugged experience. My parents believed that man should earn his bread by the sweat of his brow. Toil, honest toil, had a certain dignity about it, and indolence or laziness was abhorrent, if not downright immoral.

But life was not entirely work. There was a time for reverence, a time for church, for Sunday clothes, and genteel visiting among friends and neighbors. There was a time for reading, for family devotions, and for neighborhood gatherings. You might call them house parties. And there were certain community observances. There was Christmas, both at home and at the community hall. There were oranges and candy and simple presents and always a Santa Claus in his red suit with sleigh bells around his fat middle.

There was Decoration Day, when everyone went to decorate the graves of the soldiers who had died in the Civil War. There were the old veterans who marched to each grave and left a flag and there was the chaplain who offered a short prayer. These were heroes, both dead and living, and the brass band cast a patriotic spell over all those who witnessed the solemn ceremonies.

But next to Christmas, the greatest day of all was the Fourth of July. It began at midnight. The older, more daring boys ushered in the day with a cannonade in various parts of the community. At daybreak, the small fry got out their punk and firecrackers, and soon had an assortment of burned fingers and other minor wounds.

But at noon there was a picnic on the green and a band concert, and then speeches. Once the Governor came in his high silk hat and cutaway coat. He made a speech, and all of us clapped and cheered and were very respectful. I still remember parts of his speech. He talked about the first Fourth of July, and the Declaration of Independence, and the brave men who signed that document. He said something about the Revolution, and George Washington, and Valley Forge.

And what did it all mean? It meant that young Americans were getting an education. They were learning that the warp and woof, out of which a good life is woven, are made up of work and play, and good community relations, and reverence for God. That it is made up of a love for country, of respect for law and order and for those who are our legally constituted leaders. That a wholesome society rests on four great cornerstones—the home, the church, the school, and the community.

This was the America I learned about as a boy. It is still that America. The horizons have been expanded, the perspective has been enlarged, but the basic factors that made America are constant. As sure as the law of gravitation, as constant as the North Star, as eternal as truth itself.

But now that I have become a man, a graying, aging, and perhaps a somewhat disillusioned man, I am wondering if we have lost something in the more than half-century which has elapsed since a wondering lad first began to comprehend the blessed land in which he was privileged to be born.

In that half century since an American boy began to think, he has the feeling that the pattern has changed to some extent. The picture seems to be a bit out of focus, the vividness of the idealism faded a little, and the fabric a bit more uncertain. Is there a change in the basic fundamentals which seemed once to account for our greatness? Work, honor, courage, patriotism, independence. Ah, yes, independence. I remember a courageous phrase, "and for the support of this declaration of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Where is our independence today? Have we lost it? Do we indeed want it? Or do we prefer security above liberty? Do we still "hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain

inalienable rights, and that among these are life, liberty, and the pursuit of happiness?"

Do we still want these things? Are they still a vital part of our existence? Do we want life and liberty enough to fight for it? Do we want the right to pursue happiness? Are we willing to preserve that which was bequeathed us by brawn and sweat and thought? Or do we want to surrender our independence and accept instead the bounty of a nursemaid state? Do we want independence and the risks that go with liberty? Or do we want unlimited social security, old-age assistance, subsidies, and a welfare state, in exchange for that for which our fathers gave their very lives? Are we selling our birthright for a mess of pottage?

I am not sure I know just what we do want. I only know that I have done a lot of crying in the wilderness lately and I know that many have written to me agreeing with my thesis, but complaining critically that while I point out the obvious, I make no suggestions as to the remedy. Only yesterday, I received a letter from a friend who objected to my habit of viewing with alarm without suggesting a remedy for curing our ills. That is a constructive suggestion, but considering our limited space it is also quite a large order.

As I recall it, we suggested that the greatest danger to our economy is the debasement of our money. We call it inflation. Debasement of our money is caused by making commitments which we cannot keep. Inflation is repudiation, in whole or in part, of the promises we have made. And society, our society, is kept solvent and moral and decent by promises that are kept. Our greatest problem at the moment is to retain our honor and guarantee the integrity of the American dollar. When we cease to do that we are no better than any other bankrupt nation. Even Uncle Sam can go broke.

How can we maintain our solvency? It isn't easy. We have acquired the habit of looking to Government for the solution of all our economic problems. That has never worked and it never will work if we are to remain free men.

We must learn to spend less than our income, both as individuals and as a nation. The important thing is to shock the people of our Nation into a consciousness of the danger of making commitments we cannot keep. Our Government was never designed to support the people, but it is the duty of the people to support such government as is necessary to "establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

It was never contemplated that the citizens of our country should become the wards of the State, nor that our schools should be subsidized by the Federal Government.

It appalls me that the cost of the Federal Government has multiplied 10 times in 20 years, and that the Government employs 2,500,000 people and that 5,500,000 people are receiving Government relief in addition to those who are receiving social security. And did you ever see government bureaucy at work? Its clumsy, inefficient operation, hampered by inertia and redtape, would bankrupt any private business. It is slowly and surely choking the Nation to death.

What to do about it? Strip off all unnecessary governmental services. Cut out the subsidies. Go back to a government designed to "establish justice, insure domestic tranquility, provide for common defense, and promote the general welfare" within decent limits and beyond that, trim the fat to a very minimum.

Much has been said about Federal aid to schools. In my opinion, the Federal Government should spend not 1 penny for schools. The Government has no money except that which it gets from the States. Why ask Oklahoma to pay a tax to the Federal Government for schools and then return it to Oklahoma, less brokerage, for its own schools? Or would you ask New York to regularly contribute to the Federal Government in order that the Federal Government might aid schools in North Carolina?

Either is too ridiculous even to be discussed, and yet the notion still persists that the Government gets money from sources other than the pockets of its citizens. The States are perfectly capable of solving their own school problems and many of them would like to be given a chance to spend their own money on their own projects.

The Hoover report repeatedly revealed shocking examples of extravagance, inefficiency, and downright malfeasance. It pointed the way to save billions, but lethargy and intrenched bureaucracy frustrated many good intentions to save tax dollars.

There is another thing which we can all do. That is to apprise our representatives in Congress that all we ask, as taxpayers, is honest, efficient government. Don't blame a Congressman for being a spendthrift if you made him that way. Even a good Congressman can't reelect himself. He has to please his constituents. If the people who elect him are moochers, he will probably, in self-defense, help to make mooching easy and comfortable.

A short time ago I heard a Congressman in a press interview. He was asked about this platform. His reply was, "Increased social security, Federal aid to schools and reduction of taxes." That is quite a platform. It was good enough to get him elected to Congress, but you and I know it is stupid, and immoral, and economically impossible. When a man can be elected to Congress on that platform, both the Congressman and his constituents are sowing the wind, and will reap the whirlwind and will deserve the disaster which will inevitably result.

Frankly, I am not much impressed when people ask that a remedy be spelled out when an evil is established. We were created with minds with which to find the solution to our problems once the problem has been established.

What we really need is a desire to be saved from our sins and to pray for the courage and the character to save ourselves from a disaster of our own making.

Most intelligent men know that we are literally sitting on an economic time bomb. It has been reported recently that "Britons will have to increase their contribution to government subsidized National Health Service, school meals and welfare milk in order to preserve national solvency." The present British Government is in trouble because it created the health service in 1948 and the opposition is crying "resign" because its estimated cost of that program has almost quadrupled.

There are those who still think "it can't happen here," but unless I am deaf and dumb and blind—it can, and it will unless we rise phoenixlike from the ashes of our lethargy and dare to fight like men.

Oh, yes. It's "Independence Day" again. I didn't intend to stray so far from my thesis. That is one of the dangers of age. The road is long and I have seen much that is interesting along the way.

For those of you who are still with me, please forgive me for taking you on this unusually long journey. This time, I slipped my tether and was lured by the mirage of my own reminiscence of more than a half century.

Expert on Wildlife Urges Halt in DDT Spraying

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. METCALF. Mr. Speaker, H. R. 783 calls for research on the effects of insecticides, herbicides and fungicides upon fish and wildlife. Such studies would lead to a determination of the amounts and percentages of such chemicals that can be used effectively without killing or injuring fish and wildlife.

In the following report published in the Evening Star, Washington, D. C., on July 1, 1957, Dr. Fairfield Osborn expresses alarm over damage caused by pesticide spraying and points out that 65 million acres of cropland and 3 million acres of forests were sprayed without adequate information as to the effect on birds, mammals, and fish.

Such doubts have been expressed by others all over America. This is just one further protest indicating a growing concern about the effect of these various chemical sprays all of which point to the urgency for immediate action on H. R. 783.

The complete article from the Star follows:

EXPERT ON WILDLIFE URGES HALT IN DDT SPRAYING

NEW YORK, July 1.—"Let's stop DDT spraying of croplands and forests until we know more about it."

That plea came recently from Dr. Fairfield Osborn, president of the conservation foundation and the New York Zoological Society.

Expressing alarm over reported extensive damage to the Nation's wildlife and fish due to pesticide spraying, the conservationist said:

"Until it is certain that all known facts about possible damage are in hand, I am personally very much in favor of suspending this DDT program. Extensive studies must be made to determine how to prevent further loss."

CALLS INFORMATION INADEQUATE

Dr. Osborn noted that last year the Government sprayed 65 million acres of cropland and more than 3 million acres of forests without adequate information about the poisoning of birds, mammals, and fish.

Some insecticides were used in concentrations 10 times that which can be tolerated by wildlife, with the resultant death of thousands of birds, he said. He also said there had been huge fish losses following extensive sprayings of forest trees.

The conservationist said he agrees with Assistant Secretary of Interior Ross L. Leffler who is urging Congress to authorize a comprehensive study of what the use of billions of pounds of chemical pesticides are doing to the Nation's wildlife.

"Our conservation foundation and other interested groups are combining for our own field and laboratory investigations which will probably take a year," he said. "And we'll turn over our findings to the Government's investigating agencies. When all the facts are in, we'll know how to proceed with DDT spraying. Until that time, we firmly be-

lieve there should be no repetition of the program. The damage has been too great."

This concern, he said, has extended to private industry. One chemical company, the Thompson Chemicals Corp., of Los Angeles and St. Louis, has publicly announced withdrawal from further production of presently known agricultural insecticides, according to Dr. Osborn.

"It wants to wait until more tests are made," he said.

BIRDS FOUND DEAD

Dr. Osborn declared that he had firsthand knowledge of the effects of recent spraying. In the vicinity of his home at Garrison, N. Y., he said, thousands of birds were found dead after a spraying.

He related that a close friend, Dr. Robert Cushman Murphy, retired ornithologist of the American Museum of Natural History and a fellow of the New York Zoological Society, has brought suit against the Department of Agriculture because of a spraying. Dr. Murphy, who lives in Setauket, L. I., found dead orioles, fish, and frogs in ponds subsequent to the spraying.

"Let's wait with that DDT until we know more," Dr. Osborn said. "It will prove far more economic throughout the Nation in the long run."

A member of the American Committee for International Wildlife Protection and the International Committee for Bird Preservation, among other naturalist groups, Dr. Osborn is author of Our Plundered Plant, The Limits of the Earth, and other books.

Trade, Not Aid, for Poland

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. DONOHUE. Mr. Speaker, I am pleased to enclose a very timely and explanatory editorial, concerning assistance to Poland, which appeared in the May 4, 1957, issue of the Christian Science Monitor.

The article follows:

TRADE, NOT AID, FOR POLAND

Labels, once attached, tend to stick. Mutual security continues to be generally described as foreign aid, although it is America's best investment in defense. And the prospective agreement between the United States and representatives of the Polish Government probably will be identified in most prints as aid to Poland in spite of the fact that the arrangements constitute a straight, simple two-way trade transaction.

What will be proposed, according to apparently reliable accounts, is that the United States Government shall sell about $80 million worth of surplus agricultural commodities, chiefly wheat and cotton, to Poland, taking payment in zlotys instead of dollars. In addition, a loan of about $15 million would be made from mutual-security funds, with which the Poles, would buy American mining machinery. Announcement is said to be awaiting congressional passage of a bill to add $1 billion to the present authority to sell farm surpluses for foreign currencies.

To be sure, it can be said, as in the case of other Iron Curtain currencies, that no one knows exactly what a Polish zloty is worth or when a stock of zlotys will become convertible into dollars. But if an even roughly realistic exchange rate can be arrived at, will not a moving of some of the huge surpluses which are running up storage bills be of real benefit to American farmers and taxpayers?

As for the mining machinery, no small amount of business is done on credit these days; and if Poland by a bit of modernization can sell more coal to its European neighbors, they in turn will be the readier to take off American hands Polish zlotys with which to buy fuel.

In short, nobody is being asked to "give" anybody anything. There are no grants involved. Even credit is usually paid for. The question is simply whether the United States is willing to trade with a country whose government is controlled by national Communists though it exercises a much greater degree of internal self-government than before.

This may or may not be good business. The fact that a normally grain-surplus country like Poland wants to buy wheat is a measure of the damage done to it by the forced collectivizing of farms under Stalinism. The purchases of grain will give time to turn back many Polish farms to peasant proprietors—a gain for a free economic system. Is not this worth a little trade cooperation?

By a very similar process American, French, and British help has enabled Marshal Tito, of Yugoslavia, for nearly 9 years to defy orders from Moscow while maintaining a slightly less rigid Communist dictatorship. That example has something to do with the weakening of the Soviet grip throughout the satellite states. If one by-product of trade with Poland is even slightly greater economic freedom from the Soviet Union, then not only Poland and America but the free world will profit from the transaction.

Two Questions About H. R. 11: Interstate Commerce and Suppliers' Price Cuts To Help Retailers Meet Local Competition

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 5, 1957

Mr. PATMAN. Mr. Speaker, I have a letter of March 14 from the San Francisco Petroleum Retailers Association, Inc., which asks two quite specific questions about the equality of opportunity bill, H. R. 11. Believing that other small-business people, as well as Members, may be interested in these questions and my answers, I am offering for the RECORD the letter from the San Francisco Petroleum Retailers Association, Inc., together with my reply, both of which follow:

SAN FRANCISCO PETROLEUM
RETAILERS ASSOCIATION, INC.,
San Francisco, Calif., March 14, 1957.

Hon. WRIGHT PATMAN,
House of Representatives, House Office Building, Washington, D. C.

DEAR SIR: In order to aid us in combating the propaganda that the oil companies are putting out to their dealers to get them to oppose H. R. 11, we would like an answer from you that we can use in our letters, bulletins, and press releases.

Specifically the statements have been made that H. R. 11 would not apply to California, and also that in the event of an independent dropping his price in an area, the major supplier would not be able to help their dealer in that area. The two statements are, of course, incongruous, but are typical of the steps that are being taken to defeat this legislation.

Our legal counsel has advised us that naturally H. R. 11 would apply in California, and we are going on that premise.

As I mentioned above, we would like a complete explanation from you as to the ramifications that H. R. 11 would have if passed, and your permission to use this information to the fullest.

The board of directors of the San Francisco Petroleum Retailers have voted in favor of supporting this bill, and we will contact all the Members of Congress from this State to that effect.

Thank you for your courtesy, and the best of luck for a winning battle.

Yours truly,

SAN FRANCISCO PETROLEUM
RETAILERS ASSOCIATION.

MARCH 19, 1957.

Mr. WALLACE E. PETTIGREW,
San Francisco Petroleum Retailers Association, San Francisco, Calif.

DEAR MR. PETTIGREW: I am glad to have your letter of March 14 asking me for statements which will explain what the equality of opportunity bill, H. R. 11, would do.

I am enclosing pages from the CONGRESSIONAL RECORD which contain statements by me, explaining both the purpose of the bill and how it would work.

To give brief answers to your specific questions, however, they are as follows:

First, you ask whether H. R. 11 would apply in the State of California. The answer is that it would apply in all States and in the District of Columbia. However, since the bill involves Federal law, and not a State law, it would apply only to those companies that are in interstate commerce. The question of whether a company is in interstate commerce is, in some instances, a rather technical one, but in general it means that the company must be in business in more than one State, or that it sells its products in more than one State. As a general rule, the bill would not apply to sales made by a single store retailer, although it would give protection to such a retailer from the discriminatory selling practices of a company which is in interstate commerce.

Your second question is whether a major oil company from which you purchase supplies would be able to drop its price to you, in order to help you meet local competition. The answer is that the oil company could drop its price to you, within certain limitations. The limitations are that the bill would create a strong tendency to require the major oil company, if it drops the price to you, to drop the price also to its other dealers who are in competition with you. I use the phrase "strong tendency" for this reason: The bill does not require the supplier to accord absolutely fair and equal treatment to its competing dealers; but it does forbid the supplier to discriminate among its dealers to such a serious extent that the effect may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly."

In other words, it is this key language which I have quoted above which would determine whether or not your supplier's discriminatory selling practice is illegal. This is the same language which defines an illegal merger of corporations, under section 7 of the act; and it is the same language which defines an illegal exclusive-dealing agreement and an illegal tie-in sales agreement under section 3 of the act.

I hope that these remarks and my enclosed statements will clarify all of the issues for you.

I am,

Sincerely yours,

WRIGHT PATMAN.

The Troublemaking ILO

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. FEIGHAN. Mr. Speaker, under leave previously obtained, I insert in the RECORD an editorial which appeared in the Cleveland News of July 3, 1957.

It is my hope that many Members of Congress will read this excellent editorial comment on ILO. It should prove very beneficial to Members of Congress whenever we are called upon to take any action whatever with reference to ILO.

The editorial follows:

THE TROUBLEMAKING ILO

Sharp public disagreement exists as to whether an arm of the United Nations known as the International Labor Organization is worth United States participation.

This is the virtual parliament to which U. N. member nations send employer, employee-trades union, and Government delegates. Two former employer delegates, the latest William L. McGrath, of Cincinnati, resigned in alarm and have unsuccessfully appealed to the United States Chamber of Commerce and the NAM to discontinue their support of this piece of governmental machinery.

Our national administration evidently feels dutybound toward the U. N., to continue to participate in the ILO, and the American labor union delegates have seen no harm in it. Apropos of this indifference, it was to the ILO sessions that Delegate Dave Beck was bound when he was fetched back home to be asked questions he refuses to answer.

It might be unfair to the ILO to say that Beck is exactly the kind of delegate who saw no harm in the ILO seeking to perpetuate its socialism into American law, but that is a sort of characteristic coincidence about this mess.

The ILO became most alarming 2 years ago when Russia suddenly decided to participate in its study and findings, as long as it could control three delegations—the U. N. members of Byelorussia and the Ukraine being inside the Soviet orbit. This has given the Communist line practically a balance of power in the ILO, and our society is in some danger now from the ILO "conventions," which come up to each U. N. nation as proposed treaties.

As Mr. McGrath said in a recent speech, the ILO is now studying and adopting conventions about government control of farm-youth education, government control of all private employment, government control of all wages, hours, and work conditions—a natural thing for Soviet Russians, but a grim concern to free nations whose Socialist labor-union delegates jump in and vote along with the Reds for conventions for such advanced socialism.

There is no chance or present hope of any ILO majority for the freedom in private business and work rights in which the American system devotedly believes. It's almost a Russian deal with a stacked deck.

The ILO long ago put down the United States for 25 percent of the cost of its operation, the largest assessment, as usual, of any participating nation. But, because of frustration about this strange socializing parliament, Congress 2 years ago put a dollar ceiling—$1,750,000—on our contribution.

Some Congressmen now favor raising the ceiling by $214,000 to meet the full 25 percent of this budget, over which neither the United States nor the United Nations has any control. We suggest Congress do nothing of the kind.

If the ILO could have taken the hint, and if its participants had revolted into a majority against Russian policy and tactics, that would be another story. Yet, as Mr. McGrath said the other day, the ILO delegates have insisted on going ahead with a blueprint for a wholly regimented state, which he heard discussed by speakers who ventured that communism might have to be the force to put over this regimentation into socialism.

The News thinks Congress should push the dollar ceiling down as a more vigorous hint, and, if that didn't work, take the advice of its disgusted free-enterprise delegates and get out.

Where is the commonsense in supporting any arm of the U. N. which spends its entire time throwing Socialist programs at us which the American people are bound to reject with scorn and indignation? Or are we getting closer to some unappetizing Bricker treaty amendment to protect us from our own willful playing with fire?

New Weapons Doom Many Defense Jobs

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. MILLER of California. Mr. Speaker, one of Washington's most astute columnists writing on Government personnel problems is Joseph Young, of the Washington, D. C., Evening Star.

In a recent column, he discussed the future dislocation of civilian employees in the Department of Defense due to the change that is gradually taking place within that Department with the adoption of new weapons and newly devised organizations. The column appeared on June 26, 1957. I commend its careful reading to all who have large defense installations in their districts:

NEW WEAPONS DOOM MANY DEFENSE JOBS

(By Joseph Young)

A heavy dislocation of civilian employees in the Army, Air Force, and Navy Department is expected during the next year.

Fortunately for civilian employees in the defense agencies in the Washington area, this impact will not be felt much here. But the field service is expected to be hit heavily.

Although the total number of defense civilian jobs will not be materially changed, a lot of employees are due to lose their positions.

The reason is that the defense agencies are gradually changing to different type operations. Added emphasis on missile programs and nuclear weapons necessitate the opening of new installations and the expansion of others.

To do this within the present civilian employed strength, other defense units will either have to be curtailed or closed down to make way for the new and expanded installations.

This means that some employees will lose their jobs to make possible the hiring of other workers in new activities.

Since special skills are needed for the new types of jobs and since the opening and closing of defense installations rarely will occur in the same area, it will be virtually impossible for displaced employees to find other jobs in new defense units.

The impact of this can be eased somewhat if the Senate restores some of the fund cuts made by the House in the Defense Department's 1958 budget requests. It would permit some defense units to continue present operation. But even so, defense officials say many civilian workers will lose their jobs.

In the Washington area, defense agency employees are more fortunate. Since they serve mainly in an administrative capacity for units in the field, employees here will not be affected much by the changes in the field as long as the total number of civilian workers in the field remains about the same.

Washington area employees in the defense agencies, however, are affected by the 12-percent cut in administrative personnel strength that has been ordered for defense units in this area by Secretary Wilson, starting July 1. The agencies will try to achieve as many of the reductions as possible through attrition—by not filling vacancies. However, some layoff notices will have to be issued.

The Cost-Price Squeeze Hurts People

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, an editorial from the Perham Enterprise Bulletin, a newspaper in my district, hits the farmer's cost-price squeeze. I ask permission to insert this very pertinent editorial which was reprinted in the Henning Advocate, June 27, 1957:

SQUEEZE CONTINUES

The Gallup poll has discovered that the farm revolt against the Republican Party is increasing. A recent sampling shows that 48 percent of the farmers think the Democratic Party is better for the farmers, while only 20 percent think the GOP is their best champion.

To those of us living in the Midwest, this is no surprise, and no mystery. The cost-price squeeze has put a sizable crimp in the farmers' net income. Worse than that, the end of the squeeze is not in sight. This uncertainty is probably as much a factor in the farmers' political thinking as the actual squeeze itself.

It also dominates the thinking of all persons directly dependent upon the farmer for their livelihood. Businessmen have absorbed about all the price increases they can. As the prices go up, sales in the farm areas drop off.

"The average prices we receive wouldn't be so bad," say the farmers, "if the things we buy would stay in line."

They, of course, haven't stayed in line, and are likely to get farther out of line. Big business and big labor seem to have formed an alliance. Labor gets a wage boost, industry adds that on plus a big slice for itself and shoves the whole package in the consumers' shoes. How long this can go on, we won't even guess. All we know is that a wage boost that isn't accompanied by increased production is inflationary and unfair to the rest of the public. Ditto for unwarranted price increases.

Country newspapers are really getting the squeeze, too. Cost of newsprint is up 300

percent in a period of less than 10 years. Not only that, but the product is inferior, difficult to put through the types of presses and folders used in country shops. Labor costs have about doubled. Delays of any kind have become costly. Repair costs are out of this world; and revenues are down. Something will have to give pretty soon.

We don't think this administration has been sufficiently tough on the price gougers. Gentle warnings have gone unheeded. Something more drastic is overdue if a bust is to be avoided.

H. R. 11 Would Operate Against Monopolization of Oil Industry by International Oil Combines

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PATMAN. Mr. Speaker, heretofore I have referred to propaganda distributed by representatives of the international oil combines in opposition to H. R. 11. On January 28 I placed in the CONGRESSIONAL RECORD at page 930, on January 29 at page 1102, and again on February 5 at page 1402, quotations from and citations to documentary evidence of a false front lobbying campaign which had been planned and organized by the international oil combines against H. R. 11. Since then the Antitrust Subcommittee of the Committee on the Judiciary, United States Senate, has held extensive hearings dealing with that subject and has more fully documented the evidence on that point.

Until we analyze the situation, it is difficult to understand the reasons why the international oil combines and other major oil companies associated directly with them have gone to such lengths in their opposition to H. R. 11. However, once we look into the matter, then their reasons are perfectly clear. They want to gain a complete monopoly control over our domestic oil industry as they have gained monopoly control over the international oil trade. Standing in the way of that accomplishment are the independent producers, refiners, and distributors in our great American petroleum industry.

There is a means by which these giant international oil combines can destroy the independent producers, refiners, and distributors of our domestic petroleum industry. That means is the use of the practice of price discrimination. H. R. 11 would curb the practice of price discrimination. Therefore, the giant international oil combines oppose it.

Recently I wrote Mr. Gordon M. Robb, of Houston, Tex., a letter in which I pointed out the dangers in allowing these giant international oil combines and those associated with them to continue the practice of price discrimination. I believe that the Members may be interested in reading the letter I wrote to Mr. Robb because in it I have tried to dispel some of the misinformation and clear up some of the misunderstandings about H. R. 11. That letter is as follows:

APRIL 29, 1957.

Mr. GORDON M. ROBB,
Houston, Tex.

DEAR MR. ROBB: I thank you for writing me on April 22, 1957, about H. R. 11 to amend section 2 (b) of the Robinson-Patman Act.

Your interest in this proposed legislation is appreciated. It does appear, however, that someone has misinformed you concerning the possible effects of this proposed legislation on various methods of doing business.

Enclosed is a copy of H. R. 11. It is a simple and modest proposal. You will note that it provides that the "good faith" meeting of competition shall be a complete defense to a charge that a seller has unlawfully discriminated in price unless the effect of the discrimination would be to substantially lessen competition or tend to create a monopoly.

The reason why we must have a law to curb price discrimination is that without such a curb big competitors destroy small competitors without respect to efficiency or other merits, and the result is that all business tends to end up in a monopoly.

By discriminating in price, a big seller may destroy his smaller competitors even when all competitors receive their supplies at the same price and have the same unit operating cost. But when discrimination is a general practice in business, the bigger competitors receive another unearned advantage in the price they pay for supplies, and they almost inevitably use this advantage to destroy smaller competitors.

Some of us thought that we had solved this problem and had placed some reasonable limits on price discrimination by passage of the Robinson-Patman Act in 1936. But the majority opinion of the Supreme Court in the Standard Oil (Indiana) case drove a serious loophole into the law. According to this opinion, a seller is justified in discriminating in price as between his competing customers, when he is meeting the price offered by a competitor to one of those customers no matter to what extent competition may be destroyed.

H. R. 11 simply says that such discriminations will not be permitted where the effect may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly."

If we do not have effective laws against monopoly and against unfair methods of creating monopoly, countless small businesses will be needlessly destroyed, and, in fact, the whole country will be hurt by high prices, low production, unemployment, and slow progress.

The fully integrated major oil companies with international connections and facilities are among the worst offenders against our antitrust laws. They, as the Standard Oil Company of Indiana, have utilized the practice of price discrimination to eliminate independent oil producers, refiners, and distributors.

Recently I had some research done regarding the decline in the number of active and inactive oil refining companies in the United States. In that connection it was found that in 1920 the number of such companies totaled 274. In 1950 the total number of active and inactive small refining companies had dropped to 193. I am informed that at the end of 1955 the total number of refinery companies stood at 179. Included in that are the 30 major integrated, international oil combines. Thus, the total of independent refinery companies in the United States at the end of 1955 stood at 149. That number is growing smaller.

Thus, you can see that if the trend to monopoly based on monopolistic practices such as price discrimination and other factors continues, it will not be long before independent oil producers will have no independent oil refineries as markets for their products. The international major oil companies will constitute the only markets. Then the prices the independent oil producers will receive will be the prices the international oil companies decide they wish to pay.

In view of these circumstances I am not surprised that the opposition to H. R. 11 and to other proposals to strengthen the laws against monopolistic price discriminations has been led by the major oil companies. I have made some speeches on the floor of the House about this. Enclosed for your information is a reprint of some of these recent statements.

I trust that this information will be found to be responsive to your inquiry of April 22.

With best wishes and kind regards, I am,

Sincerely yours,

WRIGHT PATMAN.

Deficit Financing by Poultry Farmers: Five Cents To Pay for Eight-Cent Feed

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, more letters are arriving in my office relating stories about unbelievably low egg prices being received by my farm constituents. Under unanimous consent I insert a letter from farmers in Crookston, Minn., together with a clipping showing eggs top grade at 21 cents per dozen, and old hens selling for about 40 cents apiece, whereas the chicks cost the farmer 35 cents apiece. That is 5 cents gained by the chick, but does not include cost of feed to produce those chickens, costing 8 cents per pound:

CROOKSTON, MINN., *July 1, 1957.*

Mrs. COYA KNUTSON,
Member of Congress.

DEAR COYA: I am sending you one egg receipt for each month of the year up to July so you may see the prices and grading.

LOCAL PRODUCE
(Courtesy Peterson-Biddick Co.)

	Cents
Poultry:	
Old roosters	0.07
Hens	.08
Eggs:	
P. B. Grade	.21
A grade, medium	.18
B grade, large	.18
Butterfat:	
Sweet	.63
No. 1 sour	.60
No. 2 sour	.57

Local Canadian exchange: Exchanged at 3 percent premium.

The "less" is the commercial feed and oyster shell and grit purchased.

I am also enclosing the Saturday, June 29, egg and poultry market so you can see eggs are down again.

This spring we paid 35 cents apiece for our pullets and at 8 cents per pound for hens we will have to sell the old hens for about 40 cents apiece (which we did last fall also).

I hope this information will be of some help to you in relaying it to the Secretary.

Sincerely,

Mr. and Mrs. GEORGE L. HAGEN.

A Fresh New Approach to the Problem of Juvenile Delinquency

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. KEATING. Mr. Speaker, a constituent of mine, Miss Melissa E. Bingeman, has come forward with an interesting suggestion for meeting one aspect of the problem of juvenile delinquency. She suggests institution of a special honor system in our schools designed to rip the false mask from those who protect their classmates from detection by misapplying their parents' admonition not to tattle.

Today, in all too many instances, the false code or mask makes dishonor look like honor and thus makes the problem worse. Miss Bingeman suggests that a solution lies with the students themselves, through their own student-council leaders. They are the ones who are suffering from the stigma caused by the bad example of the few, and they know how the code operates and how to buck it.

Under Miss Bingeman's proposals, student leaders would frame a new honor code by means of which our young people would pledge not to protect, by their silence, any wrongdoing by their contemporaries.

Certainly, it is to hoped that youth reforms can come from within as much as possible. It is a big problem, but through continued dedication of interested parties, new and fresh approaches, such as outlined in this plan, may find the answers.

Already the new honor code has caught on in the city of Rochester, N. Y., where most of the original supply of 10,000 copies of the proposal have been called for. I hope it will gain as ready an acceptance in other parts of the country, as well.

Miss Bingeman deserves high praise not only for the clarity of her presentation of the problem, but for coming up with what appears to be a sound and workable solution.

Copies of her leaflet which details the problem and plan are available to any high school students—not teachers—in the country who will write to the Art Print Shop, 77 St. Paul Street, Rochester 4, N. Y. The cost is approximately $20 per thousand copies, but it is suggested that interested parties should write first for the latest estimated costs.

I hope every Member will take time to read this piece, as reprinted below, and will make efforts to interest their constitutents in this honor code. Under leave previously granted, I insert at this point, this thoughtful and unique leaflet.

A NEW ANGLE ON DELINQUENCY—WHAT DO YOU THINK OF IT?

Nowadays every newspaper or magazine you pick up has something to say about delinquency. An editorial in the Democrat and Chronicle, when the Salk vaccine was announced, said "We need another vaccine—a vaccine for delinquency." Delinquency is like polio in two ways; (1) it doesn't hit very many, (2) but it can work havoc on those it does hit. Both of them can cripple their victims; polio cripples physically, delinquency cripples morally. While some patients recover, many are crippled for life.

Salk vaccine reduces illness from only one cause—polio; it doesn't help in the case of broken bones, cancer, heart disease, kindney disease, pneumonia or tuberculosis, the main killers of youth. We do not give Salk vaccine for cancer nor safety lectures for pneumonia: each different malady requires a different preventive or cure. In the same way delinquency has many causes, and for each cause a different preventive or cure is needed. Here is offered a remedy for only one of its causes.

SOME CAUSES OF DELINQUENCY

Some causes are recognized, but there is one important cause which has not been recognized because it is disguised. It wears a handsome mask. This is the one for which a preventive is proposed.

Among the delinquency causes that are recognized are poor home conditions, such as overcrowding, poverty, lack of parental control, lack of love or understanding, harshness or slackness). Then there are alcohol, narcotics, degrading pictures, bad adult example, criminal and delinquent associates; there may be too many unfilled wants, too little money, or too much money and too much free time—not enough constructive things to do to use up teen-age energy.

AN UNRECOGNIZED CAUSE OF DELINQUENCY—THE CROOK IN THE MASK

This crook has fooled many youngsters into thinking that loyalty and honor require them to keep mum about every kind of wrongdoing by other youngsters. This protects the thief and vandal by reducing detection, identification, apprehension and conviction. So it increases crime and delinquency; for if a kid can get away with it he is apt to continue and to do things that are even worse. The crook, hiding behind that false face (called a code of honor) makes many kids think it is worse to report a crime than to commit it, worse to identify the culprit than to commit the crime.

THE CROOK PROVIDES IMMUNITY

This false idea of honor protects the crook, instead of protecting the school and the community, and lets the delinquent get off scot free. It provides immunity.

When you add immunity to temptation and opportunity, you get a combination that can explode into crime. Temptation often comes from inside of us; opportunity is supplied by unlocked automobiles, self-serve stores, and by modern social freedoms.

At the same time there are two strong influences that keep kids going straight—character and consequences. The great majority of kids go straight because of character; others, because of the probable consequences of going crooked. When the imposter, wearing that beautiful mask labeled "honor," keeps them from having to face the consequences of their misdeeds, they become bolder, sometimes becoming chronic delinquents graduating into chronic criminals.

MULTIPLICATION, NOT ADDITION

Delinquency which results from immunity can also multiply the delinquency from all the other causes, by combining with them. In this, again, it it is like disease. Two of Rochester's most eminent physicians[1] tell us that there are some mild ailments that can become deadly if they strike a person who already has some other mild ailment. This happens, they say, when a person with an inactive TB germ breathes silica dust (which can cause a disease of the lungs) or when a person with a mild anemia (too few red blood corpuscles) is hit by one of a number of other ailments. The two mild causes together can cause a flareup that is fatal.

This is true also when immunity (provided by the false code) is added to any of the other causes of delinquency or crime. When you remove the fear of consequences, you give delinquency and crime the green light. It may have been this combining of immunity with the other causes of delinquency that brought about the increase during the First World War; then in the prosperity period of the 1920's; then in the depression of the thirties; then in the Second World War, followed by the Korean war, then the cold war, and now the uncertainty of military service. Each of these brought a rise in delinquency, for they combined with the immunity provided by the false honor code and caused a flareup into delinquency.

BYPRODUCT OF THE CODE

One of the effects of the false code is that it throws to the wolves the children and teen-agers who never intended to be vandals or crooks, but who somehow got caught in a web of circumstances from which they could not free themselves. They have been forced by the code, and against their own will, to protect the guilty secrets of others, or to take part in vandalism or other crimes.

SPECIAL DANGER REQUIRES SPECIAL SAFEGUARDING

Just as mountain climbers rope themselves together so that if one slips the others can pull him back to safety, so kids who are in danger from delinquent companions, or other temptations, need the support of other youngsters to keep them from falling. The fellow students of a school, through a genuine code of honor, can be such a rope. In our high schools are the separate strands, but they have never been bound together into a rope.

THE DELINQUENCY BAROMETER

We know that a falling barometer means there is a storm ahead; and the delinquency barometer has been falling. FBI figures show that the average age of delinquents has steadily declined. The average prison age dropped from 23 to 19 between 1944 and 1953. In 1953 one-half of the burglaries were by boys under 18, and a large proportion of them under 16.

J. Edgar Hoover told Congressman KEATING, recently, that in 1955, 1 out of every 35 youths from 10 to 17, was arrested, that 576,000 under 18 were taken into custody in the United States, this being an increase of 11 percent over the previous calendar year; that (at present) 42 percent of all persons arrested for major crimes are persons under 18, and of that number, one-half are under the age of 15.

Or, listen to this (from official sources): "Delinquency has increased 45 percent over the past few years"; and an FBI report says: "The national crime rate has been climbing steadily at an appalling 10 percent a year to a record of 2 million major offenses over the whole country." The FBI Uniform Crime Reports for 1955, says: The 1955 property loss was about $339 million (offset by a police recovery rate of about 57 percent), and: "The percentage rise in crime since 1950 is almost three times that of the increase in population"; moreover, "latent demoralization, destruction of respect for the law, and juvenile delinquency go along with violent crime."

SO WHAT

So boys are learning, earlier, that when they indulge in vandalism no one will "squeal"; that the other kids will, by their silence, protect the thief, the arsonist, the burglar, the pickpocket, the light-breaker, the window-smasher, the ink-thrower.

[1] Dr. Wm. Alfred Sawyer and Dr. George H. Whipple.

They learn that they can carry brass knuckles, switch-blade knives, and even guns, with impunity; for not only their own pals (who also are guilty) but the decent boys and girls, neighbors, and fellow students who have broken no laws, destroyed no property, injured no one, have been fooled by the false face that makes dishonor look like honor. They have been fooled into thinking it is honorable to shield the criminal.

THE TRAGIC RESULT

Apparently many people blame all youth, the innocent as well as the guilty, for the increase in deliquency. To such unthinking people the word "teen-ager" means delinquent. Letters to editors in our daily papers, often point out how unfair this is. "There are good youngsters, too," they protest. The trouble is that the good youngsters have not been heard from; their lips have been sealed by the imposter in the mask, who has not allowed them to declare themselves. He has fooled the parents, too. One father was overheard saying to his son: "Don't you tell—I don't want my son called a snitcher."

WHAT IS THE ANSWER?—UNMASK THE CROOK

It is the decent youngsters who can do it. They, and they only can tear away the mask and show up the falseness which now compels the law-abiding, straight-shooting youth to take sides with the law-breaker, and against the law.

Before offering a blueprint for scrapping the false code it may be useful to take a look at how it developed.

This should also show us how to reestablish a true code of honor.

WHO MADE THE MASK IN THE FIRST PLACE?

The grownups made the mask. They tried so hard to teach their children not to tattle that they fell into danger of another kind; like the man in his car at the railroad crossing. He was waiting for the Black Diamond to pass. It made such a racket, with its pounding wheels, that he did not hear the freight train approaching from the other direction. It was the freight that killed him. He was just as dead as though he had been hit by the Black Diamond.

In the same way, we tried so hard to teach children not to tattle, that we gave them the idea that all telling was tattling. We did not take the time or the trouble to teach them what kind of telling is tattling, and what kind is duty. If a child turns on the gas, or plays with matches, for example, there is danger, and it must be stopped or reported. Such telling is duty. But we did not get the idea across to the children. They cannot be expected to know what telling is tattling, and what is duty, unless they are taught. Too many have never been taught; they grow up with the wrong idea.

MAKING THE MASK

When grownups label all telling as tattling they are making the mask. Then, when children reach school-age they soon find out that telling anything on anyone, turns their schoolmates against them; for these schoolmates have usually had the same kind of home training.

FOOLED BY THE FALSE FACE

By the time children are 10 or 12 years old they realize that they want to be popular, and they have learned that, in the eyes of their schoolmates, it is worse to tell who stole the bicycle, than to steal it; worse to tell who broke the street lights than to break them; worse to tell who threw the snowball at the windshield, and caused an accident, than it was to throw it; worse to tell who smashed the window, than to smash it. This is discouraging to the child who wants, and expects, to do what is right, but expects others to do it too. They are forced to do 1 of 2 wrong things, and there is no right way open to them. This is frustrating to those who have a sense of justice, and may have a lifelong effect.

At the same time it encourages the child who "got away with it" to do it again, or to try something even worse. Thus it has come about that in the teen-age world it is a worse offense to identify the violator than to commit the violation.

Long before boys and girls leave high school many have adopted this phony code as their own; so they take it with them when they enter college, or the Army, business, the professions, or when they take a job. They will continue to protect the cheat, the thief, the fraud who is victimizing the firm, the Army, the Government, the city, just as they, by their silence, had protected the cheat, the bully, the thief and the vandal while still in school. We can see signs of this all around us and in newspaper headlines.

AN OLD STORY

Our fathers and grandfathers grew up with this same false code. This may be one reason why crime and delinquency have increased so steadily. While we have feared, and wondered at, this growing evil, we have failed to realize the effect it has had on the decent, honorable, self-respecting boys and girls, kids with character and a sense of responsibility. They have not only been immobilized, they have been muzzled by the phony code. They have been kept from taking a united stand.

When they come up against a situation where their knowledge of wrong-doing could stop it, they have three choices: (1) They can ignore it; (2) they can report it secretly, surreptitiously, with assurance that no one will never know where the information came from; (3) they can report it openly, and take the consequence in vituperation, ostracism, retaliation; they can be branded as informers, rats. All are repugnant.

Is it any wonder that usually they do nothing.

THIS IS THE DILEMMA; WHAT IS THE SOLUTION?

The answer is: Unmask the crook.

Only the teen-agers can do it. They are in the high schools; therefore the high schools can do it, under the leadership of their elected student councils. It is their fight. They are the ones imposed upon; it is from their ranks that delinquents and criminals are recruited; it is their example that younger children follow; it is they who will be the parents of the next generation; and they know better than does anyone else, how the phony code operates, and what it will mean to buck it. They know the moral and physical courage that will be required.

The Army, the Navy, the Marines, the Air Force know that there are in every service posts that can best be filled by youth; yet in this war on crime and delinquency youth has been deprived of its opportunity to serve, deprived by the false (or spurious) coating on our honor code, and, as a consequence all youth has been unjustly blamed for the acts of criminal youth. This is the fault of the false coating on the code, and not the fault of the rank and file of teen-agers; they do not lack either integrity or courage.

DECLARATION OF WAR ON CRIME AND DELINQUENCY

The student body of any high school has the right and the power to frame its own honor code. They have the right to say that they will not protect, by their silence, any act or situation which injures, or is apt to injure others, or the property of others.

Several Rochester schools have already taken this step, although it is not generally known. This points to the second step: The newly adopted code needs to be published, so that the general public will know that pupils of that school will not, by their silence, protect vandals or criminals.

ANNOUNCEMENT BY MANIFESTO

The high school student council, on behalf of the student body, can give the newspaper a copy of their official honor code, with the date on which it is to become effective, and not retroactive. At the same time a copy can be posted on the main bulletin board of the school, also with the effective date. As past delinquencies would not count, all students could support the code without losing face.

A WORKING MODEL

Different schools would probably use different plans for carrying out their new code. One possible way would be to authorize all members of the student council to receive reports of code violations—that is of acts that endanger people or property. All such reports of violations would be considered at the next meeting of the council; and when actual violations are reported, the case could be posted on the bulletin board, under the code, and without the names of the perpetrators or the reporters. The school, or its student body, not the individual, would be responsible.

THE EFFECT

One effect would be that the responsibility for reporting infractions of the code is shared by the entire school; another is that all taint of dishonor or of treachery, or lack of loyalty, is removed by the public announcement which is also a warning that intentional injury of persons or property will be recorded and made known.

CAN WE GO INTO REVERSE?

Can people reverse their ideas? Those who doubt it need only to remind themselves that the population of the United States once reversed itself on an important issue inside of 1 hour, on December 7, 1941, the hour of the sneak attack on Pearl Harbor, when public opinion turned a complete somersault. There are also many people who remember the amused contempt with which the FBI was once regarded, and how quickly it changed to trust and admiration when J. Edgar Hoover took over.

NOT A NEW IDEA

There is really nothing new in the idea that a good citizen should support the law as against the lawbreaker. We expect it of our police, our public servants, our Government representatives, and Government officials. We do not consider them as petty, or snitching or ratting when they uphold the law. Nor do we consider them noble if they are false to their country, community, or their job in order to cover up some misdeed or crime committed by an associate or friend.

WE HAVE BEEN TWICE FOOLED

First, the imposter fooled us by telling us it is disloyal to be true to school and community if that involves getting anyone into trouble; then he fooled us again by telling us we withhold information as a matter of honor, when, actually, it is more often a matter of fear: fear of contempt, of ostracism, of reprisal. It seems harder to be brave when it brings denunciation than when it brings medals.

THERE IS REASON FOR FEAR

Our present code makes some youngsters think the criminal is the hero, and that his victim is the criminal. This was so in a case reported by the United States Senate Subcommittee on Delinquency. It tells the story of the boy, Eddie, who had been demanding, and getting, money from his schoolmates. One day he asked Harry for a dollar, but Harry didn't have one. So Eddie warned him to have it sure by 3 o'clock that afternoon. Harry borrowed a dollar, to avoid being beaten up. But that borrowed dollar was the means of convicting Eddie.

His school friends, however, considered Eddie the hero, and Harry the villain. "There's the guy who squealed," they yelled, as they pounced on Harry and his friends, who were returning from a high-school dance.

"Nine boys leaped out of a pursuing car. By the time the police arrived the attackers had escaped." Harry was taken to the hospital, with severe cuts and bruises, and an injured back. One of his companions suffered a broken jaw, and required surgery; the third boy was knocked down, kicked, given two black eyes. Several of the nine did not even know Harry; they had been asked to help beat up a "squealer."

This is typical of what the Senate committee uncovered. It shows that physical as well as moral courage will be needed. The crook in the mask has been making monkeys of the decent kids long enough.

SIZING UP THE ENEMY

In war it is important to know the strength and strategy of an enemy. In this case the enemy consists of those who deliberately take advantage of the phony code in order to steal, damage property, or indulge in other crimes. Enemy strategy calls for the use of epithets (snitching, ratting, etc.), and sometimes for a beating, or worse.

Advance notice, well publicized, that after a certain date no decent pupil of the school will protect vandalism or other crime by withholding information, would forestall any possible charge of treachery, and would discourage reprisal.

THE BEST DEFENSE IS OFFENSE

This is a recognized principle. Positive, not just negative action is needed. The first objective would be to reduce crime and delinquency in the area of the school. The published manifesto would discourage vandalism on the part of younger children, as well as of teen-agers. This could develop into the most important, the most exciting contest ever staged—the contest to see what community can reduce its crime and its delinquency the most, or the fastest.

TEEN-AGE POTENTIAL UNLIMITED

The teen-age potential is unlimited for either good or ill: but the potential for ill has had free rein. It is proposed that its potential for good be unleashed. Here, in our high schools, are all the qualities needed to scrap the false code, and the flood of lawlessness which it has spawned, and to establish a realistic code of honor. Here we have intelligence, both moral and physical courage, initiative, tenacity, faith, endurance, enthusiasm, resourcefulness, idealism, and surely an abundance of incentive and power.

When high-school teen-agers realize that a small minority has been able to stigmatize their entire generation, they will awaken, and take over. When that happens, nothing will be able to stop them.

Immigration Legislation

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. DONOHUE. Mr. Speaker, as we all know, one of the most challenging legislative problems before the Congress is equitable revision of our current immigration laws.

I am pleased to enclose an erudite explanation of this problem contained in an article, by Josephine Ripley, which appeared in the April 25, 1957, issue of the Christian Science Monitor.

The editorial follows:

IMMIGRATION LEGISLATION

(By Josephine Ripley)

Congress is not believed to be in any mood for a drastic overhauling of the Nation's immigration laws. No hearings on either the administration or Democratic immigration bills have been scheduled. It has been suggested that the Senate Immigration Subcommittee may get around to the subject after the Easter recess, but there is nothing definite.

President Eisenhower has twice asked Congress to permit more immigration from Southern and Eastern Europe. The 84th Congress did nothing in that direction. The present Congress may, it is thought, approve a few minor changes in the law, but no major ones. This thinking is based on the fact that the makeup of the Senate has changed but little from 1952 when the legislators defiantly overrode a Truman veto of the present McCarran-Walter Act.

Observers see no fundamental change in immigration theory on either side of Capitol Hill, Representative FRANCIS E. WALTER, Democrat, of Pennsylvania, coauthor of the law, is in a strategic position as chairman of the Subcommittee on Immigration. He is opposed to opening the immigration gates any wider.

Also, the emotional drive for refugee admission following the Hungarian revolt has subsided. Admission of Hungarian refugees has slowed to a trickle. Some 31,000 or so have been admitted to this country so far. More than 100,000 have been resettled in other nations.

The President has asked Congress to give those Hungarians "paroled" into the country under an emergency statute the status of regular immigrants.

But Congress is not considered ready for any change in the national-origins quota system. This system was established in 1924, and reaffirmed in 1952 in the McCarran-Walter law. It restricts immigration from southern and eastern Europe, Asia, and Africa. It gives the largest quotas to Britain, Ireland, and Germany from which lands came the bulk of the country's first immigrants.

As one step, the President has asked that the quota system be based on the 1950 census population instead of the 1920 census, as at present. This, in itself, would effect a change in the national-origins quota, since the later figures would reflect the increased migration from other countries.

There will be strong opposition to the switch if and when the measure comes up. But should pressure for an overhauling of the present immigartion law be more forceful than expected, it is considered possible this change in the census date might be conceded as the least obnoxious to opponents of the changes proposed.

Few who follow immigration legislation have any expectation that Congress will agree to the President's recommendation for a pooling of unused quotas to be distributed "on a first-come first-served basis." But there is some reason to believe the legislators may go along with the President's request for a cancellation of "mortgages" on existing quotas. These "mortgages" were incurred during the displaced-persons program, when admissions were charged against future quotas.

If approved, this cancellation will open the way for somewhat increased immigration from the Mediterranean areas and the Orient.

It is probable, too, that Congress may look favorably on the President's proposal for the admission of orphans adopted by American citizens abroad.

Present immigration laws fix a basic quota of 154,857 annually. Some 60,000 of these quota numbers expire unused each year. They cannot be carried over. Immigration over and above that figure must be by special legislation. Special circumstances have prompted such legislation, as in the case of some 336,000 displaced persons admitted to the United States over a 4-year period following World War II, and some 209,000 who came in under the Refugee Relief Act, which expired last December.

In the year ended June 30, 1956, 321,625 immigrants entered this country. With the new Hungarian influx, the number is expected to be even larger this year. Also there is no limit on immigration from Puerto Rico. Being United States citizens, Puerto Ricans may enter the country at will, and do so at the rate of about 200,000 a year.

Under the administration's proposals, it is estimated that regular quota immigration—normally about 250,000 a year—would increase to between 400,000 and 500,000. Large numbers of people in Poland, Italy, Yugoslavia, and Greece are already awaiting opportunity to migrate to this country.

But Congress, in its traditional reluctance to revise immigration patterns and policies, is not expected to authorize any major changes, although some immigration legislation—if only to regularize the status of Hungarian parolees—may be passed before the session ends.

Southern California's Do-It-Yourself Motto Turns Desert Into Oasis

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. HOSMER. Mr. Speaker, Harry Karns has written in the Long Beach Independent Press-Telegram of the magnificent water system conceived and executed by southern Californians. It has turned a desert into an oasis. It also points out a do-it-yourself lesson to those who turn to the Federal Government seeking answers for problems they should solve themselves.

Mr. Karns wrote as follows:

HOW GREEN IS OUR DESERT?

(By Harry Karns)

We of southern California live in an oasis at the end of a 600-mile waterline. Our destiny is coupled to a strand of pipe.

Without that waterline we could never have grown to be the teeming, vigorous population center that we are. Nor could we anticipate the millions yet to come to this western El Dorado.

The water we pump from the earth is not enough. Nature is too capricious with its wet and dry cycles.

Three decades ago southern Californians, living beside an ocean of salt water, began to understand that lack of fresh water could wither the ambition they had for this region. They went hunting for an extra supply.

They found it in the Colorado River, hundreds of miles away, locked in by deserts and mountains. To tap this improbable source they spanned the deserts with pipelines and canals and cut tunnels through the mountains they could not scale. They brought the water through.

Today the Metropolitan Water District's Colorado River aqueduct, the longest and biggest domestic water-supply line in the United States, ranks as one of the 10 engineering wonders of the world.

There is something else marvelous about all this. Big and costly though it is, the aqueduct system of the metropolitan water district is not subsidized in any way by the United States Government.

Early this year, President Eisenhower toured the drought area of Middle Western States, afterward promised Federal aid, but noted that the basic need is for greater local responsibility and long-range planning.

He might well have cited southern California as an example of what can be done when men look ahead with the will to solve their own problems.

The metropolitan water district was formed in 1928. Long Beach was one of the 13 original cities that made it up. In the face of the great depression, the voters of these cities bonded themselves in 1931 for $220 million to build the Colorado aqueduct.

In the depth of the depression, they built the main aqueduct from the Colorado in Arizona to Lake Mathews, near Riverside. Mathews, the terminal storage reservoir, is largest of 9 on the 593-mile-long system.

Five pumping stations hoist water 1,617 feet over mountains. Water pours through 92 miles of tunnels, 63 miles of concrete-lined canals, 55 miles of concrete conduit, 29 miles of inverted siphons, and 351 miles of distribution lines.

This water emerges from spigots, faucets, and hydrants in Los Angeles, Orange, San Diego, San Bernardino, and Riverside Counties to make our desert green and to supplement the local supplies of more than 6 million people.

Since 1952 the district has been increasing its capacity. Eventually it will be able to deliver a billion gallons of water a day—twice as much as at present—for an additional 4 million residents. Anyone who thinks this is unnecessarily ambitious should remember that 1 out of every 25 persons in the United States today lives in southern California, and the population influx continues.

Certainly the term "lifeline" was never more aptly applied than to that long water line from the Colorado River.

Protecting it is, obviously, a vital chore. The pipeline is so constructed that MWD engineers know instantly of any breakage. During World War II every pumping station in the system was designated as a restricted area. Now, as then, the full length of the line is patrolled. Reservoirs, too, are closely guarded. (Even the officials of the water district are prohibited from as much as fishing in Mathews.)

Meanwhile, millions of gallons of Colorado River water are released yearly in Los Angeles and Orange Counties and allowed to spread out and seep into the earth to replenish underground supplies, which are almost impossible to sabotage or contaminate.

In his ever more urgent quest for that ever more vital commodity, water, man has turned to the ocean. Some day, he is confident, he will be able to convert salt water into fresh by an economical process. We of southern California have a whole ocean at our front door. What, then, of pipelines to distant rivers?

First, the sources now available and the means of tapping them cannot be neglected on a hope which may be many years in maturing.

Second, if and when salt water conversion becomes practical, there will remain the problem of distribution—and the metropolitan water district distribution system is the most elaborate in the land.

The men who conceived this system saw further into the future than even they supposed.

Questions and Answers on H. R. 11, an Amendment to Robinson-Patman Act

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 5, 1957

Mr. PATMAN. Mr. Speaker, during recent days the Members have referred to me questions received by them regarding H. R. 11. Effort has been made to supply answers to the Members who referred to questions. However, some questions have been repeated a number of times. Therefore, for the benefit of Members and others I shall insert in the RECORD at this point answers I have made to a number of those questions. The questions and answers are as follows:

1. Question. Why do we have Federal laws against price discrimination?

Answer. Congress conducted extensive investigations respecting the practice of price discrimination during the periods of 1875–90, 1912–14, and 1935–36, and so did the Bureau of Corporations during the period 1903–14 and its successor, the Federal Trade Commission, during the period 1926–34. Each of those investigations uncovered an abundance of evidence demonstrating that the practice of price discrimination was used widely by large sellers with the effect and result of destroying competition and creating monopolies. Therefore, Congress acted to curb the practice of price discrimination because it had been found to be a monopolistic practice.

2. Question. Why is H. R. 11 needed?

Answer. The Federal Trade Commission in its official formal report on H. R. 11 to the Committee on the Judiciary, House of Representatives, March 12, 1957, in effect stated that the decision by the Supreme Court of the United States in the case of the *Standard Oil Company of Indiana* v. *Federal Trade Commission* (340 U. S. 231) and other recent decisions in similar cases have made it clear that notwithstanding Federal legislation against price discrimination a large seller may now discriminate in price even where the effect may be to substantially lessen competition and tend to create a monopoly. Therefore, the Commission stated that it is of the opinion that the objectives of H. R. 11 * * * are of sufficient importance to the effective operation of the Clayton Act that such legislation should be enacted without awaiting further case by case development.

In the light of those circumstances it appears that it is time for each of us to reexamine our position on the question of whether we are for a free and competitive enterprise system or for a system of monopoly. When that is done, I am confident that a majority will be found who are still opposed to a substantial lessening of competition and a tendency to monopoly and are therefore in favor of H. R. 11, the equality of opportunity bill. It is a bill against monopolies.

3. Question. Would the law as amended by H. R. 11 apply to local sales by retail stores?

Answer. No. The law applies only to interstate sales and shipments.

4. Question. Would the law as amended by H. R. 11 apply to local sales by wholesalers?

Answer. It would apply only to interstate sales and shipments. Therefore, since wholesalers and jobbers ordinarily sell only in a single State it would not apply to such sales. On March 18, 1957, I made a statement outlining in detail how the equality of opportunity bill, H. R. 11, would and would not apply to independent oil jobbers. That statement appears in the RECORD commencing at page 3429 of March 18, 1957.

5. Question. How will H. R. 11 affect freight absorption?

Answer. The bill will not prevent freight absorption. In the RECORD of March 18, 1957, page A2145, I inserted a statement outlining why it is considered that H. R. 11 will not prevent freight absorption. I refer to that statement for the benefit of those who wish to review more material dealing with that point.

6. Question. Will the law as amended by H. R. 11 prevent sellers from reducing prices to meet competition?

Answer. No. There is nothing in the Clayton Act, the Robinson-Patman Act, or in H. R. 11 forbidding price reductions. Under those provisions of law any seller would remain free to lower his price to any level he chooses to meet competition or for any other purpose. Those provisions of the law do not deal with the question of price reductions. They deal only with the practice of price discrimination.

7. Question. Describe a situation in which the law could be applied if it were amended by H. R. 11.

Answer. Under date of March 8, 1957, the Armstrong Creamery Co., of Wichita, Kans., wrote a letter to Members of Congress and to Members of the Senate in which price discrimination practices of the National Dairy Products Corp. were outlined. That up-to-date instance of price discrimination was described by the Armstrong Creamery Co. as follows:

"Recently the National Dairies Division (Sealtest) at Kansas City lowered the price of ice cream 25 cents per gallon throughout this area. Discounts and all other factors considered, this new price is lower than 97 percent of the sales volume in the area before Sealtest lowered the price. This low price makes it impossible for any dairy to sell ice cream at a profit, and if continued very long will force a number of independent plants out of business. At the same time Sealtest has been raising prices in other areas where competitive situations are as bad, or worse, than they are here.

"The plain fact is that through ineptness and mismanagement, Sealtest has lost a lot of volume in the past few years and has taken this method of regaining their position. Right now they can use the excuse that they are meeting the price of the 3 percent of the volume which was sold at a cutthroat figure (and which will always be sold that way).

"Of course, Sealtest's profits in other areas will more than carry the losses they will take in this one."

The letter of the Armstrong Creamery Co. concluded as have many others I have received from small and independent business concerns in a plea for the passage of H. R. 11. The closing words of that letter were: "It is the only salvation for a great number of independent businesses."

8. Question. Since H. R. 11 is designed to eliminate destructive price discriminations which substantially lessen the competition and tend to create monopoly, who are those opposing it and why?

Answer. Most big business concerns such as National Dairy Products Corp. and the giant major oil companies are opposed to the passage of H. R. 11. Need we discuss the details of why when we have before us examples of the practice of price discrimination such as the one outlined by the Armstrong Creamery Co., of Wichita, Kans.?

Judge Denman

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 27, 1957

Mr. MILLER of California. Mr. Speaker, the editorial appearing in the San Francisco Examiner on Saturday, June 29, pertaining to Judge William Denman, who lays down his administrative responsibility as chief judge of the United States Court of Appeals for the Ninth Circuit, is worth reading.

Judge Denman is more than a great lawyer. He is a great man in the fullest sense of the word and is one of the ties between the old West and the new. The editorial follows:

JUDGE DENMAN

It is characteristic of Judge William Denman that, at the age of 84, he makes it plain his retirement from the bench is only a semiretirement. He has too much zest for life and love of the law to seek the hammock.

Judge Denman will lay down his administrative burdens and full-time duties as chief judge of the United States Court of Appeals for the Ninth Circuit; he will, however, continue to sit when needed, as retired Federal judges are authorized to do.

So on this occasion of his semiretirement we seize the opportunity to say that his fellow San Franciscans appreciate his 60 years of service as a public-spirited citizen, gifted lawyer, and distinguished judge. His courageous and independent spirit is a part of San Francisco's treasure house.

An Anniversary in the Cause of Freedom: Jan Hus' Death, July 6, 1415

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. REUSS. Mr. Speaker, we are approaching a day which is important in the hearts of all Americans of Czech descent: the anniversary of the death of the great Czech patriot, Jan Hus. Burned at the stake on July 6, 1415, Hus was a true martyr in the cause of human liberty.

We recall Jan Hus these many centuries later because his struggle for freedom of expression reminds poignantly that the Czech people lie again today under the yoke of an alien despotism. From the heroes of the past, we can derive renewed confidence in the ultimate destiny of the Czechs to be free once more. I for one believe that the United States Government must seize the initiative and propose a settlement based on the disarmament and liberation of middle Europe.

America is fortunate to have the strength of its citizens of Czech ancestry in building our own sinews of democracy. That is why it is appropriate to pause in the Halls of the United States Congress and take note of the anniversary of Jan Hus' death. Because it is an anniversary in the cause of freedom, it has deep and lasting meaning to all of us.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

[illegible]

Appendix

Centennial Convention of National Education Association—Excerpts From Report by Miss Martha Shull

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. NEUBERGER. Mr. President, one of the great meetings held in this country during recent years was the 100th anniversary session of the National Education Association, which has demonstrated such continuing leadership in the betterment and improvement of the schools throughout the land.

Presiding over the centennial session of the National Education Association was a high-school teacher from my home city of Portland, Oreg., Martha Shull, of Jefferson High School, who has been president of the NEA for the year 1956–57. This, naturally, was a great honor in which all of us from Oregon have shared vicariously. Although Miss Shull is not of our political party—and even was an active supporter of my opponent during the 1954 senatorial election in Oregon—both Mrs. Neuberger and I join in congratulating her for the distinction of presiding over the century-old convention of an organization as renowned and useful as the National Education Association.

I ask unanimous consent, Mr. President, that excerpts from the able and effective president's report, delivered by Miss Martha Shull to the 100th anniversary convention of the NEA, be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the report were ordered to be printed in the RECORD, as follows:

OUR CENTENNIAL CONVENTION—ITS OPPORTUNITIES AND RESPONSIBILITIES—EXCERPTS FROM REPORT BY MISS MARTHA SHULL

It is now my duty and my pleasure to make a report to you of the activities and the ideas which have developed in this year since July 1956. Because 1957 is the hundredth year, it should be especially significant, but its importance is as a milestone or landmark, not a destination. This convention should be not only a celebration, but also a turning-point in the road to the fullest possible development of human dignity and worth.

In the planning of the program, the staff suggested that for this convention the president's message should deal primarily with the tremendously important business facing the delegates here, because it happens that we are at a turning point and need to look carefully at the roads we may take. It is fitting and proper that on our 100th birthday we do face decisions, and that we use the light of the candles on our anniversary cake and our appraisal of the past to examine carefully the needs and desires toward which we will move in the future. The complete program of meetings and other attractions planned for you by Philadelphia, and by Pennsylvania and New Jersey will make this an enjoyable and profitable week for all members and friends. Please be sure to read all of the program.

It is difficult to compress into one speech all the things I would like to discuss. Our own history is fascinating, and I hope you will read it. Dr. Wesley's account will give you entertainment, understanding, and pride. The vision, initiative, courage, perseverance, and devotion of the founders and of dozens of others after them have made this association an integral and influential part of the remarkable history of education in this country. In its scope, its goals, its achievements, our system of education, is amazing, as is our association.

Amazing also to me has been my year. It has been full of experiences which have confirmed my admiration for people, especially for educators. I have traveled nearly 100,000 miles since last July, including Manila and Guam, Hawaii, Puerto Rico, and 32 States. Everywhere there have been charming people and well-planned events. Because I represented the NEA, I was made welcome everywhere. My only sorrow is that I have not been able to write notes of appreciation to all of you generous and helpful people who have so graciously given your time, thought, and friendship.

Certainly the centennial celebrations beginning even before 1957 have made those months unusually colorful. Our centennial is worth celebrating because of the achievements and growth of the past and because of our status and influence in the present, but it is even more important to analyze our position in relation to the amazing new age which is coming as inexorably as the tide, the age of automation and technology—the age which begins to be tangible with the advent of the International Geophysical Year, the age in which marvels of travel and communication and labor-saving devices will become commonplace. The turning point in our road is not clearly marked as such, but it is a dividing point in history. What will be the guidelines of the future? When the 4-day week will produce all the material things that we can possibly use, what will people do with the rest of their time? When jet flight enables us, as the ads say, to have lunch in Paris, dinner in Manhattan, or tea in London and cocktails in Boston, when time takes on a new perspective, what kind of ideas and activities will give it meaning? What can we do to prepare for the profound changes coming into our lives and into the lives of the children we teach?

It is clear that if the basic values of democracy are to survive, education must meet new needs in every area of living. Four are obvious. First, there is the wide field of science and its applications. Technology and automation require that everyone know more science and mathematics than we have needed to know in the past. They require also that larger proportions of people be well trained in these fields; more technicians and more scientists are needed now and will continue to be needed. A second obligation is greater understanding of other parts of the world. International ties are being inextricably drawn by the new media of transportation and communication, and international relationships must be based on valid concepts of what goes on in the lives and minds and hearts of the people all over the world. A third requirement is more understanding of a feeling of responsibility for our kind of government. Governments, like clocks, go from the motions men give them, and as governments are made and moved by men, so by them are they ruined too. Wherefore governments rather depend upon men than men upon governments. In 1682, in his Preface to the Frame of Government of Pennsylvania, William Penn said, "Democratic government does indeed depend upon its citizens, upon every citizen."

A fourth and vital need is that of enabling people to be happy, in a profound sense of the word—to see that material possessions and financial success are not the source of happiness: to see that one needs strength to meet difficulties, not a life without difficulties. Somehow we must reconcile and balance the independence of the individual with his need to be part of the group; and faith in enduring values with interest in the rush of scientific discoveries.

No doubt each one here is mentally adding other equally important fields for development. And other new areas will develop.

Now, how can our association move adequately into this new age and meet increasing responsibilities? Shall we continue to travel in a DC–6 whose speed and facilities, though impressive a few years ago, are already quite inferior to those of the DC–7 and which will soon be completely outmoded by jet planes—or shall we modernize our vehicle by means of the proposed expanded program, and try to keep up with the jet age?

I am happy to report that our relations with the Federal Government are very good. This is reflected in President Eisenhower's coming to the Washington NEA centennial birthday party, and his nationwide speech dealing with education. Similarly, the presence of Vice President Nixon, of Postmaster Summerfield and of Secretary Folsom at our centennial convention speaks well for the attention the organized teaching profession receives at the hands of leading officials in our Government today.

Much worthy work in Washington is unseen. For instance, NEA played a major part in preventing a cut in the budget of the United States Office of Education. A member of the NEA staff has worked continuously with the Department of Defense to improve the status of teachers in the American schools operated for military families overseas. Spokesmen for the National Education Association have appeared before committees of Congress to testify on driver education, safety, postal rates, juvenile delinquency.

There are many other areas of service in which we should expand our program. The field of legislation and Federal and State relations has tremendous possibilities, if we can add field workers and resources for travel and printing. Wider understanding and cooperative action would further strengthen our legislative program. In many ways State associations and the NEA can supplement and complement each other in the now-developing State relations plan.

A second area in which action at the national level is tremendously important is that of public relations. This includes also the equally challenging and relatively unexplored area of lay relations. Undoubtedly, public relations starts in the classroom, and all of us are engage in it constantly; but we need the help of experts. It is essential for the continued development of our schools that more people understand what they are doing and help decide what more they should do. The mediums of mass communication

have great influence, and because education now has some degree of popular appeal, our press and radio division has secured the active participation of the NEA and in several TV and radio enterprises. With more funds and more staff, much more could be done. Similarly, we have moved forward in working with other national organizations. We have six joint committees, and we have taken part in a variety of meetings with other groups. Through such contacts there is exchange of information and ideas which is helpful to everyone. Much more money is needed in the budget for such projects; the budget committee is recommending nearly $50,000 increase for these areas.

These aspects of the program at the national level are only an indication of the kinds of expansion which are needed and feasible with a larger budget. These phases of the program help to create and maintain a favorable climate in which the State, the local, the individual teacher may function effectively. There are other areas which affect each of us even more specifically. All parts of the program affect and reinforce all other parts, and the improvement of education is the underlying purpose of all. Various services contribute directly to the improvement of instruction, to the development of professional personnel, and to the welfare of teachers.

In the first of these areas, it has been recommended that a commission on instruction be established to make the excellent services of our departments more fully available to the whole profession. Other recommendations in this area include additions to all of the divisions, committees, and departments which relate to improvement of instruction, and the addition of a staff member to work on conventions and regional instructional conferences. At present the planning of the convention takes much time away from the more specialized and creative services of the assistant executive secretaries. The budget committee is recommending about $85,000 more for educational services than was spent this past year.

The development of professional personnel is important not only for the improvement of schools but also as part of the answer to the problem of the teacher shortage. The answer lies in the upgrading of standards to enable teaching to attract a greater proportion of the most competent young people. The Commission on Teacher Education and Professional Standards has clarified the thinking and led the way to improvement in this field in phenomenal strides, but with more staff and more money for conferences and for printing, they can do much more. Certainly we need to develop closer working relations with teachers education institutions. Through the National Council for Accreditation of Teacher Education, we have the means to fulfill our obligation of making certain that institutions preparing teachers are equipped to offer professional programs of undoubted quality. The shortage of teachers cannot be met by any substitutes; the important, the indispensable element for the education of every child is an understanding teacher who has time enough for each child. Teaching is not just keeping school.

The improvement of education is, I believe, our most important purpose. This beginning of a new century is a good time to consider seriously a new emphasis in all teaching and, indeed, in all our professional relationships. I believe that in the face of all the influences which push toward adjustment and conformity and desire for easy living, we need reaffirmation and real practice of a belief in the importance of the individual and a real respect for excellence and integrity.

A valuable aid in this upgrading of the profession is the Commission for the Defense of Democracy Through Education, established by the representative assembly in 1941 as a general trouble-shooting agency for the teaching profession. There is a touch of irony in the fact that the defense commission and the tenure committee are doing their work so well that often results are not visible to public view. The Defense commission often manages to prevent a crisis rather than to treat it after it occurs. There is little public recognition for this type of work for the simple reason that you can never prove that something would have happened had you not prevented it. However, there are thousands of classroom teachers and administrators, boards of education and others interested in the welfare of the schools, who have received assistance from the hard-working staff of the defense commission. There is an urgent need to increase the staff and services, including a possible revision of the duties of the attorneys who now answer the legal questions which come up.

The improvement of education is, I believe, our most important purpose. This beginning of a new century is a good time to consider seriously a new emphasis in all teaching and, indeed, in all our professional relationships. I believe that in the face of all the influences which push toward adjustment and conformity and desire for easy living, we need reaffirmation and real practice of a belief in the importance of the individual and a real respect for excellence and integrity.

In the field of welfare, many activities are possible. A salary consultant has already been employed and has been very much in demand. Other special services are under consideration. The department of classroom teachers has helped teachers to realize their responsibilities and their importance, and to develop constructive ways to work together and with other groups in solving problems and in promoting professional growth and development. The addition of clerical assistance and of additional funds for field work and conferences will contribute further to the recognition and enhancement of the status of the teacher. It was through the department that I began to realize how important our professional association is.

Supporting all other services is the area of field operations and membership. It is recommended by the budget committee that four field workers be added to present the program of the NEA as a whole to local and State groups; and that additional funds be provided for cooperative State workshops and leadership training programs, and for special services to local associations. It is proposed also that the membership problem in large cities be given more attention and some funds. It is recommended that this whole area be assigned $116,970 more than was expended this past year.

I have not even mentioned many parts of our program which are fully as important as those. It is instructive to study the report of the budget committee. The committee has tried to incorporate into figures the deliberations and recommendations of the board of directors, realizing that some areas can be expanded rapidly and that others will require time for more planning and for finding and training the additional staff needed for the expanded program. In their report, they point out that if dues are not increased, no new personnel can be added, no salary adjustments can be made beyond the ordinary increments and the contingency fund will be only $76,000 which is an inadequate amount for a budget of over $4 million. These are the dark facts which we face.

Though the facts are dark, the reasons are bright, and the consequences can be positively brilliant. Because the work of the association has met many needs, we have been growing in every direction at once. Because every facet of the cause of education is exciting to some one, staff and members alike have given generously of their time and thought to these matters of general welfare. If paying something more for dues seems painful, surely there are enough members with appreciation of the need for a constructive, productive, professional association to explain these things to the laggards. Indeed, it will be as important to carry on your own program of communication and enthusiasm at home, as it is to vote for dues at this convention.

Need for Long-Range Water Program

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. JOHNSON of Texas. Mr. President, the recent series of disastrous floods has awakened people everywhere in our country to the need for a wise, prudent, long-range water program. The need is felt not only in Texas and the Southwest, but in every section. It has become apparent that there is no domestic problem so pressing as control of our water resources.

I ask unanimous consent that an editorial on this question, from the Los Angeles Times, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Times of June 20, 1957]

NATION'S GROWING WATER PROBLEM

Flash floods in Missouri and Illinois, following by a few weeks a comparable disaster in Texas and Oklahoma, point up the Nation's need for a comprehensive program to harness peak flow of water for storage against times of drought.

Millions of acre-feet of water swept over the countryside in each instance. Eventually it was drained off by rivers and carried to the sea. Loss of life and property damage are sufficient to spur control of these periodical rampages, but there is also the wastage of one of the most precious natural resources.

Development of more storage facilities by constructing dams, reservoirs, and spreading grounds should be a prime consideration. This would automatically reduce the amount of fresh water to smash through cities, devastate farmlands and then be lost forever.

Control of peak runoff would serve a dual purpose: husband the water for the people's use and sharply reduce erosion of agricultural land. It has been estimated that the Missouri River at flood stage carries in topsoil the equivalent of two farms per minute through St. Louis. The Mississippi Delta is being built by the farmlands of 30 States.

Other rivers in virtually every State are washing rich soil in valuable fresh water into the sea. A growing population contributes to the runoff, for the land in cities and suburbs is paved or so hardened with other forms of surfacing that it retains little water.

Annual rainfall drops 5 billion acre-feet of water on the Nation, but evaporation and

wasteful runoff claim 70 percent, leaving only 30 percent to be retained on or under the ground. It is estimated 170 million Americans now are using 200 billion gallons daily. Increased population and more uses for water are expected to double the daily take to 400 billion gallons by 1975.

This demand will not be met if the present ineffective handling of water continues. The peaks of floods and the valleys of droughts must give away to a constant and adequate supply.

Address by Hon. Edward Martin, of Pennsylvania, at Independence Day Celebration, Valley Forge, July 4, 1957

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. MARTIN of Pennsylvania. Mr. President, last Thursday I had the honor of speaking at the historic Washington Memorial Chapel, located in a lovely, natural grove at Valley Forge, Pa. This is one of the most beautiful chapels in the Nation, and has been developed under the excellent leadership of Dr. John R. Hart. Every State in the Union is represented in this project.

The exercises were held under the auspices of the Colonial Daughters of the 17th Century and the Valley Forge Historic Society. The chairman is the dynamic Mrs. William C. Langston, of York, Pa., and she was assisted by a charming group of patriotic leaders who always place America first.

I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE INDEPENDENCE DAY CELEBRATION SPONSORED BY THE PENNSYLVANIA CHAPTER, COLONIAL DAUGHTERS OF THE SEVENTEENTH CENTURY, AT VALLEY FORGE, JULY 4, 1957

Madam Chairman and my fellow Americans, it is a great honor to address this fine assembly of patriots who have done so much to keep alive the spirit of America.

There is no place more fitting for the celebration of Independence Day than this serene and beautiful shrine, here at Valley Forge. There is no place in America where real patriotism was better exemplified.

We meet at this hallowed place of suffering and sacrifice to pledge anew our devotion to the ideals of liberty and independence.

In these ceremonies we honor the ragged Continentals who left their bloody footprints in the snow of Valley Forge.

We gain new inspiration from the immortal example of General Washington, kneeling here on the frozen ground, to ask Divine guidance and protection in the struggle for freedom.

Here at Valley Forge Washington's little army, poorly clothed, poorly equipped, poorly housed and with inadequate rations, gave the world its finest example of valiant courage under the most severe hardships.

In that dark and desperate winter of 1777–78 they learned to suffer and to obey as men, soldiers, and patriots, for they believed in their cause. They were fighting for their own ideals of political freedom.

At one time less than 5,000 men were fit for duty. But when spring came, the little army was drilled, trained, and organized into a great fighting force.

Yes, my fellow Americans; the Fourth of July is an anniversary to be celebrated with a great outpouring of patriotic fervor, for on this day we pay tribute to the memory of the courageous statesmen whom we honor and revere as the Founding Fathers of our Republic.

One hundred and eighty-one years ago today, in the City of Philadelphia, they set forth a new concept of human liberty and equal justice. For the first time there was brought into the world a plan of government based on the proposition that all men are created equal—that they are endowed by their Creator with certain inalienable rights—that among these rights are life, liberty, and the pursuit of happiness.

In those undying words they erected a great and enduring landmark of human progress. They created a nation based on the firm foundation that the people are supreme, and that government derives its just powers from the consent of the governed.

In these days, when so many of our people take our precious liberty for granted, it is well to look back to the Fourth of July in 1776 when the Liberty Bell rang out the tidings of independence, proclaiming to all the world that "these United Colonies are, and of right ought to be, free and independent States."

Eight years of terrible war were fought before the Colonies were made free and independent—eight years of crises, defeats, and discouragment—which culminated in glorious victory at Yorktown.

The war was won, but a great test of statesmanship remained before "we, the people" could form "a more perfect union."

That historic goal was reached when representatives of the States, meeting in Independence Hall in 1787, framed the Constitution of the United States. Regardless of the pessimism of many people and the gloomy prophecies of many statesmen of the world that is plan of government could not survive, that Constitution has met the test of time. Today it is the oldest written Constitution in the world.

Under that Constitution we have fought wars in defense of right, honor, and justice. We have overcome the threat of financial disaster.

We have seen the clearing of the forests, the breaking of the sod on the prairies, the development of our natural resources, the building of great transportation systems and the growth of our great cities. We have seen our Nation expand from the Atlantic to the Pacific.

Under our Constitution we have seen the American standard of living rise to the highest level the world have ever known. We have reached cultural and spiritual attainment unequalled in any other part of the world.

In a comparatively short space of time—less than 200 years—we have expanded into the greatest industrial and agricultural nation of all history.

What is the secret of our great progress and our unsurpassed development?

For the answer we must go back to the ideals of the Founding Fathers, who built the structure of American greatness on the solid foundation of freedom of the individual.

Out of their far-sighted vision and wisdom we have:

First, our plan of equal justice, equal opportunity, and equal right to work and succeed.

Second, our plan of free enterprise which gives each individual the right to possess and enjoy the fruit of his labor, resourcefulness and thrift.

Third, our plan of equal obligation to take part in Government. The call for military duty makes no distinction between rich or poor, creed, color or national origin. In the same manner our plan of Government calls for self-reliant citizens, depending upon their own initiative, to work for civic betterment and thus advance the welfare of all the people.

Fourth, our plan of Government was established on the deep religious convictions of our people. The spirit of religion guided the first settlers to the North American Continent. Firm reliance on the protection of divine providence is set forth in the Declaration of Independence. Benjamin Franklin suggested prayer for divine guidance in framing the Constitution. That practice continues today in our legislative halls. God is recognized in the constitutions of 47 States of the Union. In Government we depend upon God.

During all our history we have been confronted with grave dangers. The same is true today. What are some of the dangers we face?

1. Too much government. The Founding Fathers recognized that big government could in time become oppressive. Therefore, they sought to restrict the powers of government to those specifically granted by the people and enumerated in the Constitution. We have become careless of this limitation. As a result government has grown so big and so complex that it has encroached upon the liberties of the people.

2. Too much public and private debt. Excessive debt is one of the greatest dangers because it brings on inflation and robs the people of their savings. It is shocking to realize that public and private debt has reached the staggering total of $803 billion. That is an average of $4,700 for every man, woman and child in the United States. Never before in the history of the world have any people owed as much as we owe today.

3. Too much dependence upon government. It is most unfortunate that in this period of great prosperity 5½ million of our citizens are receiving some form of governmental help. About 8 million are now employed by the three levels of government.

4. Too much evasion of the law. Every student of history knows that great nations have gone down to destruction when the moral fiber of their people was undermined by greed and corruption.

5. Too little interest in government. Unfortunately there are too many misguided Americans who do not understand and do not appreciate the real meaning of America.

6. Failure to appreciate that we are truly a nation under God. A government dedicated to the ideals of individual freedom cannot long endure unless its people are imbued with the spiritual strength and courage that comes from faith in God.

There have been many definitions of the real meaning of America. One that I like best was expressed by one of the greatest Americans of our time, the distinguished former President of the United States, Herbert Hoover. On his 74th birthday, in an address at his birthplace, the little town of West Branch, Iowa, he said, and I quote:

"America means far more than a continent bounded by two oceans. It is more than pride of military power, glory in war, or in victory. It means more than the vast expanse of farms, of great factories or mines, magnificent cities, or millions of automobiles and radios. It is more even than the traditions of the great tide westward from Europe which pioneered the conquest of this continent. It is more than our literature, our music, our poetry. Other nations have these things also."

Then Mr. Hoover continued: "The meaning of our word America flows from one pure source. Within the soul of America is freedom of mind and spirit in man. Here alone are the open windows through which pours the sunlight of the human spirit. Here alone is human dignity, not a dream, but an accomplishment. Perhaps it is not perfect, but it is more full in in realization here than any other place in the world."

With love of country in our hearts, and with loyalty to ideals for which the heroes of our independence suffered and died, we can defend and preserve the American Republic.

We can go forth from this meeting, strengthened by faith in God, to meet the problems of our day with wisdom, courage, and patriotism.

The Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. HUMPHREY. Mr. President, we have heard many discussions and read many articles about the Federal budget. None has been more thoughtful or understanding than an article by the Rev. Father Joseph A. Hughes, printed in the Register, Duluth edition, for Sunday, June 9, 1957. I ask unanimous consent to have Father Hughes' article, entitled "As Things Go," and relating to our foreign-aid program, printed in the Appendix of the RECORD. This welcome article gives every Member of the Congress food for thought.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AS THINGS GO—FOREIGN AID

The debate on the budget has stirred up the country as no other domestic issue has for many years.

Much of the talk about reducing expenditures has centered around cutting foreign aid and, of course, military expenses.

Echoing over the Halls of Congress and other places of public oratory in the foreign aid consideration is a disturbing note. It is the frequently repeated reminder that American financial aid to other countries is good defense for the United States.

Sometimes it is heard in reverse: It is not necessary for this country to help other countries now because they are either unable or unwilling to defend us against our enemy.

This is disturbing because it reflects a corroded mentality. It bespeaks an inner core of selfishness that, in the end, will do us in more effectively than any foreign Communist power.

The big troubles in the world come from egotism, supernationalism, materialism, and selfishness. Individuals and nations have a highly developed grasping instinct. The big question, even in noble works, is: What is there in it for me?

We have given billions of dollars to other nations. And, undoubtedly, we are inclined to feel noble about this generosity. But this generosity is, too frequently and too fully, camouflaged self-interest.

We have done the right thing very often for the wrong reasons. When legislators have to appeal to our own national interest in order to give what we owe in justice and charity to substandard nations, we stand revealed in our eyes and in the world gaze as puffed up, conceited, complacent, self-seeking millionaires who are willing to give of our wealth but only to those who can render some service to us in return.

We should give industrial, agricultural, and financial assistance to neighbor nations not because it is expedient, not because it is good defense, not because it is an inexpensive way to stop or win a war—but because it is right, because it is human, because it is Christian, because it is demanded by the moral law and counseled by spiritual idealism.

Our money is not going to save us, or the world, or the peace. What will save us is character, virtue, fraternity, honor. Let's get off the money bags and on to the treetops. We could stand being where the vision is clearer and the air more pure.

Statement on Oil Imports by Texas Railroad Commissioner Ernest O. Thompson

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. JOHNSON of Texas. Mr. President, Gen. Ernest O. Thompson, a member of the Texas Railroad Commission, and the man I regard as the world's greatest authority on the oil industry, issued last week a statement that sums up clearly and succinctly the existing situation with respect to excessive oil imports.

"Domestic oil producers," General Thompson said with painful clarity, "are at the mercy of the importers of crude oil and petroleum products."

I ask unanimous consent that this authoritative statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OIL IMPORTS

(By Ernest O. Thompson, Texas railroad commissioner, July 2, 1957)

Domestic oil producers are at the mercy of the importers of crude oil and petroleum products.

The importers determine freely and without let or hindrance the quantity of crude oil and petroleum products they wish to import during any given month. The only deterrent is a 10-cents-a-barrel duty on oil and a small duty on products.

For example, if the United States needs, say, 8 million barrels of crude per day to make products, and imports are estimated to be 1 million barrels per day, the only thing that can be done is to subtract that 1 million barrels imports from the total of 8 million barrels needed—leaving 7 million barrels for the domestic producers to supply.

They have imported as much as 1,600,000 barrels of crude and products per day. This takes the domestic market from the domestic producers and forces reduction in production.

There have been years of strong protestation against these constantly increasing imports of crude oil and products; but so long as the importers pay the 10-cents-a-barrel duty, there is nothing done about it.

Appeals have been made to the importers to show restraint, but more and more oil companies of the United States are getting into the importing business.

I feel that total imports of crude oil and products should not exceed 1 million barrels per day on the average. This would furnish the supplement of fuel oil and residuals we need, and would furnish adequate trade balances with other countries we sell goods.

It may turn out that a tariff increase will prove the answer to protect our domestic crude producers, and at the same time raise some revenue.

At all events, the President has been notified by the Director of Defense Mobilization that oil imports threaten to imperil the national security; and the President, under the Reciprocal Trade Act, has appointed a committee of five Cabinet members to check the Director's findings on the broadest possible study. So perhaps there will be some action taken by the President under the Trade Act of Congress, which says he shall do the necessary things to correct the situation when any commodity is being imported into this country in such quantities as to threaten to imperil the national security.

We are hopeful for speedy relief.

Address by Philip Sporn at Christening of Towboat "Philip Sporn"

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Philip Sporn, president of the American Gas & Electric Co., at the christening of the new towboat *Philip Sporn*, of the American Barge Line Co., at Jeffersonville, Ind., July 5, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS MADE AT THE CHRISTENING OF THE NEW TOWBOAT "PHILIP SPORN" OF AMERICAN BARGE LINE CO., JEFFERSONVILLE, IND., JULY 5, 1957, BY PHILIP SPORN, PRESIDENT, AMERICAN GAS & ELECTRIC CO.

I am deeply moved by the honor bestowed upon me by naming this new towboat after me and so associating my name with it in its work in moving the many highly essential and diversified products along this great arterial highway extending all the way from Pittsburgh down to New Orleans. This great inland waterway, perhaps the greatest in the world, is composed of a number of major river basins and, of these, my company has been concerned primarily with one, the great Ohio River Basin.

The Ohio River Basin is perhaps the most diversified of any major river basin in the United States. Vast quantities of agricultural products are produced in the area. More than three-fourths of the Nation's bituminous coal is mined here. It is certainly one of the Nation's outstanding industrial regions and includes the important iron and steel producing areas of Youngstown and Wheeling; the large manufacturing centers of Columbus, Canton, Cincinnati, Indianapolis and Louisville; the well-established great chemical center along the Kanawha River, a tributary of the Ohio, centering around Charleston, W. Va., and of great importance, the many new chemical and

other industrial centers that are rapidly springing up along the stretches of the great river.

The Ohio Valley is literally bursting with activity. Since 1950 more than $10 billion in industrial and atomic plants has been expended on the main stream. The Ohio and its tributaries and the valley, now growing so rapidly, has already surpassed the Rhine as a chemical center, and the Ruhr as a steel center.

But it seems to me, and this is perhaps pertinent to the work that will be done by this beautiful boat now named *Philip Sporn*, that there is another aspect that needs to be pointed out. The Ohio River is much more than a great artery of commerce. It is much more than a transportation highway.

The Ohio River is the great river of power in the United States. We all know about the power of Niagara and the power of the St. Lawrence now being harnessed and we have heard a great deal about the hydroelectric power of the Tennessee and the power in the Columbia River in our great Northwest. But the power that is generated by steam-electric plants utilizing the Ohio River as the very basis and foundation, both as a transportation medium for its fuel and as a source of condensing water, is infinitely greater than the power of any of these rivers and perhaps exceeds—and if not now, then surely eventually—the power of all of them.

By the end of 1956 the electric plants on the Ohio, with a practically negligible amount of them being hydro, totaled almost 9¾ million kilowatts, and with the completion of projects now actually underway this amount will grow to 11½ million kilowatts. These plants, operating at the average load factor that they have been running at in the order of 75 percent, have produced or will be capable of producing close to 80-billion kilowatt-hours a year. This is more than 40 percent of the total energy generated in Russia in 1956.

If to the Ohio you add the capacity of the plants along its tributaries, and add the relatively small amount of hydro produced along these tributaries, you find the total electric power capacity of these plants well over 32 million kilowatts, with close to 28 million kilowatts represented by steam-electric plants and the combined output of the plants close to 215 billion kilowatt-hours per year, or more than 10 percent in excess of the total 1956 output of all the generating plants in Russia. This, I think, lends startling stature and importance to the Ohio River.

Truly, the Ohio River has become the great power river of the world.

As I pointed out a moment ago, 90 percent of this energy is generated by fuel, by coal. It is in the job of transporting and delivering the coal from the great mines in the valley to its use centers that the river itself performs such a great task; in achieving that it utilizes the services of many powerful tools like the boat that is being christened today.

Mr. Calhoun, I know that in wishing the new towboat a great and productive career as a transporter of freight and fuel on the Ohio River, I am wishing for it what you, and its owners, have visualized for it—a great and happy career that will contribute not only to the prosperity of its company and of its owners but, even more, contribute to the welfare and prosperity of this great valley, of its people, and to the welfare and safety of our country.

Invocation of Rabbi Martin M. Weitz, at Installation of President, American Medical Association, Waldorf-Astoria Hotel, New York, June 4, 1957

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. SMITH of New Jersey. Mr. President, at the annual meeting of the American Medical Association held in New York on June 4, at the Waldorf-Astoria Hotel, Dr. David B. Allman, of Atlantic City, N. J., was inducted into the high office of president of the association. Those of us who live in New Jersey were all highly gratified by this honor conferred on our State by the elevation of one of our citizens to this important office.

On the occasion of the inaugural ceremony, Rabbi Martin M. Weitz, Ph. D., Beth Israel Temple, Atlantic City, N. J., pronounced the invocation.

I ask unanimous consent that this invocation be printed in the Appendix of the RECORD.

There being no objection, the invocation was ordered to be printed in the RECORD, as follows:

INVOCATION FOR AMERICAN MEDICAL ASSOCIATION—INAUGURAL CEREMONY FOR DR. DAVID B. ALLMAN, PRESIDENT OF THE AMERICAN MEDICAL ASSOCIATION, WALDORF-ASTORIA HOTEL, NEW YORK CITY, N. Y., JUNE 4, 1957

(By Rabbi Martin M. Weitz, Ph. D., Beth Israel Temple, Atlantic City, N. J.)

Source eternal, God of the universe, master physician of mankind, help us to minister at Thy altar when we serve fellowman, with skill of scalpel, hand of healing and heart of understanding. When we are patient in affliction, courageous in peril, sensitive to the sufferings of others, it is because Thy spirit guides us for he who serves fellowman labors with Thee in Thy workshop.

We seek Thy light as we foregather in this oldest and largest fellowship of the arts and skills of healing—the American Medical Association—in this, its 111th annual convocation.

"He who saves one life, is as one who saves an entire world," is not mere ancient parable, but modern prescription. As to masters of medicine before us, from Hippocrates to Albert Schweitzer, give us also four dimensions to help us help man:

1. The art of detachment—to be apart from, yet a part of the life of others. As Sir Osler phrased it, "To scorn delights and live laborious days for others."

2. The virtue of method—a measure of system for more work, better records, deeper study, finer leisure, greater humanity. In the words of Albert Einstein, "Let us learn to make disasters into incidents rather than incidents into disasters."

3. The value of thoroughness—so that even chemistry, anatomy, physiology are balanced into the art of healing and serve the glory of living, so that knowledge is translated into wisdom. In the formula of Albert Schweitzer, "Ethics is nothing else than the thorough complete value, reverence for life itself."

4. The grace of modesty—a love of truth greater than the love of any particular truth. Humility is a lantern that sheds light not only on our way, but for others, so that life's journey for each may be a pilgrimage. We may remove diseased portions of a limb, but we are powerless to make tissue heal. Maimonides prays for humility in his Code for Physicians: "Endow me with strength of heart and mind so that both may be ready—in all humility—to serve the rich and the poor, the good and the wicked, friend and enemy, and that I may never see in the patient anything else but a fellow creature in pain."

Master Physician, bless all in this dedicated fellowship of healing, those who have given it leadership in years before, and to Dr. David Bacharach Allman and all his coworkers who serve the American Medical Association and its larger labors, from this inaugural on in days to come.

For the blessing of all and the hurt of none, for the joy of all and the woe of none, for the life of all and the death of none. Amen.

Freedom of Debate in the Senate

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. TALMADGE. Mr. President, on Tuesday, July 2, the Special Subcommittee on Senate Rule XXII of the Senate Committee on Rules and Administration heard one of the most forceful and persuasive analyses ever given on the subject of freedom of debate in the United States Senate.

The presentation was that of Hon. Charles J. Bloch, of Macon, Ga., who testified before the subcommittee as the representative of Hon. Marvin Griffin, Governor of Georgia. Mr. Bloch, a distinguished member of the Georgia bar and an outstanding leader in all phases of public life in Georgia, is one of the Nation's foremost authorities on constitutional law. He has held many positions of trust and presently is serving as a member of the Board of Regents of the University System of Georgia.

Feeling that Mr. Bloch's thoughts and conclusions should have the careful study of each Member of this Senate, Mr. President, I ask unanimous consent that his testimony be printed herewith in the Appendix of the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

RULE XXII

I appear as the representative of the Honorable Marvin Griffin, Governor of Georgia. I oppose the proposed amendments to rule XXII of the Standing Rules of the Senate, pertaining to limitation of debate.

I have examined Senate Resolutions 17, 19, 21, 28, 29, 30, 32.

I have more closely examined Senate Resolutions 17 and 30 than I have the others.

Senate Resolution 17 does not show Senator JAVITS as one of those who submitted the resolution. However, the staff study of the Committee on Rules and Administration, which is a comparative analysis of the various resolutions, does show Senator JAVITS as a sponsor. Senate Resolution 30 has 39 Senators sponsoring it.

It would serve no purpose to discuss in detail the differences or likenesses in the various resolutions. In various forms, they would accomplish the same result. Each and every one of them, if adopted, would limit debate in the greatest deliberative body the world has ever known, the Senate of the United States. The Constitution provides in article I, section 3, paragraph 1, that the Senate of the United States shall be composed of "two Senators from each State." While the 17th amendment has changed the method by which the States select their Senators, the Senate is still composed of two Senators from each State. The Senate never dies. It is a continuing body, eternal as far as mortal man can make it so. It is fitting that it should be such, for here sit the representatives of the 48 sovereign States which, grouped together, are known as the United States of America.

Within the boundaries of the State of New York there were nearly 15 millions of people. Rhode Island had less than a million. California had ten and a half million inhabitants. Its neighbor, Nevada, less than 2 percent of that number, about 160,000. Pennsylvania, with its 10 million, is bordered by Delaware, with about 300,000. To the northwest of Illinois, with its approximate 9 million, are the Dakotas, with around 600,000 each.

But on the floor of the Senate and its committee rooms, caucuses, and councils, the voice and vote of Nevada is equal to that of California; the voice and vote of Rhode Isalnd, with its 121.4 square miles, is equal to that of Texas, with its 267,000 square miles.

It was so planned by those who drafted, proposed, and ratified the Constitution of the United States. In this union of States no one State is more important than any other in that group of ambassadors which the States have sent to Washington, and who form the Senate of the United States. To insure that no one State might ever be outvoted by any other State in the Senate of the States united, the Constitution provides specifically in article V thereof "that no State without its consent shall be deprived of its equal suffrage in the Senate."

While it is not yet proposed that any one of the States be deprived of its equal suffrage in the Senate, it is now proposed by these bills that certain varying numbers of Senators can deprive other Senators, ambassadors from sovereign States, of their free and untrammeled right to place before the Senate and the people of the Nation their right to debate and discuss as fully and freely as they deem best problems which involve their very life.

Today, you seek to limit the voice of the States.

Tomorrow, will you seek to limit the vote of the States?

We hear it said that in this Government of ours, the strength of the majority shall prevail. Those who formed the United States did not so provide. One man in Nevada expressing himself through his Senators has the voice and vote of 200 men in New York.

North Dakota, South Dakota, Montana, Idaho, Wyoming, Vermont, Arizona, Delaware, Nevada, Maine, New Hampshire, New Mexico, Rhode Island, 13 States, each had a population of less than a million according to the 1950 census. Will it next be attempted by Senators from New York, Illinois, Pennsylvania, and California to deprive those less populous States of their right to vote in the Senate on an equality with the more populous States?

Is the force and power of numbers to rule henceforth in this Nation? Is might to make right? Can you blame us for asking these questions when we hear men in high places say, in support of unconstitutional legislation, that the end justifies the means? That was the governmental foundation upon which the gas chambers of Dachau were built.

One Senator from New York sponsors Senate Resolution 17, another seems to sponsor Senate Resolution 30. One Senator from Illinois sponsors Senate Resolution 17, another sponsors Senate Resolution 30. One Senator from Pennsylvania sponsors Senate Resolution 30, another Senate Resolution 17, one Senator from California sponsors Senate Resolution 30. Is it mere coincidence that 7 of the 8 Senators from New York, Illinois, Pennsylvania, and California seek to hush the voices of their fellow Senators?

With this hue and cry of majority rule, what will come next?

Will you seek to change the Constitution so as to permit convictions in impeachment proceedings without the concurrence of two-thirds of the Members present?

Will you seek to change the Constitution so as to provide that the Presidential veto of legislation may be overridden by less than two-thirds of each House of Congress? You know that the votes of Senators from just 17 States can prevent the passage of a bill over Presidential veto. Will you seek to change that in the shouting for majority rule?

Will you seek to change article V of the Constitution so that amendments may be proposed by less than two-thirds of both Houses of Congress? Will you seek to change that same article so that amendments may be ratified by less than three-fourths of the States?

And having done that, will you seek to change article IV, section 3, of the Constitution so as to permit new States to be formed or erected within the jurisdiction of another State without the consent of the legislature of that State?

The theory of rule by majority, by careful planning, can convert our form of constitutional government into one of which Washington and Jefferson and Adams and Lincoln and Wilson never dreamed.

Will you, pursuing that theory, change the Constitution so as to provide that less than two-thirds of the Senators present may suffice to ratify a treaty with a foreign nation?

I plead for freedom of debate. I plead that no death sentence be imposed upon that freedom, and upon the rights of the States of the Union to have their ambassadors debate and speak as freely and as lengthily as they desire.

Will the privileges of free speech be reserved only for those who seek to undermine our form of Government? That freedom should be preserved for those who love America as well as for those who hate it.

Freedom of debate is a liberty guaranteed by the Constitution equal in importance to any other liberty. Tyranny thrives in a climate of suppressed debate. The adoption of the Declaration of Independence was openly debated. The Articles of Confederation were adopted in the Continental Congress after open and unrestricted debate. With these articles as a guide, the Constitution of the United States was prepared and proposed, without any limitation of debate. That debate lasted over a period of many, many months. After it was adopted by the Continental Congress it was proposed to the several States for ratification. In their legislatures and their conventions, the States openly and frely debated it for 9 months before 9 States ratified it. New York debated it so long that she was the third to the last State to ratify it.

And, so adopted and ratified, after full and unrestricted debate, it, with 2 amendments besides the Bill of Rights, stood the test of time for almost 80 years. The 14th amendment, constructions of which threaten our whole structure of constitutional government, was adopted under the most extreme character of cloture—cloture enforced by the bayonet.

The so-called liberal organizations who advocate restriction of debate in the Senate of the United States evidently believe in a peculiar kind of freedom of speech—freedom of speech for themselves alone. If the theories of government they espouse are under attack in the Senate of the United States, they desire open, thorough, unlimited and unrestricted debate. But, if haste is essential to the passage of measures they espouse, then there must be a restriction of debate.

I heard one of the most liberal lawyers of the South recently say in an address (May 19, 1957): "Society cannot survive without full discussion and debate." That statement was unique because it was the only theory of government I had ever heard him express with which I could wholeheartedly agree.

You seek to avoid filibusters. A filibuster is good or bad according to who is doing the talking and according to what its purpose is.

Doubtless every Senator has seen the brochure on limitation of debate in the United States Senate prepared in December 1956 by the Library of Congress Reference Service. Therefore, it would be useless for me to enter into a detailed discussion of it. I do hope, though, that every Senator will study page 29 of it, headed "Later action on 35 filibustered bills," and see if unrestricted debate is such a bad thing for our Nation.

Of these bills, over a period from 1865 to 1946, the only ones not passed were these:

(a) The force bill in 1890–91.

(b) The armed ship bill in 1917.

(c) Antilynch bills, 1922, 1935, 1937.

(d) Antipoll tax bills, 1942, 1944, 1946, 1948.

(e) FEPC bill, 1946.

Strange it is that every one of these bills, save one, had as its object and purpose the embarrassment of the Southern States, their relegation to their 1865–70 status as conquered provinces.

And strange it is, too, that almost every lawyer in the United States Senate, as a lawyer, or as a judge, would have not the slightest hesitancy in deciding that these bills exceeded the powers delegated to Congress by the sovereign States. Yet, they are cited as examples for the need of restriction of debate. They really serve as outstanding examples of the need for unlimited debate and the survival of constitutional government.

We are so much these days of minority groups. Formerly this phrase had a distinct meaning. When we heard it uttered, we visualized certain racial groups or certain religious groups.

Now the phrase is somewhat more difficult to define. Personally, I think that the outstanding minority group in the country is that group which is striving for the perpetuation of constitutional government. Today, the minority group in this country whose members need protection is composed of those who believe in a government under the Constitution of the United States as it was written, legally amended and construed by judges trained in law and construed according to legal precedents, the established law of the land.

If by "minority group" is meant those who are of African descent rather than English or continental European, why do they desire to destroy law and the Constitution?

If by "minority group" is meant those who worship their God in a manner different from most of those who settled the Thirteen Original States, why do they desire to destroy established constitutional precedents?

When and if the phrase "The end justifies the means" becomes the law of the land, they will be the first to feel its blunt force.

Government under a constitution, construed according to law and established, long continued legal principles is their only hope of survival.

What end could possibly justify the abolition of jury trials?

What end could possibly justify the abandonment of principles of equity practice established as the law of the land more than 400 years ago in England, and continued in this America for more than 300 years?

What end could possibly justify jeopardizing rights which now seem established by adjudication and construction of the Constitution?

I mean simply this: The first amendment to the Constitution provides that Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press. There is no provision in the original Constitution or in the Bill of Rights which prevents a State from making laws respecting an establishment of religion. There is no provision in the original Constitution or in the Bill of Rights which forbids a State to prohibit the free exercise of religion. There is nothing in the original Constitution which prevents a State from abridging the freedom of speech or of the press.

Long after the 14th amendment was adopted, the Supreme Court construed the provision in it that no State should deprive any person of life, liberty or property without due process of law to mean that no State should deprive any person of the liberty of worship, speech and of the press. By judical construction, the word liberty was held to extend the prohibitions of the first amendment so as to restrict the States. In so holding, the Supreme Court evidently failed to consider that if the word liberty had that breadth of meaning, the first amendment was totally unnecessary. The fifth would have sufficed. If the doctrine of the end justifies the means is to be the new rule of Constitutional construction, if precedents established in the decisions of jurists trained in the law are lightly to be swept aside upon the testimony of psychologists and articles in the New Yorker magazine (cf. case 107, October 1956, decided June 24, 1957, slip sheet page 6), then all freedoms rest upon a perilous base.

The case referred to is that of *Kingsley Books, Inc. Louis Finkelstein, doing business as Times Bookshop, et al.* v. *Peter Campbell Brown, corporation counsel of the city of New York.* There a proceeding under section 22-a of the New York Code of Criminal Procedure, as amended in 1954, providing for a limited injunctive remedy was upheld in a 5 to 4 decision. The opinions show quite clearly that if appellants had requested a jury trial, or had attacked the statute in the lower court for failure to require a jury, it would have been invalid. Will you deprive southerners, Americans of the South, a right which the Court impliedly held to be that even of a purveyor of obscene books?

Are the rules of the Senate to be changed in order to pass a statute of that nature?

Those rules are of long standing.

CONCLUSION

The document to which I have referred—"Limitation on Debate in the United States Senate," on pages 23 and following gives 36 instances of "Outstanding Senate Filibusters From 1841 to 1955."

A glance at the list shows that the filibuster is not merely an old southern custom. Perhaps the reason why the southern Senators have more often than others engaged in prolonged debate is that the South is the only section of the Nation against which legislation has been frequently specifically directed. But Senators from other sections, too, debate at length when they have what they think are reasons to debate. I notice that in 1914 Senator Burton of Ohio "filibustered against a river and harbor bill for 12 hours." The armed ship debate of 1917, and the World Court protocol debate of 1926 were not southern inspired. Neither was the lengthy talk of Senator Copeland of New York against the Sale of Pines Treaty in 1925. I notice, too, that in 1950, Senator MALONE filibustered against a conference report on the slot-machine bill. In 1953, during the prolonged debate on the so-called tidelands offshore bill, Senator MORSE established a new record for the longest single speech. On April 24–25, he spoke for 22 hours and 26 minutes. Now, the Senator has introduced Senate Resolution 21, which is one of those pending before this committee.

It all depends upon whose ox is gored. We all know that if unwarranted legislation were introduced adversely affecting any group of States, the Senators representing the States in that group would want to debate without limitation what they deemed injustices to their States sought by bills violative of the Constitution.

The 22 Senators from the 11 real Southern States are a minority group. The other 74 Senators can outvote them. If they do, our southern Senators may well say, "You are sounding the death knell of constitutional government. Do not think that the people of our States will suffer from that destruction alone. The bell tolls for you and yours, too."

Agriculture Is a Most Important Industry, Let's Conserve It

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. JOHNSON of Texas. Mr. President, a smalltown newspaper in my State, the Hays County Citizen, published at Kyle, Tex., recently carried an editorial that would do credit to the most noted newspaper in the land. This weekly newspaper, serving an area where farming is of paramount importance, appealed to its readers to place on the agricultural industry the value it deserves.

I ask unanimous consent that this thoughtful editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSERVE INDUSTRY

Almost any town from the very smallest to the large metropolitan centers is constantly on the lookout for a new payroll for its people. Especially desired are manufacturing concerns, because they bring in new dollars from outside and add to as well as stimulate the flow of money. They provide more jobs and replace money which has had to go out of the community to bring in manufactured goods.

Every businessman is ready to help a new manufacturer or one who is about to relocate in overcoming any obstacles which might prevent him from choosing the businessman's town.

Sometimes we fail to place our agricultural industry in the same catagory with other manufacturing interests. When we do, it is indeed an unfortunate oversight. It would take a tremendous industry indeed in the Kyle-Buda area to replace our agricultural industry. It is our major source of new dollars into the community.

If the agricultural industry is to grow, or even hold its own, the productivity of the land must be maintained and it is here that the community can and must help. Lending encouragement to soil and conservation practices, working with the farmer in achieving legislation toward this end, supporting activities of tomorrow's farmers through FFA, and first of all recognizing the part the farmer is playing as an industrialist.

Several local businessmen are to be congratulated today for the part they have been and are now playing in seeing that the productivity of agriculture remains high by conservation and planning ahead.

Certainly all this is not to be construed as antimanufacturing sentiment. Such is far from the truth. The State of Mississippi has adopted a postwar program called BAWI (balance agriculture with industry). It has much to commend it. We merely acknowledge with gratitude what we have as we seek to supplement it, not supplant it.

Curbing the Supreme Court

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Curbing the Court," from the Aiken S. C., Standard and Review of July 1, 1957. This daily is published under the able guidance of Mrs. Annie H. King.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CURBING THE COURT

Senators OLIN D. JOHNSTON and STROM THURMOND of South Carolina have called for and initiated a movement in Congress—what support they will gather from congressional colleagues is questionable at this time—to curb the "wild hayride the Supreme Court of the United States is now on" with first one asinine and unconstitutional decision after another which is undoing all that which made this Nation strong and democratic and rapidly turning it into a controlled land of despotic directives.

First, it was a psychological ruling by the Supreme Court on segregation on "Black Monday" in May 1954, followed rapidly with other decisions, seemingly communistic-dictated or ordered by a despotic ruler, which does not do justice to the Nation and its people and have loosed mad dogs of subversives, Communists, rapists and murderers loose to prey upon the Nation with defensive

curbs ineffective because of hand-tying rulings affecting the Federal Bureau of Investigation, the Justice Department, the States and the Nation.

Congress has the power, although it has never been found necessary to be used, to curb such wild activities of the Supreme Court. Drastic measures must now be used, it seems, if the Nation does not become a dictatorship ruled by nine men and their decisions adversely affecting the welfare of the Nation and plunging it into decadence within and helpless to defense from without.

The support the South Carolina solons will have in this effort is beginning to gather strength as the other sections of the Nation are gradually beginning to realize that the South is right, and has been from the beginning, in fighting to the last ditch the rulings of the Court contrary to the Constitution. Slowly but surely the North, the West, and the East are beginning to wake up and realize in what direction the country is headed at breakneck speed. But one sadly relates the other section of the Nation awakened only when their toes were trampled upon by Supreme Court decisions.

Better late than never and a united front is needed today to present a solid wall of resistance to things and happenings which tend to "throw the Nation to the wolves."

If a solid front is not presented what then will take place tomorrow in the way of further rulings from the high tribunal?

Senators JOHNSTON and THURMOND are not lone prophets crying in the wilderness. They are statesmen who see the perils confronting the land and the people they love and have girded themselves for battle to preserve the rights and freedom as guaranteed by the Constitution.

Can we do aught but lend the embattled Senators our whole support as citizens of this land of democratic ideals and way of life?

There Are Good Reasons for Free Senate Debate

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. SCHOEPPEL. Mr. President, in January of this year there appeared in the Saturday Evening Post a very important editorial entitled "There Are Good Reasons for Free Senate Debate." Because of the debate we are getting ready to embark on at this time, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of January 12, 1957]

THERE ARE GOOD REASONS FOR FREE SENATE DEBATE

Although the liberal Democrats have only a thin toehold in the Senate and probably not even that in the House, they appear to expect everybody to stand aside while they call the shots. One of the first items on their agenda is to amend the Senate rule which permits unlimited debate, the object being to pass civil-rights legislation despite the protests of their southern brethren. In this they are joined by a few modernized Republicans.

Before the subject has got out of hand, some Senators, we predict, will remind their impatient colleagues of the reason for free debate in the Senate. The purpose of the rule is not to test the endurance of senatorial lung power, or to kill off progressive legislation, or to wear out the public. The reason debate in the Senate can be cut off only under extraordinary circumstances is that the Senate is the last line of defense for the States. While this rule remains, a majority in Congress lacks the ability to pass legislation repugnant to some of the States.

So that there will be no misunderstanding, perhaps we should say that the Saturday Evening Post believes that a reasonable program of civil rights is not only just and desirable but that it inevitably will come, step by step. But the Post denies that any cause or goal is sufficiently important to justify the destruction of our traditional safeguards.

Despite all the talk about whether the Senate is a continuing body or whether it is a new body, with the right to make new rules every time it meets, the essential issue is whether or not a majority in Congress shall be able to force into law proposals which are not accepted as valid by a considerable number of States. The late Senator James Reed, fiery Democrat of Missouri, might well have settled the argument when he said many years ago:

"Strike down this safeguard of public discussion, apply the gag, and imagine, if you please, that it is applied only to pass good measures, only to accomplish the virtuous and the wise and the holy, only to bring the thing of rectitude; imagine that if you please. He is a fool, he is every kind of a fool that has ever cursed the earth or cursed himself, who thinks that any power will always be used wisely and justly. * * * Why should there not be some place in this country where the virtues or the iniquities of proposed legislation could be exposed without gag, without rule, without limit, some place where every public act must come under the surveillance of men who have complete freedom of speech?"

It is, of course, popular to talk of "majority rule" as if the majority were inevitably right, when the fact is that we have a Bill of Rights to protect minorities and individuals—and sovereign States—from the whims of majorities. And, unless we are prepared to strain the bonds of the Federal Union even more than they have been strained already, Senators will give sober thought to the reasons for unlimited debate in their body before sacrificing an important permanent Federal principle to immediate political advantage.

International Educational Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters I have recently received from individuals who have participated in the International Educational Exchange Program, and who have written me of their experiences abroad under this program. I feel certain that my colleagues will be interested in reading these letters which stress the value of the program in helping to spread understanding and good will between citizens of the United States and citizens of foreign countries.

The first letter is from Mr. David O. White, who studied for a year in Munich, Germany; the second is from Mr. Warren R. Schoonover, who spent a year in Egypt as a visiting professor of soil science at the University of Alexandria.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MUNICH 42,
AGNES BERNAUER ST. 124,
June 17, 1957.

Senator J. W. FULBRIGHT,
United States Senate,
Washington, D. C.

DEAR SENATOR FULBRIGHT: A wonderful year in Germany is rapidly coming to a close, and I am sending in this mail letters of thanks to the people who supported my Fulbright scholarship application. It seems to me that you also deserve a word of thanks.

My family and I have lived in a completely German community, the children have attended German schools, and our circle of friendships has grown rapidly. In order to maintain these contacts for another year we are going to move across Munich this fall to the American military establishment, where I shall teach during the coming year. One year has provided us with working knowledge of the language and a valuable orientation upon which we now wish to capitalize further.

The opportunity to study in Germany has proven invaluable. I came over here to study the use of athletics as a political instrument of the Third Reich, and have found a concentration of materials and advisers which has made for smooth, sure progress. Furthermore, as a public school administrator, I have found that no experience can take the place of exchanging views with people whose cultural roots and educational problems are different from one's own.

So, Senator FULBRIGHT, I want to thank you for your foresight and initiative in helping to establish a program which cannot help advancing world understanding, and assisting people like myself to do needed research in areas which might otherwise be passed over untouched.

Sincerely yours,

DAVID O. WHITE.

JUNE 27, 1957.

Senator WILLIAM FULBRIGHT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR FULBRIGHT: It was my good fortune to receive a Fulbright research award to study saline and alkali soils in Egypt. I spent an academic year (1953–54) at the Faculty of Agriculture, University of Alexandria, as visiting Fulbright professor of soil science to conduct this study.

The University of California has consented to publish the report on this work in order to make it available to other soil scientists and as an example of international cooperation.

I have been greatly interested in the Fulbright program and feel it should be continued and expanded. I think it could be increased in value, however, if a larger proportion of the awards were to go to research workers rather than to teachers and students. There are many problems, such as the one I worked on, which are of mutual interest, both to the country where the work is done and to the United States. If such problems are carefully chosen in advance and facilities are prepared there is an opportunity to accomplish a great deal during the time of a few months. In my case the planning period occupied almost a year, but I was able to start work without delay upon arrival in Egypt. We hope you and the organizations

concerned will give increased consideration to the research opportunities in this program.

I am enclosing two copies of the report for your information. I am sure you can secure additional copies if you desire them by writing to Dr. Paul Sharp, Director, Agricultural Experiment Station, University of California, Berkeley 4, Calif.

I have retired from the University of California and I am going to India for 2 years on the international cooperation program of the University of Illinois. Should you desire to get in touch with me you can address me in care of Dr. Frank Parker, U. S. T. C. M., American Embassy, New Delhi, India.

Sincerely yours,

WARREN R. SCHOONOVER.

Mr. Dulles and China

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a letter to the editor entitled "Mr. Dulles and China," written by James P. Warburg, and published in this morning's Washington Post and Times Herald.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

MR. DULLES AND CHINA

With the world's attention and the hopes of humanity focused upon the disarmament talks at London, Secretary Dulles has seen fit to proclaim at San Francisco that the United States remains unalterably wedded to a China policy which would seem to make any serious approach to universal disarmament impossible.

How can there be any hope of developing a system of reliably enforced disarmament while the greatest military power in Asia remains excluded from the world organization? Are we and our Allies to reach agreement with the Soviet Union for the reduction and control of armaments while Communist China, with its 600 million people, remains free to maintain the greatest conventional military establishment in the world?

Was it wise or necessary to reaffirm at this moment a China policy which not only blocks the road toward disarmament but which keeps the United States perpetually at the brink of war, cements the Sino-Soviet alliance, divides the anti-Communist coalition and alienates most of the uncommitted peoples?

In the manner of an able prosecuting attorney, and with the mantle of self-righteousness wrapped about him, Mr. Dulles has presented his case showing the government of the Chinese People's Republic to be a "bad" government. One may accept this moral indictment and yet wholly disagree with the Secretary's conclusions.

"The United Nations," said Mr. Dulles, "is not a reformatory for bad governments." Such governments, he said, should be ostracized from the world community. They should be subject to cultural and economic boycott, to diplomatic nonrecognition and to exclusion from the United Nations.

"The United Nations," said Mr. Dulles, "is supposedly an association of those who are already peaceloving—an association of those governments able and willing to carry out their charter obligations." Of these obligations, the Secretary said, "the basic obligation is not to use force except in defense against armed attack."

Surely, in the light of postwar history, and especially in view of what happened last October, this description of the U. N. membership is—to put it mildly—romantic nonsense. No one has more eloquently shown that this concept of the U. N. is unrealistic and self-defeating than Mr. Dulles himself. In his book, War or Peace, published in 1950, Mr. Dulles wrote:

"I have now come to believe that the United Nations will best serve the cause of peace if its Assembly is representative of what the world actually is, and not merely representative of the parts which we like. Therefore, we ought to be willing that all nations should be members without attempting to appraise closely those which are good and those which are bad. Already that distinction has been obliterated by the present membership of the United Nations."

May we not hope that our Secretary of State will recapture the sane realism and the plain commonsense which he displayed when he pondered these matters as a private citizen?

JAMES P. WARBURG.

NEW YORK, N. Y.

Proposed Curb on United States Supreme Court

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "South Carolina Senators Call for a Supreme Court Curb," from the Williston, S. C., Way of July 4, 1957. This newspaper is ably edited and published by Mr. Ben P. Davies, Jr.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOUTH CAROLINA SENATORS CALL FOR SUPREME COURT CURB

Both of South Carolina's United States Senators, OLIN D. JOHNSTON and STROM THURMOND, have called for a curb on the powers of the United States Supreme Court, which body has apparently set about rewriting the Constitution.

In speeches and in news conferences the two South Carolinians have joined in deploring decisions handed down by the Court that infringe upon the rights of individual States as well as other rights guaranteed under the Constitution.

Senator THURMOND has also introduced a bill in the Senate in an effort to keep the Court from further reviewing school segregation cases. The Court has had a heyday since that fateful Black Monday, May 17, 1954, when they ordered that school segregation be abolished and all schools throughout the land be integrated.

The latest capers of the Court—which were touched on in this column last week—have brought criticism from leading legislators throughout the Nation. At first, it was only the southerners who decried the actions of the Court, but as Chief Justice Warren and his cohorts continued to rewrite the laws of the land to suit their sociological whims the hue and cry has been taken up by leaders in sections throughout the Nation. They can see the handwriting on the wall and now realize that the school decision was just the entering wedge.

We commend Senators JOHNSTON and THURMOND on their stand and trust that they will not ever weaken.

The London Disarmament Negotiations

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. HUMPHREY. Mr. President, in recent days and weeks a good deal has been written about the uncertainties and confusions surrounding the current London disarmament negotiations. I have seen no analysis of the situation more precise and to the point than this morning's article entitled "Unreadiness and Indecision," written by Walter Lippmann. It seems to me Mr. Lippmann's analysis is a very thoughtful one which deserves careful attention by the Members of the Senate.

I ask unanimous consent that the text of Mr. Lippmann's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of July 2, 1957]

UNREADINESS AND INDECISION

(By Walter Lippmann)

There is a remarkable resemblance between General Eisenhower's handling of the disarmament negotiations and his handling of the budget. In both cases, that is to say, he has launched a proposal and embarked on a course, not having made up his mind about just where he wished to go. The deliberation, the weighing of alternatives, the hard work of making a firm decision, would in an orderly and rational conduct of Government have preceded the presentation of the budget and the sending of Mr. Stassen to London to negotiate with Mr. Zorin.

But in the case of the budget, it took nearly 2 months before it was reasonably clear whether the Chief Executive was for or against the executive budget. Only after much confusion and controversy did the President begin to make clear where he stood. In the case of disarmament, it has now transpired that he started the diplomatic exchanges with no real agreement within his own official family, with no adequate understanding with our allies, and with his own mind still fluid. During the past few weeks, with Mr. Stassen abroad in London to speak for him, the President has acted the part, not of a statesman who has a policy but of a puzzled man who is thinking out loud.

No doubt the problems of disarmament are extraordinarily complicated. They are fraught with uncertainty and with risk, and there is an awful responsibility on one who, like the President, must make the final decisions. But there is no reason why he had to enter into the negotiations or, why he had to send Mr. Stassen to face Mr. Zorin, until he knew for certain whether he was in favor of reaching the kind of agreement that might conceivably be possible. He should have waited until he was ready. There was no

use talking with the Russians if the President himself had not yet thought through his policy, no use if high officials in Washington were convinced that they must nullify what Mr. Stassen was supposed to do.

In the field of diplomacy, this has been like committing unprepared troops to a great battle, while the generals have not yet arranged for their supplies or ceased to argue with one another about the objectives of the battle. This is the way to demoralize an army and during the past week there has been a very considerable demoralization in Washington. The greatest doubt has been raised as to whether the President wants an agreement, or whether he could now persuade the Senate to ratify an agreement.

Mr. Gromyko is wrong in saying, as he did last week, that the United States is using the disarmament talks as a screen concealing its striving to continue and intensify the arms race. The truth is that the United States is not really using the disarmament talks at all because the President and his administration have a policy to which some are opposed, and about which the rest are not convinced.

Unless the President can find some way to clarify and then to make firm the American position, we shall find ourselves with a treaty that the President does not really want, or with one that the Senate will reject. In either event, we shall bring down upon ourselves the onus of blocking the path to a limitation of armaments.

I have heard it said that this will not happen because if and when Mr. Stassen really starts to negotiate about the details with Mr. Zorin, he will find the Soviet Union is quite unwilling to reach a good agreement about inspection and control. That may well be true if the negotiations are genuine. But if we remain in our present position, where the probabilities are against the ratification of a disarmament agreement, the Soviet Union can go very far in its offers without running the risk of having to make good on them.

We had better assume that the Russians do want an agreement, and that they are prepared to pay a considerable, though not an enormous, price for it. We had better assume, too, that we shall have ourselves to clear up the confusion in our own position, and that we must not count upon the unreasonableness of the Russians to save us from the consequences of our uncertainty and indecision.

Disarmament Is No Cold War Cure-All

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. SCHOEPPEL. Mr. President, on July 2 there appeared in the Wichita Eagle, of Wichita, Kans., an article written by Roscoe Drummond, entitled "Disarmament Is No Cold War Cure-All." Mr. Drummond pointed out some very important matters we ought to be considering as we look forward to the events that will happen in the next few months.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DISARMAMENT IS NO COLD WAR CURE-ALL
(By Roscoe Drummond)

WASHINGTON.—Walter Lippmann is urging a thorough, public debate on whether it is desirable or undesirable for the United States to join the Soviet Union in any kind of disarmament in the present state of the world.

Mr. Lippmann urged such a debate before President Eisenhower disclosed that he himself had some second thoughts on the wisdom of ending nuclear bomb tests.

The warning which Mr. Lippmann sounds—and he favors an arms-limitation agreement—is that unless there is a frank facing of the arguments against as well as for disarmament, we may well end up seeing the President negotiate an agreement which neither the Senate nor the American people will accept.

It is urgent that Mr. Eisenhower begin to meet openly the genuine reservations which many people have about disarmament at this time because nothing could be more hurtful than to have the President put his name to a treaty and then have public opinion strike his signature from it.

There is a strong case for disarmament. What seems to me most dangerous is that disarmament should be sold to the American people on the ground that it is going to do something which it isn't—that it is going to bring about peaceful coexistence, reduce tensions between Russia and the free world and generally create a climate in which the great disputes which divide us can be resolved.

I cannot see where disarmament is going to do any of these things.

There is no evidence that the Soviets are trying to curtail the cold war. The only evidence is that they might like to carry on the cold war at a slightly reduced cost through some disarmament.

Consider the fact that while disarmament negotiators in London are trying to work out a big arms limitation, the Communists were continuing to violate a little arms limitation in North Korea.

Consider the fact that while we are trying in London to devise a system of inspection that will make worldwide disarmament enforceable, the Communists have been so violating the inspection system setup to govern the Korean truce that the United Nations command can no longer live with it.

Consider the fact that on the very day that the United States proposes a mutual cutback of Armed Forces, the 150,000-word report of the special United Nations committee confirms everything the world instinctively knew was true about Moscow's illegal use of its armed force to crush the liberties and independence of the Hungarian people, that the uprising of the Hungarians against Soviet rule was spontaneous and nationwide, unaided by any western imperialists, that Soviet forces violated Hungarian territory because they were never invited in by any Hungarian Government.

Consider the fact that the Kremlin shows no interest in and, in fact, a sustained opposition to negotiating a solution to any of the international problems and tensions—such as the unification of Germany—which have produced the arms race the Soviets now appear to want to halt.

Conceivably it may be in the interests of both the Soviet Union and the United States to take a first step toward an inspectable reduction of armed strength.

But let us not take this step in the false and wishful expectation that it is going to usher in a peace with the Kremlin or produce a climate in which we can let down our guard and watch cold-war tensions melt away.

No, the evidence seems to be sufficient to say that if Moscow wants to negotiate a disarmament agreement, it wants to negotiate it, not as a means of liquidating the cold war, but as a means of carrying it forward at a slightly reduced cost.

Even under such conditions a first step arms limitation may be useful, but let us not acclaim it for more than it is.

The Importance of Urban Renewal Funds

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. WILEY. Mr. President, I have commented on several occasions previously on the Senate floor with regard to the importance of continuing and, indeed, strengthening the urban renewal program.

In city after city across this country vast tracts of real estate are blighted with decay.

These blighted areas have become sources of infection for the breakdown of families, the breeding of vice, centers of ill health, and other civic maladies.

We all realize, of course, that appropriations for urban renewal represent a strain on the Federal budget.

The fact of the matter is, however, that if Uncle Sam were to abandon this program, it would undoubtedly come to a dead halt throughout the country.

I send to the desk now the text of a letter which I have received from Mr. Willard E. Downing, executive secretary of the city of Milwaukee's Citizens Urban Renewal Committee.

Mr. Downing points out the importance of continued appropriations for this purpose.

I append to his letter the text of a front-page editorial which was carried in the Milwaukee Journal issue of July 2, describing a new booklet as published by this committee.

I ask unanimous consent that the text of the letter and editorial be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

CITIZENS' URBAN RENEWAL COMMITTEE,
Milwaukee, Wis., July 3, 1957.

The Honorable ALEXANDER WILEY,
United States Senate, Washington, D. C.

DEAR SENATOR WILEY: The Citizens' Urban Renewal Committee, at its last regular meeting on June 26, expressed considerable concern over some recent newspaper articles indicating that the President had suggested that Federal supports for urban renewal should be cut and also urged greater State participation in this program.

Our committee felt that this would be a very grievous injustice, particularly in States like Wisconsin. Our ability to produce sufficient income to provide for imaginative and realistic programs in urban renewal is very limited. Certainly the city of Milwaukee would be in no position to carry on this program at its current ability to produce income. The State has drastically curtailed its building program because of the limitations on its income. If the President's recommendations were put into effect, it

would mean that urban renewal in Wisconsin would come to a standstill and this indeed would be a tragedy.

Our committee, therefore, urgently recommends that you support adequate Federal aids for urban-renewal programs so that our city and State can eliminate blight and slums. For this, we feel, is one of the most significant programs for the future well-being of our country.

Sincerely yours,

WILLARD E. DOWNING,
Executive Secretary.

Mrs. Max Fenske, chairman; Harold E. Beck, vice chairman.

Willard E. Downing, executive secretary.

Members: Harold E. Beck, Pierce H. Bitker, Frank S. Caravella, Herbert L. Ebling, Fred A. Erchul, Mrs. Max Fenske, Alois Fons, Mrs. Arthur C. Frick, Rt. Rev. Donald H. V. Hallock, Edward L. Hanley, Mrs. Clara Herrmann, Rudolph Kotras, Jr., Joseph Linke, Floyd Lucia, John Ocvirk, Valentine E. Persik, Donald L. Soucie, Bernard D. Toliver.

MILWAUKEE—BOOKLET ON YOUR CITY TELLS THE COST OF BLIGHT AREAS

"The city's tools, the city's capital are the houses, the buildings, and the people who live and work in them. The city cannot afford to let its capital go downhill. It cannot afford to let its people live, work, and play in blighted structures."

This from This Is Your Milwaukee, a new illustrated pamphlet issued by the citizens' urban renewal committee, a group charged with advising city government on urban renewal. It is charged, too, with the important job of informing Milwaukeeans on the urban renewal program and encouraging participation in it.

The pamphlet can be obtained from the urban renewal coordinator's office in the city hall. It is short and informative.

A telling point the pamphlet makes is that Milwaukee cannot afford blight. It costs you money. Blighted areas have 10 times as many cases of tuberculosis as good residential areas. Blighted areas return to the city only $9.93 per person, compared with an average of $47.32 for residents of good areas.

A typical blighted area has more than three times as many fires as a typical good area. Blight requires more police protection, more sanitation service, more of every city service. City service costs money. You supply that money. You can't afford the burden of today's slums and blight and the constant addition of slums and blight where deterioration is allowed to continue unchecked.

The city has a plan for checking the spread of blight and weeding out slums. It is urban renewal—the conservation of good neighbors, the repair of bad neighborhoods, the clearance and redevelopment of slum neighborhoods. It's a package program that makes sense. Why not learn more about it by getting a copy of the urban renewal committee's booklet?

Punishment for Publication of Classified Material

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. YARBOROUGH. Mr. President, on Saturday, June 29, 1957, I pointed out, in an address to the Texas Press Association, the dangers to freedom of the press lurking in the Wright Commission recommendation that a fine of up to $10,000 and imprisonment for not to exceed 5 years be imposed upon any person publishing any information on any subject classified as secret by any Government bureau.

People interested in preserving our democratic liberties and rights are alarmed over this effort to muzzle the free press of the Nation. Another newspaper has joined the growing numbers which are speaking up for our historic freedom of access to information.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Midland Reporter-Telegram of Friday, July 5, 1957, entitled "A Dangerous Proposal," pointing out the dangers in the Wright Commission recommendation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A DANGEROUS PROPOSAL

Danger signals flash all over the place when one particular proposal of the 12-member Commission on Government Security meets the public eye.

It is a recommendation, buried deep in the massive report, that Congress adopt legislation making it a crime for newsmen and other private citizens to disclose secret information, even though it is not their intention to endanger the national security. The maximum penalty under the proposed law would be 5 years in prison and a $10,000 fine.

On the surface this proposal might seem satisfactory, but the unseen implications are deep seated and dangerous to the freedom of the Nation.

Certainly, no responsible man or woman would advocate the publishing of information which really concerns national security. No responsible newsman would do it. But the matter does not end there. It is in the authority to classify information that the danger rests. This proposed legislation easily could bring about a complete blackout of news concerning our Federal Government.

The coverup of Federal activities under the guise of national security is one of the most dangerous trends in Washington today. A national security label hides many an unsavory Government activity right now. Some bureaucrats simply do not want the people to know what is going on. By misusing the patriotism of the average American, Government workers, if they so desire, are able to get away with almost anything.

The Texas Press Association, at its recent meeting in San Antonio, adopted a resolution strongly opposing this particular proposal of the Government Security Commission. Senator RALPH YARBOROUGH, in addressing the convention, termed the recommendation a dangerous threat to the freedom of the press. He urged strong opposition to the proposed measure, which actually would give the heads of executive agencies the power to make confidential anything they would like to cover up.

Under the proposed new law, it would be easier even to hide newsworthy facts under a security guise. Dictatorships flourish under such practices.

Other proposals and recommendations of the commission undoubtedly are worthy of consideration and adoption in the Government's effort to strengthen its security program.

The President and States Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three related editorials commenting upon President Eisenhower's recent speech on States rights before the national governors' conference. The editorials are entitled "Ike Talks States Rights, but Urges Civil Rights," from the June 27, 1957, issue of the Macon Ga., Telegraph; "The President and States Rights," from the June 26, 1957, issue of the Metropolitan Herald, of Atlanta, Ga.; and "Ike and States Rights," from the June 27, 1957, issue of the Washington, Ga., News-Reporter.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Macon (Ga.) Telegraph of June 27, 1957]

IKE TALKS STATES RIGHTS BUT URGES CIVIL RIGHTS

President Eisenhower's concern, as expressed before the governors' conference, that in recent years "more and more rapidly the pendulum of power has swung from our States to the Central Government" comes as somewhat of a surprise.

The Chief Executive sounds now more like Candidate Eisenhower of 1956 and 1952 rather than the head of an administration sponsoring a civil-rights program that includes a provision whereby one believing his rights violated may ask relief directly in Federal courts without first seeking remedy in State courts.

The Williamsburg address of the President makes it plain that he believes that he who controls the purse strings, enjoys policy-making power. Indeed, that is the basis of the President's proposition that if the States assume more financial responsibility of governmental programs, the pendulum of power will swing back from Washington to the States.

SCHOOL AUTHORITY

On that line of thought, we would remind Washington that in no major field of governmental service has the National Government contributed less assistance than to education. Hence, by the President's own reasoning, the greater authority of administration and policymaking with reference to public schools rightfully belongs to the States.

Federal aid of one kind or another has been extended to the States since the earliest days of the Republic, but the modern system of cash grants entailing Federal supervision did not get underway until introduction of the Federal income tax on a permanent basis.

Today, there are but a few major public services that the Federal Government does not participate in financially and in varying degrees administer.

Federal funds distributed as grants-in-aid 30 years ago totaled about $125 million. Within the next 10 years the amount had more than doubled to $290 million. Now, such disbursements will probably exceed $3 billion.

In taxing the public in order to give back to the public such staggering sums, the Federal Government has all but monopolized the sources of revenue.

It is well for the President to challenge the States to take on a greater share of public-service programs by raising taxes, but before such can be given serious thought the Federal Government must vacate some of the revenue-raising sources.

ABANDON GAS TAX

For years the States have demanded withdrawal of the Government from the gasoline-tax field. The same governors' conference, that the President addressed, has in years past called for termination of the Federal gasoline tax and several legislatures have memorialized Congress to that effect.

It has also been proposed from time to time that the Federal Government relinquish to the States the admission tax, tax on telephone service, and retail excises—all more suitable for State or local, than for Federal administration.

No such steps have been taken by the Treasury.

Talk of the States taking over more of the financial burden of public services, until such time when the Federal Government yields to the States more of the springs from which revenue flows, is just so much talk.

Mr. Einsenhower's advocacy of States rights, viewed against the backdrop of his civil-rights program, is unimpressive.

[From the Metropolitan Herald, Atlanta, Ga., of June 26, 1957]

THE PRESIDENT AND STATES RIGHTS

President Eisenhower says that his civil-rights bills, now before the Congress, are "moderate and conciliatory."

Either the President has not read the bills or has not had them explained to him by unbiased assistants.

Proponents of the measures, during the debate in the House, plainly stated that the legislation was aimed at the white people of the South. They admitted that the NAACP had forced such legislation. Many of them pulled no punches in stating that the NAACP would not go along with a trial by jury in civil-rights cases, that that organization was tired of waiting for Congress and the White House to act. They condemned the entire South by charging that no southern jury would ever convict a white man charged with violation of civil-rights legislation.

This then is the moderate, conciliatory legislation the President praises.

All competent observers in Washington reported that only "extreme White House pressure" prevented the adoption of the trial by jury amendment. These same observers also report that this same extreme pressure from the White House caused the Senate to vote favorably to bypass the Judiciary Committee, in violation of established Senate rules, and place the bill directly on the floor. It is interesting to note that this maneuver was too much for some liberals, who favor civil-rights legislation, and they voted against the bypassing of the committee.

The President continues to talk about how he favors States rights, as he did during both election campaigns. He did it again Monday before the governors' conference. The truth is the President talks a good game of favoring States' rights, but when it comes to vital legislation, as in the notorious civil-rights legislation, he is found using extreme pressure to force its passage.

[From the Washington (Ga.) News-Reporter of June 27, 1957]

IKE AND STATES RIGHTS

Reports from Williamsburg are that President Eisenhower received a rather cold response to his speech to the national governors' conference.

Ordinarily, you'd think the President's proposal would have been received with cheers, for he asked that the States take over some of the programs now being carried on by the Federal Government.

That would suit a lot of States, particularly in the South, just fine.

For many, many years we have argued that too much Federal Government is not good for the country, and that the States should be left alone to manage their own affairs as much as possible.

Why, then, shouldn't we greet the President's speech with enthusiasm?

Simply because his speech doesn't hold true with the many big Federal spending programs he has been demanding of Congress.

We needn't go any further than the multimillion-dollar Federal aid to education program of Mr. Eisenhower and the Republican Party.

Most Southern States, and especially Georgia, object to the Federal school program for two reasons.

We say first that it isn't necessary, and we base our opinion on what Georgia and our neighboring States are doing at the local and State levels for public schools.

Secondly, we know that if the Federal Government ever starts financing school-building programs for States and local communities, the Federal Government will take over full control, in time. The Federal Government will have the say on qualifications for teachers, on textbooks, on courses of study, and on whether or not the races will be mixed.

The historically traditional field of local education isn't the only one which the modern-day Republicans have proposed to take over. The President's program, as submitted by him to Congress, goes much farther toward usurping rights and duties of the States than anything the New or Fair Deals ever demanded.

We can agree with the principle of Ike's speech that the States be encouraged to take care of themselves and run their own affairs. But Ike's administration just hasn't been practicing what he preached.

The Richard E. Byrd Antarctic Commission

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. WILEY. Mr. President, on May 31, of this year, it was my pleasure to introduce, with 22 cosponsors, S. 2189, to establish the Richard E. Byrd Antarctic Commission.

We are now awaiting reports from the various executive agencies which have this issue under study.

Time is, however, growing exceedingly short in the 1st session of the 85th Congress.

It is my earnest hope that the agencies will report, therefore, as soon as possible on this bill.

What must be borne in mind is this fact: To establish or just to continue an Antarctic expedition requires literally months and often years of planning.

If we do not establish such a commission this year, then we will have lost precious time not simply in 1957 but in the years up ahead.

It is my earnest hope, therefore, that the Wiley bill for the Byrd Antarctic Commission will be subject to hearing before the end of the 1st session, or no later than the commencement of the 2d session of the 85th Congress.

I invite attention to a significant article which was published in the May 13 CONGRESSIONAL RECORD. Congressman THOR C. TOLLEFSON, of Washington, introduced in the RECORD a Washington Daily News article of March 28 of this year by Jim G. Lucas, with the significant title "Looks Like the Reds Plan Long Antarctic Stay."

The article pointed out that there is strong reason to doubt whether the Russians regard their bases, which have been established for the International Geophysical Year, as only "temporary." The article reflects the concern of our Australian friends concerning the long-range Soviet plans for the Antarctic.

This morning's New York Times carries a dispatch by Mr. Walter Sullivan regarding the plans for seven American tractor parties to cross around 7,500 miles of the hinderland of the Antarctica.

While these valiant Americans are piercing the unknown in these freezing regions, surely the very least that we can do is to take action on legislation which will make sure that their work will be fully capitalized upon from a long-range standpoint.

Of course, their scientific findings will contribute to the "pool" of the International Geophysical Year.

But I am thinking now of even more direct benefits to the American people in terms of our own national interests.

These benefits can only be achieved through establishment of the Richard E. Byrd Anarctic Commission.

I am glad that there are many sources in the executive branch which are extremely sympathetic with the need for legislation of this type.

At the same time, I would be less than frank if I did not state candidly that there are some folks downtown who seem to be dragging their feet.

While I know these folks have a high regard for Antarctic exploration, they do not seem to realize that unless we fully coordinate work in this field we can never fully benefit from it.

These folks seem to fear the establishment of this small new agency. They seem to be more concerned with the minor costs that it would involve than they are with the tremendous national results which it would achieve.

I hope, however, that the reports which will come from the various Federal agencies to the Senate Labor Committee, which will soon be studying the Antarctic bill, will be favorable.

And I trust that this committee will report the legislation unanimously to us of the full Senate.

I hope, too, that there will be similar favorable action in the House of Representatives on the legislation.

Such action might well include, on both sides of the Hill, reference to all future Arctic, as well as Antarctic, work.

I ask unanimous consent that the text of the New York Times article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRACTORS TO TOUR ANTARCTICA'S ICE—SEVEN UNITED STATES EXPEDITIONS TO STUDY 7,500 MILES OF FROZEN HINTERLAND FOR IGY

(By Walter Sullivan)

During the next 18 months, 7 American tractor parties are to cross about 7,500 miles of the little-explored hinterland of Antarctica.

The slow-moving vehicles will make a circuit comparable in distance to one from New York to Dallas to Los Angeles to Seattle and back to New York—without filling stations.

In most cases food and fuel will be delivered en route by aircraft.

This will not be possible on the 500-mile journey to be made from Wilkes Station this year. No planes are stationed there within reach. In an attempt to spot crevassed areas and other obstacles along this route, an intensive study is planned of aerial photos on file in Washington, D. C.

The pictures were taken by planes of United States Navy expeditions that discovered the region in 1947 and 1948.

DATA SOUGHT ON ICE SHEET

The program of tractor journeys was proposed by Albert P. Crary, the chief scientist at Little America. It has been approved by leaders of the United States program for the International Geophysical Year, an 18-month study of the earth that started last Sunday.

The purpose of the tractor trips is to find out more about the ice sheet that weighs heavily on the continent at the bottom of the world.

In addition to the journey from Wilkes Station, a tractor trip is planned for each of the next two seasons from three other American bases: Little America, Byrd Station in Marie Byrd Land, and Ellsworth Station on the Weddell Sea.

The treks will be made in October and November so that the vehicles can be back at their bases in time to help unload the relief ships. The longest will cover a 1,500-mile triangle on the Ross Ice Shelf—a floating extension of the continental ice sheet, roughly the size of France.

An additional project will be a study of the heavily contorted ice surrounding Roosevelt Island 50 miles south of Little America. The chaotic patterns of crevasses make this region almost impassable. It is planned to use helicopters to lift the scientists in a leap-frogging survey of the area.

TO BE STUDIED AS ROCK

Both sea ice and shelf ice will be treated as rock formations in this study. Some believe a better understanding of mountain-building and other phenomena of the earth's crust can be gained through examination of what happens when the flowing shelf ice, 700 feet thick, is twisted, bent, and split as it impinges on Roosevelt Island.

This study will be under James H. Zumberge, of the University of Michigan. Once or twice men flying over the 1,200-foot hump of Roosevelt Island have thought they saw bare land peeping through its icy mantle. An attempt will be made to find this spot and place a survey camp there.

Among the problems that scientists studying the ice shelf will try to resolve is whether the self grows on the bottom or dissolves there when the freshwater ice slips off the land and comes in contact with sea water.

Last season an examination of ice in a crevasse near Little America produced salt and algae, a form of plant that lives in the sea, from layers 20 feet or more above sea level. This seemed to support the view that the ice had grown from the bottom. The subject is one that has been discussed by scientists since the British expeditions of early in the century.

AIRBORNE SURVEY WEIGHED

Another program under discussion is for an airborne survey of the ice sheet in the vicinity of the South Pole. A party would be landed at 50-mile intervals along a line extending along the meridians of 60° east and 120° west, with 4 stops in each direction from the pole.

At each point explosives would be used to determine the ice-sheet thickness by echo-sounding. Another line of soundings by airborne scientists has been proposed along the route followed by Capt. Robert F. Scott on his trek inland from the Ferrar Glacier in 1903.

The tractor journeys for the Antarctic summer of 1957–58—which coincides with the northern winter—are to be as follows:

1. From Little America to McMurdo Sound, passing south of Roosevelt Island, and then to Liv Glacier (where an aircraft-refueling depot was established by air last season) and back to Little America. A major obstacle on this route is the region of massed crevasses near 81 degrees south latitude, south of Little America. This blocked the tractors of the second Byrd Antarctic expedition in 1934.

2. From Byrd Station to the mountainous region near the coast, to the Sentinel Mountains and back.

3. From Ellsworth Station into Edith Ronne Land.

4. From Wilkes Station to the already established inland camp, then south to a point 192 trail miles from the coast, then to Mount Long, discovered by Navy planes and believed to be about 6,500 feet high, then to a fuel cache on the outbound route and from there back to Wilkes Station on a route skirting the coast.

CAUTION TO BE NEEDED

Because this party will not have aerial reconnaissance it will have to move cautiously near the mountains and coastline. It is to bring a dog team as well as two weasels, which are small tracked vehicles. The dogs can be used to scout suspicious areas. The fuel depot will be established in advance.

Journeys for the season of 1958–59 are planned as follows:

1. From Little America into western Marie Byrd Land.

2. From Byrd Station into the region south of Ellsworth Highland.

3. From Ellsworth Station into Coats Land.

Tractor journeys into other parts of the continent are planned by the Australian, British, French, New Zealand, and Soviet expeditions.

Emperor Penguins for the Portland, Oreg., Zoo

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an excellent article from the Oregonian of Sunday, June 30, 1957, describing the airlift which will fly some of the famous and stately emperor penguins from the icy wastes of the Antarctic to the great new zoological gardens which are being constructed in my home city of Portland, Oreg.

This article is by Leverett G. Richards, aviation editor of the Oregonian, who himself has logged many hours of flying experience both in the Arctic and in the Antarctic.

Portland's forthcoming zoo will be a model for all the world, and we are pleased that the celebrated emperor penguins will be part of the exhibits at that installation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENGUIN AIRLIFT TO FLY ANTARCTIC EMPERORS TO PORTLAND ZOO

(By Leverett Richards)

Portland's new zoo may be the first in the world to boast a colony of emperor penguins from the Antarctic, if Operation Emperor succeeds as planned, Ormond R. Bean, city commissioner in charge of parks, announced Saturday.

With the cooperation of the Navy and the Air Force, Jack Marks, Portland's zoo director, plans to capture a score of emperors, one of the rarest and most mysterious of birds, in the shadow of the South Pole and fly them to Portland.

Plans have been completed for a penguin pool designed especially to meet the peculiar needs of the emperor, biggest and most curious of the scores of species of penguins. The call for bids will be issued the 1st of September and construction will be rushed to completion in time to house the big birds this winter, Bean said.

Rear Adm. George J. Dufek, Navy commander of Task Force 43, charged with support of the 7 United States bases in the Antarctic, has assured Commissioner Bean that "your plan has my full concurrence and that the complete cooperation of myself and all members of my staff will be given to Mr. Marks in the execution of this project."

Maj. Gen. Chester E. McCarty, Portland attorney who commands the 18th Air Force, has agreed to supply the necessary airlift in the course of flying scheduled missions to the Antarctic in Operation Deepfreeze.

All previous attempts to transplant the emperor penguin, which stands 3 to 4 feet high and weighs up to 95 pounds, have failed, primarily because of the long voyage through the tropics required by ship.

ANTARCTIC START PLANNED IN OCTOBER

Marks expects to leave for the Antarctic in October and fly to McMurdo Sound, main support base for the South Pole, in a C–124 of the 54th Troop Carrier Squadron. There he plans to capture 20 of the big birds that walk and squawk like men, with the aid of Navy pilots who will fly him to the edge of open water 25 miles away by helicopter.

The birds will then be flown back to the 54th Squadron's rear maintenance base at Christchurch, New Zealand, and transferred immediately to a C–124 Globemaster returning to the United States. Col. William Forwood, who will be the Air Force task unit commander in the Antarctic, plans to make the 8,000-mile flight from the Antarctic ice in 4 or 5 days, by putting extra pilots aboard to permit 1-hour refueling stops en route instead of the usual 2-day rest period at Honolulu.

A C–46 Curtiss Commando of the 403d Troop Carrier Wing at Portland, General McCarty's first troop carrier command, will be waiting at Travis Air Force Base, Calif., to rush the penguins to the Portland Zoo.

If the flight can be made as planned, the birds will arrive in top condition without being exposed to the malnutrition, dehydration, and heat exhaustion which has led to death from tropical diseases for nearly all

Emperor penguins brought out by previous expeditions.

FEW KNOWN TO SURVIVE

Only two emperors are known to have survived for any length of time at the Bronx Zoo in New York.

Alan Best, director of the Stanley Park Zoo in Vancouver, British Columbia, is the first to succeed in keeping alive for a long period of time the closest living relative of the emperor—the king penguin, which looks almost exactly like the emperor, but weighs only half as much. Best, who spent years collecting birds near the Antarctic, has learned how to feed and care for his six king penguins as no one else has.

He has agreed to advise and assist Marks in taking care of his emperors and will take the big birds into his own zoo if the emperors should arrive before Portland's penguin palance can be completed, Bean reports. Best attributes much of his success in handling the almost unknown birds to the specially designed pool constructed for them. Lawrence, Tucker & Wallmann, architects on Portland's $3,800,000 zoo, studied Vancouver's zoo and consulted with Best in the design of Portland's own emperor emporium, which is 54 feet, 6 inches in diameter and will cost an estimated $50,000.

Marks will be armed with a special penguin persuader, a suit of emperor underwear of strong linen cloth which he can slip over the heads of the birds to pinion their powerful wings to their sides. These horny flippers are capable of breaking a man's wrist. Some such straitjacket is necessary, since the birds have to be fed by hand, even after years of captivity. They eat any kind of fish, but seem to prefer fillet of salmon.

POOL TO PROVIDE PARADE ROOM

All this Portlanders may be able to see for themselves in the years to come, Commissioner Bean points out. The penguin pool for the new zoo is designed to parade the big penguins over flying ramps to small islands where they can be seen preening themselves, conducting their complicated mating ceremonies, or rocking back on their heels to sleep through the winter rain.

No refrigeration will be necessary, Harry Buckley, superintendent of parks, says. The air in the pool and in the boudoir or retiring room in the rear will be cooled by jets and sprays of water, which will also keep the area clean at all times.

Portland's new pool, like Vancouver's, will display the birds in the open. The Bronx keeps its emperor in a refrigerated cage.

While the aptenodytes, as the scientists cal them, can survive incredible cold and hardship, Vancouver's king penguins have become so acclimated to the warm rain of the west coast that they hate the ice and snow of our rare cold spells and seek the shelter of their retiring room, Best reports.

Best is confident Portland's emperors, too, will learn to like their new pool and rear their young in captivity.

A Backward Glance by Miss Perkins

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. MILLER of California. Mr. Speaker, just a few months over a quarter of a century ago President Franklin D. Roosevelt, leading the New Deal to victory, smashed the precedent that women could not serve in the Cabinet by appointing the gracious Miss Frances Perkins as Secretary of Labor.

This sincere, intelligent, small, but aggressive woman, gave labor its proper standing in the economic and social life of our great Nation. Miss Perkins, who sprang from a conservative, Republican Massachusetts family and started life as a teacher in science, has made a place for herself in the history of this country that all who toil may proudfully accept.

I think Cynthia Lowry's article appearing in the Washington Star on Sunday, July 7, is an excellent one and I am proud to make it part of the RECORD.

The article follows:

A BACKWARD GLANCE BY MISS PERKINS

(By Cynthia Lowry)

The lady in the tricorn hat and simple black dress has been out of the Nation's eye for 12 years. But, by choice, she remains close to the running stream of the Nation's life.

Miss Frances Perkins finds it more peaceful and pleasing today to teach and to write. But her most valuable contributions to her Nation's welfare, she feels, were in the stormy days of the New Deal.

She was the first woman Cabinet member. She remains the only woman to serve as Labor Secretary, holding that job through the 12 years of the Roosevelt administration.

"The next great advances we will make," she says, "will be toward more social advantages for all people—better housing and transportation, more electrical power.

"As far as I can see, the necessary protection for working people is almost complete. From now on that protection can be only improved and enlarged. Generally speaking, working people are much better off today, although there are still between 3 and 4 million getting $1,200 a year or less, far below the minimum standard of living in today's inflation."

SEVEN OBJECTIVES

It was 1932 when President-elect Franklin D. Roosevelt asked Miss Perkins, then New York State industrial commissioner, to list 7 major objectives concerning the protection of working people.

The list included old-age insurance, unemployment compensation, minimum wage-maximum hour laws, a planned backlog of public works for periods of lowered employment, a free public employment service and medical insurance covering the bulk of people.

When she resigned as Seretary of Labor on the advent of Harry S. Truman to the Presidency she was 63 years old. Her batting average on those 7 objectives was .850—all of them had passed into being except the mass medical insurance plan.

Now, at 75, Miss Perkins looks back on those storm-charged years with the same patient serenity she wore as a cloak on the job. Many of her friends, in fact, blame the tension that surrounded her career on the fact that she was a woman in a job that had always been held by a man.

She was accused of everything from ineffectiveness and a welfare worker's outlook to a "pink" viewpoint and complete lack of understanding of business problems.

A WHIPPING GIRL

Businessmen, labor leaders, even Congressmen, teed off on the Government's first whipping girl. But to this day, Miss Perkins remembers: "Taking attacks was part of the job. Someone had to go ahead with things and take the consequences, and I was the person."

One blow, she admits, penetrated her armor, although she didn't show pain at the time. That was the congressional resolution, introduced in 1940, asking an inquiry into whether impeachment proceedings should be instituted for the failure of her department to deport a west coast labor leader, Harry Bridges. (Immigration and Naturalization was at that time in the Labor Department, later transferred to Justice.) The resolution was defeated and 17 years later Bridges is still around. But even today, Miss Perkins can only muster a bitter smile at the incident.

"That one," she confesses, "hurt."

Since the day in 1945 when she stepped out of the national spotlight, Miss Perkins has continued a busy woman. Once when she was Secretary of Labor, Miss Perkins said, "I'll never retire. I can't knit."

"I think," she added, "it is dreadful for active, busy people to retire. I think I would be very distracted if I ever had to stop work. But like a good many other people who have always been busy, I have found great satisfaction in doing things which are entirely different from things I have ever done before. * * *"

TRUMAN APPOINTMENT

For 8 years, Miss Perkins served on the Federal Civil Service Commission, a Truman appointment which kept her in Washington most of the time. During this period she wrote and published a book The Roosevelt I Knew, which recalled her association with the late President from the time he was a young State senator, through his years as New York State Governor and finally as the man who "never let me down" in his years as President.

A Democrat, she resigned her civil service job when General Eisenhower was elected. Since then she has turned to teaching labor and government at such schools as the Universities of Illinois, Wisconsin, Chicago, and Cornell. She has also set about putting more of her recollections into print.

Last year she traveled and taught in Europe, lecturing at the Salzburg Seminars of American Studies and the University of Bologna.

Miss Perkins is a widow. Her husband, Paul Wilson, a financial statistician whom she married in 1913, died a few years ago. Their child, Suzanne, is married and lives in Connecticut. Miss Perkins divides her time between New York City and a Maine summer home.

For a Democratic Secretary of Labor, Miss Perkins has an unusual background. She was born in Boston to conservative Republican parents who believed a woman's place was in the home. She started off to teach chemistry after graduating from Mount Holyoke but became involved with social work in Chicago.

A New York City clothing-factory fire in 1911 that claimed the lives of 146 girls headed her for work on safety legislation—and her work with industry and labor.

She becamed known for her three-cornered hat and her simple black dresses which one wag said looked like they were turned out by the Bureau of Standards. Actually Miss Perkins is smartly dressed in private life. She considered her black dresses and tricorn hat as a secret sort of uniform for her public life.

As for the current McClellan committee hearings into unions, she accepts them as an element of growth.

"I think the McClellan committee has done its work in one union, and that the union itself has done the rest," she said in her calm, cultured voice. "Many unions have grown rich suddenly. But I'm not so horrified because I never thought that labor was a special class, better than bankers, bakers, or any other people. We've had insurance scandals, and banking scandals before. And I suspect that investigations of the so-called welfare funds may reveal a lot of incompetence in handling money, not dishonestly, but incompetence. But we will probably get some legislation and the situation will be corrected. The business of caring for other people's money has always been a problem."

Looking backward, Miss Perkins is something less than impressed with her career.

"What you might say," she said with a smile, "is that I happened to be a woman born in my own time."

Enforcement of Antitrust Laws by Federal Trade Commission

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. O'MAHONEY. Mr. President, the Senate Judiciary Committee this morning, in considering a bill introduced by the Senator from Utah [Mr. WATKINS] and myself, S. 1356, to restore to the Federal Trade Commission jurisdiction in the enforcement of the antitrust laws in the packing industry so as to protect the producer and the consumer from unfair price discrimination, rejected an amendment which would have restored the regulation of the industry to the Department of Agriculture, where it has been neglected for almost 30 years.

I am today in receipt of telegrams from Mr. Bryan Patrick, president of the Wyoming Stock Growers Association; Mr. Jack Toole Shelby, presdient of the Montana Cattlemen's Association; and Howard Flitner, of Greybull, Wyo., of the Wyoming Wool Growers Association, indorsing the O'Mahoney-Watkins bill.

I ask unanimous consent to have the telegrams printed in the Appendix of the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

CHEYENNE, WYO.,
July 2, 1957.

Hon. JOSEPH C. O'MAHONEY,
United States Senate,
Washington, D. C.:

Livestock producers and stockmen are entitled to same protection by the same qualified agencies as are other individuals or businesses. Under the Packers and Stockyards Act as now written we do not have it. The Federal Trade Commission has the experience, the trained staff and the funds for investigative purposes while the Department of Agriculture does not. We earnestly urge your support of the O'Mahoney-Watkins bill in the interests of all stockmen.

BRYAN PATRICK,
President, Wyoming Stock Growers Association.

JULY 1, 1957.

Senator JOSEPH C. O'MAHONEY,
Senate Office Building,
Washington, D. C.:

Montana Cattlemen's Association in State convention at Great Falls, June 29, adopted a resolution supporting Senate bill 1356, urge that it be reported out of the Antitrust Committee favorably and enacted. The association feels this legislation vital to the cattle industry.

JACK TOOLE SHELBY,
President, Montana Cattlemen's Association.

JULY 2, 1957.

Senator JOSEPH C. O'MAHONEY,
Chairman of Subcommittee of Judiciary, Washington, D. C.:

We of the Wyoming Wool Growers Association strongly endorse the O'Mahoney-Watkins bill and urge your support of this registration transferring the enforcement of the Packers and Stockyard Act from the Department of Agriculture and place it under the Federal Trade Commission for the following reason: Places enforcement under one agency which is already set up to do similar jobs thereby prevent duplication and gives us more economical administration of act to Department of Agriculture is not set up to enforce the act and has not done so in the past.

HOWARD FLITNER,
Wyoming Wool Growers.

The Second O'Mahoney Amendment

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks I wish to commend the sponsors of the second O'Mahoney amendment—section 633 of the Department of Defense Appropriation Act of 1958. This amendment was adopted unanimously by the Senate after 2 days, debate during which Senators O'MAHONEY, DOUGLAS, CARROLL, and LAUSCHE, and others, discussed the numerous examples of waste, overlapping, duplication, and inefficiency in procurement and other supply and service activities in the Department of Defense.

This is not a new subject to the Congress nor to the American people. On May 2, 1957, I spoke at some length upon the need for improvement in supply management in the Department of Defense, citing the huge personal property inventory of $111 billion with $51 billion in the supply sytems. I also mentioned the overlapping and duplication in the stock fund corporations which have capitalization of some $12 billion. I also mentioned the fact that a step has been made toward supply management improvement through the establishment of the single manager, cross-servicing systems whereby some 45,000 items out of 3,295,000 have been included in the systems for clothing and textiles, medical supplies, petroleum products, and subsistence.

PROVISIONS OF THE SECOND O'MAHONEY AMENDMENT

The first O'Mahoney amendment—section 638 of the Department of Defense Appropriation Act of 1953—provided:

(a) Notwithstanding any other provision of law and for the purpose of achieving an efficient, economical and practical operation of an integrated supply system designed to meet the needs of the military departments without duplicating or overlapping of either operations or functions, no officer or agency in or under the Department of Defense, after the effective date of this section, shall obligate any funds for procurement, production, warehousing, distribution of supplies or equipment or related supply management functions, except in accordance with regulations issued by the Secretary of Defense.

(b) This section shall be effective 60 days after the approval of this act.

This provision gave great latitude to the Secretary of Defense to bring about economy, efficiency, and effectiveness in the supply systems of the military agencies. While a good start was made in the fall of 1952, there was a change of policy with the advent of Secretary Wilson's administration, and the services began a program of integrated supply within each service and abandoned the principles set forth in the O'Mahoney amendment of 1952, which was to develop an integrated supply system for the Department of Defense.

The second O'Mahoney amendment reads:

SEC. 633. Section 638 of the Department of Defense Appropriation Act, 1953, is amended to read as follows:

"SEC. 638. (a) Notwithstanding any other provision of law, the Secretary of Defense shall take such actions as are necessary to achieve economy, efficiency, and effectiveness in noncombatant services, activities, and operations through the elimination of overlapping, duplication, and waste within and among the agencies of the Department of Defense.

"(b) The Secretary of Defense, in order to provide for the effective accomplishment of this section, is hereby authorized from time to time to transfer, combine, and coordinate noncombatant services, activities, and operations within the Department of Defense.

"(c) The Secretary of Defense is further authorized to transfer such property, records, and personnel, and such unexpended balances (available or to be made available) of appropriations, allocations, and other funds of the military departments as he deems necessary to carry out the provisions of this section."

The new amendment requires that the Secretary of Defense shall eliminate overlapping, duplication, and waste not only in the supply systems within and among the departments, but also with respect to other noncombatant services, such as, for example, transportation service, commissary service, PS service, accounting service, engineering services, and so forth. The scope of the second O'Mahoney amendment is, therefore, much broader than the first and, in addition, is a directive to the Secretary of Defense.

While subsection (a) of the new O'Mahoney amendment makes it mandatory that the Secretary of Defense achieve economy, efficiency, and effectiveness through the elimination of overlapping, duplication and waste, the subsections (b) and (c) authorize him to implement the basic intent of subsection (a) by transferring, combining and coordinating noncombatant services, activities, and operations and such property, records, personnel, funds, and so forth, as are necessary to achieve the intent.

With respect to combatant functions, Secretary Lovett wrote to President Truman on November 18, 1952:

Another problem which will be referred to in more detail under the notes dealing with the Munitions Board, arises out of possible confusion in the act which provides that the three military departments shall be "separately administered," while at the same time providing that the Secretary of Defense shall be head of the Department of Defense which shall have within it the three military departments over which the Secretary of Defense shall have "direction, authority, and control." No great difficulties have been encountered because of this straddle, except in the field of supply, warehousing, and issue, where certain ardent separatists occasionally pop up with the suggestion that the Secretary of Defense play in his own back yard and not trespass on their separately administered preserves. I feel that the Secretary of Defense clearly has authority to step in where necessary in these fields, provided he does not transfer, reassign, abolish, or consolidate any of the "combatant functions assigned to the military services" by the act.

However, to avoid a waste of time in arguments, it would be well, I think, to have this clarified definitively and I believe that it could be simply done by following the procedure already favorably acted upon in the case of other executive agencies through adoption of the recommendation of the "Committee on Organization" looking toward correcting the present diffusion of authority and diffusion of responsibility in certain executive departments. Under reorganization plans previously submitted to the Congress by the President, all functions of all other offices of a department and all functions of all agencies and employees of a department are transferred to the Secretary of the Department with exceptions, if necessary. The application of this approved procedure to the three military departments or the Department of Defense could neatly cure such questions and I believe it should be considered.

It was the intent of Secretary Lovett and others that Reorganization Plan No. 6 of 1953 would clarify the Secretary's authority with respect to these matters. President Eisenhower's letter of April 30, 1953—House Document 136, 83d Congress, 1st session—states in part:

The first objective, toward which immediate actions already are being directed, is clarification of lines of authority within the Department of Defense so as to strengthen civilian responsibility.

I am convinced that the fundamental structure of our Department of Defense and its various component agencies as provided by the National Security Act, as amended, is sound. None of the changes I am proposing affects that basic structure, and this first objective can and will be attained without any legislative change.

With my full support, the Secretary of Defense must exercise over the Department of Defense the direction, authority, and control which are vested in him by the National Security Act. He should do so through the basic channels of responsibility and authority prescribed in that act—through the three civilian Secretaries of the Army, the Navy, and the Air Force, who are responsible to him for all aspects of the respective military departments (except for the legal responsibility of the Joint Chiefs of Staff to advise the President in military matters). No function in any part of the Department of Defense, or in any of its component agencies, should be performed independent of the direction, authority, and control of the Secretary of Defense. The Secretary is the accountable civilian head of the Department of Defense, and, under the law, my principal assistant in all matters relating to the Department. I want all to know that he has my full backing in that role.

I have noted that the Senate, in passing the amendment, omitted a section which would have required the President himself to have submitted to the Congress within 180 days a plan for the establishment of an efficient common supply service under a civilian managed agency for the Department of Defense.

To my mind the omission of a special section dealing exclusively with a presidential plan for supply does not weaken the general import of the bill. The President is still in a position to exercise his great influence in bringing about the necessary improvement in all of the supply and service activities under the amendment as passed by the Senate. He is the head of the executive branch and Commander in Chief of the Armed Forces and as Chairman GEORGE H. MAHON, of the Military Appropriation Subcommittee, stated on May 24, 1957:

We cannot get a dollar in value for a dollar spent with rivalry running riot.

The new weapons we are now perfecting and the weapons that are likely to be developed over the next decade will be fabulously expensive.

The country cannot afford to provide these new weapons and also support an outmoded military structure which promotes unwholesome interservice rivalry and duplication.

I may be oversimplifying the picture but it should be clear to all that the stakes are high and that the desperate struggle for power and position among the services is quite understandable, and real, and quite expensive and wasteful, I may add.

The vested interests of military personnel as reflected in our present departmental and military organization concepts must be set aside in the broader interests of all. But we must make it possible for our men in uniform to set aside their vested interests and be somewhat secure in their careers.

A part of the answer is a greater degree of unification instead of tension and disunity, something approaching a merger. People who do not think these tensions exist have not looked for months as some of us have into the faces of our military leaders who have earnestly pleaded for appropriations and discussed problems of defense.

President Eisenhower, for whom I have the profoundest respect, is the one man in our Nation who, by reason of position, prestige, experience, and ability, can step into this picture and bring order and effectiveness and a saving of tax dollars out of a situation which promises something approaching colossal waste and havoc generally.

I do believe that it is essential, however, that the President and the Secretary reach a common understanding with respect to this matter. On Wednesday, July 3, 1957, at the President's press conference he was asked the question: "Mr. President, would you care to give us your views on the proposal of Senator O'MAHONEY for a single agency for the three services?" The President responded as follows:

Well, you are asking a question that, of course—on which there has been volumes, literally many volumes, written. I have always believed this, that there should be a very strong central official of the—in the Defense Department who could prevent duplication of effort, competition which drives up prices in the products of single factories or industries, and, in general, a very definite power within the Defense Secretary himself or his immediate subordinates to keep all procurement, distribution and supply, on a very efficient, economical basis. And, as long as we don't have that power in the Secretary of Defense, you are bound to have these duplications and these competitions that do run up prices to the public.

It is noted, however, in the Senate hearings on H. R. 7665 that Secretary of Defense Wilson is not in agreement with the President with respect to the need for unification nor does he believe as the President stated that the Secretary of Defense needs additional authority. For example, at page 16, Senate hearings on H. R. 7665, we have this discussion between Senator SALTONSTALL and Secretary Wilson:

Senator SALTONSTALL. You have all the authority then that you feel you should have or need as Secretary of the Defense Department?

Secretary WILSON. That is right, and in addition I understand our type of government. The President cannot do things without checking them with the Senate and the House and we all have to get into it together and know what is going on and be in reasonable agreement on it.

It is found that Secretary of the Army Brucker, who was previously General Counsel for Secretary Wilson, takes the same view as the discussion on page 128 of the Senate hearings bring forth.

It is also of concern to me that Secretary Wilson advised the Senate committee that he has not discussed the problem of unification with the President.

See the following excerpts from pages 56 and 57 of Senate hearings on H. R. 7665:

SAFEGUARDING NATIONAL SECURITY

Senator SYMINGTON. A statement was made some time back that—

"The national security is safeguarded only if the Security Establishment is trained and administered under a single direction by a single department."

Do you agree with that statement?

Secretary WILSON. Who made it?

Senator SYMINGTON. It was made in 1945 by the then General Eisenhower. Inasmuch as your opinion apparently has been changed at least somewhat on the Cordiner Committee report by him you properly call your "boss," I am wondering if you feel what you said this morning is in accordance with the way he felt at that time in 1945.

Secretary WILSON. I don't know what he thinks about it today. I have not talked to him about it. I know that there was a great deal of argument in the Congress when the Defense Department was set up. What I said this morning is my own personal analysis of it and belief. I see where nothing would be gained by giving the Chairman of the Joint Chiefs of Staff and the Secretary of Defense more power and authority and put it all in one great big organization. The pieces are already too big, in my opinion. And all the big businesses in my country have been struggling to decentralize and get away from the very thing that you are talking about.

COMPARISON WITH GENERAL MOTORS

Senator SYMINGTON. You consistenly bring up the fact that, in effect, the Pentagon Building operation is comparable to the operation of General Motors. I know something about the organization of General Motors. I worked for it in supplying goods for many years. General Motors was and is a holding company that operates primarily for profit. A great many people get a bonus above their salary. This goes pretty far down

the line, in each of the operating companies working under and for the holding company.

Based on my years in the Pentagon Building, the difference between that operation and the operation of the Pentagon was the difference between night and day. The people in the Defense Department do not have any profit motive. They operate on the basis of authority. Problems came up which, to my knowledge, were totally foreign to the operation of a business for profit.

UNIFICATION QUESTION

I was interested in your definite position on further unification or, rather, against further unification, because this committee, and the Congress are trying to give you the amount of money you think necessary to run the establishment, and at the same time not tax ourselves out of the free-enterprise system.

I will not read all the nine points that were made by General Eisenhower at that time.

Incidentally, the recent article appearing in the paper questioning the President only last week would seem to show that President Eisenhower feels the same way today that he did then.

I am sort of surprised that you never talked to him about it. Mr. Reston, of the Times, says in an article dated May 15:

"The President recalled this morning that he returned from World War II convinced that the day of the separate service was gone. He added that he encountered very fierce opposition then, that the law establishing the Defense Department did not meet with his desire. He wanted at that time a Chief of Staff for the President. He emphasized over and over again the main thing that was needed was the power of decision to settle inevitable differences among the services."

Then his last point that he made in his testimony before the Congress was this:

"Finally, there is no such thing as a separate land, sea, or air war. Therefore, we must recognise this fact by establishing a single Department of the Armed Forces to govern us all."

If there is a difference of opinion between the President and the Secretary of Defense with respect to the need for more unification in noncombatant areas or with respect to the authority of the Secretary of Defense to bring about needed unification in certain services in order to accomplish economy, efficiency, and effectiveness, the adoption of the second O'Mahoney amendment, which I fully endorse, should eliminate any doubt and confusion.

I have reviewed General Eisenhower's statements on the need for more unification in supply and service activities in 1945, 1946, 1947, 1949, while a candidate in 1952, and since he has been President. I cannot help but believe that his true position is that which he stated to the Woodrum committee on June 2, 1945, "efficiency must be obtained with maximum economy. This means expensive duplication must be ruthlessly eliminated."

GENERAL MARSHALL'S STATEMENT IN 1949

Mr. Speaker, I believe that General Marshall's prophetic statement before the House Armed Services Committee in 1949 requires some sober consideration on the need for further unification today. General Marshall stated that the day would come when the struggle for appropriations between the services would be very difficult to manage. He stated that "unity is absolutely mandatory, in my opinion, and it involves, of necessity, an approach to the subdivision of funds."

General Marshall realized that a continued heavy tax burden would eventually threaten our defense if unity were not secured and overlapping, duplication, and waste were not eliminated. General Marshall also stated in 1949, 8 years ago, "That, in a sense, is the view that I have always taken and which I hoped would have been smoothly worked out long ere this time."

General Marshall was, of course, correct in his statement that defense would be jeopardized by wasteful expenditures, and, as I pointed out in a letter to Secretary of Defense Wilson on October 24, 1955, large, excessive, and wasteful expenditures deprive our citizens of many other important services necessary for the general welfare such as schools, hospitals, roads, conservation of resources, and so forth, and also prevent tax cuts and reductions in the huge national debt.

Mr. Speaker, I commend Senators O'MAHONEY, DOUGLAS, and CARROLL for the amendment which passed the Senate on July 2, 1957. I sincerely hope that it will be given approval by the House and that the President and the Secretary of Defense and all his subordinates will enter into the spirit of the amendment and make it fully effective so that we shall not need to bring the matter up again next year and the next.

Billion Dollar Club

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following article from the Bay Region Business, a publication of the San Francisco Chamber of Commerce, which lists seven San Francisco firms in the Billion Dollar Club:

Seven of the Nation's 81 corporations with assets of more than a billion dollars have their headquarters in San Francisco, the only western city with such a large representation, giving proof to its claim to the title of Headquarters City of the West.

Leading the local list is the Bank of America, located at Pine and Montgomery Streets, center of the Wall Street of the West. Bank of America is the fourth largest corporation in the Nation with more than 600 branches in its system.

The billion-dollar club, a barometer of business growth, has almost doubled in the last 10 years.

The chamber points out that 30 national enterprises with combined assets of more than $30.8 billion have headquarters here with banks, railroad, steamship, utility, petroleum, insurance, and manufacturing companies comprising a significant cross section of the Nation's economy.

The 7 San Francisco billion-dollar firms and their total assets at the end of 1956 compared to a year before are:

	Dec. 31, 1956	Dec. 31, 1955
Bank of America NT and SA	$9, 991, 842, 011	$9, 263, 286, 000
Southern Pacific Co.	2, 138, 536, 918	2, 039, 295, 394
Pacific Telephone & Telegraph Co.	2, 088, 068, 406	1, 784, 336, 000
Standard Oil Company of California	2, 041, 373, 083	1, 855, 610, 313
Pacific Gas & Electric Co.	1, 978, 534, 218	1, 864, 434, 838
American Trust Co., San Francisco	1, 610, 354, 455	1, 541, 810, 999
Crocker-Anglo National Bank	1, 510, 138, 260	1, 497, 041, 244

More Pay for Postal Workers

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. WIER. Mr. Speaker, in one of the Minneapolis newspapers there appeared a fine article written by Roy C. Larson, president, Twin City Federal Savings and Loan Association, Minneapolis, Minn. It deals with the proposed increase in salary for postal workers and I should like to call it to the attention of all Members of the House. Therefore, I ask that it be printed in the Appendix of the RECORD.

The article follows:

MORE PAY FOR POSTAL WORKERS

I am not a postal worker nor do I have any connection with the postal service, but nevertheless I am greatly disturbed by the plight of the postal employee.

One reads articles of wage increases of 20 cents an hour to groups who have been getting an increase of approximately the same amount every year for 10 years running. On the same page is the statement that an increase in postal pay would cause inflation.

The postal workers and carriers I know have a take-home pay of approximately $60 per week.

Lending institutions consider them as poor customers in home purchases, unless they can make a 50-percent downpayment on a relatively inexpensive home, not because they are poor pay, but because they wouldn't want them to starve while paying.

One of the very few items that hasn't tripled or quadrupled since the war is postage cost. Certainly we could stand an increase in rates.

These loyal employees of the postal service have no force they can exert to obtain an increase in pay. Consequently they have thrown away their pride for a living wage, but to no avail. I am not a believer in radical methods to obtain an end, but in this case, even if they have signed a no-strike pledge, they are certainly justified in striking.

Here is an opportunity for one of our long-winded politicians (either side) to blow his horn in the right direction and obtain, not $10 per week as will be proposed, but an increase of $40 per week minimum, for the postal workers. They are 6 years behind in pay increases.

ROY C. LARSON,
President, Twin City Federal Savings and Loan Association.

The Billy Williams Story

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the June 21 edition of the Minneapolis Spokesman, of Minneapolis, Minn., entitled the "Billy Williams Story."

The editorial follows:

THE BILLY WILLIAMS STORY

Billy Williams for years has been a living Minnesota legend. First as messenger and later as executive aide, he has served 14 of the State's 29 governors. Williams' retirement from State service on June 30 has been announced. His retirement will bring back many memories to him and others of the momentous occurrences and events of which every State chief executive and his office are the vortex.

Having served State chiefs since the opening of the present State capitol in 1905, Williams has stored in his memory thousands of incidents which ought to make excellent history of the times and individuals who have led the political life of the State most of the 20th century.

While Billy Williams has always seemed to shy away from the spotlight, there is little doubt that he has played an important part in State governmental circles, both in the executive and in the legislative branches.

The most astute and influential legislators during the past 52 years have been proud to call Billy Williams a friend and it is impossible to estimate how much Williams has been able to do for others by his close freindship with sentators and State representatives who have served in our legislature.

His great ability for friendship, and the respect he has earned can be seen by the fact that despite his important ushering in, and out, the various callers on the various governors he served, a job where an aide could be charged with favoritism, and his quiet influence on certain types of legislation, there has never been any public or private criticism of Billy Williams that this newspaper has heard.

In the past 20 years, as the Minnesota Negro became more aggressive and articulate, there were a number of suggestions that Williams in his long key place in State government could have been more active in behalf of the Negro-American cause in Minnesota.

Such criticism died aborning because there were those who recognized that Williams, while appearing to be aloof from the struggle against job discrimination, discrimination in public facilities, etc., actually carried on a subtle campaign at high level to gain converts for racial equality at all levels.

The fact is that Williams' high place, close to the chief executives of the State was a good example of the ability of persons of Negro ancestry, if given a chance for responsibility. Hundreds of rural legislators discussed the race question with Williams through the years and by what he said in his quiet way and by the manner in which he carried himself, the Minnesota Negro gained converts to his side in high places which could not have been gained in any other manner.

Williams, who looks more like an American Indian than a person of African ancestry, chose to take his stand on race long before he became a government employee. An accomplished baseball player, he played first base for a number of independent teams throughout the Northwest. He was such a star that Ned Hanlon, owner of the world-famed big league Baltimore Orioles, sent him a contract. Williams, only a young man, refused to sign the contract because Hanlon insisted that he would have to masquerade as a Cuban. Because he was proud to be an American Negro, Williams turned down what early sports writers believed would have been a career of national fame and fortune. This was enough answer to this newspaper for the few critics who felt Williams was not interested in the advance and progress of his people.

All during the period in which a newer younger leadership among the Minnesota Negro population has been emerging, Williams has continued to encourage, advise, and boost it. His wide acquaintance throughout the State has been used well and he has used every opportunity to indicate to the friends he has made that his people were making progress that entitled them to encouragement and consideration in all areas of State life.

This newspaper had hoped the Billy Williams story would have been written long ago. It is a story, equal to the best talents of the best historian available, for Williams' intimate exposure to the current of events which whirl around, and through a statehouse and a governor's office should provide a wealth of information about a half century of Minnesota government and politics, and the individuals who played the important roles.

The great esteem with which the State regards Billy Williams was evidenced in 1955 when the State legislature unanimously, and without dissenting voice, granted him a guaranteed income for life of $300 per month.

Billy Williams, at 79, looks, walks, and acts like a man in his late fifties. This newspaper hopes he will have plenty of time to visit, fish, and hunt with the many cronies and friends he made during his long service to the State and its people.

An Armed Forces Problem

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the June 21, 1957, issue of the Muskogee, Okla., Daily Phoenix relating to the reduction of the Air Defense capability in the 33d Air Division's area of responsibility, which covers 300,000 square miles over the States of Oklahoma, Texas, Louisiana, and Arkansas.

This editorial warns that the Air Force's ability to protect this area and its 11 million people has been falling off for the past 3 years simply because the Air Force is not able to retain the highly skilled officers and airmen technicians so necessary to operate at anything like peak efficiency.

This is a matter on which Brig. Gen. William P. Nuckols, commander of the 33d Air Division at Oklahoma City has has written me expressing his own grave concern over this problem. I have been impressed by the soundness of the position taken in this editorial and in the recommendations that are made there. Since General Nuckols' own recommendations are along these same lines, I should like to commend them to the attention of the House through the medium of this editorial.

In this connection, I have also received a very fine and thoughtful letter on the subject of military pay from a service mother at Checotah, Okla., Mrs. Milam M. King, who now has one son in the Army and who had another son in the Navy during World War II.

The editorial follows:

AIR FORCE NEEDS HELP

All of us should be concerned about the gradual diminution of the Air Defense capability in the 33d Air Division's area of responsibility, which encompasses essentially the States of Oklahoma, Texas, Louisiana, and Arkansas, a total of 300,000 square miles with a population of 11 million people.

The Air Force's ability to protect our area and our people has been falling off for 3 years now and today continues to fall off simply because the Air Force is not able to retain the highly trained officers and airmen technicians required to operate the air defense system at anything near peak efficiency.

The Air Force trains young, intelligent and highly motivated people to shoulder this essential responsibility. But, the Air Force is not permitted to offer them the reimbursement commensurate with their training. Civilian life, with its significantly higher salary rates inexorably beckons to them, and they answer in distressingly high numbers on completion of their first enlistment.

Io today's modern, high speed air defense system we need career-minded, experienced officers and airmen to produce an acceptable level of air defense in our area against the multi-megaton hydrogen bomb of 1957.

Megatons have become standard in American conversation today, but few people realize the enormity of the word. Megaton means 1 million tons. Less than four megatons of bombs were dropped in all wars since the airplane was invented. Yet, today, it is accepted that a 4 megaton bomb can be delivered on 1 American city by 1 airplane in 1 instant of time. Muskogee certainly must be presumed to be a potential target with its industrial development.

To highlight the expensive dollar cost of this constant turnover in people, in the 33d Division alone (headquartered in Oklahoma City), 1 of 16 in the Air Defense Command, the Air Force lost to civilian life 900 officers and airmen in the past 2 years. Each lost officer represents an average investment of $30,000. Each lost airman represents an investment of $15,000. This, then, was a total loss to the taxpayers of $14,625,000 in only 1 of 16 air divisions in Air Defense Command, which, in turn, is only 1 of 7 major commands in the Air Force.

There is a solution to this problem, a problem which is of vital and personal interest to every citizen in Arkansas, Louisiana, Oklahoma, and Texas.

The solution is:

A. A significantly increased air defense capability at

B. A significantly decreased cost to the voting taxpayer through

C. The creation of a career minded and career motivated Air Force, the individuals of which are paid commensurate with their ability and experience.

In effect, the air defense of the United States in general, and the great 4-State area of the Southwest in particular, can be increased by some 15 to 20 percent at no increase in cost. Or, alternatively, our present

potential level could be an actuality at a very substantial savings of taxpayer dollars.

To put it another way, we can have more defense for the same money or the same defense for less money. This can be accomplished if two identical bills, currently before the Congress of the United States, are enacted into law.

These bills are S. 2014 in the Senate and H. R. 7574 in the House.

Both bills provide in effect a modernized method of computing basic pay for the uniformed services, so as to enable the Air Force, among others, to retain their expensively and highly trained personnel far beyond the 2-, 3-, or 4-year period of their initial term of service.

But, it will take the active interest, influence and support of the taxpaying public to bring to reality during the current session of Congress this proposed pay structure which will give our air defense commanders the tools to perform their essential tasks more effectively and at a saving, estimated for the entire military establishment at $5 billion.

Speed in the passage of these two bills is essential to the effectiveness of air defense of the Southwest. Trained people are leaving the Air Force every day, people the Air Force shoud be retaining to build up, rather than reduce further, the air defense of our Nation. The loss of another full year's worth of already scarce officers and technicians, if the bills are not passed at this session, will degrade further the protection of our Nation and of our area from a devastating air attack.

You can do your part with a letter to members of Oklahoma's congressional delegation, both Representatives and Senators. If you don't have time for a letter, just clip this editorial and mail it to them.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks, I am including herewith copy of my weekly newspaper column Keenotes which was released for publication today, as follows:

KEENOTES

(By Representative ELIZABETH KEE)

Secrecy has always been, to me, a word with unpleasant connotations. Webster's Dictionary defines it as the "quality or state of being secret; concealment; furtiveness in violation of a right, a law, a code or the like." Certainly, then, it is a word which, under any normal circumstances, should have no place in the democratic processes of government where the people's ability to govern themselves depends in large part upon the fullness and accuracy of the information available to them.

But these are not, unhappily, normal times as the United States and its allies, the free nations of the world, struggle to loosen the grip of the giant octopus, communism, whose bloody tentacles are today fastened about vast areas of the earth's surfaces and its peoples. Consequently, since World War II—and most especially since the development of the atom bomb and nuclear weapons—the American people have patriotically relinquished more and more of their vital and essential right to know in the name of national security.

Tragically, however, throughout the world's history, it has been demonstrated time and again that powers once yielded to governmental bureaucracy are hardly ever redeemable and lead inevitably to the grasp for more power and to widespread abuses of the public confidence. And so it would seem to be in our time, where excessive use of the rubberstamp "Secret" in the conduct of national affairs has concealed much information that rightfully belongs in the public domain.

This is why the Congress, in 1955, recognizing the urgent need for an objective, nonpolitical and independent study of the innumerable laws, executive orders, regulations, programs, practices, and procedures intended for the protection of the national security moved to establish a Commission on Government Security. The functions of this Commission were to establish fair, uniform, effective, and realistic measures to safeguard both national security and the rights of the individual; to obtain to the greatest uniformity; to restore full public confidence in the Government's programs; and to protect the national security.

Sworn in on January 9, 1956, the Commission on Government Security consisted of 12 outstanding citizens, 4 appointed by the President, 4 by the Vice President, and 4 by the Speaker of the House. The Commission elected its own Chairman, Mr. Loyd Wright, a former president of the American Bar Association, and its own vice chairman, Senator JOHN STENNIS, of Mississippi.

Last week the Commission rendered its report and recommendations and the furore this has created in Washington threatens to be anything but a tempest in a teapot. The storm is not likely to blow over soon, nor, indeed, should it until there has been the widest possible public discussion of its implications.

The principal controversy centers about the Commission's recommendation for a law to prohibit unauthorized disclosure of secret documents jeopardizing national security. This has been generally interpreted by the press as being aimed at news-gathering agencies, the newspapers and news reporters, all of which represent the public's major source of knowledge about the Government's handling of domestic and foreign affairs.

In refuting the press' assumption, Chairman Wright has stated: "The Commission's proposed statute is not aimed at newspapermen. It would apply equally to every American citizen, no matter what his occupation. It would, for example, cover the person who works in a defense plant, making secret weapons for the Government, who reveals plans or technical data. It would cover a Senator or Congressman speaking outside the legislative halls. We do not believe that journalists will claim a special immunity over their fellow citizens."

I wholeheartedly agree with Chairman Wright's finding that a person who imperils the Nation's security by wilfully, knowingly, and deliberately releasing secret information should not be able to escape punishment by pleading that he believed no harm would result. It is not a matter on which he is free to speculate. He has no right to take the law, and the survival of the Nation, into his own hands.

Nor, I would point out, have any of us at any time and under any circumstances, the right to take the law into our own hands. This has always been a basic principle of organized society.

On the other hand, the Commission itself would seem to have run afoul of the very problem which caused the Congress to establish it in the first place. In attempting to justify its proposal for the enactment of a law to prohibit unauthorized disclosures, Chairman Wright sought to have released certain classified information about the occurrences which led to its findings—occurrences which involved the revealing of information vital to the national security. In his opinion, the Chairman stated, these occurrences no longer required secrecy.

His request was denied by the responsible official who evidently did not see eye to eye with Mr. Wright in this instance. So, in Chairman Wright's own words "The information is apparently entombed forever * * * in the bureaucratic graveyard of a maze of files, never to be disseminated to the American people who are entitled to know the full details of these dark chapters of betrayal."

On the surface, therefore, it would appear that the Commission on Government Security has failed in its principal objective, to find the means to safeguard our national security while at the same time preserving and maintaining the American people's vital and precious right to information.

Meanwhile, the Special Subcommittee on Government Information of the House Committee on Government Operations, under the skilled chairmanship of Representative JOHN MOSS of California, has for more than a year now, disclosed instance after instance of arbitrary and capricious suppression of Government activities and practices which it was in the public interest to be made known.

The problem of national security versus our inherent right to know what goes on within our Government will not be easily solved. In the end, it will, I feel, best be resolved when the conduct of our domestic and foreign affairs rests in the hands of public servants, divorced from politics and with the wisdom, discretion, good judgment, and intelligence to use well the authority and confidence imposed in them by the American people. The inflated egos of a bureaucracy swollen with a little power can be as dangerous to our national well-being from within our midst as can be the threat of communism from outside our borders.

Pope Asks World To Aid Refugees

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following news story, written from Rome by Paul Hofman, which includes the Pope's address before a delegation of the American Jewish Committee. The item appeared in the New York Times of July 2, 1957.

POPE ASKS WORLD TO AID REFUGEES—TELLS AMERICAN JEWISH UNIT HE OPPOSES EVIL BLIGHT OF RACIAL PERSECUTION

(By Paul Hofman)

ROME, July 1.—Pope Pius XII has urged the governments of the world to resettle refugees driven out of their native countries by the evil blight of racial persecution.

The pontiff made his plea in an address to a delegation of the American Jewish Committee last Friday. The original English version of the Pope's remarks were published this afternoon by L'Osservatore Romano, Vatican newspaper.

The text showed that the Pope had condemned anti-Semitism and racial discrimination in any form as a "violation of fundamental rights inherent in a human person." During their stay in Rome, the representatives of the American Jewish Committee had talks with high Vatican prelates on the question of Jewish and Arab refugees in the Mid-

die East. Eugene Cardinal Tisserant was understood to have promised the support of the Roman Catholic Church for a negotiated solution of the refugee problem in the Middle East.

The French-born cardinal is dean of the Sacred College of Cardinals and secretary of Sacred Congregation for the Eastern Church. In the latter capacity, he heads the Vatican department in charge of religious organization in the Middle East and in other areas where Catholics, in union with Rome, worship according to one of the several eastern rites.

Cardinal Tisserant and members of the American Jewish Committee delegation had a 45-minute conference after the delegates' audience with the Pope.

Reports that confidential talks on refugees are underway between officials of Israel and some Arab countries have been recurrent here for some time. The first contacts were believed to have been established in New York.

The Pope's address did not mention the Middle East specifically. However, it showed that the pontiff realized that his visitors were concerned with the plight of refugees.

The delegation, led by Irving M. Engel, New York lawyer and president of the American Jewish Committee, has left Rome for Tunisia and Morocco.

The text of the Pope's statement to the American Jewish Committee follows:

"The American Jewish Committee, which you honorable gentlemen represent, has just rounded out 50 years of service in behalf of the right and status of those of your race who, with other minority groups, have been subjected to the violation of fundamental rights inherent in the human person.

"Forced to forsake the land of their birth and seek on far-off unfamiliar shores a refuge where they might begin anew a family life, how many have then had to experience the almost desperate situation added to their miseries of not being welcome where they had hoped for hospitality.

"Your desire to visit us this morning is a testimony to your confidence in the interest we have in the sad plight of the peoples just described.

"Again and again, as did our predecessor of happy memory [Pope Pius XI] before us, we have strongly urged that the fundamental principles of justice and charity and the long-recognized practice of offering asylum to those not guilty of crime be the norm of government conduct today.

"It is a consolation to our paternal heart to know that our appeal has been generously heeded in many countries; and we like to cherish the hope that so long as that evil blight endures, states will not be lacking in their obligation to succor those who have been forced to emigrate.

"We have been happy to welcome you gentlemen and our heart goes out in a fervent prayer to God that in His bounteous goodness He have pity on those who are suffering injustice and enlighten those who are perpetrating evil."

Port of Los Angeles, Bureau of Customs Receipts Show Startling Figures Reflecting Tremendous Growth of Los Angeles-Long Beach Dutiable Entries

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 2, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I am pleased to present some recently received figures reflective of the tremendous growth of the southern California southland relating to the sharp increase in the workload and extent of the Bureau of Customs, United States Treasury Department, through the port of Los Angeles—Los Angeles-Long Beach.

These came to me through the cooperation of Mr. Carl F. White, collector of customs at the port of Los Angeles, in my desire to keep informed of the status of collections in that portion of my native State of California. Since the figures speak loudly and clearly for themselves, I need not make further comment:

Port of Los Angeles (Los Angeles, Long Beach)

	Total collections	Dutiable entries
July 1, 1956–June 30, 1957	[1] $54, 520, 458. 93	[2] 41, 164
July 1, 1955–June 30, 1956	42, 785, 332. 01	34, 084
Increase	11, 735, 126. 92	7, 080
Percent increase (1957 over 1956)	27. 4	20. 8
July 1, 1956–June 30, 1957	$54, 520, 458. 93	41, 164
July 1, 1952–June 30, 1953	28, 498, 848. 96	22, 171
Increase	26, 021, 609. 97	18, 993
Percent increase (1957 over 1953)	91. 3	85. 7

[1] Average per week $1,067,780.50.
[2] Average 791 per week.

Zinc Mines and Mills Closing

EXTENSION OF REMARKS
OF
HON. JOHN J. DEMPSEY
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. DEMPSEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the publication American Metal Market which, I believe, emphasizes the need for prompt and decisive action to be taken by the Congress to save the metal mining industry before it is too late. This deplorable situation is caused by the dumping of excessive imports from cheap- and slave-labor foreign countries, a situation which our Government has seen fit to virtually disregard up to this time. Our mines and mills are closing and our workers are being thrown out of employment. It appears now that only proper Congressional action can afford the necessary relief to our domestic industries. The article to which I refer is as follows:

ZINC MINES AND MILLS CLOSING

American Smelting & Refining Co. will cut back zinc production at its mine properties by approximately 3,000 tons per month, according to an announcement from the company's New York headquarters. Three mines and a mill will be shut down. The curtailment is due to the sharp fall in zinc prices brought about by reduced industrial consumption and decreased deliveries to the Government. The zinc price has dropped 3 cents a pound in the past 2 months.

The mines to be closed are the Northport unit at Colville, Wash., the Keystone Mines at Crested Butte, Colo., and the Groundhog Mines at Vanadium, N. Mex.

Operation at the mill at Deming, N. Mex., which processes Groundhog ore and some custom ore will also be suspended. In addition to their zinc output the 3 mines produce approximately 500 tons of lead per month contained in concentrates.

Total production of all United States zinc mines had been averaging about 45,000 tons per month during the first quarter of 1957.

Resolutions Adopted by the Iowa-Des Moines Annual Conference of the Methodist Church

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. LeCOMPTE. Mr. Speaker, the Iowa-Des Moines annual conference of the Methodist Church, representing 140,000 Protestant Christians, adopted 3 resolutions that I desire to bring to the attention of the Congress. Under leave to extend my remarks in the Congressional Record, I ask unanimous consent to include the resolutions on disarmament, permanent United Nations police force, and continued testing of atomic weapons.

The resolutions follow:

DISARMAMENT

1. We wish to commend President Eisenhower and Harold Stassen for their sincere efforts to find the path that leads to a just and lasting peace. We promise them our prayers and our wholehearted support.

2. We urge our Government to take the initiative in making more daring proposals toward universal disarmament. We should offer to channel the billions we are now spending on arms into a fund for the ecovelopment of the underprivileged nations of nomic, educational, social, and cultural dethe world. This, to be conditioned on the willingness of other nations to likewise invest their savings from disarmament in this effort.

3. We regret that the opinion prevails among many nations of the world that the United States maintains its position through material and military force. May we not commend a new confidence in our great moral and spiritual resources in tangible investments of good will, understanding, and helpfulness to all members of the family of nations?

4. The secretary of the conference shall be requested to communicate these resolutions to the President of the United States, the Secretary of State and the Senators and Representatives from Iowa.

RESOLUTION ON PERMANENT UNITED NATIONS POLICE FORCE

Whereas the United States emergency force has shown its value as a means of keeping order in troubled areas between nations; and

Whereas we believe that such a paramilitary force could be useful in other trouble spots now, or in the future; and

Whereas we believe that the United States can more effectively secure peace with such a force at its disposal: Therefore be it

Resolved, That the Iowa-Des Moines annual conference of the Methodist Church

meeting in annual session this 13th day of June 1957, believes that it would be in the best interest of world peace and the United States to make the present U. N. emergency force permanent; to expand it and have it individually recruited by the U. N.; to put the force in United Nations uniform, and give it special training for observation, patrol, and guard duty; and to define safeguards for its use, assignment, and administration; and be it further

Resolved, That the secretary of the Iowa-Des Moines annual conference be requested to transmit copies of this resolution to the President of the United States, to the Secretary of the United States State Department, and to the Senators and Representatives of Iowa, in Washington, D. C.

RESOLUTION REGARDING THE CONTINUED TESTING OF ATOMIC WEAPONS

Whereas it is a matter of common knowledge that we are now living in the atomic age, with its consequent atomic radiation dangers; and

Whereas there is unanimous agreement among all scientists that radiation "fallout" is detrimental to all living organisms, including the human race; and

Whereas it is a stated policy of our Government to continue the testing of atomic weapons, irregardless of the warnings of a large percentage of our scientists; and

Whereas it appears that the matter of atomic radiation "fallout" is a moral and a religious issue, as well as a military and a scientific issue: Therefore be it

Resolved, That this annual conference of the Methodist Church go on record as opposing the continuation of atomic weapons testing by our Government (and by all other governments, as well). And that this conference make its wishes known to the heads of our Government by ordering that the secretary of our conference send copies of this resolution to the President of the United States, the Secretary of State, and to the legislative representatives from the State of Iowa who are now serving in the Congress of the United States.

Resolutions Adopted by the Rabbinical Assembly Convention, Kiamesha Lake, N. Y., May 16, 1957

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to my colleagues' attention the resolutions adopted by the Rabbinical Assembly of America at its recent convention. The Rabbinical Assembly consists of 600 rabbis. The views of this distinguished group on these important public issues warrant careful consideration.

The resolutions read as follows:

RESOLUTION ON ISRAEL, SUEZ, AND AQABA

The Rabbinical Assembly of America, in convention assembled, extends warm fraternal greetings to the people of the State of Israel and expresses its good wishes to the only democracy in the Middle East. Though continuously facing military, economic, and political difficulties, our gallant brothers in Israel have shown remarkable patience and forbearing. Challenged by gross provocations of peace and security through continuous atacks of Egyptian fedayeen and other Arab infiltrators, Israel has defended her borders with courage and fortitude.

Out of deep religious concern for the preservation of human life, we urge the statesmen of our country to redouble their efforts to bring peace and stability to the Middle East. Essential to the prevention of hostilities in that area is a fair and clear American foreign policy. To hide behind the smokescreen of inability to cope with a situation within the United Nations framework, only makes a mockery of peace and justice. The world has a right to expect progressive leadership from the United States of America such as was demonstrated during the recent crisis in Jordan. Lack of American leadership in the Middle East will result in continued violence which may eventually spread to other areas. Promises, which have been made or implied by the President of the United States of America to Israel concerning the use of the Suez Canal and Gulf of Aqaba, must be fulfilled if we are not to yield to the blackmailing devices of Arab potentates who flirt with communism. Egypt must not be permitted to return to the positions from which it may again blockade the Gulf of Aqaba and its international waterway.

RESOLUTION ON CIVIL RIGHTS

The Rabbinical Assembly of America once again declares its recognition of the full rights of all citizens to equal opportunities for education, employment, housing, and exercise of franchise without regard to color or creed.

Events of the past year have dramatized the more flagrant abuse of these rights in certain sections of the South. However, the disregard for the rights of citizens also exists in communities in other sections of the country. Segregated schooling is not limited to a Clinton, Tenn., and a Montgomery, Ala., as evidenced by what are in practice segregated schools in the Negro neighborhoods of northern metropolitan areas.

The Rabbinical Assembly of America therefore calls on the responsible leaders of all communities to reexamine their local situations as they now exist with regard to housing, education, and employment opportunities for minorities. This may serve as the first step toward the realization of human dignity for all our citizens which may eventually become a criterion for all nations, and the best possible answer to those who seek to undermine our American way of life.

RESOLUTION ON EGYPTIAN JEWS AND PROTECTION OF RELIGIOUS INSTITUTIONS

The Rabbinical Assembly of America is shocked by the violation of human rights, dignity, and security of Egyptian Jews. The incursions against human freedom and the continued atrocities call to mind Nazi brutalities of two decades ago. We are grieved and alarmed over the arrests of thousands of Jews, the confiscation of their property, their deportation to concentration camps, and exile out of the country.

Much as we appreciate our Government's expression of deep concern to the Government of Egypt regarding the expulsion of Jews, we believe that more can be done to aid the latest victims of persecution. The desperate plight of Egyptian Jews, who have been systematically plundered, impoverished, and forced to flee by the Nasser dictatorship, surely should command our sympathy and our help, just as do the sufferings of the Hungarian refugees from Red despotism. The Rabbinical Assembly of America calls upon the President of the United States to extend the parolee provisions of our immigration laws to include Egyptian Jews at this time.

We further call upon our Government to express the need for the protection of Jewish religious institutions in Egypt.

RESOLUTION ON IMMIGRATION POLICY

The Rabbinical Assembly of America deplores the failure of Congress to eliminate the restrictive, discriminatory provisions of the Immigration and Nationality Act of 1952 (McCarran-Walter law), which have been denounced by many religious and civic groups and by Presidents Truman and Eisenhower.

We urge Congress to enact speedily amendments which will revise the immigration law in order to:

(a) Substitute an equitable and nondiscriminatory formula for the admission of new Americans in place of the inviduous national origins quota system;

(b) Eliminate the unnecessary and harsh deportation provisions;

(c) Eliminate the inequitable distinctions now in the law as between native born and naturalized Americans;

(d) Set up fair appellate procedures in immigration and nationality matters.

We further call upon the President to make use of the powers at his disposal in order to admit refugees from Egyptian tyranny and persecution as was done for the Hungarian refugees.

Review of Inequitable Decisions Coming From the Board of Veterans Appeals

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. SAYLOR. Mr. Speaker, I spoke last week on the subject of the necessity of enactment of legislation to provide judicial review of decisions by the Veterans' Administration. This agency, needless to say, has always opposed legislation of this type and, in fact, has always favored the finality clause which is in all basic Veterans' Administration laws with two exceptions. Briefly stated, this provision means that once the Veterans' Administration has made a decision, no other body of the Government can review it or change it. This, of course, is contrary to our concept of law. All decisions should be subject to review and most agencies recognize the fact that a review would benefit all parties.

If the Administrative Procedures Act were in fact followed by the Veterans' Administration, perhaps we would have better decisions, but it is not.

When the Congress enacted Public Law 550—the so-called Korean GI bill of rights—it provided that the decisions under that act should not be final and it permitted the Veterans' Administration rules and regulations to be reviewed by the Comptroller General. The Veterans' Administration was vigorously opposed to this provision. But now that the act has been in effect for nearly 5 years, I am informed that the procedures work well and that the Veterans' Administration has, as might be expected, profited by having its proposed regulations reviewed by the General Accounting Office. The same procedure is provided for in the War Orphans' Educational Assistance Act, Public Law 634 of the 84th Congress.

Perhaps this is the solution to the problem which I have been calling to the attention of the House—namely, review of inequitable decisions which have been coming from the Board of Veterans Appeals. Perhaps if the General Accounting Office were given authority to review all the regulations applicable to compensation and pension claims and to even review decisions, it would result in more justice being given to the veterans of this country.

Lift in the Fog

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. SCHOEPPEL. Mr. President, in the Wall Street Journal of June 14, 1957, there appeared an article under the heading "Lift in the Fog," written by William Henry Chamberlin, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFT IN THE FOG—RECENT EVENTS HAVE HELPED CLARIFY RED CHINESE PUZZLE BUT FOR UNITED STATES SOME VITAL PIECES ARE STILL MISSING

(By William Henry Chamberlin)

Some new pieces are being fitting into the Chinese puzzle—particularly into the pattern of American policy toward the Communist regime on the mainland.

In the wake of the British decision to widen its trade with Red China, President Eisenhower has indicated he is not adamantly opposed to this country's eventually following suit. Several Senators have publicly expressed themselves in terms rather inconsistent with the strict "no recognition" slogan embodied in resolutions of the Senate and House and inserted into the platforms of both parties.

Two monthly magazines of substantial if not mass circulation have published articles advocating a more flexible American attitude toward Red China. Finally, the mob riot that wrecked the United States Embassy on the Nationalist Chinese stronghold of Formosa adds a new dimension to the China question.

Even when added up, all these developments do not suggest that the United States in any predictable future will sponsor the admission of the Peiping regime to the United Nations or exchange diplomatic representatives with it but, like the pressure to permit American newspapermen to go to Red China at their own risk, they reflect a trend to question and reexamine a policy, which, however well-grounded in political and military strategy and in moral revulsion against the misdeeds of the Chinese Reds, suffers from the disadvantage of being somewhat negative.

The British decision to lower government restrictions on exports to China to the levels observed in dealing with the Soviet Union is perhaps more important for its political than for its economic implications. It is very unlikely that this British decision will touch off any spectacular increase in the present very small trade between the Chinese mainland and the countries of the West.

NO BIG SWITCH

Non-Communist countries in 1955 sold $313 million worth of goods to Red China and purchased goods to the value of $493 million. These figures are negligible in terms of the total volume of world trade. Nor is there any apparent prospect of appreciable expansion. Some 80 percent of Red China's foreign trade is with the Soviet Union and its satellites. Much of this is on a basis of long-term contracts, so that no big switch to dealings with the West is possible.

The vast China market has always been a mirage, because of the extreme poverty of the Chinese people and the sharp limits on what China is able to export in order to pay for its imports. It is more of a mirage than ever since the Communists took over China; there is something about communism that makes export surpluses melt away like snow on a warm spring day.

The British action is significant not because it will release a great two-way flow of trade with China, but because it strikes a hard blow at the United States policy of trying to keep Red China as insulated as possible from the non-Communist world. Other countries, notably Japan and Germany, are pretty sure to follow the British example.

There will be more coming and going of trade mission to and from Peiping. The strict United States boycott will become less effective because, if the Chinese want anything very badly that is not banned on strategic grounds, they will have alternative sources of supply.

Both the United States and the Chinese Nationalist Government have tried to tone down the effect of the riot in Taipeh, the Formosan capital, though it was naturally exploited to the utmost by Peiping and Moscow. But this outburst has called attention not only to certain tensions between the Americans and the Chinese, but also to the fact that there is some divergence between American and Chinese Nationalist aims.

The hope of Generalissimo Chiang Kai-shek is to return to the mainland and oust the Communists. He has never been willing to accept the status of a local ruler on Formosa. Indeed, about the only point on which Chiang and the Chinese Red leader, Mao Tse-tung, are in agreement is that Formosa is properly part of China.

However, the return of the Nationalists to the mainland is militarily impossible without American air, naval, and possibly group support on a very substantial scale. Neither the Truman nor the Eisenhower administration has been willing to extend such support. What the United States has done is to build up Formosa with economic and military aid, to throw around the island the shield of the Seventh Fleet, reinforced by a treaty of alliance with the Nationalist Government and the specific congressional authorization for President Eisenhower to employ American Armed Forces for the defense of Formosa and such other islands as may be necessary for this defense.

TIME FOR BARGAINING?

Now, say the advocates of a softened policy toward Peiping, is the time to bargain with Red China for recognition of the independence of Formosa before the political stability of that island is put to a severe test by the passing from the scene of Chiang Kai-shek. It is further suggested that the United States might derive practical benefit from an embassy in Peiping and that pressure for admission of Red China to the U. N. is likely to swell to the point where it may become irresistible. And there is the wistful hope that Peiping may be detached from Moscow.

However, although the new trend in discussing China policy is worth watching, there are powerful arguments on the side of maintaining our present policy. The effect of American recognition of Red China, or even of negotiations looking to recognition, on morale not only in Formosa, but also in South Korea and South Vietnam, might well be disastrous.

The effect on some 10 million overseas Chinese, living in such countries as Thailand, Vietnam, the Philippines, Malaya and Indonesia, would also be a matter of some concern. If these Chinese, preserving their language, customs, and traditions in the foreign lands where they live, got the impression that the United States had capitulated to Red China, they would most probably get on the Communist bandwagon themselves.

Nor is there any assurance that a softening in the United States attitude would help to detach Red China from its alliance with the Soviet Union. This alliance has pretty firm ideological, military, and economic cement. The Soviet rulers, reckoning with China's population and size, seem to have played their cards rather skillfully, withdrawing from positions and privileges in Manchuria which could have been construed as imperialistic and making their technical advisers in China behave as unobstrusively as possible.

SEEDS OF DISPUTE

This is not to say that there might not some day be a falling out between Moscow and Peiping on some such issue as control of the Communist movements in Asian countries or issues arising along the Soviet-Chinese land frontier, the longest in the world. But it seems unlikely that the United States, by anything it might do, could bring about this falling out between the Communist titans.

Despite the new pieces in the Chinese picture, any speedy or drastic reorientation of United States policy in that part of the world seems improbable. But some future modification seems less improbable than it did even a few months ago.

The Nuclear Dilemma

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. McCORMACK. Mr. Speaker, I include in my remarks, an objective, considered, and written editorial "The Nuclear dilemma," appearing in the July 1, 1957, issue of the Boston Herald, of Boston, Mass. This editorial relates to the failure to reappoint Hon. Thomas E. Murray as a member of the Atomic Energy Commission and of his appointment as consultant by and to the Joint Committee on Atomic Energy.

A fair construction of the editorial justifies an interpretation most favorable to Mr. Murray: A recognition of his great capacity, and strong pleasure in the fact that Mr. Murray will occupy a position that will enable him, in the important nuclear field, to continue to make his contributions to the best interests of our country and to mankind in general.

The editorial follows:

THE NUCLEAR DILEMMA

After 7 years of service Thomas E. Murray is no longer a member of the Atomic Energy

Commission. But he has not been silenced by the administration's failure to reappoint him. Indeed it is apparent that in his new position as consultant to the Joint Congressional Committee on Atomic Energy, he will be making more noise than ever.

In his statement to the committee, commenting on his career with the AEC, Mr. Murray launched into current United States policy with vigor. He is opposed to an all-inclusive ban on atomic weapons. He favors further development of small nuclear weapons. He deplores the lack of public knowledge about atomic energy.

The latter point was probably the most significant. "Today," he said, "there are few, if any, secrets in nuclear science. And the secrets of nuclear technology are, and increasingly will be, opened to professional knowledge." But at the same time, he said neither Congress nor the public is getting enough information about the facts of nuclear energy to be able to make up their minds about the issues at hand.

Undoubtedly this is true. AEC Chairman Lewis L. Strauss, with whom Mr. Murray has battled for nearly a decade, is a security man. His approach to the problem seems to have been what they don't know won't hurt them and what they learn will only scare them. But the result has been that, not knowing enough, the public has gone off in all directions, believed anything and everything that has been sent their way, unable to pick and choose. Perhaps worse than that is the fact that we have had Congresses which have not been able to know what was going on either.

One of the difficulties of the democratic form of government is the conflict that inevitably arises between civil and the military purposes. Democracy is essentially a civilian system, able to take temporary wars in its stride but a little shaky when it comes to maintaining a large-scale peacetime military machine, shakier still when secrecy is given the tremendous emphasis that the Truman and Eisenhower administrations have given it. It is true, of course, that a certain amount of secrecy is necessary in these cold war days to preserve democracy, but too much secrecy undermines the very thing we are trying to preserve.

We hope the joint committee, with Mr. MURRAY helping out, will be able to bring some sense to the nuclear dilemma. Atomic energy is not a strange and mysterious force; it is as natural as the wind. And it is by no means an American monopoly, either. The Soviet Union and most other technologically advanced nations know as much about it as we do. It is only in the fringe areas of knowledge that one nation's scientists can be ahead of the scientists of another, and secrecy or no secrecy, they can never hold such an advantage for more than a short period of time.

Economy in Government

SPEECH

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. MASON. Mr. Speaker, I have today filed a petition signed by taxpayers from 43 different States urging Congress to:

(a) Reduce Federal expenditures;

(b) Cut Federal taxes; and

(c) Greatly reduce and soon eliminate foreign aid.

A similar petition has been filed in the other body by the chairman of the Senate Finance Committee.

These petitions were circulated by Taxpayers Educational Association, Inc., of Austin, Tex., a nonprofit organization.

The following is a copy of the petition that was circulated in 43 States, mostly among working men and their wives. After all, they are the people that pay 80 percent of all the Federal taxes collected. Hundreds of thousands of names have been collected and are still being collected on these petitions.

A PETITION TO MEMBERS OF CONGRESS OF THE UNITED STATES

(For petition, see CONGRESSIONAL RECORD for Wednesday, July 3, 1957, p. A5328. The petition was included in the remarks of Senator BYRD, Democrat, of Virginia, on that date.)

Republican Luncheons

EXTENSION OF REMARKS

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. MAY. Mr. Speaker, of interest to many political organizations in the States throughout the country would be the open Republican luncheons in the State of Connecticut held once a week.

The following editorial from the New Britain Herald ably depicts the atmosphere of such luncheons and could well serve as a recommendation to other State organizations:

[From the New Britain (Conn.) Herald of July 3, 1957]

WORTHWHILE GET-TOGETHERS

Whoever, and we suspect Meade Alcorn, started the Republican Dutch-treat luncheons at the Hotel Bond, Hartford, every Tuesday noon certainly opened the gates of the right to know. The idea has made inroads on the "old smoke-filled rooms" that we used to hear about, but more to the point, it forever neutralizes the old saying, "It costs $25 to register in the lobby of the capitol, but more things are fixed up in the lobby of the Bond."

There will always be small group conversations about this and that concerning things political, but the informal mass grouping has a tendency to bring out in the open questions leaning toward mild embarrassment of steamroller tactics.

It helps the politicians feel the pulse of popular opinion. So often one in authority hears only the favorable things and stumbles when he tries to hop on the skirts of popular fancy.

Beneficially, it affords the political moguls of the State a chance to keep their "weather eye" on minor officials throughout the "hinterlands." Connecticut is so small in area that the get-together takes on the complexion of being "right folksie," for Republicans can come from the far reaches of the Laurel State to hear and make known their ideas.

The press, too, should be ever thankful for this vehicle, via the forgotten man, to trot out information in the embryo adding zest to the old saying, "Big oaks from little acorns grow."

One large orchid should be presented to the Republican State central committee for embracing the idea and developing it into a party institution.

Journalism on the Air

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Frank Stanton, president of the Columbia Broadcasting System, Inc., before the National Press Club in Washington, D. C. on July 2, 1957, and the verbatim transcript of the question-and-answer period following the address:

Mr. GRANT. Among many other interesting things about the Columbia Broadcasting System, it is a company with 7 presidents, 1 for each of the 6 divisions of CBS and then a seventh president who is president of all the other presidents.

This seventh president, or I should say the first, the president of the presidents, is our luncheon speaker today and we are glad to have him here.

It is not easy to phrase an introduction of Dr. Frank Stanton. I have to say something nice about him or Ted Coop and our other CBS friends will be mad at me. If I say anything too nice about him my friends from NBC and ABC might be mad at me.

So while I think about how to chart this middle course let me introduce some of our other distinguished guests at the head table. [Laughter.]

On my left the new chairman of the Federal Communications Commission, I believe now making his first public appearance since he became chairman, the Honorable John C. Doerfer. [Applause.]

Mr. GRANT. On my right the man who just retired as Chairman of the Federal Communications Commission, the Honorable George C. McConnaughey. [Applause.]

On my left the chairman of the Judiciary Committee of the House, the Honorable EMANUEL CELLER, of New York. [Applause.]

On my right a member of the Federal Communications Commission, the Honorable T. A. M. Craven. [Applause.]

Also on my right a member of the Federal Communications Commission, the Honorable Robert T. Bartley. [Applause.]

And on my left a member of the Federal Communications Commission the Honorable Rosel H. Hyde. [Applause.]

On my right the president of the National Association of Radio and TV Broadcasters, Mr. Harold Fellows. [Applause.]

On my left the director of the National Science Foundation, and an old friend of Dr. Stanton, Dr. Alan T. Waterman. [Applause.]

On my right the vice president of CBS in Washington, Mr. Ralph Hardy. [Applause.]

On my left the executive editor of the Washington Post, Mr. J. R. Wiggins. [Applause.]

This man I am about to introduce now I want to say in the presence of his boss was one of the best presidents this club ever had and has made life very difficult for those of us who have followed him in the job, the director of news and public affairs for CBS, Mr. Ted Coop. [Applause.]

We also have some other people here who are connected both with CBS and with this club, people that we would have a great deal of trouble getting along without.

The associate director of public affairs of CBS and the chairman of the house committee of this club, Mr. Lewis Shallenberger.

[Applause.]

A member of the CBS news staff and a member of our board of governors, Mr. Griffing Bancroft.

[Applause.]

Another member of the CBS news staff and the vice chairman of our speakers' committee, Mr. Claude Mahoney.

[Applause.]

Here at a table in front of the speakers' table we have the chairman of the board the Washington Post, Mr. Eugene Meyer.

[Applause.]

Also at the same table the president of WTOP, the CBS affiliate in Washington, Mr. John Hayes.

Mr. Meyer and Mr. Hayes have with them a group of their associates at the same table.

We regret that we did not know until this morning that Mr. Fred Ford, of the Department of Justice, would be nominated for the vacancy on the FCC. I am sorry we did not know in time to invite him to be here at our head table.

I understand that we have in the audience the former Secretary of the United States Senate, our old friend, Les Biffle.

[Applause.]

In the audience the vice president of the Westinghouse Broadcasting Co., Inc., Mr. J. E. Bodino.

[Applause.]

I will tell you in a minute Dr. Stanton of me along as a psychologist and still has connections in that field. The American Psychological Association is represented here by Dr. Bruce Moore, Dr. Frederick Baher, and Dr. Bob Hoke.

Will they rise and take a bow?

What with one thing and another here lately CBS has been making news as well as broadcasting news.

Just when some of the committees of Congress were showing an unusual amount of interest in the networks, CBS has conducted a couple of interviews with Communist bosses that have caused a lot of excitement and drawn a great deal of comment in this country, and as you may have noticed, some of this comment has not been in praise of CBS for a piece of journalistic enterprise.

We thought that this would be a good time to invite the top man in this whole big CBS show to come down and meet the press.

I apologize for using that phrase in connection with the president of CBS.

[Laughter.]

Dr. Stanton, you know, started out to be a college professor and then got sidetracked into the broadcasting business. It happened this way. While teaching psychology and studying for his docter of philosophy degree at Ohio State he wrote a paper which set out the theory that advertising is more effective when heard than when seen.

Well, this is a theory that some of us would not go along with, but CBS liked it. [Laughter.]

As a result of that paper, Frank Stanton got a job with CBS as a research man at $50 a week.

CBS soon discovered that he was not only a man with ideas but also a man who would spend 70 to 80 hours a week putting those ideas to work, and so he started to climb. They used to say that he was the fair-haired young man of radio, and they meant that in more ways than one. Be became president of CBS at the age of 38, and at the time he could have passed for 28.

One day in connection with a big news show he was asked to go down to the studio on some business. When he got there the lady producer of the show took this unassuming young man to be an assistant producer and she said to him, "Well, I am glad you are here, but when the hell is Stanton going to show up?" [Laughter.]

Today at the age of 49 he is still a man of ideas, still a hard worker, still a scholar, still looks younger than his years. He somehow finds time to engage in an incredible number of activities outside his job including memberships and directorships and a list of organizations as long as your arm.

In his spare time when he has any he pursues his longtime interest in photography, in sports cars, and in architecture.

May I present now one of the Nation's important figures in radio and television, the president of CBS, Dr. Frank Stanton.

[Applause.]

Mr. STANTON. Ben, thank you very much.

Distinguished guests and gentlemen, I was not sure whether the president of the club was going to make the main address here this noon or whether I was.

I am a little embarrassed with some of the stories that Ben tells about.

I don't recall the incident about the studio but I have been barred from studios on occasion, and it could happen in a fast-moving and complex organization.

I do recall, however, one time going to the coast in connection with negotiation with Marie Wilson. I wanted to talk with her about some terms in her contract. She was much more interested in who was doing my hair. [Laughter.]

Just by way of explanation about the "doctor," it is not something that I think I would have carried over from academic life into business were it not for the fact that in the New York area there is a man who issues a tip sheet in electronics stocks who has, unfortunately, the name of Frank Stanton, and I have not been able to separate him from my life except by going back and putting the Ph. D. in front of my name and then there is no doubt about it because he does not have that.

It has gotten me into some trouble around the office from time to time. When I first started to work there at CBS, I needed a special assistant or an extra secretary. Actually I did not have a secretary of my own. I was using a pool service and I needed a girl that would be working full time. They sent up a very attractive blond to me and she came in and started to work for me but I recalled that she behaved rather strangely when she came in and after 2 or 3 years she came in 1 day and said she was getting married and she would have to leave, but she said "I think I ought to tell you that something had happened the day I first started to work for you."

Now this was a very, very attractive young lady and I had glass partitions in my office, not to the ceiling only bank high you know for a $50 a week employee.

She said "When the personnel department said to me I would have to go up to Dr. Stanton and see him," she said, "I came in and saw those glass partitions and saw how young you were, I did not know how I was going to be able to go through a physical examination." [Laughter.]

This story was told the day she was leaving.

Gentlemen, I come from a commercial organization. [Laughter.]

A major duty of that organization is to report the news. A major right is to editorialize about the news. It is about these two things—reporting and editorializing—that I want to talk with you about.

They make up an area of our common interest.

Like all institutions in an enterprising society, the press is never in a position of having arrived.

It is in a constant state of evolving, hitting upon new techniques to meet new situations, expanding old concepts to cope with enlarged responsibilities, restlessly extending the frontiers of news gathering, devising more provocative ways of probing the minds of newsworthy men and women, all to see if the job of a free press in a free society can't be done a little better.

The industry of which I am a part has come relatively late to this adventure, and we arrived squarely in the midst of the great events and pressures of what Winston Churchill has called this "tragic century."

You know better than I some of the strains these pressures have placed upon the role of journalism in a free society. On the one hand, all of us have had to be alert to encroachments on our traditional freedom of the press.

On the other hand, we have had to recognize a special responsibility to the public interest that world events have imposed upon us.

In addition to this basic problem which has been yours as well as ours, we in broadcasting have had unique problems all our own. We have had to harness a new technology and pioneer a new branch of the press, electronic journalism.

For example, radio brought novel and wholly untried dimensions to journalism. It had the strength of immediacy in reporting, sometimes, indeed, transmitting the very event as it was happening. It could bring to the listener the actual voices of great personalities, giving life to significant speeches that only very few newspapers could print in their entirety.

It could lend vitality to the transmitting of ideas through interviews, debates and panel discussions.

At the beginning, we were about as elementary as one could be. We simply read on the air what you in the wire services wrote. It was as recently as 1933 that CBS established its own news bureau, the first in broadcasting. We began direct shortwave news pickups from abroad during the Anschluss in 1938. It was then that radio reporting put on long pants.

Television came along when we had scarcely grown up in radio reporting. With it came new dimensions. To the living voice was added the living image. With the vocal inflection was the facial expression, either one of which could damn or exalt a man's words.

In its ability to confront viewers with the personalities in the actual process of making news, the television interview enables an entirely new and significant personal experience for millions of people. They are there at the questioning. They see and feel what traditionally only you reporters have seen and then distilled for the rest of us.

This is a whole new dimension of journalism. In its use, we feel dutybound to bring the most important men and ideas of our times to the American people, and in the manner in which this is done we are determined to acquit ourselves as your brothers in a free press.

For if we define as the most important men and ideas those that are most apt to affect importantly the lives of our viewers and listeners and readers, then we must, I think place our whole confidence in the wisdom of Jefferson's statement that the people "may be safely trusted to hear everything true and false and to form a correct judgment between them."

If we do not believe this, there is no hope for a free press. Indeed there will be no use for it, because there will be no free society for it to serve.

It seems to me that you either accept Jefferson's proposition or you reject it. It cannot be watered down. You can't say that it is all right for some people to be exposed to

ideas or personalities but it is dangerous for others to be so exposed.

You can't say the people can be trusted once in a while or almost all the time. Once you start doing that, who is going to make the exceptions and on what grounds?

We have been convinced for a long time that one of the things television should be used for is to bring to the American people the very presence and words of world leaders, with all the revealing evidence of face and voice for them to judge.

Of course, television viewers have seen all he American Government and political leaders many times. And they have seen foreign leaders too. Sunday afternoon, millions of people had a good look at Tito. Three weeks ago, they all saw Khrushchev in action. Next Sunday they will see Nehru.

But these are only the most recent in a long series of such interviews, a series which has included Adenauer of West Germany, Nasser and Fawzi of Egypt, Ben Gurion of Israel, Chou En-lai of China, Casey of Australia, Lonordi of Argentina, Gronchi of Italy, Nagy of Hungary, and Gaitskell of England.

We like to think we are improving our techniques like newspaper techniques must be flexible. For example, in the case of Chou En-lai filmed interview, we used a technique often used by newspapers—submitting written questions in advance.

We submitted 39 questions and got 10 answers, and so informed our audience at the outset of the broadcast.

On the other hand, we canceled a scheduled Face the Nation interview with Molotov in San Francisco 2 years ago because at the 11th hour he demanded agreement on the specific questions we were going to ask him. Because this is a panel program, a format which uses to the full the revealing power of the medium, we insisted that it had to be an unrehearsed, free for all interview, or nothing.

Actually it was this experience with Molotov in San Francisco in June 1955 that started us on the trail which led to the Khrushchev interview and we were determined that if Khrushchev appeared on Face the Nation, we would not submit questions in advance.

We did the program on our own terms. In pushing for the Khrushchev interview, we were as much aware of our responsibility as we were of our freedom. We were doing our job as journalists. Khrushchev and his views are of great importance to our world and to the world of our children. The less this man—or any man of his importance—remains a myth or a dark legend or a mystery to the American people, the more certain they are to size him up correctly.

In a news conference on June 11, one of you asked the Secretary of State this question: "Do you have any fears or any evidence that the American people were taken in or bamboozled by Mr. Khrushchev in his appearance on TV?"

The Secretary answered, "Well, I think myself that the American people are sufficiently versed in the vocabulary of communism so that they were not fooled in any way."

I agree with Mr. Dulles.

One result of the Khrushchev interview made us feel particularly good. You newspapermen recognized the broadcast for what it was—a significant press interview. You were generous in your editorial praise. This support encourages us.

The Khrushchev interview was an exercise of our duty to report the news. Now I would like to turn to the second area of our common interest—the constructive exercise of the broadcaster's right to editorialize.

At the outset, I want to state the one principle which permeates the entire problem. That principle is the obligation—whether self-imposed or imposed by law is immaterial—to maintain fairness and balance in the presentation of controversial ideas. This we believe must be the cornerstone of all our policies in the field of opinion, whether the opinion be ours or that of somebody else.

This principle shapes the entire problem of editorializing. It is the yardstick by which editorial policies must be measured.

There are three general ways in which a network can present editorial views. One way is to allow its newscasters to editorialize in the course of their news programs.

Second—and a purer form—is to have a stable of columnists of the air separate from the news staff. And third is for management itself to express its editorial views in its own name.

We have rejected the first two courses and have gone very slowly on the third.

I would like to discuss the reasons with you.

We have decided that it is unwise for our newscasters to act as editorialists for reasons which seem to us compelling. For one thing we are certain in our own mind that for radio and television at least reporting and editorializing are separate and quite distinct functions. They cannot overlap.

Intermingling the two enervates them both: The news loses authority as it is sifted through the filter of opinion, and opinion loses its forces as it is tugged and compressed to pass as the coverage of news.

Very early in the game, we stated and published our policy in these words:

"CBS news and news analysis programs are broadcast solely for the purpose of enabling the listeners thereto to know facts—so far as they are ascertainable—and so to elucidate, illuminate and explain facts and situations as fairly to enable the listener to weigh and judge for himself."

Parenthetically I should state that this standard of objectivity and avoidance of personal opinion represents a goal which over the years we have not attained in every instance.

Newscasters like all newsmen are, thank goodness, human, and it sometimes takes a superhuman effort not to let personal opinion creep in.

We do not think that the policy is vitiated and should be abandoned just because 100 percent observance may not always be possible.

The important thing, however, is that this kind of objectivity be the goal, and that there be an honest intent to reach it. With that intent, deviations have been rare and will be rarer.

We are proud of our worldwide news staff. They are men of the highest degree of competence. They enjoy the respect of their fellow journalists, the confidence of people of affairs both here and abroad, and the trust of the listening public.

It would go very much against the grain of our entire concept of the reporting role of broadcasting to have these men suddenly appear as editorialists. They are great reporters and news analysts, and we want them to continue as such.

For these reasons we do not use reporters on the air as editorialists.

We come then to the second method of broadcasting editorialists using special columnists of the air who do not deal with the hard news. Other networks are experimenting with this system either alone or in conjunction with combining news and editorial comment in the same individual.

These networks have adopted what has come to be known as the spectrum concept, using commentators representing a variety of political, social, and economic viewpoints in the expectation that the net results will be fair treatment to all viewpoints on any issue.

We are watching these experiments with real interest.

This concept seems at first glance to be plausible, but we at CBS are not persuaded that it can provide the right answers.

For one thing this concept provides no assurance of fairness and balance on particular issues.

We do not believe you can simply hire men of varying persuasions and then assume that all significant viewpoints are getting equal exposure.

To do this some supereditor would have to find out what each commentator is going to deal with in his program topically and then make sure the others address themselves to the same topic.

Otherwise, one commentator might very well plead for Federal aid to the public schools while his counterpart of some other shade in the spectrum was strongly urging withdrawal from the United Nations.

On the other hand, if the spectrum theory were pressed to its potential, the end result would be a staff of professional debaters with assigned topics.

I should note that, of course, the defects of the spectrum theory provide what seem to me to be another compelling ground for not permitting newsmen to serve also as editorialists. For the spectrum concept would require us to determine what part of the theoretical spectrum is missing, and then to hire a newsman just because his views happen to fall into this slot, instead of judging him on the basis of overall competence as a reporter and news analyst.

Having rejected these first two approaches, there remains for us at CBS the third course—management's editorializing in its own name.

In 1949 the Federal Communications Commission reaffirmed our right to editorialize in this manner, provided room was made for opposing views. CBS fought hard for this right. Having won it, we have not used it very much. For editorializing over the air involves a whole cluster of problems that call for much wiser solutions than we now have, and not until they are found do we at CBS feel that we can exercise this significant right fully and in the public interest.

Editorializing on the air involves important differences for editorializing in print.

First, we do not have the tradition of editorializing. In sharp contrast, this is the basic tradition of newspapers which, as you will recall, historically were organs of opinion primarily and organs of news secondarily. Hence our approach has been different because our history is different.

This is a case where it is easier to continue than it is to begin.

There is a second difference between newspapers and networks which has a bearing on this problem of our editorializing. Most newspapers are under the control of a single ownership. Except for the handful of stations which a network is permitted to own, we provide a service to independently owned affiliates. The nature of the electronic media, with their simultaneity, affords no practical opportunity for the management of the affiliated stations to determine in advance of broadcast whether it agrees or disagrees with the network management's editorial. Because of the close relationship between the network and its affiliates, their identities tend to merge in the mind of the public.

Without resorting to cumbersome procedures of prescreening, it would be most difficult to take editorial positions acceptable to all our affiliated stations, positions for which they as licensees would be willing to accept responsibility.

Nevertheless, CBS has editorialized on a couple of occasions. One was in 1950 during the debate on color television. The other was in 1954 when we sought access for our cameras and microphones for full, on the spot coverage of the Watkins Committee hearings.

In each case we provided equal time to views opposed to our own. I think that you may agree, however, that these were rather specialized topics upon which a network could be expected to have informed views.

I can confess, because I myself was CBS' editorial voice on each of these occasions, that neither of these editorials fell upon the public consciousness with earth-shattering repercussions.

These differences between newspapers and networks, and our limited first-hand experience, suggest some of the reasons why we have moved so slowly into editorializing and why, rather, we have presented controversy through talks, interviews, and panel discussions which give leading outside spokesmen the opportunity to present their opposing views to the public.

There is much to be said for this approach. For in this area of presenting leading public spokesmen of opposing views on important public issues, radio and television offer special advantages not open to the written word. The broadcaster can bring into the American home the views and attitudes on any issue of leaders in positions of responsibility or special knowledge. This we think is a most important advantage. For the processes of democracy flourish in a climate of debate. They are imperiled by unanimity.

Through talks, interviews, and panel discussions, the listener participates in such exchange of views and is able to make up his mind on the basis of what he himself sees and hears at first hand.

My final point on this question of the use of the right to editorialize is by way of summary.

Broadcasting is still very young. As journalists, we have seen our first job as reporting and our second as providing a forum for discussions and debate by public figures.

Having begun our journalistic venture at the time and in the way we did, I hope we have achieved on the whole pretty good standards of news judgment. The development of this newer function of airing editorial opinion is still subject to the sweat and care of responsible experimentation. But we know very well that we will not have achieved full stature in journalism until, having found the proper solution, we exercise fully and as wisely as possible our fundamental right to editorialize.

Thank you. [Applause.]

Mr. GRANT. Thank you, Dr. Stanton.

I hope that Ted Coop has explained to you that the questions are written by the people in the audience and the president simply reads these questions.

The first question is:

When newspapers and magazines are made up by members of this club, they could not care less whether their news judgment meets with the approval of the Government. Why was CBS so concerned over whether the President approved or disapproved of its presentation of an interview with Krushchev?

Mr. STANTON. You mean these questions are not rehearsed and given to the speaker first? [Laughter.]

Well, I don't know whether I can read back this question or not, but, "When newspapers and magazines are made up by members of this club they could not care less whether the news judgment meets the approval of the Government."

I think I would say exactly the same thing.

I am sure that the members of the CBS news staff would endorse this particular statement because certainly that is the attitude of management of CBS.

The second part of the question: "Why was CBS so concerned over President Eisenhower's approval of its presentation of an interview with Khrushchev?"

I don't think CBS was abnormally concerned.

I think that it is proper that any organization who has done something that if I interpret what was said at the news conference did not meet the approval of the President I think that it is entirely proper that some concern should be shown for it, but if you are convinced of the wisdom of your course of action, that is it.

I don't know what expression the individual who wrote this card had in mind of our fear or of our concern—excuse me for the substitution of words—I am not aware of this, and I document the answer by the fact that last Sunday, which was I guess 2 weeks, no 4 weeks after the Khruschchev interview, we did the Tito interview.

Certainly I don't think that that is a demonstration of concern.

Mr. GRANT. Why did not CBS issue an answer to President Eisenhower's press conference remarks regarding the Khrushchev interview on Face the Nation?

Mr. STANTON. I would like to give a two-part answer to that.

First: I had some difficulty myself in understanding exactly what the President had said in his news conference. [Laughter.]

By now I think it has dawned on me what he was saying; and, if I had had the vision then that I think I have got now, we would have answered him.

Mr. GRANT. What is your opinion of having President Eisenhower give Russian TV reporters a telecast interview to Russia similar to the Khrushchev interview?

Do you think the Soviet Government would permit such a telecast to its people?

Mr. STANTON. I will take the last part of that one first.

I can't answer the last part. As to the first part, I am all for it. I think the free exchange is a thing that is very much needed, and we offered facilities to the White House in the week between the initial Khrushchev broadcast and the panel discussion the following week for the President or anyone he wanted to designate to be put on film to be sent to Russia.

I want to make it perfectly clear that we were not in any way taking the position to negotiate with the Russians about the release of the program, but we wanted to make our facilities available to the White House so that, if the White House or someone in the White House designated wanted to do a job on film that could be packaged and sent over, we wanted to cooperate to that extent, because we believe in the free exchange of information.

Mr. GRANT. Does CBS have any plans to do a Tito-type interview in Red China?

Mr. STANTON. No, we have no such plans.

Mr. GRANT. Would CBS comply with Representative MADDEN'S resolution to require that all questions in broadcast interviews with Iron Curtain leaders be screened by Secretary Dulles? [Laughter.]

Mr. STANTON. Mr. Madden's resolution came to me by way of the press service late last night and I haven't had an opportunity to study it. I think I understand the intent and I think a dark day is outside the door if this comes to pass. I think the concept would be abhorrent to the Government. I certainly think it would be abhorrent to the public.

I know that we will do everything we can do to make sure it doesn't come to pass. It is just one step from doing it in radio and television to doing it in the press, and I think that it would be a very dark day indeed if we came to this kind of reporting in the free United States. [Applause.]

Mr. GRANT. Aren't you splitting hairs when you draw a distinction between editorial opinion on one hand and analysis on the other?

Mr. STANTON. I suppose the answer is that on some occasions yes, but we still feel that it is better to have the objective and to try to hew to the line than to be too concerned about the infrequent merging of the two. It is difficult on occasion, but I go back to something I said in the direct statement that I read to you, and that is that it is the attitude or the intent as you approach the analysis or approach the job, and I think that the thing is very clear in 99 percent of the cases.

Mr. GRANT. Since your answer a moment ago, two members of the club have sent up questions which say approximately the same thing: What would you have said in answer to the President? [Laughter.]

Mr. STANTON. You see this is one of the things that couldn't happen if Madden had his way. [Laughter.]

Mr. STANTON. Because if you had cleared the questions first then you couldn't have any followup questions.

Well, this would have taken a lot of thinking to have found the right words, and I would prefer not to try to do that as an ad lib statement before you. But the substance of what I would have said would have come right out of the document that I read before you here this afternoon, and I would have made it quite clear that, I think, on the question of the commercial enterprise that you can't have a free press unless you have commercial enterprise. There has to be someone that provides the oil for the lamps of the journalist, and I didn't think that there was anything wrong with being commercial, if you will.

I don't think that with a group that is as steeped in the traditions of the free press as this group is here today, I need to go further with the kind of thing that I would have said. I only say I'm sorry I didn't say it, because in retrospect it has taken on much more significance than I thought it had when I first read the statement that was made at the news conference.

Mr. GRANT. Would you care to comment on the rumor that CBS and Westinghouse are merging?

Mr. STANTON. One of you called me in New York when that story broke in one of the trade papers and said, "Doesn't Variety know that it has to give 90 days' notice to the Department of Justice when it is going to merge with Westinghouse?" I commented at that time that there was nothing to it, there had been no conversations of any kind, and there has been no change since the date of that statement.

Mr. GRANT. Radio and TV fought hard for their right to film and record the Presidential news conferences. Yet rarely are they broadcast in full on the networks. Why?

Mr. STANTON. As matter of news judgment. [Laughter.]

Mr. GRANT. What is the matter with pay TV? [Laughter.]

Mr. STANTON. That is a loaded question.

Well, there are two kinds of pay TV that have been talked about. One is the kind that would use the free wavelengths that have been specified for broadcasting as we know it in this country today, and then there is another kind of pay TV that is getting more and more attention these days and that is a form of wired pay TV.

On the former, I have some serious questions about it and on the latter I think it is a matter of a competitive form of service. I think that the public would be shortchanged if we had pay TV.

I am not at all persuaded in my own mind that if we had pay TV on the air today that the public would go for it, but if the public did go for it, I think they would soon discover that they were then only beginning to pay for what they had been getting free up until that time. I have searched the pleadings of the proponents for the kinds of things that they would bring to the public that the public is not now getting, and I think with the occasional heavyweight fight and new and special movies not yet made, which might be released through this medium, I can't find anything in the schedule that would change from what they are getting now free.

In other words, I think that the promoters would be hijacking the public into paying for what they are now getting, and to show you how simple this would be from an arithmetic or money point of view, if just one-tenth of the families in this country paid 50 cents each, that is one-tenth of the audience that now views Ed Sullivan every Sunday night paid 50 cents each to see the Sullivan show, this would amount to about 4 to 5 times as much income for the show and all the things behind the show as the sponsor is now paying to put on that program, so that you would have in effect one-tenth of the regular viewers of Sullivan tipping the scales completely over to the side of pay television, and the people who could best afford to pay would be setting the pace for the other 90 percent of the audience, and that in effect would begin to siphon off writers and producers, talent over to the side of pay television, and I think it would be only a very short time before most of your big shows that are now coming to the public free would be on the pay TV schedule if it works. If that happens and your networks as you now know them and your free stations as you now know them are converted, you will have a different kind of service in this country.

I don't think it will be any better and I don't think it necessarily will be any worse except for one thing. I don't know who will step into the breech of the coast-to-coast public affairs and news area. Certainly pay television won't. The operation of the CBS news and public affairs department is about a $7 million bill a year. Now that money has to come from someplace. I don't think people are going to pay to see Khrushchev and Tito and Face the Nation and Meet the Press and the other programs that go on in that general area of programing.

I think that they will not pay for them, that there won't be any networks because I don't know who is going to pay the $14 million a year to keep the lines hot, and in that case then I think something will be taken out of the fabric of our set, which I think is very important at this particular time in our history, and that is the serious sociological problem that I see, is that I think you threaten the network structure. You take something out that we have had and have used beneficially. I am not now talking about the advertising side, I am only talking about the news and public affairs side. This I think is a serious loss to the public, but from the standpoint of the entertainment shows, they will be roughly the same I would guess except that you will have to pay for them, and the average family uses its set about 5 hours a day.

The promoters of pay television are talking about 50 cents a half hour or 25 cents a half hour, 50 cents an hour. This is a big bill to foist on the public when they are now getting it for free. And when you talk about getting more culture, I can't think of a promoter who, if he had his choice between putting on Sadler Wells Ballet and Jane Mansfield or Monroe, is there any doubt in your mind what he is going to do? I don't think you are going to get any more culture than you are getting now.

I think you stand a better chance of getting more through the present system, but I speak as a biased spokesman. [Laughter and applause.]

Mr. GRANT. Do you think people would pay to see Khrushchev on television?

Mr. STANTON. I already answered that.

No; I think you would have a small percentage of people who would pay, but more importantly, I don't know how many stations would even accept the program for airing, because if they had their choice between that and the putting on some sporting event or some class B movie or even a class A movie where they could make more money, I think the choice is just as plain as the day we were born.

They would go for the high-circulation show and you would not have this kind of programing.

Mr. GRANT. We are just about out of time. I don't want to ask you this question: What is the future for color TV?

Mr. STANTON. I hesitate to speak to that because I had my face on the cover of the Time magazine, I think in 1951, predicting it was just around the corner.

I think the future is very bright, but I hesitate to put the date on the future.

Most of you men in this room have seen color shows.

When color is good it adds a lot to a program, but it is no substitute for good writing, good production, and good ideas. I think eventually we will have most of our programs in color, but the timing is something that I don't think I would care to predict, but just as sure as we are here, someday you are going to have the majority of your schedule, your live schedule at least, in color, and I think you will get more out of it and more information because in many fields of broadcasting or telecasting you can pass more information with color than you can in black and white.

This is particularly true in the field of sports because you have the extra identifying characteristic of color.

I don't think it will make a great deal of difference in certain kinds of shows, but I think that eventually your entire schedule or the major part of it will be in color.

Mr. GRANT. Thank you, Dr. Stanton.

I am sorry that we are out of time. I want to present to you this National Press Club certificate of appreciation for your appearance here.

Mr. STANTON. Thank you very much. [Applause.]

Many Commitments to Mental Institutions Are Unconstitutional

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. BURDICK. Mr. Speaker, on January 31, 1957, I introduced a bill in the House known as House Concurrent Resolution 98, which provides for a complete congressional investigation into all ramifications of mental health legislative programs which are currently being promoted.

I am informed that many thousands of citizens of the United States are confined in asylums, many wrongfully and needlessly. Many of these inmates of State mental institutions were committed under State laws which violate several fundamental constitutional guaranties both in State and Federal Constitutions. The most flagrant of these violations are:

First. Denial of the right of trial by jury.

Second. Denial of the right of habeas corpus.

Third. The taking of the inmate's property without due process of law.

Fourth. The taking of the inmate's real or personal property without due legal notice to him of the proposed sale of such property.

The conventional format for the accomplishment of these illegal acts is to confer upon a State so-called court of equity the power to commit an individual upon the application of designing persons who frequently use this ruse to get control of the victim's property.

This situation as to possible illegal commitment of alleged mental incompetents was brought forcibly to attention by an article which appeared in the Washington Post of May 31, 1957, under an Annapolis, Md., date line. It appears that Judge William R. Horney ruled in Queen Annes County that a 1943 act of the Maryland Legislature violated the constitutional rights of William Easton, who had been declared mentally incompetent and was confined in a Maryland mental hospital.

An appeal from the decision of Judge Horney was argued in the Maryland court of appeals at Annapolis on May 30, 1957.

Prior to the 1943 Maryland act persons had been declared mentally incompetent only after a trial before a judge and jury. The 1943 Maryland act permitted a judge in equity court without a jury, first, to declare a person mentally incompetent on the advice of two physicians and, second, to order the person's property sold, or transferred to a guardian.

Judge Horney ruled that this act was unconstitutional and a nullity, as it violated constitutional guaranties of the alleged incompetent.

This decision raises the important issue as to whether other State statutes similarly phrased did not also deprive many alleged incompetents, committed to many State mental institutions, of fundamental constitutional rights by depriving them of their liberty without a jury trial and by depriving them of their property without due process of law.

It would appear that State statutes of the kind referred to may involve two serious denials of Federal constitutional guaranties, to wit, first, of the right to a jury trial and, second, of the right guaranteed by the 14th amendment against deprivation of liberty and property without due process of law.

That is why an investigation on the congressional and national level is imperative where there are State violations of Federal constitutional guaranties.

The Aim Is the Same

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting as part of my remarks an editorial which appeared in the Newark, N. J., Star Ledger on July 2. It hits the nail on the head. Commu-

nists are Communists wherever we find them. The article follows:

THE AIM IS THE SAME

The television showmen put on another big name show Sunday, starring Tito of Yugoslavia.

But this time the entrepreneurs avoided the trap they fell into when they gave Russia's Khrushchev a free propaganda ride into the living rooms of America. This time they had a panel of Americans standing by to pick the Communist propaganda to pieces.

For which, hurray.

But the Tito interview wasn't very informative, and neither was it very entertaining.

Yet it wasn't a total loss, as we had a chance to hear from the Yugoslav dictator's own lips what we've been saying over and over: that no matter how much Communist Russia may differ with Communist Yugoslavia—and that goes for Communist China—the aim of Communists everywhere is still the same, to turn the United States and the rest of the world into Communist territories.

Philippine Independence Day

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. LECOMPTE. Mr. Speaker, recently the Republic of the Philippines celebrated its own Fourth of July. As you know, Philippine Independence Day coincides with ours, in grateful recognition by the Philippine people of the part we played in helping them achieve their freedom.

In Manila, a significant statement was made by former President Sergio Osmeña on the occasion of the celebration of Independence Day by the Filipinos.

President Osmeña is a revered statesman who is highly respected in this country and who is considered one of America's best friends. In the Philippines, he is loved as a true patriot and his words carry the weight of his wisdom and experience.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include this refreshing and inspiring statement.

The statement follows:

THE PHILIPPINES ON THE 11TH ANNIVERSARY OF HER INDEPENDENCE

On June 9, 1908, on the closing of the first session of the First Philippine Assembly over which I had the honor of presiding, I made from the speaker's rostrum the following statement which was unanimously approved by the assembly:

"Following the dictates of my conscience as an assemblyman, as a representative of the people, and on my responsibility as the speaker of this body, allow me, gentlemen of the assembly, to declare solemnly, as I do now, before God and before the world: That our people seek independence; that our people consider themselves capable of living an orderly life, useful to themselves and to others, in the concert of free and civilized nations; and that we believe that if the people of the United States should at this moment resolve the Filipino cause in favor of the Filipinos, our people would, in assuming the consequent responsibility, be in a position to comply with their duties to themselves and to other peoples of the world, without injury to liberty, justice, and law."

The independence which we dreamed of in 1908, the independence for which our innumerable heroes and martyrs sacrificed their lives and properties, is an accomplished fact since July 4, 1946. It was proclaimed by the United States of America on the very day previously agreed upon between that country and the Philippines. This independence has not been obtained as the result of force and violence, but freely and peacefully, within the orderly processes of the Government itself. It was not the product of hate, ill-will, and suspicion, but of mutual understanding, mutual trust, and a sincere friendship between both countries. Thus, to insure its stability and perpetuate its blessings, America, which generously gave it to us, provided in the Independence Act for the perpetual neutralization of the future Republic of the Philippines. As a result, however, of the bitter experience of the Second World War, neutralization proved to be patently impracticable, the plan was abandoned. But the United States continued to show its generosity and friendship by concluding with us a military alliance and helping us to face the problems of rehabilitating our national economy by paying us $800 million for damages caused by the war and extending technical and financial assistance through its International Cooperation Administration.

Under these favorable circumstances, the Filipino people were able to vigorously begin the vast work of establishing and organizing a free and efficient government, both stable and progressive. Under such a government—especially during the administration of our late lamented leader, President Ramon Magsaysay—peace and order were reestablished at a time when they seemed to have been completely overwhelmed in the terrible wake of the last war. Graft and corruption in the Government were fought, and the guilty punished. The various economic plans were coordinated and completed in a master economic blueprint, with the purpose of raising the standard of living of the masses, especially that of the rural inhabitants, for whose satisfaction and contentment every effort was exerted. Nothing was spared to bring about the policy of keeping the government close to the people.

In the field of our foreign relations, we have lived in peace with the other countries of the free world, and have extended to them our friendship and cooperation. Our Government cosponsored the SEATO conference in Manila, and participated in a most effective manner in the conference held in Bandung. In the United Nations, the parliament of the world, our Filipino delegates have distinguished themselves for their independence of judgment and love for liberty. Our diplomatic and consular service has been established throughout the world, with new emphasis on Asia and Africa. The new Afro-Asian orientation of our foreign policy is a decisive and significant effort to gain the respect and friendship of our neighbors in Asia, as well as of other countries in the East and in Africa.

But the most reassuring aspect of our foreign relations under the administration of the late President Magsaysay has been the maintenance of our close association with the United States, based on a common history and ideology, and the traditional friendship between our two peoples, started and maintained as a basic policy since the beginning of this century.

In the midst of the horrible tragedy of Pinatubo, which cut short the career of our beloved leader, President Magsaysay, we were thus deprived suddenly of his wise and paternal guidance. It has pleased divine providence to have as his successor in a difficult post, a man who is well versed in the intricate problems of our country, with a long and brilliant background in public service, and identified with the ideas and policy of his predecessor. This man is President Carlos P. Garcia. We are confident that under his administration the wise foreign policy that I have just described, as well as the constructive domestic program of President Magsaysay, will be kept intact and dynamic and will be vigorously pursued, in accordance with his solemn and public promise. In fact, under the able and patriotic leadership of President Garcia, this promise is now being fulfilled with sincere devotion, intelligence, and energy.

With such positive accomplishments before us, with the republic firmly grounded on the solid bases of law and order, and the democratic ideals which inspired our lebertarian struggles, we can look at the future with optimism. Hence, on this 11th anniversary of our independence, we can paraphrase the political declaration made by the Philippine Assembly on June 19, 1908, by affirming that "the Filipinos upon assuming the responsibilities of independence, have known how to fulfill, and will continue to fulfill their duties to themselves and to other peoples of the world, without injury to liberty, justice, and law."

Capability and Foreign Policy—Address by Raymond A. Hare

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 8, 1957

Mr. HUMPHREY. Mr. President, our distinguished Ambassador to Egypt, the Honorable Raymond A. Hare, recently delivered at Grinnell College, Grinnell, Iowa, a commencement address entitled "Capability and Foreign Policy." Mr. Hare's remarks are the product of many years of diplomatic experience and practical wisdom.

I ask unanimous consent that the text of his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAPABILITY AND FOREIGN POLICY

(By Raymond A. Hare, Ambassador to Egypt)

By way of an introductory generalization, I would venture to suggest to you that no small amount of the grief and frustration encountered in both the framing and understanding of foreign policy could be avoided if foreign policy were approached more as a science and less as a political rough-and-tumble with esoteric overtones. For, as a result of some reading on foreign affairs and some slight personal experience in that field, I have been increasingly impressed by the recurrence, in greatly changing circumstances, of identifiable phenomena which lend themselves to analysis, classification, and the drawing of basic and subsidiary conclusions. Whether these conclusions can yet be classed as laws in the scientific sense is perhaps debatable, and it is not my purpose to press that particular point to conclusion with you today. There is no question in my mind, however, but that such deductions do prove that the study of foreign policy can be pursued beyond mere action and reaction and also beyond the evoking of historical precedents, immensely valuable as that may be.

Now, if we can give ourselves the benefit of the doubt that such a scientific or neo-scientific approach to the study of foreign policy is permissible, and if we can assume that, in preparing a manual on the subject, we are including a chapter bearing the title of this talk, "Capability and Foreign Policy," let us see how a rough first draft of such a chapter might look.

LIMITATIONS ON CAPABILITY

Just recently I was talking in Cairo with an Arab diplomat who had formerly been stationed in Washington. In the course of our discussion he observed that one of the greatest sources of misunderstanding of the United States by other peoples is that they usually take it for granted that our capacity for action is without limit and that, such being the case, failure by us to accede to the desires of others is regarded as evidence of either lack of interest or unfriendly intent. He said that, from his service in Washington, he understood that we did not have the capability commonly attributed to us, but others are deluded by assumptions of unlimited American power and judge us accordingly. He might have added that this same failure to understand our limitations is not uncharacteristic of our own American public, which consequently tends to see adverse international developments largely in terms of policy failure; it is also sometimes shared by policymakers themselves when, in disregard of basic limiting factors, they seek solutions by the tortured twisting of a phrase or the concocting of some superficially appealing formula.

It is true, of course, that our total potential as a nation is almost astronomical when we think of it in terms of our total material strength, intellectual resources, and moral forces. If all this were in the form of an immense reservoir on which we could draw to meet our international problems, our difficulties would be greatly reduced indeed. But this is not the case.

In the first place, most of our national potential is unavoidably earmarked for domestic purposes. This is true even in time of war, even in total war; and it is, of course, all the more true in time of peace, even in this peace that we call the cold war.

Assuming, however, that we have a certain unknown quantity of potential on which to draw, we still find use of it circumscribed in many ways. For instance, we may have adequate available strength and satisfactory implementing policies and still be immobilized to varying degrees by mental unpreparedness; e. g., the precipitate dismantling of our military establishment after World War II. Then, too, there are problems where geographical, ethnical, occupational, organizational, or other interests may predominate over what might seem to be the broad national interest. There also may be, and often are, jurisdictional conflicts between our executive agencies, e. g., surplus commodities disposal abroad; or between the executive and the legislative, e. g., foreign aid. There also are often, very often, conflicts of interests in respect of other countries which affect our liberty of action.

In fact, this last phenomenon is so important and also so recurrent that I sometimes wonder if we fully appreciate its significance and also if we understand that this problem is of a type which increases in at least arithmetical—sometimes it seems geometrical—ratio to the degree of our emergence as a great power with all of the complex responsibilities inherent in such a position. To smaller countries may be permitted the privilege of concentrating on their own particular national issues to the virtual exclusion of other considerations, but not to us. Examples of the resulting problem for us are many, but several familiar ones might be cited, such as the effect of Arab-Israeli differences on our attempts to carry out a policy of peace and stability in the Middle East, the Algerian situation in north Africa, the Kashmir difficulty in the Indian subcontinent.

So again and again we find that, as problems arise, it might not be too difficult to develop a satisfactory policy provided we had sufficiently unrestricted and uninhibited use of our potential resources. But we don't, and that is the real headache in foreign policy formulation—a headache which is not eased by the fact that many of our limitations are of a delicacy which makes full public explanation difficult.

OUR BASIC NATIONAL INTERESTS

I would ask your indulgence in developing our chapter a little further in order to examine the process of applying our capability, as distinct from assessing it. To begin with, we would have to assume that we had determined (presumably in a previous chapter of our manual) the nature of our basic national interests. This is a matter of analysis, not capability, and, if the conclusions are wrong, we have only the inadequacy of our judgment to blame. Reduced to basic simplicity it would be something like this: We Americans have had a historical break. Under the impulse of a political awakening in Europe and coincidental with the industrial revolution, stout souls from many lands made their way here and found a rich continent inviting development. They rose to the challenge, and present-day America is the result. In surveying this heritage we find it good and sufficient; we do not covet the lands or goods of other men; we merely wish to maintain what we have and, if improvement is required, to do so in our own way.

This is our interest. As regards our basic policy or—to borrow a more precise military term—our grand strategy, that, too, is very simple and depends on two major factors. The first is that, as long as war and predatory communism haunt our planet, we must be sufficiently strong to maintain our military defense in association with our allies and friends. The second is that, as long as the world is afflicted by political, social, and economic deficiencies, we should be prepared to lend a helping hand in much the same way and for the same good reasons that we give attention to our own community and national maladjustments. In other words, what we especially seek is security for ourselves and the well-being of others. We seek these in our own self-interest but also in the reassuring knowledge that what we seek is reciprocally good.

INTERNATIONAL FORCES AT PLAY

Having then agreed on our basic interests and grand lines of policy, the next step is to survey the various international forces at play in order to determine their angle of incidence with reference to our own desired lines of action.

Please note the phrase "angle of incidence," which I used advisedly in order to emphasize the fact that foreign policy almost invariably takes the form of a compromise which in physics might be likened to a resultant of forces. For, as we analyze varying forces affecting our interests, we will find that they are of three types: Those directed along the same lines as our own interests, those directed in a diametrically opposed sense, and those having differing degrees of variance from what we would desire.

As regards the first type, the problem is primarily one of correct analysis and then of making sure that such favorable trends are properly facilitated. This is the easiest type of foreign policy determination, but it is by no means an automatic process for the reason that favorable trends may sometimes be manifested in unexpected forms requiring careful discrimination for correct identification; and, even then, great sensitiveness and imagination may be required to assure that a potential benefit is not inadvertently lost. Thus, in the early days of the Turkish Revolution it required no small degree of perspicacity to identify the movement as having elements congenial to American policy. However, that conclusion was wisely and fortunately reached, and we have ever since had in Turkey a stalwart friend. In the case of Canada, on the other hand, the community of our interests is so obvious that both of us have to exert a degree of care not to take each other too much for granted.

Now we come to the second type of international current which, on examination, is found to be directly against us. Here we have three options: Let it go, meet it head on, or attempt to deflect its course.

Here is where capability clearly comes in, since I believe you will find few cases where, even with the most carefully thought-out policies and with the maximum exertion of our capabilities, we can meet an opposing force head on and stop it. If we could do so, it really would not be much of a problem. Actually, what usually happens is that we have to direct our efforts to deflecting such opposing currents in such a way as to minimize their adverse impact as much as possible; but the result will still usually be somewhat, perhaps very much, short of what we would like. However, this does not necessarily mean that we have failed. Rather it means that, despite the best-laid policy plans, our capability was such that making the best of a bad situation was the best that we could do.

Thirdly, we come to a type of political current where the elements of analysis and capability are both very important. This is the current which is neither directly for or against us. This is a most important category because most of our problems really fall in this area. Unfortunately, we often seem to overlook this fact and, in the spirit of an accountant with his ledger, to attempt to put all problems in either the debit or credit column, overlooking, in so doing, the necessity for a third type of entry which cannot appropriately be written in either black or red ink.

Barring a few obvious cases—I leave it to you to fill in the blanks—can you say that any government is 100 percent for us or 100 percent against us? Of course not, and surely no people is. Yet that is the implication when we so often pose the question "Whose side are they on?" and expect a one-word reply. Just because nationalism may sometimes be manifested in intemperate forms, are we to view all nationalism as a negative force, or vice versa, are we to assume that, because we gained our independence by revolution, all revolutions are good? Of course not. And yet we do have an unfortunate tendency to oversimplify such phenomena. To do so may be convenient and timesaving, but neither as a government nor as a people can we afford to do so. I know you would not tolerate such unprofessional thinking by the mechanic who repairs your car or the doctor who heals your body; by the same token you should not tolerate it in either those who are directly responsible for foreign policy formulation or in yourselves because, under our system of government, it is basically the American people whose understanding support makes effective foreign policy possible.

As regards the handling of this type of complex problem, the technique is essentially the same as in that of directly opposed currents in the sense that we should do the best we can, by wise planning and effective use of our capability, to maximize the advantageous and minimize the disadvantageous. Sometimes, by so doing, we may be so fortunate as to achieve a solution in essential identity with our desires. That is a diplomat's dream. But usually you will find that, even by exercising one's best efforts—and we should not, of course, be satisfied with anything less—the result is in the nature of a compromise. If so, we need

not be unduly despondent. What is important is to do our best in the knowledge that our capability has its limits. Defeat and victory are both relative terms, and we should realize that the counterpart to exaggeration of failure is the no less objectionable inclination to overestimate our successes. Both are errors of oversimplification. Complex questions usually have complex answers, and we must be sufficiently sophisticated to understand that this is so and why.

What I have been attempting to say is that there are certain rules governing foreign policy somewhat like those governing other sciences, especially the social sciences; that among these rules is that of capability; that, because of the limitations of capability, there are corresponding limitations on foreign policy formulation; that there is no excuse for failure to analyze foreign policy problems beyond the usual margin allowed for the fact that we are human; but that foreign policy is not in the nature of some newfangled wonder drug capable in itself of producing international miracles but is subject to practical procedures by which problems can be realistically and systematically analyzed and logical conclusions reached; that, despite our great strength, the potential available for application to any specific problem is limited in many ways; that, just as the problems themselves are complex, so must the solutions usually be mixtures of things which we desire and things we would prefer to have otherwise; that with our increased responsibilities come greatly increased limitations on our actions to which governments of smaller countries are not subjected; that these limitations of capability are not something to be accepted with resigned fatalism but rather are factors to be studied objectively with a view to making the most of our planning skills and our capability in working toward our objectives.

So, the next time that things may seem to go wrong and that you are inclined by conditioned reflex to ask "What's wrong with our policy anyway?" I would suggest that you take a second look and see to what extent your dissatisfaction may in fact be due to limited capability. This is not to excuse inept planning but rather to suggest that both the planner and the public have a common interest in approaching our problems with a more dispassionate and analytical mind.

Look Out for the Red Chinese

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. BURDICK. Mr. Speaker, the voices demanding a softer attitude toward Red China grow louder. It is difficult to understand why. Right now the Chinese Reds are fostering narcotics trade all over the world.

The United States narcotics commissioner, Harry J. Anslinger, is quoted in a recent Associated Press statement as saying Communist China is the only country in the world that is not trying to curb illegal use of narcotics.

"Year after year we produce incontrovertible evidence of quanities of narcotics leaving mainland China—we seize it on ships at the dock," said Mr. Anslinger.

Some of the people who would now turn soft on the Reds need to be reminded that the Communist China of today is the same outfit that helped murder our boys in Korea. If Red China has changed since the Korean war, it has not been for the better. Its activities in the drug traffic prove that.

The Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "The Question Nobody Asks," written by Gen. Hugh B. Hester, and published in the July issue of the Progressive magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE QUESTION NOBODY ASKS

(By Gen. Hugh B. Hester)[1]

In the current national debate, no one has asked the basic question of foreign aid: Has it, on balance, improved the chances of world peace? Only if it has done this, can foreign aid be justified as serving the interests of the American people, for, after all, it is they who are paying the bills and will be among the millions dying if and when world war III comes. No other test makes sense.

Before a satisfactory answer can be given to this basic question, however, it is necessary to observe how the two types of aid work: Whether they really complement or oppose each other as forces for peace. Military aid is now granted to any nation that will ally itself with the United States against Russia and China, or will join us in the policy of containment of communism anywhere or preferably everywhere. Economic aid is, also, given to them and to a few other nations like India that insist upon a policy of nonalinement with any power bloc.

Pakistan, which receives both types of aid, and India, which receives only economic aid, serve as a useful illustration of how the two affect each other. According to the Indian leaders, any increase in the military power of Pakistan automatically increases the insecurity of her adversary, India. Thus military aid to Pakistan means a corresponding or greater increase in the military budget of India. This, in turn, the Indians contend not only consumes an equal amount of economic aid, but tends to set off an arms race chain reaction among the lesser powers, which may, and often does, increase poverty rather than, as intended under the aid program, reduce it.

Whether this should be true is not the question here, for logic has little in common with fear-induced hate. And again, unfortunately perhaps, the so-called enemies of the small nations, in the opinion of many of their leaders at least, are not the Russian and Chinese Communists, but their immediate neighbors; those generally in a comparable state of underdevelopment, poverty, and military strength. Any military aid, under these conditions, tends to upset the balance of power, as in the case of Pakistan and India, and so automatically wipes out any possible benefit from economic aid.

Again, in accordance with Indian views and many others, these apparently conflicting characteristics of foreign aid, as now conceived and administered by the United States, may be, and often have been, used to maintain the power of governments that are medieval in structure and totalitarian in nature, even when social, political, and economic reforms admittedly were absolutely necessary for any tolerable future for the peoples involved. Most of the Middle East is a prime example of this. Here a whole region, capable of one of the highest standards of living anywhere, is kept in abysmal poverty. And this is primarily because of great power competition and conflict. Much of Asia, Africa, and Central and South America are victims of this same outmoded struggle for power. The Arabs almost to a man believe that French colonial power over Algeria is now possible only because of United States aid.

This brief survey seems to suggest that military aid, especially for the small nations, may not only cancel out economic aid by inducing small local armament races, but may also shore up reactionary, despotic regimes, and thus increase proverty and national tension by preventing necessary changes. What then of United States aid in support of the great military alliances, such as NATO and SEATO and the Baghdad Pact?

Any worthwhile survey of the value of United States military and economic aid to the great powers, such as Great Britain, France, Germany, and Japan, must include, as a minimum, a few of the basic assumptions upon which the present cold war is based. Perhaps the most basic of these assumptions—I prefer the word myths—was the readiness of the West to maintain perfectly normal and friendly relations with the Soviet Union at the end of World War II, only to be rejected by Stalin's brutal intransigence.

This is a myth. Winston Churchill urged the strangulation of the Communist baby in its crib at the end of World War I, led the British propaganda attack upon the system between the wars, proclaimed it as evil as nazism the same day Hitler invaded Russia and ordered Montgomery to stack German arms for possible use later against the Soviets and, also, urged Eisenhower to do likewise at the time of surrender, May 1945. He resumed the attack openly and with full vigor at Fulton, Missouri, in March 1946, in the presence of and while a guest of the President of the United States.

The United States waged a two-front war against the Soviets immediately following the conclusion of World War I, participated in an economic blockade, including food, for 1 full year, and refused diplomatic recognition to the Soviet Union for 17 years. President Truman, then a United States Senator, is reported to have welcomed the German attack upon Russia in June 1941, and to have proposed that we aid the Germans when the Russians were winning and the Russians when the Germans were winning, in order to help them both kill each other off. He is, also, reported to have stated to a group of his principal advisers less than 2 weeks after the death of Roosevelt that Stalin had received his last concession from us.

The Soviets, of course, reciprocated these fears and hates in full measure, and made their own special contributions. The points to remember, however, are that twenty-odd

[1] Hugh B. Hester, retired brigadier general of the U. S. Army, held major posts in both the Pacific and in Europe during and after World War II. In recent years he has written widely on American foreign policy.

years of suspicion, fear, and hate-inspired propaganda left little or no basis for trust and cooperation, that the war alliance was one of pure convenience, that both sides were responsible for this difficult, if not impossible, condition at the end of the war, and that once the war was over the thin veneer of friendship was ripped off by the top leaders of both blocs. From a vantage post as head of the United States-German food and agricultural program in Berlin, 1945–47, I watched the drama of the cold war develop and unfold.

Another important assumption of United States foreign policy is that the Soviet Union was able, ready, and planning to march west across Europe soon after the end of the war, and, therefore, NATO was necessary to prevent and did prevent this aggression. This assumption raises a number of interesting questions, only two of which can be discussed briefly here. First, what is the basis of the belief that a nation, which had lost more than 15 million of her people as a direct result of the war, including much of her youth, and had had two-thirds of her farms and factories destroyed, was ready, able, and actually planning another war? And this time, make war against a formidable alliance, which included the materially most powerful nation on earth, the United States—a nation greatly strengthened, not weakened as was she, by the war. Would the United States, after having lost over 12 million of her people and all her farms and factories east of the Mississippi River, be able, ready, and planning a war against an even greater giant: one strengthened instead of weakened by the great war? The question answers itself.

Second, what then is the justification for the belief that NATO, until quite recently a paper organization, and still far from adequate to its stated purpose, has or could have prevented a Soviet aggression against Western Europe? The mere statement, that since Russia has not atacked Western Europe, NATO must have therefore prevented such an attack, makes no sense. When, if ever, has any great power waited years for a grand coalition to form, organize, arm, and train before attacking, if any attack was intended in the first place? How stupid must one assume the Soviets to be?

Finally, what of the United States foreign policy assumption, "You cannot trust the Soviets under any circumstances"—recently revived by Admiral Radford? The only sensible response to such obvious propaganda is that the Soviets have no better and probably no worse record of performance in international relations than many other governments, including some with whom the United States now has military alliances. This God and Devil, good and evil theory has furnished propaganda and fuel for war for every power group since the beginning of time. In the jungle world of the state system, this has been standard operating procedure for centuries.

I do not know how much experience Adm. Arthur W. Radford has had in negotiating with Soviet Russia, or how good a negotiator he is. But, for whatever it is worth, as chief administrator of our German food and agricultural program in Berlin after World War II, I negotiated with the representatives of the Soviet Union frequently, often daily, and I found them sound, sensible, and reasonable people with whom to work. Once we were able to reach mutually beneficial terms, agreements were possible and when made, they were kept. I found the British and French good collaborators too.

Historically, all great powers have kept their agreements when, but only when, it was in their interest to do so. It would be interesting indeed to see a scorecard of great power performance in this respect, compiled by a competent panel of international experts, free of bias. It might, also, prove interesting to observe the red faces of some of the leaders who have so often, ostentatiously and sanctimoniously, wrapped themselves in the cloak of international morality. It is not that the leaders themselves are immoral, but that the state system is amoral.

So far as the power elite of the Soviet Union and the United States are concerned, the problem consists primarily of the fact that both countries now are centers of world power and, therefore, in the jungle world of the state system, they must of necessity be enemies. If neither was a world power, the fact that one was a Socialist totalitarian state and the other capitalistic democracy would have little significance.

Assuming, as I think one must, that military aid is the common cement which binds together the bricks of the United States military alliance system, and assuming as one must, that great power alliances divide the world sharply, the conclusion is unavoidable that foreign aid as now administered with its emphasis on the military does not promote peace but conflict. And, therefore, it is not in the interest of the American people. It is a fact that the forty-odd allies of the United States do not really have a common enemy, common interest, common language, common culture, common political instituions, or common concepts of freedom and justice. All this means that they cannot possibly form a purposeful alliance. The only interest common among these allies is a consistent demand for United Sates dollars.

Once this interest has been overcome by a greater one, such as nationalism, or fear of the atom and hydrogen bomb attack, the alliances must of necessity fall apart.

Nations do not have permanent allies, only permanent interests, and those permanent interests now are synonymous with world peace. A vast economic aid program, organized and administered along the lines of UNRRA earlier, would contribute materially to world peace because of its international scope and cooperative character. Most of the nonalined nations, such as Burma, Indonesia, and India, have repeatedly stated their preferences for a multilateral aid system under U. N. direction. Even the Soviet Union has recently suggested such a solution for the Middle East.

If the United States would place her vast resources at the disposal of such a project, she could promptly recapture her former proud leadership in the cause of international peace, and likewise, she would contribute greatly to her own security. Her present system of unilateral aid, heavily emphasizing the military side, does not contribute to peace but does contribute to conflict. It is an essential ingredient of the Truman-Dulles-Eisenhower doctrine of Soviet containment, and as such can only contribute to a world war. In our own interests, and in the interests of world peace, we should now be willing, in my opinion, to modify our aid program in accordance with these suggestions.

Need for Driver Education

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. ROBERTS. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD an article which appeared in the Washington Post on June 21, 1957, and which illustrates once again the need for driver education.

The Subcommittee on Traffic Safety, of which I have the privilege and honor to be chairman, has just completed hearings on H. R. 5416, to provide Federal funds to the States to assist them in establishing driver-education classes.

The facts presented to the subcommittee indicate that if we can properly train the Nation's new drivers, it would probably help lower the accident rate. While young people comprise approximately only 9 percent of the Nation's population, they are involved in 27 percent of the Nation's fatal accidents. Several studies made of groups of young people who have had driver training show that driver training reduces the accident rate among the youth by as much as 50 percent. I sincerely hope that H. R. 5416 will be approved when it comes before the House for consideration:

How To Keep Well

(By Dr. Theodore R. Van Dellen)

PRIVILEGES BRING RESPONSIBILITIES

The slogan "Driving Is a Privilege," needs to be emphasized. Those who abuse it by taking the wheel while intoxicated, or by acting like maniacs on the highway, should have their licenses revoked.

For many years, accident prevention has been a hit-or-miss proposition. Every community has its own solution and in many areas the situation reeked of politics. We now have a definite plan of attack that involves the vehicle, the road, and the driver.

Our experts hope to educate the driver at the high school level. Some States make such courses mandatory before issuing a license. This worthwhile project should be incorporated into the curriculum of each school in the Nation so that our boys and girls will learn that driving is a privilege and that transgressing the traffic code is as immoral as killing or stealing.

Great Britain is becoming alarmed at its massacre. The daily average of highway deaths is 15, in contrast to our 110. The World Federation for Mental Health, at a meeting in Berlin last summer, devoted part of its program to the study of speed. A French expert stated that the desire for speed was an expression of man's dissatisfaction with his limitations and frustrations and that spectators derive a similar satisfaction from auto races.

At any rate, speeding is a sign of immaturity and a compensation for feelings of inferiority and inadequacy. It might be wise to try speeders in courts presided over by a judge who is a psychiatrist rather than a lawyer.

The time may come when a physical examination will be a prerequisite to obtaining a license. Mr. Citizen might be suprised to learn how many drivers are half blind, are subject to epileptic seizures, have a disabling paralysis, or are on the verge of a stroke or a heart attack.

Many individuals drive while taking medications that decrease alertness or with a foot or an arm in a cast. I have known persons to drive after getting drops in their eyes; after reaching home they say, "I don't know how I made it."

These points are stressed because it brings us back to driver education. The majority of these drivers obtained their license before these disorders and circumstances arose. Driver education stresses the need for alertness and health and might discourage driving after a disability occurs.

District of Columbia Banking Bill, H. R. 8572

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. MULTER. Mr. Speaker, my bill, H. R. 8572, which I introduced today, would permit the District to have the same banking facilities as the other 48 States. The District of Columbia is the only jurisdiction in the continental United States in which one banking authority has sole and supreme jurisdiction over the granting of bank charters and the supervision of banks. In every other State of the Union there are two banking authorities, the State banking authority and the national banking authority. Each is a strong and vitally necessary safeguard against arbitrary exercise of authority by the other. This bill establishes a second banking authority for the District and ameliorates the tyrannical situation that now exists.

The sole banking official authorized to permit the organization of new banks in the District is the Comptroller of the Currency. There is no check on his powers except by court review, which is expensive and rarely desirable because of possible retaliation, even if successful in court. The policy of his office is not to grant any application for a new bank charter in the District of Columbia. If he cannot discourage the filing of an application for a charter for a new bank in the District, the Comptrolleer will disapprove it after it is filed.

The powers of the Comptroller of the Currency—those which have been granted him by law and those which he claims—are far too broad and absolute for the needs and progress of the District.

If the applicants for a bank charter in the District of Columbia feel that the Comptroller of the Currency is arbitrary in disapproving their application for a bank charter, they cannot make an application to any State authority for a State charter as can be done in every one of the 48 States and in each of the Territories. The Comptroller contends there is no appeal from his decision.

The Comptroller denies to applicants any right to a public hearing on their applications. He refuses them any right to know who may be objecting to their applications and the grounds for such objections.

The Comptroller of the Currency has not bothered to publish rules or standards which would inform the public what facts they must prove in order to justify a favorable ruling or decision on their applications. The Comptroller claims that he is not required to set forth in detail, or in any manner whatsoever, the facts on which he bases a decision on an application. In short, the situation, as it now stands, permits the Comptroller to be as arbitrary, discriminatory, and capricious as he wishes. He can dispense charters and other favors to those whom he deems should have them or withhold them as he pleases.

The present Comptroller's testimony before the House Judiciary Subcommittee on Bank Mergers reveals that he had a complete lack of understanding or comprehension of the monopolistic forces that are, and have been for some time, casting a bigger and bigger shadow over our banking system.

His sympathetic consideration of more and bigger mergers and consolidations has been repeatedly made evident.

I urge you to read the testimony of the man who has absolute power over banking institutions in the District. It is set forth in the transcript of the hearings before the Antitrust Subcommittee—Subcommittee No. 5—Committee on the Judiciary, 84th Congress, 1st session, on H. R. 5948, pages 70–78.

Concerning this testimony by the present Comptroller, the Antitrust Subcommittee made the following comment:

> It is doubtful that the Comptroller's office is aware of the purpose of antimerger legislation or of the dangers that mergers pose to the competitive banking structure. This conclusion is indicated by Mr. Gidney's testimony before the subcommittee that he would not say any banks have been eliminated from competition as a result of mergers that have occurred in recent years. In his view, even if a merger takes place between the only two banks in a community, "there is still competition in the community." (P. 36, Interim Report of the Antitrust Subcommitee (Subcommittee No. 5) of the Committee on the Judiciary, House of Representatives, 84th Cong., 1st sess.)

I do not pretend to be the final judge as to the needs of the District for new banks. However, I would like to point out that there were 29 banks remaining in operation in the District of Columbia after the banking crisis of the twenties and thirties had run its course. I assume there was a need for all of these banks and that they were operating soundly, or the Comptroller of the Currency would have closed them.

In 1933, these 29 banks had about $260 million in deposits.

At present, there are about 17 banks remaining, the other 12 having been absorbed by one or more of the remaining banks through merger, consolidation or purchase. Deposits in the intervening years have increased to $1.4 million, or more than 5 times what they were when there were 29 banks operating in the District.

Yet the Comptroller of the Currency thinks that 17 banks are adequate for the District. He cites the number of branches as if these branch offices furnish bank credit competition. The fact of the matter is that the number of sources of bank credit in the District of Columbia has shrunk from 29 to 17 since 1933, a decline of more than 41 percent and will shrink further as the big banks continue to absorb the smaller ones.

There could be 1,000 branches of these 17 banks, and still there would be no further increase in the sources of bank credit. The branches, practically all of which are operated by the large institutions, only serve to increases the concentration of the power of the big banks' credit in the District. Needless to say, with the number of banks shrinking from 29 17 since 1933, no matter how many branches these 17 banks establish, there can be no increase in the sources of bank credit in the District of Columbia—for as the number of independent banking units decreases, the sources of credit decrease.

The sharp decrease in the number of bank units is juxtaposed against the sharp increase in the population of the District, which has just about doubled, being approximately 860,000 at present, according to the Bureau of the Census estimates. Bank clearings and bank debits, the latter a well-recognized indicator of economic activity, soared to unprecedented heights. Recently published figures on bank loans in the District have shown all of the banks to be loaned close to capacity. The profits of District of Columbia banks after taxes increased 9 percent in 1955. The profits of District of Columbia banks after taxes increased 4.3 percent in 1956.

H. R. 3405 would give to the people of the District of Columbia a voice in determining their banking needs. Before a bank can be chartered by the District Commissioners, there must be a hearing on the questions of whether the new bank will serve the public needs to advantage, whether it will have a reasonable chance of successful operation, the fitness of directors, and other pertinent facts.

Under H. R. 3405, before a bank for which a charter has been issued can commence operations, it must become a member of the Federal Reserve System or of the Federal Deposit Insurance Corporation. Regardless of which membership the organizers of the bank should decide to undertake, the agency in question—the Federal Reserve or the Federal Deposit Insurance Corporation—then must investigate and make a determination of the following factors set forth in section 6 of the Federal Deposit Insurance Act of 1950:

First. The convenience and needs of the community to be served by the bank.

Second. The adequacy of its capital structure.

Third. Its future earning prospects.

Fourth. The general character of its management.

Fifth. Whether its corporate powers are consistent with the Federal Deposit Insurance Act.

At this stage of the proceedings, the Comptroller of the Currency will have the opportunity to state his opinion as to whether the new bank should be insured by the Federal Deposit Insurance Corporation since he is a member of the Board of that Corporation. When the new bank makes an application to become a member of the Federal Deposit Insurance Corporation, the Comptroller of the Currency, who is a member of the Board of Directors of the Federal Deposit Insurance Corporation, will have the opportunity of voting against the new bank if he deems its existence to be contrary to the public interest. Thus, in every case of a new bank chartered under H. R. 3405, two Federal agencies will have the

opportunity to pass on the question of need as well as the District authorities. This procedure for determination by a local agency in the first instance under a local law and a determination under Federal law by a Federal agency is identical to the procedure that is, and has been for many years, in operation in all the States. There is no sound reason why this procedure should not be established in the District of Columbia.

H. R. 3405 would also supplement home-rule legislation since it will give to the people of the District of Columbia a voice in determining their banking needs. For this reason, I hope that those who have been supporting the home-rule legislation will lend their support to this bill. Self-determinaiton of the number of sources of bank credit is vital to the community. Unless there is some action taken to reverse the trend of the past 23 years, the present oligopoly in banking in the District of Columbia will be transformed into monopoly in every sense of the word, and the sources of bank credit in the District, already decreased 41 percent will be further centralized into fewer hands.

My bill will eliminate the dictatorship in banking supervision and bank chartering that now exists in the District. When a new District bank charter is sought, the question of need will be determined by the District Commissioners and the Federal Reserve Board and the Federal Deposit Insurance Corporation. In the case of the action by the District of Columbia Commissioners, the decision will be made after a public hearing, and the rights of all parties and of the public interest will be safeguarded under the Administrative Procedure Act.

I hope to see early enactment of this measure.

You Are Science's New Guinea Pig

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. BURDICK. Mr. Speaker, in 1950 and 1951 a select committee of the House, presided over by my colleague, the Honorable JAMES J. DELANEY, of New York, held 39 public hearings to determine the poisonous or deleterious effects of the use of chemical additives in the Nation's food. This committee reported in 1952 that 276 of the 704 chemical food additives then being used had not been satisfactorily tested. This committee recommended that the Food, Drug, and Cosmetic Act of 1938 needed strengthening to require all food processors to prove by scientific pretesting, beyond a reasonable doubt, that any chemical food additive was safe for use.

Why were these recommendations never put into effect? Who is blocking them, and why? Why should the captive American consumers be treated like an aggregation of guinea pigs?

On March 25, 1957, I proposed by House Resolution 212 that there be a speedy, nonpartisan inquiry by a select committee of the House to find an answer to these questions. This resolution still reposes in the Rules Committee. Can any Member suggest a better way to meet this very serious public health problem?

Apropos of this whole subject of poisoned foods, under unanimous consent I insert in the RECORD at this point a timely article which appeared in the New York Mirror, June 30, 1957, entitled "You Are Science's New Guinea Pig," written by Joan Dickinson. The article follows:

When the American housewife wheels her cart around the supermarket, she is wholly unaware that the safety of the Nation's food supply today is being seriously questioned by leading doctors, due to the tremendous increase in the use of chemical food additives over the past 10 years.

Some research scientists are so alarmed by their experiments on test animals, they are warning of a definite hazard to public health. Practically every food we eat, from bread and butter to apple pie, has had chemicals used in it or on it at some stage of production, processing, packaging, transportation, or storage. And no one is sure what the long-range effect of these chemicals on the human race will be.

For 7 years Congressmen have listened to scientists' reports of how some of the chemicals which are now, or have been, in our foods, have caused a variety of diseases when fed, injected, or skin-painted on test animals. Among these diseases are cancer, sterility, bone disease, liver and kidney damage, blood changes and hemorrhaging. The scientists are not so concerned with highly poisonous chemicals that can be readily recognized, as they are with the small amounts of chemicals that have no apparent immediate effect—the ones they think could have vicious effects on man after years of intake.

Even more startling is the fact that there is no law requiring the testing of chemicals before they are introduced into food. And many have never been tested at all. With the exception of known poisons, the Food and Drug Administration must prove chemicals already in food are harmful, before it can force their removal. Testing and legal actions drag on and on for years while the public acts as human guinea pigs.

A total of 704 different chemicals are presently used in foods—and yet only 428 are known to be safe. This leaves 276 chemicals, commonly consumed by every American family, that have not been passed upon. The Food and Drug Administration refuses to name these chemicals but lists 100 as "probably safe." Of the remaining 176 it knows absolutely nothing—and new chemical additives are appearing all the time.

Wallace F. Janssen of the FDA estimates that with the present staff the agency has a 25-year backlog of research just on food colors alone. Ironically, food dyes are one of the chemicals most frequently cited as possibly being cancer causing.

Added to this unnerving admission is the past record of Government tested and approved chemicals, after years of use, were discovered to be dangerous and were banned from foods. Generally the public never hears of these cases, though they involve basic food items that all of us eat daily.

For about 25 years, Agene, a flour bleach, had been used when scientists proved that it produced running fits, or canine hysteria, in dogs and nervous disorders in monkeys. It was never found to cause epilepsy in humans, but some scientists wonder if other chemicals could be responsible for nervous disorders and mental illnesses.

Thiourea was proposed for use on citrus fruits to prevent mold. Oddly, it penetrated the skins of the fruit and, to the amazement of scientists, when the juice was given to rats they all died overnight. While the FDA was testing it, a frozen food plant noting that thiourea prevented the darkening of sliced peaches—added it to a shipment, without consulting anybody. Luckily, use of the chemical coincided with a plant inspection, and the Food and Drug Administration was notified. It managed to round up all the peaches before they reached the market.

IN LETHAL WRAPPINGS

Recently the agency seized 6,000 pounds of cheese wrapped in a preserving paper that was treated with a chemical as poisonous as carbolic acid. The cheese readily absorbed the colorless, odorless chemical from the wrappers. A salt substitute (lithium chloride), recommended for persons requiring a low-salt intake diet, caused several deaths before it was discovered to be poisonous after a long period of use when the normal salt content of the body is reduced. Dulcin, an artificial sweetening agent used until recently in diabetic food and some low-calorie soft drinks, was on the market for 50 years before anyone bothered to test its long-range effect. The result—it caused tumors in the liver of rats.

These past cases led the House of Representatives to form an investigating committee in 1950, headed by JAMES J. DELANEY of New York. For 3 years the Delaney committee held public hearings. Doctors, who are top experts in their field, unrolled gruesome details of their experiments. These tests are not claimed to be conclusive—it has not been proved that the same chemicals will have as bad an effect on humans, and it is too early to evaluate exactly what effect they have had, or will have in the future—but in view of past experience, they illustrate the urgency of amending the food laws before irreparable harm is done.

Our present population has been consuming large amounts of chemicals for only 10 years—but what effect will they have on our present generation of children who will consume them for a lifetime? Some are alleged to attack reproduction organs—what effect will this have on our grandchildren?

In 1953, Representative DELANEY introduced a bill requiring the testing of all chemicals now in, or proposed for use in, foods. It was proposed that no known poisons be allowed in food, even in amounts small enough to be considered harmless, and that chemicals suspected of being cancer-inciting be banned.

Immediately, industry-sponsored bills were introduced in Congress. Unanimously supporting pretesting, they had a so-called "grandfather clause" which would exempt all chemicals that had been in use for a period of time, and required for the most part, the testing of new chemicals. Eleven bills were introduced, with the result that none has even been acted upon. And scientific reports and more and more warnings continue to pour in.

When the Delaney hearings first started, a bitter controversy had been raging for a year over the use of bread softeners and emulsifiers which are added to bakery goods, candy, ice cream, peanut butter and cake mixes, to prevent separating and make the ingredients blend better. One food chemist described some emulsifiers as similar in chemical makeup to detergents used for cleaning and laundering. Certain ones keep cakes from "dipping" in the middle during baking. When added to bread in larger amounts, some make the loaves softer and they stay softer 48 hours longer. This was a boon to bakers since most women squeeze bread to see if it is fresh. A special bread standard hearing was ordered. Testimony was developed that certain emulsifiers fed to animals in higher concentrations caused a large number of deaths, severe kidney damage, formation of stones, hemorrhag-

ing, and other disorders. Many bakers voluntarily stopped using the chemical products, but Congressmen were alarmed to find that 13 bakery firms were still using them a year later, for fear of losing sales to competitors whose bread was softer. By 1955 the Food and Drug Administration finally succeeded in ruling out the use of certain of these emulsifiers in bread. But the ban applies only to bread—and it took 6 years from the time the first experiments indicated these chemicals could be very poisonous. Not all emulsifiers are considered possibly toxic, but some that are, are still widely used, and labeling requirements do not say the type of emulsifier used must be indicated on the package.

It has long been known that some coal tar dyes cause cancerous growths and for this reason many are banned from use in foods. But doctors are wary of many more that are approved. Hundreds of children have become ill from orange and red colored candy and popcorn. When the Food and Drug Administration removed 3 red and orange dyes from the certified list, the decision was immediately contested in 4 separate court actions. All but one are still unsettled.

A certain butter yellow dye widely used to color butter, margarine, and other products, in the past, produced malignant tumors in the livers of rats. The British, testing 2 of the yellow dyes, found they caused tumors in 7 out of 17 mice in about half their lifetime. Dr. Charles S. Cameron, medical and scientific director of the American Cancer Society, told the Delaney committee: "This is not used as a coloring agent today in this country, but other members of the same chemical class are used, and they are used to color, for the most part, candy, pastry, fruit juices, margarine, and preserves. Yet, they could conceivably be a factor in the development of cancer of the human liver 20 years from now."

USGING A LIMIT ON DYEING

The total production in the United States of synthetic primary coal tar dyes certified by the FDA is more than 1,500,000 pounds a year. Dr. W. C. Hueper, chairman of the cancer prevention committee of the International Union Against Cancer, urges international limiting of food dyes to an absolute minimum. He has named 20 chemicals added to foods or remaining in them after spraying, that produce cancer in laboratory tests.

Dr. Francis Ray of the cancer research laboratory, University of Florida, states that chemicals that do not harm healthy animals will cause cancer in animals that are poorly fed, or if their diet is deficient in certain vitamins. Dr. Ray has also shown that long continued use of a small dose causes cancer much more frequently than a few large doses.

Just a few months ago, Dr. William E. Smith of the Cancer Prevention Committee, and one of the country's foremost cancer research authorities, warned the present Congress of another great hazard—the widespread practice of using stilbestrol pellets to fatten and tenderize poultry and livestock. Stilbestrol is a hormone, known to be cancer-inciting, and so potent and dangerous that under the drug law it cannot be purchased without a physician's prescription. Its use is banned in Canada. Dr. Smith notified Representative DELANEY that it is urgent that any bill to amend the food laws should include chemicals given to animals destined for use as foods.

PELLETS IN THE POULTRY

The history of stilbestrol is one of the strangest tales of modern medicine. The pellets have been injected into poultry for 10 years. It reduces the male characteristics and the fowl gains about an extra pound, has a smoother-looking skin and is said to be more tender. When properly administered, the pellet is lodged at the base of the skull and is absorbed within 4 to 8 weeks, and no remains of the drug are supposed to be in poultry when it is eaten.

Stilbestrol has also been used by doctors to alleviate menopausal difficulties in women, to relieve the pain of prostatic cancer in men, and even to prevent excessive tallness in girls.

Its danger was discovered when mink breeders began reporting that their mink were not reproducing, and soon entire farms were stricken with a strange, unaccountable disease. Dr. Robert K. Enders, a specialist who works without pay for the Department of Agriculture, Bureau of Animal Industry, investigated. The mink had been fed chicken waste, the heads of which contained the remains of the stilbestrol pellets. The affected mink were completely sterile, and many never reproduced again. In time, thousands were affected. To prove the suspicions about stilbestrol, experiments were started.

"The animals that got stilbestrol were the poorest mink I have ever seen that were still breathing," Dr. Enders later told the Delaney committee. "They lost their hair, they were fat and puffy, you could put your finger in the skin and dimple it and the skin would not come back." Cysts developed on breasts, ovaries, kidneys. There was no reproduction at all. Dr. Enders reported another experiment where minute doses of stilbestrol were tried. Ten to 50 gamma a day—a gamma is one-thirty-five millionth of an ounce—were enough to cause sterility. Again, proof that a small regular dose is more harmful than a few large ones.

It was during the mink investigations that it became evident that stilbestrol is present in poultry that is sold to the public. Examining the chicken heads to determine how much of the drug poisoned the mink, Dr. Enders found some heads that had not been injected. It could only mean that these chickens had the pellet placed lower down in the neck or in some other part of the chicken which would be sold, instead of removed during butchering. Food and drug inspectors verified the fact that they do find unabsorbed pellets in marketed poultry. There are only 250 inspectors throughout the country, and it has been estimated that less than 1 percent of the poultry sold in New York City alone, is examined. Careful inspection at a good packing house revealed that 16 percent of the chickens had pellets injected some place other than the head. Poultrymen have written Congressmen admitting this.

Studies reveal that the drug, even when thoroughly absorbed and properly injected, tends to concentrate in the fat and the liver of treated animals and fowl, and much poultry is marketed before the absorbing period of 8 weeks is up. Delaney's office reports that stilbestrol will shortly be available in liquid form, so that it will be impossible for inspectors to detect.

Over 30 million chickens are drugged yearly and 4,000 pounds of stilbestrol is sold. The drug is now proposed for use in lambs, where it has been discovered to have spectacular effects. In the end, it will be impossible to judge how much stilbestrol is being taken in in the average person's diet.

NO SAFE POISON LEVEL

Dr. Smith, this spring, reported: "My colleagues and I have assembled data to show that this drug is not destroyed by cooking and that marketed poultry have contained per bird up to 342,000 times the amount of this drug sufficing as a daily dose to induce cancer in mice."

Where cancer is involved, Dr. Smith says, there just is no such thing as a safe level of poisoning. In the past, the Food and Drug Administration, in the case of known poisons used as pesticides, has settled on an amount that is considered safe to remain on vegetables and fruit. Recently the agency ruled out any residue of Aramite, a spray found to cause tumors in rats, but were forced by the chemical industry to establish an allowable amount.

The Bureau issued an order tolerating residues of Aramite in apples, blueberries, cantaloupes, celery, cucumbers, grapefruit, grapes, green beans, lemons, muskmelons, oranges, peaches, pears, plums, raspberries, strawberries, tomatoes, watermelons, and sweet corn but not forage thereof. The last phrase caused Dr. Smith to comment that this indicated that Members of Congress and their constituents can be obliged to eat this substance, but a cow cannot.

In spite of all this evidence, Congress cannot get around to enacting legislation though everyone is in agreement that the need for the pretesting of food chemicals is urgent. There are presently three bills up before the House: The Delaney bill, requiring complete and thorough testing and proof of the safety and usefulness of chemicals; the middle-of-the-road Food and Drug Administration bill, designed to compromise with the industries' and doctors' desires; and the industry-sponsored O'Hara bill, which gives chemists a lot more freedom.

There is much disagreement about the testimony presented as to the potential dangers of our food supply. Chances are that unless considerable public pressure is brought to bear, the argument will go on and on. Our Congressmen are no closer to agreement now than they were 7 years ago.

I have served in Congress several years with the Representative from New York, the Honorable JAMES J. DELANEY, and as an earnest and conscientious, faithful worker for the people he has no superior. After years of setbacks his message on poisoned foods is finally reaching the people. I am aiding him all I can, and am sorry I cannot do more, for the eating of poisoned foods is doing more to destroy the United States than any power on earth. We can stand economic pressure, we can repel military forces, but the battle against poisoned foods is right here among ourselves. Either it is the idea of profits to food processors or it is a calculated plan to weaken the people of the United States through drug additives to food.

Is this whole field of poisoned foods a Communist plan to defeat the United States? The people of this country must remain on guard. As Washington said in the days of the revolution, "Let none but Americans be on guard tonight."

The Immortal Thomas A. Edison and His Objectives

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, one of the greatest men of all time was Thomas A. Edison. People everywhere throughout the world are indebted to him for the many contributions he made to a better way of life.

I am including at this point an address by Mr. George E. Stringfellow, a long-time business associate of Mr. Edison, delivered in Milwaukee, Wis. on

June 21 before the Tripoli Temple's Shrine Luncheon Club of which I am a proud member. The address follows:

EDISON'S OBJECTIVES

(Address by George E. Stringfellow, longtime business associate of the late Thomas Alva Edison and Imperial Chief Rabban, A. A. O. N. M. S., before Tripoli Temple's Shrine Luncheon Club, Milwaukee, Wis., June 21, 1957)

Noble president, illustrious potentate, members of your divan, representatives to the imperial council, past potentates, heads of units, distinguished guests, and fellow nobles, thank you for the privilege of speaking to you about Thomas Alva Edison, in the radiance of whose genius personality I lived for a significant part of my life. Any success I may have attained, I owe in a large measure to the influence of that association. You can, I am sure, understand why I like to talk about this great benefactor of mankind.

The presence in the audience of a large number of officers of Line Material Co., one of your large industries, is a pleasant reminder of the recent merger of McGraw Electric and Thomas A. Edison industries. This merger was natural and logical, since the founders of both corporations had humble beginnings and they entertained the same philosophy of life.

We of the Edison Industries, now division of the McGraw-Edison Co., feel that the merger holds great opportunities for our employees, our stockholders, and our customers. Mankind will certainly be the beneficiary of the joined forces of McGraw Electric and Edison Industries. I should like to speak to you at a later date about Max McGraw and his contribution to our way of life. However, I am billed to talk to you today about Edison; and, in the words of Winston Churchill, I shall "get on" with the talk.

The secret of Edison's greatness was, in my opinion, his dedication to the service of others. His objective, to make the world a better place in which to live, was attained.

Through Edison's inventions the luxury of kings became the household accommodation of the average man.

Edison believed in our free-enterprise system. His thoughts on this subject were admirably expressed when he said: "The free-enterprise system, as much as anything else, has made us a great Nation. Competition develops better products and improved services and hit thus increased living standards. Competition is good for individuals." And then, with a twinkle in his bright blue eyes, Edison concluded, "Although it is at times uncomfortable."

Edison learned early in life that difficulties are challenges which develop latent resourcefulness in man.

Failures and disappointments never discouraged him. For example, after the invention of the electric light he devoted 10 years to perfecting the process for the magnetic separation of low-grade iron ore. Then a freak of fortune laid bare a great field of rich bessemer ore that obsoleted his work. Turning to one of his associates, Edison asked, "Well, what next?"

When Edison was 82 years old, the world celebrated the 50th anniversary of his invention of the incandescent lamp. President Hoover and a host of other notables from all parts of the world came to his laboratory to do him honor. The next day Edison was back at work. In fact, the day that the fatal illness overtook him, the 84-year-old genius was busily engaged in extracting rubber from goldenrod.

The driving power behind Edison's energy was the desire to master the problems which retard progress of mankind. Edison's disbelief in accepted theories made possible many of his inventions. Had he been willing to accept the prevailing scientific theories as truth, he would not have given the world more than 1,100 inventions, more any any other person in history.

In face of Edison's examples of how to succeed, it is difficult to understand why a large segment of our people today seem to believe in the theory that one can have more by producing less.

A short while before he passed on to his rich reward Edison remarked, "I wonder what would have happened to me, if 50 years ago I had been convinced by a fluent talker that it was not fair to my fellow man for me to put forth my best efforts. If the founders of our Republic," continued Edison, "had been afraid they might contribute more than they were paid for, this country would not have amounted to much."

I like to think of Edison as exemplifying the faithful servants in the parable of the talents related by the Gentle Carpenter of Nazareth, as He and His disciples sat together on the Mount of Olives. You have read the story in St. Matthew's gospel—how the master before going to a far-off country called his servants to him. To one he gave 5 talents, to another, 2, and to another, 1. You remember that the servant who had one talent buried his in the ground. The one who had 2 gained still another 2, and he who had 5 gained still another 5.

Therefore, when the master returned, he was well pleased with the stewardship of the two servants who had made the most of their gifts, and because they had been faithful over a few things, he set them over many.

Edison was indeed a faithful servant. Vision, imagination, genius, industry, tenacity, and character were the talents with which he was richly endowed. By the wise use of these gifts committed to his care, the world has been enriched a thousandfold.

Understanding, light, warmth, joy, and a high living standard—all this we owe to Edison. Because of Edison's vision, because of Edison's contributions to civilization, we are freer physically and richer spiritually. Little wonder that his memory commands a devotion rooted deeply in human gratitude.

In closing, may I quote Edison's last message to the American people: "Be courageous. History repeats itself again and again. Be as brave as your fathers before you. Have faith. Go forward."

That is a great admonition, and we would be wise to follow it.

Tito Talks About Communism

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following column by Constantine Brown, which appeared in the Washington Evening Star for Tuesday, July 2, 1957, entitled "Tito Talks About Communism."

TITO TALKS ABOUT COMMUNISM—WEST SEEN FOOLING ITSELF IF IT THINKS YUGOSLAV DICTATOR WILL SIDE WITH US

Yugoslavia's Communist dictator, Josip Broz Tito, gave American television viewers a smooth performance Sunday. It was disarming and cozy. The stout Croat who holds his subject peoples in a grip of iron was affable and jolly. He waved his cigarette in the air with easy grace while he mouthed Communist nothings, as devoid of substance as the eddies of tobacco smoke around his head.

"Coexistence" was the Tito line, the same as it has been Moscow's, and Tito did a better job of making it seem something like a friendly, entirely reasonable way of life than the sometimes irascible Khrushchev ever did. Tito declared his brand of communism was essentially the same as that espoused by China's Mao Tse-tung, who recently reported to his party stooges that more than 800,000 Chinese have been executed for antistate activities. And it is the same; it is just plain communism, of the same deadly strain as that practiced in the Kremlin, in Hungary, and in every other police state where tyranny masquerades under the name of "peoples' democracy."

Controversy and rancor were entirely missing from the Tito interview, perhaps for the logical reason that the questioner, Edward R. Murrow, asked no controversial questions. Very likely, the Yugoslav dictator ruled out in advance any embarrassingly pointed questions. As a result, he was able to present a picture of sweet reasonableness, a comfortable and genial man enjoying his island retreat with his vivacious wife, his fast motorboats, his sumptuous villa. He is all for peace and coexistence, of course, and in the sylvan luxury of Brioni, surrounded by the crumbling ruins of Roman and Greek grandeur, he can forget about the thousands of political prisoners moldering in his own jails.

Plainly, Tito has not bamboozled the West at all. The West bamboozled itself. For the rugged marshal has never lied about his dedication to Communist absolutism or his own police-state suppression of freedom. If the policymakers in the free world want to make believe that he is a friendly, reliable neutral in the cold war, it's not Tito's fault. Self-delusion is not deceit on his part.

Tito has always admitted without equivocation that, in any showdown between communism and freedom, he is always on the side of the Communists. He makes no effort to hide the fact that, despite his own insistence on a strictly Tito interpretation of the party line, he is in the Soviet camp. When the Hungarian fighters for freedom rose against their Quisling Communist leaders last fall, Tito gave their revolt a bit of guarded praise and quickly reversed himself when the Russian tanks rumbled into Budapest. Then, and now, the Hungarian patriots were "tools of reactionary elements" eager to restore the dictatorship of Horthy, prewar regent of Hungary, whose influence is still supposed to linger despite his exile and death.

Without question, Tito is an integral part of the world Red conspiracy. He may have his own minor deviations as far as the Moscow line is concerned, but only in purely Yugoslav matters. He was able to get away with his defiance of Stalin in 1948 only because the Yugoslav Red movement was new, tiny, and in Tito's pocket since World War II. There would never be a chance that Togliatti in Italy, or Thorez or Duclos in France, could successfully carry off a Tito coup. But in Yugoslavia, where the people, deeply religious and mostly monarchist in sentiment, never gave communism a chance, Tito was able to parlay his success as the leader of the partisan movement into a personal Red dictatorship.

The Eisenhower administration still clings to the fanciful notion that American money, guns, tanks, planes, and technical know-how can keep Tito out of Moscow's clutches. But he has never really been out of them in an international sense, nor does he really want to be. So American arms and aid are, in effect, building up a part of the world

Communist war machine and will be one day used against the free world.

Meanwhile, our support of Tito, particularly in the economic field, enables him to consolidate his Communist regime and with it the world position of communism. The Yugoslav collectivism has never been able to feed the nation. Agriculture and industry have been strangled by Red bureacracy, and every year American wheat, dollars, and machines bail them out for another try.

The telecast should have fooled no one. It is long since time to take another look at the support for the Yugoslav Communist dictator.

Hells Canyon Legislation

EXTENSION OF REMARKS
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. BERRY. Mr. Speaker, under unanimous consent I insert in the RECORD a letter I have prepared outlining the facts with relation to the history of the Hells Canyon legislation as they have been presented to the Interior and Insular Affairs Committee. The statement is as follows:

The Hells Canyon bill may have been killed by another session of Congress, but Hells Canyon may not be dead. It has proven to be a too valuable political issue to be permitted to die.

In an effort to give you the unbiased facts as they have been presented to our commitee through the years, I shall go back to 1947, 10 years ago, when the Idaho Power Co. made application for a license for the first unit, and subsequently made application for all three dams, to use the falling water in the Snake River as it passes through the Hells Canyon Gorge, for the generation of power.

Their eventual proposal was for the construction of 3 dams: Brownlee Dam, 395 feet in height (half again as high as the Capitol Dome in Washington, D. C.), costing $63,594,000, Oxbow, farther downstream, with a height of 205 feet and costing $23,604,000; and Hells Canyon, with a height of 320 feet, costing $45,800,000. The 3 dams have a total dependable capacity of 767,000 kilowatts.

The first proposal for an alternate high dam to be constructed by the Federal Government came to Congress in 1948 when a bill sponsored by Senator Glen Taylor was introduced in the Senate. It was not voted on then, but in April 1950 it was defeated on the Senate floor.

The proposal has been before Congress each session since that time. In 1952 the Interior and Insular Affairs Committee in the House held hearings for 3½ weeks, including 2 hours each morning and many afternoon sessions. At the end of the hearings, the committee, with a membership of 12 Democrats and 9 Republicans, voted unanimously to indefinitely postpone further action on the measure.

The Federal Power Commission held continuous hearings for more than a year on the Idaho Power Co.'s application, and after making an exhaustive study with a transcript of more than 20,000 printed pages, this bipartisan, five-member Commission, upon the unanimous decision of all members, granted the power company's license in 1955.

Following the order of the Federal Power Commission, granting the license for construction to the Idaho Power Co., the Hells Canyon Association appealed to the circuit court of appeals. The circuit court of appeals in a unanimous decision upheld the order of the Federal Power Commission, granting the license to the Idaho Power Co.

The Hells Canyon Association appealed to the United States Supreme Court, which Court, on April 1, 1957, refused to grant a writ of certiorari by a vote of 8 to 1. The association then filed an application for a rehearing before the Supreme Court which was denied.

Immediately following final Supreme Court determination, on April 18, 1957, the Office of Defense Mobilization issued tax-amortization certificates to the Idaho Power Co. on an application made by the company back in 1953. This would mean that for the first 5 years after the project is finished the company would be entitled to a greater rate of depreciation and could depreciate the whole project in that period, which would lower the company's taxes for those years. Then, starting in the sixth year and thereafter, the company would have greater taxpayments for they would have used up all their depreciation credits beside having to set up a reserve for deferred taxes. Since 1950, when the law was passed, 926 similar tax amortizations have been granted to utility companies furnishing power to Government defense installations. Over 21,000 tax-amortization certificates identical to these have been issued since that time.

Returning to congressional action, in each session during the past 10 years, bills have been introduced in both Houses of Congress to authorize Federal construction of a high Hells Canyon Dam. As I have previously indicated, in 1952 the bill was unanimously tabled. Following the decision of the circuit court of appeals in 1956, hearings were again held by the House committee, and the bill was reported to the House by a one-vote margin. It was blocked in a Democrat-controlled Rules Committee and failed to reach the House floor. In 1956 the Senate, by a vote of 51 to 41, rejected a similar bill.

Two weeks ago, it was brought to the Senate floor following consideration of the civil-rights motion, and in an apparent exchange of votes in that body, was passed by a vote of 45 to 38. Following their hearings, the House Subcommittee on Irrigation and Reclamation, by a three-vote margin, struck all after the enacting clause, emasculating, if not killing, the bill.

HIGH DAM

The proposed Federal dam would be 722 feet high with a capacity of 3,800,000 acre-feet of water. However, from 1927 to 1947, there were only 4 years during that 20-year period when there was sufficient water to fill a dam of that size. It would cost the taxpayers $525,500,000 to construct. This figure does not include interest on the investment during construction, and it does not include damage payment to the Idaho Power Co. for the flooding of their installations, which amounts to almost $58 million spent at this date, $1½ million more on obligation, and with one of their dams now over half constructed.

In order to have the high Federal dam constructed by 1964 (it requires 6¾ years to build), Congress would be required to appropriate this year $11,700,000. In 1961 an appropriation of $140,500,000 would be required, which is more than the entire appropriation for the Bureau of Reclamation. (The appropriation for Oahe, for instance, is $26 million, and for the entire upper Colorado project this year is $25 million.)

Congress has never appropriated as much as $100 million for any one project in any one year. Only once since 1940 has Congress appropriated over $50 million for a single project in any one session. That was $63.5 million for construction of The Dalles. And only twice in the same period of time has it provided as much as $60 million for area projects, as distinguished from single projects. This was for the Central Valley and Columbia Basin projects.

If the sponsors of the Federal dam are not successful in getting appropriations of $100 million per year and should they receive only $25 million per year, no power would be produced from the project until 1978—more than 20 years hence. The Idaho Power Co. will be producing power in 1958.

However, without any delays and with unlimited appropriations, no power will be available from the Federal dam until 1964 at the very earliest.

THREE DAMS

On the other hand, the power company now has the Brownlee Dam one-half completed, and the Oxbow is well underway. More than 1,250 men are employed on the construction; they have already spent to date $57,285,000. These plants will add more than one-half million kilowatts to the power product of the Pacific Northwest by 1958.

The three-dam plan, which was found to be the best plan of river development by the FPC, an agency of Congress itself, after 44,000 man-hours of engineering studies, 20,000 pages of hearings and more than 5 million words of testimony, would be destroyed by the Federal dam which the FPC said, "that the United States itself should not undertake the development of."

The overall three-dam project licensed by the FPC will: (a) Develop the same total head of 602 feet as the Federal dam; (b) produce approximately the same amount of average energy; (c) have a dependable capacity of 767,000 kilowatts—as compared with only 785,000 kilowatts for the Federal dam; (d) provide, without appropriations from the Federal Treasury, 1 million acre-feet of storage which is all the flood control storage justified at this point on the Snake River, with benefits appraised by the Army engineers at a million dollars annually, and also navigation benefits appraised at $100,000 annually; and (e) during the 50-year period the power company at the present tax scale will pay the following taxes: Federal, $289,505,450; to State of Oregon, $47,788,000; and to State of Idaho, $150,250,550. Because of this tax contribution to government, both State and Federal, the power company will of necessity receive a higher rate from the consumers of that area. The cost of production of the Federal project is 4 mills at the site, whereas the power company can deliver to the grid at from 4½ to 5 mills.

Much has been said about power to develop the phosphate beds located about 300 miles from these dam sites. At present, the Idaho Power Co. delivers power wholesale to the phosphate companies at from 4¼ to 4½ mills per kilowatt, which is about 1 mill less than Missouri River power costs South Dakota's REA's at the busbar.

It was brought out at the hearings that, in addition to the cost of the Federal power at the dam site, if the phosphate companies were required to pay the transportation cost on the public power from the dam site to the beds, the added charge would be 2.18 mills. It might also be of interest to mention that the Central Farmers Cooperative of Chicago has recently signed a contract with the Utah Power & Light Co. for power for their installation, and has just broken ground on their new $7 million plant. They need power in 1958, not in 1968.

With one exception, all farm organizations and canal companies in Idaho are very much opposed to the high Federal dam. They fear that the need for added water storage in such an impoundment will preempt their water use and deprive the 2½ million acres of irrigated farmland above the dam of sufficient water supply. The economy of Snake River Valley in Idaho is entirely dependent upon the use of these waters for irrigation. The farmers are dependent upon it—Idaho is dependent upon it.

The entire area is out of power and if the Federal project was ever to have been built, it should have been started in 1947 or 1948 and not in 1957 or 1958 with an optimistic completion and power production date of 1967 or 1968.

The Washington Star, in a well considered editorial on the subject, closed with this paragraph, "The issue may still be a football in 1958, but the House subcommittee has done its part, at least, to see that power rather than politics will be produced at Hells Canyon."

That Bond Put Away for College Doesn't Look So Big Now

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. MULTER. Mr. Speaker, on January 10, 1957, I introduced H. R. 2480 which would increase the interest payable on United States savings bonds, and H. R. 2481, which would exempt from taxation the interest earned on United States savings bonds. Both of these bills, if enacted, would make savings bonds a more attractive investment.

In this connection, I commend to the attention of our colleagues the following article which appeared in the July 5, 1957, issue of U. S. News & World Report:

THAT BOND PUT AWAY FOR COLLEGE DOESN'T LOOK SO BIG NOW

Warning to parents: Savings bonds, put aside for a college education, will buy less time in school than you expected.

That is true, too, of insurance policies, other forms of saving for education.

Here's the story of a special inflation problem—for parents.

If you are buying United States savings bonds to finance a son's or daughter's college career, you need to be aware of this:

The cost of going to college is rising sharply, even faster than the cost of living.

This rise in college costs is eating up the interest you get on a savings bond—and some of the principal—in terms of its actual buying power in the field of education.

Result is that bonds you thought would buy a year, or several years, of college may actually buy only about two-thirds as much schooling as you were counting on.

Parents who started saving for a child's education 10 years ago are bumping into this fact of life now, as the child reaches college age and they start cashing bonds to meet the bills.

Parents who are just starting their savings plan face the prospect that increases in college costs may outrun their savings, too, in years ahead.

To understand what is happening, look at some typical examples.

At a State university, 10 years ago, the average student spent about $200 per college year for books, tuition, fees. His living expenses were about $800. Total cost: about $1,000 per school year.

Many parents at that time figured they could guarantee a future year of college for a child by purchasing a United States savings bond for $750, to pay $1,000 at maturity in 10 years. Those bonds were favored as a safe and sure investment.

These parents find, however, that:

Student expenses have jumped about $500 a year at State institutions. That's twice as much as the interest of $250 accruing on the $1,000 savings bond in the last 10 years. Fees and other expenses are up to around $300, living costs are up to about $1,200, per school year.

College costs, thus, have increased about 50 percent as living costs in general rose about 43 percent.

As a result, the bond that was intended to pay for a full 9-month term in college is now able to keep the student in school for only 6 months. A parent has to dig up another $500 to see his child through the last 3 months of the term. That's in the average case. Some students would spend more, others less.

On a 4-year college stay a parent who figured on financing that career with an investment of $3,000 in Government bonds, now cashable at $4,000, discovers he will need $2,000 more, or a total of $6,000.

At a private school costs, started out on a higher level and have jumped less, relatively, than at the publicly owned institutions, on the average. Even so, inflation's a big problem.

The average student at a private college 10 years ago paid about $500 for tuition and fees, another $1,000 for living costs. Total, $1,500 a year.

A parent planning on private college for his child at that time figured a year of future schooling could be assured by purchasing a savings bond with a face value of $1,000 for $750 plus, say, five bonds of the $100 face-value denomination, costing $375. Total investment, $1,125.

Now, however, the year of private school actually costs about $2,100, up $600 over the earlier level, in the typical institution. The rise in costs takes up all the interest accruing on a $1,125 bond investment of 10 years ago plus $600.

Other types of savings, such as endowment-insurance policies, offering safety and a fixed rate of return, also are proving less help than they were expected to be in meeting the mounting cost of college educations.

People who didn't save at all toward college demands find their education costs a far greater problem, obviously, than those who set aside some money in bonds or other savings. But the parents who used to feel secure when they bought a bond a month, for example, for junior's education no longer are so certain of seeing him through college without more financial strain.

It's an extra bite from inflation, for parents only.

Democrats' Dilemma: Civil Rights

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PORTER. Mr. Speaker, the civil-rights discussions now being launched in the other body can result in grievous hurt to the Democratic Party and to the cause of liberalism in the United States. It is a tribute to the character of the Democrats in this House that no such wounds occurred when the legislation was before us.

An acute and timely analysis of the dilemma facing us Democrats appears in the New York Times magazine section for July 7, 1957. It is written by my good friend and distinguished fellow Oregonian, RICHARD L. NEUBERGER, the junior Senator from Oregon. As always he writes without pulling his punches and on a solid basis of pertinent facts. I am glad to associate myself with his views on this crucial matter.

The article follows:

WASHINGTON.—Can the Democratic Party of today actually be regarded as the majority party in the Nation?

This is what many of its partisans claim, and this is what might be assumed from the fact that the Democrats have held numerical superiority in both branches of Congress during most of President Eisenhower's residency at the White House.

It is my belief that this supremacy is far more illusory than real. In truth, the Democratic Party now confronts its greatest crisis in modern times. If the crisis is not successfully weathered, the result could be banishment for the Democrats for many decades from the executive branch of Government. Conversely, mastery of the crisis by the Democrats might mean a return to the political glories of the New Deal, for the Republicans are likewise not without their grave and serious problems.

In the 2½ years that I have been a Member of the United States Senate, a pair of situations have surprised me more than any others. One is the depth and even grimness of the feeling against granting equality to the Negro on the part of many southern Democrats. The other is the hostility of most Republican Senators—and this includes even some of the so-called modern Republicans—toward the mildest kind of social and economic reform.

These two circumstances pose both the sternest challenge to the Democratic Party and its principal opportunity. Of the existence of the challenge there can be no doubt, for the political timbers of the Democratic party have not required such propping and sheathing since the Hoover landslide of 30 years ago.

Although it has won five comparatively recent presidential elections, nevertheless the share of the popular vote collected by the Democratic Party throughout the Nation has declined steadily ever since 1944—and this is particularly true in the teeming metropolitan areas where most Americans live. And, while some Democrats unquestionably derive satisfaction from the party's continued statistical preponderance in both Chambers of Congress, the very nature of this advantage should afford some concern to those who trust that the Democratic Party soon will return to national office.

While the influence of the South in party affairs is doubtless a factor contributing to the dwindling proportions of the Democratic vote in the strategic urban counties of the East, it is a harsh reality that the Democrats would be far outnumbered in the Senate and the House were it not for their nearly unanimous congressional victories in the States which lie below the Mason and Dixon line.

The statistics in this respect are both decisive and startling. They emphasize that the Democratic dominance in the Nation outside the South is a myth. In the 1956 elections, the Democrats nationally polled 1,160,000 more votes than the Republicans in contests for House seats, and 1,500,000 more votes where Senatorial desks were at stake. But what occurs when the single-party South is removed from this compilation? The Democrats then become 2,600,000 votes shy of their Republican rivals in House contests and 1,300,000 votes wanting in contested engagements for Senate seats.

The inevitable conclusion from all this is that the Democrats, in addition to their stunning defeats for the Presidency in 1952 and again in 1956, are definitely a minority party in the States where actual battles are waged over Senate and House positions. For example, the Democrats now hold a margin

of 49 to 46 in the Senate, with 1 place vacant since the death of Senator McCarthy. A similar margin prevailed in the last Congress. Yet even this slim majority is founded completely on 22 safely Democratic seats from 11 Southern States, where senatorial elections go to the Democrats practically by default. If these southern seats were split equally between the parties, the result would be decisive Republican rule in the Senate by an edge of at least 58 to 38.

Thus the Democratic Party is in the anomalous position of being dependent for its Congressional majorities on an element that is a liability nationally—the Southerners who oppose civil-rights legislation. It is this question that threatens the party's future. Virtually all southern Democrats oppose Federal legislation guaranteeing the Negro his voting privileges and civil liberties. With any matter even remotely touching the race question at issue, earnest southern liberals like LISTER HILL and JOHN SPARKMAN of Alabama must take the same essential position—albeit not so flamboyantly—as JAMES O. EASTLAND of Mississippi and RICHARD RUSSELL of Georgia. Some of the political realities ruling the South were demonstrated in 1956 when the elderly Senator Walter F. George of Georgia, himself a longtime foe of civil-rights legislation, had to give way before a young challenger who differed from Senator George only by adopting a more strident attitude toward this problem.

When even Democrats with the liberal reputation of J. W. FULBRIGHT, of Arkansas, and ALBERT GORE, of Tennessee, stand against resolutions to limit debate so the Senate can finally vote on civil-rights proposals, this becomes a heavy burden for their colleagues to carry in Northern States. Indeed, I believe his allegedly "moderate" posture on civil rights was Adlai Stevenson's greatest single liability during the recent Presidential campaign. The civil-rights dilemma loads down the Democrats in the North, as the Old Man of the Sea sat athwart the shoulders of Sindbad the Sailor.

The assumption has been made that this liability prevails only among Negro voters. I doubt if any conclusion could be more fallacious. During the 1956 campaign my wife and I delivered more than 350 speeches urging the reelection of Senator WAYNE MORSE. We were continually confronted with the charge that a vote for Senator MORSE, the Democrat, was a vote to continue Senator EASTLAND as chairman of the Senate Judiciary Committee, where civil-rights legislation normally originates. This contention could not have come predominantly from Negroes, for less than 2 percent of Oregon's population is colored.

Furthermore, Senator MORSE himself had protested the accession of Senator EASTLAND to the Judiciary chairmanship, while Mrs. Neuberger and I, as State legislators, had been sponsors of Oregon's own Fair Employment Practices Act and State civil-rights bill. Yet we still were kept on the defensive over the hostility to civil rights on the part of many of my southern colleagues.

Of course, the charge has hurt the party with Negro citizens, too. After his narrow defeat for reelection in Kentucky, Senator Earle Clements told me that he had been sharply attacked because, as assistant Democratic floor leader, he had performed the purely automatic task of presenting Senator EASTLAND's name for chairman of the Judiciary Committee, a promotion governed by the long-enduring seniority system. This was used effectively among the not inconsiderable colored vote in Louisville, although Senator Clements had been a backer of legislation to safeguard civil rights.

Nor, at the national level, can Democrats ignore the facts highlighted by Richard L. Lyons of the Washington Post and Times Herald, when he wrote last November: "Election returns made it evident there had been a significant Negro Presidential voting switch away from the Democratic Party standard bearers, with whom they had been allied since Franklin D. Roosevelt's day * * *. In every city surveyed, President Eisenhower won a larger percentage of the Negro vote then he did in 1952."

What are the chances of healing the Democratic cleavage over this burning issue? And, barring a thorough rapport within the party, how can the Democrats recover politically from a breach that has widened ever since the Supreme Court verdict in the school-segregation cases?

I believe these events are necessary in order to attain such results:

1. Civil-rights legislation must be enacted. Without this basic prerequisite, the controversy will smolder indefinitely within the halls of Congress—and particularly inside the Democratic Party. Southern Democrats, while expressing to the full their legitimate views, must refrain from using a filibuster to prevent perpetually a vote in the Senate on civil rights. Not only is this legislation needed and merited, but unless Southern Senators are willing to forego stalling tactics and interminable debate, the Democratic Party eventually could be wracked to pieces.

2. Northern Democrats—at least until their numbers in the Senate are appreciably greater than at present—must accept gracefully as leader of the party in the upper chamber someone like LYNDON B. JOHNSON, of Texas, who represents a composite of Democratic Senators and who is close to the southerners on the issues which move them most emotionally. Insistence by some northerners on a Senate leader farther to the left, while perhaps not as divisive a force as the adamant southern antagonism to civil rights, nevertheless contains real elements of peril for a united and cohesive party.

3. Northern and southern Democrats alike, once the breach is even slightly closed, must dramatize for the country that there never would have been substantial economic gains either for Negroes or for whites if Republican policies on social welfare had dominated the Nation during the past quarter of a century.

The first two of these proposals require a certain modest degree of accommodation by both sides to the simmering strife over civil rights and related matters in the Democratic Party. Yet I think the compromises involved are reasonable.

As for the Democratic liberals—on one recent intraparty division along liberal-conservative lines, we liberals from both North and South could muster only 20 of the 49 Democratic Members of the Senate. When our Members are considerably less than half of the total, how valid a right do we have to object to a leader who symbolizes more of a cross section of party membership in the Chamber? I would calculate that LYNDON JOHNSON stands quite a few notches closer on the political spectrum to Senator PAUL H. DOUGLAS than to Senator EASTLAND, and I doubt if we liberals have a bona fide case at present against a Senate leader who thus synthesizes the views of the men from whom his authority stems.

But suppose the southern Democrats do not consider this northern concession a sufficient quid pro quo for abandoning their right to filibuster civil-rights legislation? The northern Democratic Senators are not helpless; they hold some trump cards, too. I always have felt they could announce to their southern colleagues that an opportunity to ballot unimpeded on effective civil-rights legislation was going to be the consideration for continued northern support of a Senate organized by the Democratic Party.

After all, under the inexorable seniority rule, most of the committee chairmanships belong to southerners when the Democrats form a majority of the Senate's membership. They have the choice seats at the head of the green felt tables, control of the selection of committee staffs and the scheduling of bills, the gleaming limousines and the other perquisites. They would lose these emoluments if the northern Democrats abstained from contributing the votes necessary to Democratic control of the Senate.

It is one of the political ironies of our era that the Democrats from the North must wage the most desperate battles against their generously financed Republican foes, but to the Democrats from the one-party South go the chairmanships and the prestige posts in the Upper Chamber. While it may be presumptuous for a Senate tyro to voice such a prediction, I prophesy there might be a rollcall vote at last on civil rights if the northern Democrats sought this in return for supplying the numerical strength to make possible continued Democratic titular supremacy when the Senate is organized.

Nor do I regard such a bargain as improper. No southern Senator would be asked to surrender his honest convictions and beliefs, but merely to forego the use of essentially undemocratic Senate rules which block majority action on civil-rights legislation.

My third proposal was that northern and southern Democrats must join in dramatizing Democratic liberalism. One of the main reasons the Democratic Party is in trouble nationally is a widely held belief that, under its current leadership, it is losing out on liberal issues to the Eisenhower Republicans. Many of my constitutents have recently expressed the disgruntled viewpoint that the Senate Democratic spokesmen are to the right of the political figures who describe themselves as modern Republicans. This notion, prevalent though it may be, is far from the actual truth—but I must confess that we Democrats have done an ineffective job of countering propaganda about so-called modern Republicanism.

In fact, on many basic domestic issues—expansion of social security, custodianship of natural resources and taxation predicated on ability to pay, to name only three—the supposedly conservative Senate leadership of the Democratic Party has been markedly more liberal than prominent symbols of "modern" Republicanism on the other side of the aisle. On almost all issues except those embodying the general problem of civil rights, the vast majority of Democrats in the Senate are conspicuously to the left of the Eisenhower Republicans. This does not mean all such Democrats are invariably liberal per se, but rather than they are favored greatly by the contrast in economic outlook between themselves and most of their GOP colleagues. Whatever may be the faults of the Democratic Party, they are trivial when compared with the indifference of its principal competitor to the continuing need for fairness and justice in our social and economic structure.

It is for this compelling reason that I believe the Democratic Party must not crack apart into a Northern and a Southern faction. Such a break would only surrender the Government of the United States to the Republicans, virtually by default, for far into the future. The opposing forces in the civil-rights controversy must resist the temptation to go their separate ways.

As a Northern liberal, I often feel that I would prefer to be in a separate party in the Senate, rather than anchored in any fashion to fellow party members who are so stubbornly determined to block civil-rights laws. Perhaps my Southern colleagues—equally rooted in their differing views—may occasionally harbor similar thoughts. But then I peer across the center aisle at our Republican rivals: people sincerely convinced of the rightness of their attitudes, but militantly

against the legislative correctives and palliatives which are so necessary to help the less favored and less fortunate in an economic system such as ours. And I realize that both the Democratic North and South will have to give ground so that the political party can endure which conquered the depression, mobilized the victorious war against the Axis and took the heroic but politically hazardous steps in Korea to curb aggressive communism.

If it is to fulfill its challenging mission of advancing liberalism, the Democratic party must overcome the civil-rights crisis which has cost it so dear in recent elections. Failure to accomplish this could be fatal to the party and, more important, lastingly detrimental to the Nation.

The Dilemma of Disarmament

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, people throughout the world are anxiously following the East-West disarmament negotiations being carried on in London. Under leave to extend my remarks in the Appendix of the RECORD, I include the following article on this important subject, written by Dr. Reinhold Niebuhr, distinguished clergyman and Christian educator. Dr. Niebuhr's timely article appears in the July 10, 1957, issue of the Lutheran magazine:

THE DILEMMA OF DISARMAMENT
(By Reinhold Niebuhr)

The dimensions of the moral dilemma of our age continue to expand. The peace which we enjoy is the consequence of the stalemate in the nuclear weapons arms race. Neither America nor Russia has a clear superiority. Both sides have publicly confessed that they do not want war, because a war with the inevitable use of hydrogen bombs would be suicidal for both sides.

Naturally, both sides are anxious not to fall behind in the arms race in which the weapons include not only hydrogen bombs but ever more intricate guided missiles in which the Russians are constantly threatening to surpass us.

If the stalemate continues there is little prospect of an all-out war. Either side might, of course, stumble into a conflict by some accident, but neither side wants to start such a war. But the necessities of preserving the stalemate confront us with some serious problems.

One is moral, occasioned by the danger to health by the fallout from the nuclear tests. Dr. Albert Schweitzer and a group of German scientists have protested the continuance of these tests, and the protests remind us of Adlai Stevenson's campaign proposal for challenging the Russians by United States abandonment of the tests and their resumption if the Russians fail to abandon them.

But with so much at stake the United States has refused to take the risk, particularly since there is no unanimity among scientists about the danger of the fallout. Incidentally, one of the problems which ordinary citizens face in our age is that they are called upon to make moral decisions on issues in which only experts have real knowledge and on which they frequently disagree.

The second problem is both moral and political. Briefly stated, our preoccupation with the ultimate nuclear weapons has made it practically impossible to counter Russian threats in local wars, in the so-called Koreas. This tendency to rely only on the ultimate weapons has been accentuated by the new British defense policy, which relies on political power to counter the Russians in local areas, and places the chief reliance on the deterent value of the ultimate weapon.

Thomas Murray, who has been a member of the Atomic Energy Commission, has called attention in a recent magazine article to the peril in this policy. It is the more dangerous because the Russian and the Chinese armies are our superiors in infantry in most parts of Asia.

There are Christians who believe that the only solution for such moral dilemmas is the disavowal of any reliance on atomic weapons. But that is a position which responsible Christians cannot take, though idealistic individuals may advocate it.

We face, in short, a moral dilemma for which there is no clear moral solution. It is certainly ironic that our culture which, only a half a century ago, was so confident of man's ability to master historical destiny should find itself in the grip of the destiny which it has no chance of mastering.

The Christian faith has always understood the moral ambiguity of the human situation and has known that there are no moral solutions for the ultimate moral problems of our existence. We may find all sorts of proximate solutions if we have the humility to recognize that the ultimate solution is beyond the competence of mortal men.

It's Started

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. BRAY. Mr. Speaker, I wish to insert an editorial from my hometown newspaper, the Martinsville, Ind., Daily Reporter, of July 5, 1957. I believe the point is well-taken that the character of William Girard, or even his guilt of innocence of the present charge, is not pertinent to the question of United States jurisdiction over our servicemen. What is pertinent is his constitutional rights, and the attitude of his Government toward those rights.
The editorial follows:

IT'S STARTED

The effort to bring the character of Specialist William Girard into disrepute, predicted by the Reporter several weeks ago, is beginning.

This is done in an effort to divert the public from demands for reforms of our foreign affairs. Officials desiring to promote the growth of governmental power through the treaty clause of the Constitution fear that resentment over the Girard case may result in passage of the Bricker amendment. So they are painting Girard as a criminal in an effort to make the campaign on his behalf look foolish.

The issues actually are not affected by Girard's character. All the charges against him may be as true as Scripture. He may be a vicious fellow who deliberately lured a poor Japanese scavanger to her death.

Whatever he is does not make right the practice of the United States Government in drafting men for involuntary service in foreign lands where they lose the protection of our courts.

Most of the servicemen who get into trouble in foreign lands are not as innocent as 11-year-old schoolgirls. Many of them are bona fide murderers; others are chicken thieves.

Yet murderers and chicken thieves are guaranteed the protection of Anglo-Saxon jurisprudence under our Constitution. They are unconstitutionally deprived of these rights under the status of forces treaties.

More important, the treaty power is resorted to in an effort to change the fabric of our Government as it affects internal affairs. By discrediting Girard's case, the agents of central power hope to head off the libertarian campaign directed at the assumed power of the Federal administration to deprive any citizen, soldier, or civilian, of liberty and property without due process of law.

On Tenure in the Supreme Court and Investigating Court Decisions

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. David Lawrence which appeared in the Washington Evening Star under date of July 2, 1957, entitled "On Tenure in the Supreme Court." Recent decisions of the United States Supreme Court have jolted millions of our citizens into a realization that the rights of the legislative and executive branches of our Government have been ignored and that it is high time that the representatives of both of these branches of our Government scrutinize closely these recent decisions to determine the extent to which the judicial branch of the Government is actually making the laws of this land by judicial decree. Certainly considerable thought should be given to the proposal to set a specified time for the tenure of office of our Federal judiciary.

In the same connection, Mr. Speaker, I include another article by Mr. Lawrence from the Washington Evening Star of July 3, 1957, entitled "Investigating Court Decisions."

ON TENURE IN THE SUPREME COURT
(By David Lawrence)

What can be done about a Supreme Court that ignores the rights of Congress and the Executive and, in effect, nullifies various provisions of the Constitution itself?

This question has arisen lately because of the extreme nature of some of the decisions of the high court which substantially impair the investigative operations of Congress and the prosecution of criminals and traitors.

It may come as a surprise to many people to find that Justices of the Supreme Court of the United States are not assured of life tenure and that nowhere in the Constitution are the words life tenure used. Actually, the Constitution simply says that Justices of the high court shall hold office only during good behavior.

The Constitution provides for impeachment of judges, but solely for treason, bribery and other high crimes and misdemeanors. In the event, however, that the Justices do not commit any such crimes but go

beyond their proper judicial functions and actually destroy the right of the Nation to protect itself against subversion, can anything be done about it?

Strangely enough, in the entire history of the Supreme Court there never has been a case involving a definition of the words "good behavior" in connection with any Supreme Court Justice. Nor has there been any case in which the power of removal of High Court Justices has been ruled upon.

This correspondent the other day recalled the stir made by the famous Myers case in October 1926 and took occasion to reread the decision, because in its 50,000 words is given the most exhaustive discussion of the removal powers of Congress ever presented by the Supreme Court.

But this case and the decision in the Humphrey case in 1935—repudiating the President's removal of a member of the Federal Trade Commission—are confined largely to the question of how far Congress may by law restrict the removal powers of the Chief Executive with respect to executive and quasi-judicial posts. It is clear that the President can remove an official for the causes specified by Congress when fixing the term of office and also for other causes not mentioned by Congress when the post is purely administrative. The decisions are vague and contradictory where no term is specified by Congress—as, for instance, in the case of lower court judges.

It is plain from a reading of the Myers case that most of the discussions in the early days of the Republic and since then have related primarily to whether the Senate has to be consulted about removals. It seems to be an established fact that for many years the Congress asserted its right to participate in the removal power. Describing this early history, the Supreme Court in an opinion in 1939 said:

No one denied the power of the President and the Senate, jointly to remove, where the tenure of the office was not fixed by the Constitution, which was a full recognition of the principle that the power of removal was incident to the power of appointment."

Often quoted in these decisions and rebutted is an argument made in The Federalist by Alexander Hamilton, who wrote, "It has been mentioned as one of the advantages to be expected from the cooperation of the Senate in the business of appointments, that it would contribute to the stability of the administration. The consent of that body would be necessary to displace as well as to appoint."

It seems logical to conclude—as Justices Brandeis, Holmes, and McReynolds plainly asserted in their dissent in the Myers case—that the power resides in Congress to control removals by stipulating in a law the basis for such removal.

Hence, if Congress chose to define good behavior and provided by law that the President and the Senate could jointly decide on the removal of any or all of the Supreme Court justices and then other justices were nominated and confirmed to replace them, there is enough legislative power vested in Congress to make the action stick despite any attempt by the courts to interfere. For Congress also has the right, specifically given by the Constitution, to determine the appellate jurisdiction of the Supreme Court. Through a law of this kind, Congress could prevent any review of its own statutory definition of the phrase good behavior.

So justices of the Supreme Court can be ousted whenever Congress and a President jointly decide to take that action to protect the country from erratic or irresponsible decisions by a majority of the high court. Life tenure is a custom, not an absolute assurance of tenure for Supreme Court justices. And custom has been overturned in decisions in more instances in the 20 years since the so-called liberals took over the Supreme Court than in all the 148 prior years of judicial history.

INVESTIGATING COURT DECISIONS

(By David Lawrence)

The Judiciary Committee of the House of Representatives wants to know how far the recent decisions of the Supreme Court go toward limiting or crippling the investigative powers of Congress. So a special committee of five members has been appointed to conduct an inquiry.

But before any such inquiry can be effective, will the House of Representatives accept the Supreme Court's edict and pass a resolution stating exactly what it wishes to investigate, and, if it should decide to call any witnesses, will the committee make clear in advance just what the witnesses are to be asked?

Any investigation probably will be useless unless the House of Representatives is prepared to assert fully its prerogatives under the Constitution, which says each House can make its own rules governing its proceedings.

There are lots of things about the operations of the Supreme Court of the United States which, under the right-to-know doctrine, Congress can seek to learn.

There is, for example, the role of law clerks. Maybe they ought to be summoned to testify to explain recent decisions. Some of these aides are brilliant students of the law and perhaps know more about the new-fangled reasoning in the so-called liberal decisions than do some of the Justices themselves.

In the March, 1956, issue of the California Law Review, for instance, there was published an article entitled "The Federal Loyalty-Security Program: A Proposed Statute." One of its three authors was Graham B. Moody, Jr., who was described in a footnote as head law clerk to the Chief Justice of the United States.

Moody, in this article, proposed a bill which Congress was evidently urged to enact in place of the Executive order setting forth the President's loyalty and security program. It was this order whose scope was subsequently modified by the Supreme Court's decision in the Cole case. Among the recommendations of the suggested bill is the point that a distinction should be made between employees in security-sensitive agencies and ordinary employees of the Government.

The Supreme Court itself had under consideration at the time the Cole case and, in a decision handed down on June 11, 1956, made just such a distinction. The Court said the Congress didn't mean to allow nonsensitive agencies to be covered by the President's regulations.

Moody left the service of the Chief Justice a few days after the decision in the Cole case was handed down, as the term of the Court ended. Moody, of course, had just as much right to publish his article as the Justices, themselves, seem to assert off the bench in making public speeches on controversial issues of the day.

Unquestionably, Moody knows a lot about the powers of Congress in these matters and, in the article in the California Law Review which he coauthored, a footnote occurs: "For what it may be worth, it is the writers' belief that some type of Federal security program is both politically and socially justifiable." But the article points out that Congress should exclude from consideration as charges by any executive department against any employee such things as the signing of petitions, presence at a gathering of two or more people, use of an alias, attendance at educational institutions, travel outside the United States. It isn't clear from the article whether all questions relative to such points would be barred from inquiry or merely omitted in setting up standards to assure that discharges from Government employment would not occur solely on account of their associations or passive activity.

Moody's point of view seems to have been borne out or confirmed in the Supreme Court decisions which followed. This would appear to indicate that, while the justices themselves might decline to testify before the new committee of the House, maybe the talented law clerks could shed some light on the reasoning processes of some of the justices. For the Court now holds that individual rights virtually supersede the right of the Nation to protect itself against subversion. It accepts the so-called liberal view that congressional investigators have no right under the Constitution to compel answers from witnesses if the questions relate to beliefs, past associations, or political concepts. The word political presumably now covers the Communist Party, though Congress has refused to dignify the Communist organization as a legitimate political party in this country but holds it to be the agent of a foreign power hostile to the interests of the United States.

The House Judiciary Committee will not get very far with its inquiry unless it is prepared to investigate the processes of the Supreme Court itself. For the American people have the right to find out who writes the decisions of the Supreme Court today—the Justices or their law clerks. If the law clerks have such influence, should not each perhaps be recognized with the title of assistant justice and be appointed hereafter subject to confirmation by the Senate, just as are the Justices themselves and the policymaking officials who assist the top-level members of the executive branch of the Government?

Secretary Weeks' Move To Oust WOC's Incomplete

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith insert the following statement:

Secretary Weeks' decision to discontinue appointment of WOC's from industry to head the operating divisions of the Department of Commerce finally puts into effect one of the recommendations made by the House Antitrust Subcommittee in its report on its extensive investigation into the use of WOC's by the Department of Commerce.

In its investigation, the Antitrust Subcommittee found that WOC's in the Department of Commerce had been appointed to full-time operating positions where their Government responsibilities inherently involved conflicts with their private interests. Mr. Weeks' decision, although belated, to curtail this practice in his Department, as far as division heads are concerned, is a step in the right direction.

Secretary Weeks' new order will continue to permit WOC's to serve as Assistant Division Directors and Branch Chiefs. This shows he still ignores the conflict of interest that is present when a WOC administers a Government program involving the company that pays him. Secretary Weeks should not appoint WOC's to head Government programs that affect their own companies.

Mr. Weeks' action shows he has become much better informed about WOC's than he was at the time of the Antitrust Subcommittee's investigation. During the investigation, Mr. Weeks claimed that findings by the Antitrust Subcommittee concerning WOC's in his Department amounted to a massive attack on free enterprise. Mr. Weeks' decision to remove WOC's from some of the important operating positions in the Department of Commerce demonstrates the validity of the Antitrust Subcommittee's criticisms of the practices it uncovered in his Department.

An Outrageous Sacrifice

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. BOW. Mr. Speaker, among the columnists who have seen fit to comment on the Girard case, I have noted that Mr. George E. Sokolsky appears to have the most accurate information and a proper objective approach to the status of our Armed Forces in foreign countries. He has written several columns on different phases of the Girard case which, of course, have appeared in numerous papers. One of these which Mrs. Kathryn Ellis Nowak, of Hempstead, N. Y., sent to me, appeared June 15 in the Long Island Press, of Jamaica, N. Y. Under leave to extend my remarks I offer this for the RECORD:

AN OUTRAGEOUS SACRIFICE
(By George E. Sokolsky)

The Girard case involves extraterritoriality, a very tricky and touchy subject. There was a time, after the opening of Japan by Commodore Perry (1853), that many foreign nations enjoyed extraterritoriality on Japanese soil and the Japanese struggled valiantly to get rid of the system by which foreigners governed themselves while living in Japan. As late as when I came to Japan in 1920, in cities such as Yokohama, Kobe, and Osaka there were memories of those days.

Extraterritoriality returned with the conquest of Japan by Gen. Douglas MacArthur but soon ended so far as foreign civilians are concerned. The American Army of Occupation became an army to assist the Japanese to withstand Russian aggression and is now stationed there for that purpose.

To avoid giving the impression of being an army of even partial occupation, the Status of Forces Treaty was applied in Japan. This treaty is wrong from every standpoint because it imperils the liberty and life of every American soldier stationed abroad in a country where the treaty applies. It is a badly conceived and badly written treaty and can only produce a constantly lowering morale in our armed services.

There is no use for a Washington official saying that the foreign courts are better than ours or more lenient. That is not the issue at all. If an American soldier, in uniform, serving his country abroad has violated regulations he is entitled to a court martial by his own service and no substitute will do.

An American is to be tried by his peers, which in the original connotation meant equals. As far as Japan is concerned, its administration of the law is so different from anything an American knows and understands, that no matter how lenient the courts may be, the American soldier will not know what is happening to him. Besides, how much Japanese does Girard know? Can he understand what goes on in a Japanese court?

It has now been clearly established that Girard's constitutional rights have been sacrificed in order not to displease the leftist elements in Japan and other Asiatic countries who might kick up a row if this American soldier's constitutional rights were preserved.

Are we to sacrifice American lives to the agitation of the left wing elements?

Who in the Government of the United States has the authority under the Constitution to deprive an American citizen of his rights as stated in the Constitution? Actually no one can do that. The President of the United States has no such authority; the Secretary of Defense has no such authority. If a soldier may be deprived of his constitutional rights because it serves the momentary politics of the State Department, why may not this newspaper be shut down for calling Khrushchev a bum, or why may not Billy Graham be arrested for preaching his particular dogma of Christianity?

There are not far-fetched examples. Actually when the Constitution is pushed aside to suit a temporary policy, it can be pushed aside for anything or for everything.

Girard did not violate the Status of Forces Treaty. He could not have violated it because he was on a military task at the moment and the treaty applies only to military personnel when they are off duty. Neither the Government of the United States nor the Government of Japan has any authority under any treaty or law to place his liberty or life in jeopardy, no matter how much each Government may benefit by so doing. * * *

When governments becomes lawbreakers, they are no different from other lawbreakers. They should be condemned by decent people. The reaction of the American people to this outrage is totally on Girard's side. No propaganda and no lies will change that. When American life becomes so cheap that a few politicians and bureaucrats in Washington can throw it to the dogs of political expediency, the American people will speak up—and sharply.

It is like that Khrushchev broadcast which made such a good impression at first, but now many Americans realize that we were had and that a brilliant propaganda was done against the United States and that great harm is being done to our country. Americans will not be silent about that either. Moral indignation over the subordination not only of individual Americans but the United States to myopic policy is growing every day.

Truman Voices Reminiscences

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an article written by Drew Pearson which appeared in the Washington Post Times Herald on July 6, 1957.

The article follows:

TRUMAN VOICES REMINISCENCES
(By Drew Pearson)

Harry Truman was in his usual bouncing mood when I saw him recently. A big pile of mail was on his desk. The American flag was beside it.

"I'm just back from stirring up the animals in Washington," he said. "Somebody has to do it."

I reminded the former President that the last time I had talked to him he had predicted there would be war over the Suez Canal.

"That was in February, 1956," I recalled, "which was 5 months before Nasser seized the Suez Canal, and 9 months before war started. How did you know war was coming?"

"Very simple," he replied. "Russian arms in Egypt. When you have an arms buildup you have war."

"Would you have stopped that buildup if you had been in the White House?"

"We have enough ships in the Mediterranean," he replied, "to throw a blockade against any vessel bringing in Russian arms. And the United Nations would support us in heading off war."

"At the Potsdam conference," he reminisced, "I posed that all important waterways be internationalized—Suez, the Dardanelles, Gibraltar, the Danube. I offered to internationalize the Panama Canal. Those waterways have got to be internationalized to keep peace in the world. We should have done it before Nasser seized the Suez."

"What happened to the proposal at Potsdam?"

STALIN LAUGHS

"The British were lukewarm," Mr. Truman replied. "Stalin said he couldn't do anything about the Dardanelles until the Montreux Convention expired. He wanted to control the Dardanelles himself and take it away from Turkey.

"Stalin always wanted a base in the Mediterranean. Now Russia has one in Albania and another at Alexandria, Egypt. I'll bet Stalin is standing up in his grave laughing."

"What do you think is the way to bring peace to that part of the world?" I asked.

"Just what I told you before," said Mr. Truman, proving that his memory was better than mine. "That is where history began. Most of our wars began down there," he pointed to the Suez Canal area and the Near East, "or in the Balkans.

"That's what Hitler was after—oil and a route through Suez. But we are not going to have peace until we readjust things. Two hundred families own most of the arable land in Iran. About 20 families or so own the best irrigated land in Egypt. I had a survey made when I was in the White House and it showed that the only way we could have peace is to settle all these problems," he pointed to the entire map of the Mediterranean, "from the Adriatic to Morocco."

FIRED TWO CABINET MEMBERS

I asked the former President whether any Cabinet officer had ever opposed him or President Roosevelt on the budget in the same way Secretary of the Treasury Humphrey had opposed President Eisenhower.

"Not on the budget," Truman replied, "but Henry Morgenthau came to see me and said he wanted to go to Potsdam. I told him the place of the Secretary of the Treasury was in Washington.

" 'In that case,' he said, 'I will have to resign.' 'All right,' I said. 'You can write it out now,' and I handed him a piece of paper. He resigned.

"Then there was Ickes. He was a great old boy," said the ex-President. "I liked him but he opposed me on Ed Pauley for Under Secretary of the Navy. I had a spe-

cial reason for appointing Pauley to that job. He was tough enough to keep the admirals in check. But I couldn't make Ickes understand that and after he opposed Pauley's appointment he came to me and said he wanted to resign in 6 weeks.

"'You have resigned already,' I told him.

"Later he came to see me, I think in 1948, and said, 'I've got to get into this campaign. They are taking the country away from us; I want to make some speeches.'

"So Ickes made some of the best speeches of the campaign."

I tried to get the ex-President to comment on some of the disagreements within the Democratic Party, particularly the refusal of Senator LYNDON JOHNSON, of Texas, to cooperate with the Democratic Advisory Committee on which serve Adlai Stevenson, Senator Kefauver, and Truman himself. But he shied away.

"It won't hurt us to fight among ourselves," he said, "just so long as nobody is underhanded. The Democrats are like the Irish—if they are not fighting the enemy, they fight among themselves. We used to have factional fights among the Democrats in Kansas City. It did us good to have those fights come out of our systems. Just so long as we fight in the open and nobody nurses grudges, it's a healthy system."

Race Relations in the City of Detroit

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. DINGELL. Mr. Speaker, I read with considerable gratification an article appearing in the Detroit Free Press of Wednesday, June 26, 1957. That article I find is one of the most effective and unbiased articles which I have seen on the subject of progress in race relations in the city of Detroit.

While we Detroiters and citizens of Michigan generally concede that we have yet much progress to make in the field of race relations, still it is with considerable pride that we view the successes which we have made in the city of Detroit in this regard.

It is our hope that all right-thinking men will one day come to realize that true progress for Americans cannot ignore progress for one segment of the economy and of our people.

The article follows:

(Worldwide attention is being focused on Detroit as the city plays host to the national convention of the National Association for the Advancement of Colored People and awaits the convention of the urban league. Both conventions are concerned with the role of the Negro in the United States. What of the role of the Negro in Detroit? For an intensive, factual presentation, the Free Press assigned several members of its staff to do a comprehensive, calm study of the question. Earlier articles concerned housing, business, and churches. Today's discusses the achievement of the Negro.)

(By Ed Winge)

Detroit Negroes have compiled a distinguished record of achievement in nearly every phase of the community's life.

In politics, in law and sports, in public service, medicine, business, and labor, they have fashioned noteworthy careers, often against considerable odds.

Some, by the very nature of their position or the field in which they excel, have attained greater prominence than others.

Particularly is this true of men and women who have become leaders in business, sports, of the professions, and then turned to politics.

This would include people like Dr. Remus Robinson, highly respected physician and first Negro to be elected to the Detroit Board of Education; Charles C. Diggs, Jr., businessman and first Negro to be elected to the United States Congress from Michigan (13th District Representative).

Also, men like Alfred M. Pelham, recently resigned as Wayne County budget director (as his father was before him); Circuit Judge Wade H. McCree, Jr.; Common Pleas Judge Elvin Davenport (assistant Wayne County prosecutor before Governor Williams appointed him to the bench); Dr. Alfred Thomas, Jr., who followed his father in a distinguished career of physician, hospital administrator, and public servant.

State Senator Basil Brown and former Senator Cora Brown also have made their mark in politics.

Detroit's Negro community proudly claims a man who is perhaps the world's outstanding Negro diplomat, Dr. Ralph Bunche, now serving as United States under secretary to the United Nations after a widely acclaimeed career as a diplomatic troubleshooter around the world.

Another Detroiter, Charles Mahoney, president of the Great Lakes Mutual Life Insurance Co., became the first American Negro to serve as a full delegate to the U. N. on appointment by President Eisenhower.

Then there is John Dancy, venerable head of the Urban League, who has quietly done so much to advance the job opportunities of his people.

Negro attorneys also serve on governmental legal staffs. Hobart Taylor heads the civil department of the Wayne County prosecutor's office. Charles Farmer is an assistant State attorney general.

Frederick Byrd is an assistant city corporation counsel. Willis Ward, one-time University of Michigan football great, formerly was an assistant United States district attorney.

Negro executives in integrated business firms are not nearly as numerous as Dancy would like to see.

However, two names immediately come to mind as successes in the business field. They are Ramon S. Scruggs and A. J. Calloway, public relations manager and suburban manager respectively of the Michigan Bell Telephone Co.

Behind the more widely publicized activities of these leaders is a large group of people who have achieved significant successes.

Leaders in the field of journalism include Mrs. Gladys Johnson, editor of the Detroit edition of the Pittsburgh Courier; Longworth Quinn, general manager, Charles Wartman, executive editor, and William Matney, managing editor, respectively, of the Michigan Chronicle, and Collins George, Free Press staff writer and only Negro reporter on a Detroit daily.

Matney also doubles as secretary of the Michigan Boxing Commission.

Many others have achieved signal success in chosen fields and are prominent members of the Negro community.

It is impossible, of course, to list them all.

But such names come to mind as Mrs. Beulah Cain Brewer, Dr. Haley Bell, and Heilbron B. Love.

Mrs. Brewer, after compiling an outstanding record as a teacher, became the first Negro named to an executive position in the Detroit public school system when she was appointed assistant principal of Higginbotham School in 1944.

She went on to become the first Negro principal when she was named to head Brownson School in 1947. She later moved to Alger School and now is principal of Pattengill School, which has a predominantly white student body.

Educated in Talladega, Ala., College, she took her master's degree in educational psychology at Wayne University in 1938, and presently is working on her doctor of philosophy degree at Wayne.

W. St. Clair Billups, now chief executive at Sampson School, became the second Detroit Negro public school principal.

Other Negro principals are Mrs. Mildred Lee, at Alger, and Mrs. Effie Taylor, at Brownson.

Ernest Marshall and Mrs. Jeannete Watt are serving as administrative assistants in guidance and placement on the board of education staff.

Negroes also have assumed positions of responsibility and leadership in suburban school systems. Dr. B. A. Milton is a member of the Inkster school board.

Dr. Foraker Johnson, a dentist, serves as school board member in River Rouge, and Attorney Charles W. Hague is in a similar capacity on the Ecorse Board of Education. Phillip Robinson is principal of an elementary school in River Rouge.

Dr. Bell, a dentist who has maintained offices at 9521 Jos. Campau, Hamtramck, for more than 30 years, has long been considered one of Detroit's most successful Negro businessmen.

Owner of extensive real estate property and a member of the board of directors of the Victory Insurance Co., he recently entered a new field—that of radio broadcasting.

With his son-in-law, Wendell Cox, he launched last fall Station WCHB, Inkster, the Detroit area's newest radio station.

Love has achieved distinction in engineering. A University of Michigan graduate and a registered professional engineer, he became a city electrical inspector in 1941.

In February 1953 he was named chief electrical inspector for the department of buildings and safety engineering, the post he now holds.

Negroes also have served diligently and effectively on official and quasi-official boards and commissions promoting racial tolerance and equality of opportunity.

Dr. J. J. McClendon, a physician, is a member of the board of the National Association for the Advancement of Colored People.

For years he was president of the local NAACP branch, now headed by Edward M. Turner, who also is head of the Michigan Conference of NAACP branches.

Members of the Community Relations Commission include Edward Davis, veteran auto dealer; James McFall, undertaker, and Mrs. Beulah Whitby, assistant director of the commission.

George Isabell, real estate management specialist, was for years president of the Detroit Housing Commission. Attorney Jesse Slaton is a member of the City Plan Commission. Mrs. Geraldine Bledsoe is on the staff of the Michigan Employment Security Commission.

Dr. Austin W. Curtis, businessman-chemist and head of Curtis Laboratories, which makes cosmetics, proprietary medicines, and drugs, is a member of the Citizens Redevelopment Corp.

Negroes have achieved distinction in the field of organized labor. Alex Fuller is a vice president of the Wayne County CIO council.

William Oliver is codirector of the UAW's fair practices department. Mrs. Lillian Hatcher is an international representative in the UAW women's bureau.

Among the more prominent businesswomen are Mrs. Violet T. Lewis, owner-operator of the Lewis Business College; Mrs. Bertha Grooms, head of the Detroit Institute of Commerce, and Mrs. Carmen Murphy, who has developed the House of Beauty into one of the most luxurious beauty salons in the city.

Veteran businessmen include Cidney Barthwell, who has built a successful chain of 10 drugstores; A. B. Chenault, University of Michigan graduate, real estate broker for more than 20 years and developer of the Mount Clements subdivision that bears his name.

Also L. C. Blount and Ernest Shell, vice president and secretary respectively of Great Lakes Mutual. Shell also is a member of the Wayne County board of supervisors.

M. Stewart Thompson, an accountant for 30 years, helped found the Home Federal Savings & Loan Association and served as manager for several years.

He is no longer with the firm, having gone into the mortgage and real-estate business for himself.

Then there are Milton Monjoy and Richard Austin, certified public accountants; John White, owner of the Gotham Hotel; Randolph Wallace, of the Garfield Hotel; Elwood Garvin, 20-year veteran of the used-car business; James Webster, undertaker for more than 40 years; and Troy Goins, manager of the Victory Loan Co.

Also Charles C. Diggs, Sr., head of the House of Diggs undertaking firm; Forrest Green, owner of a barber school; C. W. White; W. D. Morison; and Melvin Jones, in real estate; C. Walton Lewis and R. G. Schuster, who have their own insurance agencies.

In the field of building-trade supply are Manco Jones, president of the Builders Supply & Construction Co., and Walter Block, president of the Electrical Contractors & Engineers Co.

Wendell Murphy, attorney, manages the Brewster-Douglass housing project and teaches English at the International Institute. Willis Graves and Francis Dent are well-known attorneys.

Melvin Jefferson and C. A. Howell operate beauty and barber-supply firms.

In the field of fine arts, Hughie Lee Smith has been widely honored for his paintings in oil. Mrs. Nellie Watts specializes in concert management.

Any effort to cite the achievements of Detroit's Negro community must, by the very nature of the task, prove incomplete.

Even a partial listing of those who have won distinction is a formidable job, attesting to the broad scope of the Negroes' significant contribution to the community.

Soldiers' Rights Are Surrendered

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. BOW. Mr. Speaker, in the past 6 weeks magazines and newspapers have been flooded with articles and editorial comment concerning the Girard case in Japan and the agreements respecting the status of our Armed Forces in foreign countries. Some of the writers do not always appear to have full information, others are noticeably following the propaganda line set by the executive departments. It is encouraging to note that other Americans have studied our situation thoroughly so that their indignation is based on information and fact and not emotion. One of these is Mr. Dorsey Hardeman, a State senator in Texas, whose comments appeared in the San Angelo, Tex., Standard Times of June 8, 1957. Mr. Hardeman's article is as follows:

SOLDIERS' RIGHTS ARE SURRENDERED

(By Senator Dorsey Hardeman)

At last the overly trained internationalists are reaping the whirlwind of their folly in violating the constitutional rights of our people. Little did it seem to matter to those stalwart surrenderers of constitutional American liberty in July 1953 when 72 United States Senators blithely ratified the then, and now, reprehensible and indefensible NATO Status of Forces Treaty, after becoming convinced, as stated by Senator JOHNSON, of Texas, "that it afforded ample protection to the rights of Americans."

It never has been quite clear to me why it was necessary, after 166 years of constitutional protection, to enter into a treaty with a foreign nation to assure protection to the rights of Americans, under the circumstances purportedly justifying this particular treaty. In the first place it involved only members of the Armed Forces, most of whom were involuntarily inducted into service and likewise stationed, to some extent perhaps, against their will, throughout 79 foreign countries. It exempted all high brass, leaving them to be protected only by the guaranties of the 166-year-old Constitution of the United States, while the millions of GI's were afforded the additional protection of the NATO Status of Forces Treaty, which, in the mind of the writer, was conceived in the iniquitous doctrine of surrender and born of political expediency. What a diabolical farce and fraud perpetrated in the name of ample protection of the rights of Americans.

Had these international do-gooders, in their brinksmanship been content to remain steadfast to constitutional American principles, as well as, constant to accepted, established international law, rather than lost in their own irresolution by forsaking the ancient landmarks in order to gain fleeting, and doubtful, favor from some unmoral, slave-holding foreign princes and potentates, the United States would not today be faced with the serious implications of the Girard case, notwithstanding the President's assurance, at a news conference, that if Girard didn't receive a fair trial it would be taken up diplomatically. This is about as empty as kissing a grasswidow by telephone.

American soldiers have simply been sold down the river of surrender and expediency, with impunity and, doubtless, the great leaders who laid the groundwork culminating in the Status of Forces Treaty may now feel fully rewarded in their fait accompli.

As has been previously pointed out in these columns, international law has decreed for more than 125 years, which this country unqualifiedly accepted and followed, that troops stationed in a foreign country are there either as invitees or as invaders or conquerors; and exclusive jurisdiction remained in their commander and, in the case of United States troops, the Articles of War, as enacted by the Congress of the United States, followed the troops at all times.

General Pershing, for instance, with the full support of President Wilson, would have it no other way concerning the American Expeditionary Forces under his command and stationed on foreign soil.

This rule of law has never been heretofore denied, only disregarded now.

Incidentally, the Girard case is by no means the first and only case involving the surrender of rights of American GI's under this vicious treaty. Nor do I have all such cases available because of the lack of publicity given and public apathy that surrounded them and perhaps, the further fact that our purchase-money foreign aid program had a full head of steam at the time and the international cooperators and giveaways were stalking across the rights of the people in 7-league boots in the name of national security, while at the same time surrendering and disregarding individual security in a land supposedly dedicated to respect for the individual dignity of man.

Congressman FRANK BOW of Ohio is sponsoring a move in the Congress to repeal the Status of Forces Treaty. Thus far it has met with little success. The international conspirators have not as yet felt the impact of public opinion developing at the grass roots. An articulate and aroused electorate, intelligently aware of such encroachments can bring about an agonizing appraisal of the situation, just as the administration and the Congress are experiencing in connection with the peacetime spending orgy proposed by Mr. Eisenhower and his political satellites.

Cal-Sag Is the Key

EXTENSION OF REMARKS
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. O'BRIEN of Illinois. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following remarks by Brig. Gen. P. D. Berrigan, division engineer, United States Army Engineer Division, North Central, before the East Side Chamber of Commerce, Chicago, Ill., July 1, 1957:

CAL-SAG IS THE KEY

I have chosen as the subject of my remarks this evening the phrase "Cal-Sag Is the Key." This is a phrase which is most significant, I feel, and is very appropriate for our discussion. It is so meaningful, in fact, that we have used it as the theme for an exhibit which was built by the Chicago district for display at the National Rivers and Harbors Congress in Washington, D. C., 6 weeks ago. This same exhibit is now on display at the Chicagoland Fair and may be seen there on the north pier until the fair closes on July 14.

The Calumet-Sag Channel has been described from time to time as the kingpin of a vast midcontinental waterway consisting of the Great Lakes-St. Lawrence system on the one hand and the canalized Illinois-Mississippi-Ohio-gulf intracoastal system on the other. The connecting link between these two sprawling navigation systems, the kingpin which makes them one huge integrated waterway, is this 16-mile Calumet-Sag Channel from Sag Junction to the Little Calumet River. There is no other direct water connection between the Great Lakes and the inland waterways. Therein lies its significance, for, whereas the port of Chicago last year handled about 250,000 tons of overseas freight, the antiquated Cal-Sag Channel is already carrying about 4½ million tons of commerce. Also, while it has been predicted that overseas freight will increase to at least 1½ million tons per year by 1965, the Corps of Engineers has conservatively estimated that traffic through the Cal-Sag will reach 12 million tons per year within 5 years after completion of the project now under construction. Ultimately that traffic is expected to exceed 18 million tons per year. Arthur Schwietert, director of the transportation division of the Chicago Association of Com-

merce and Industry, says that these Corps of Engineers estimates are conservative in view of rapid developments taking place within the Chicago metropolitan area. He says, and I quote, "On the basis of industrial expansion since the estimate was made it is reasonable to assume that within 5 years after the project has been completed annual traffic will amount to a little over 16 million tons."

In support of my thesis that improvement of the Cal-Sag will unlock the door to a period of unparalleled economic expansion in this midcontinental region, I would like to quote further from the article by Mr. Schwietert in a new publication of the Chicago Association of Commerce and Industry entitled "Chicago's New Horizons." Mr. Schweitert opens his article, "Seaway developments to make Chicago the world's greatest inland port," with the following statement: "Metropolitan Chicago, long the natural functional center of the Nation's network of railroads, commercial airlines, and interstate highways, stands on the threshold of a transportation development which will bring to the area unmatched industrial and economic growth over the next 10 to 15 years. Along with this growth, Chicago's historic advantages as the heart of the largest single production area in the United States will take on new worldwide significance. Three projects will play a joint role in this new era of growth; the St. Lawrence seaway, Chicago's port program in Lake Calumet, and the widening of the Calumet-Sag channel, Chicago's vital link with the Illinois-Mississippi Waterway and the widespread tributary systems of the Missouri and Ohio Rivers. Together these developments will spark the greatest period of progress metropolitan Chicago has experienced since the turn of the century."

I subscribe wholeheartedly to Mr. Schwietert's views, particularly with respect to the role of Cal-Sag. However, I would emphasize a fourth major project. This is the project to deepen the Great Lakes connecting channels to minimum safe navigable depth of 27 feet. These connecting channels, the St. Marys River between Lake Superior and Lake Huron, the St. Clair River, Lake St. Clair and the Detroit River between Lake Huron and Lake Erie, and the Straits of Mackinac between Lake Michigan and Lake Huron are the busiest rivers in the world. Traffic through the Soo Locks in the St. Marys River exceeds 100 million tons per year. Detroit River traffic amounts to as much as 140 million tons annually. Total commerce on the Great Lakes, including exports from and imports to United States ports, was about 239 million tons in 1955. This represents about one-fourth of the total waterborne commerce of the United States, including all ocean ports and inland waterways. This tremendous volume of traffic through the connecting channels shows clearly that these channels from the vital links that make the Great Lakes the greatest inland waterway system in the world.

At the present time controlling depths of 25 feet in downbound channels and 21 feet in upbound channels, when the ruling lake level is at low-water datum, are available between Lake Superior and the lower lakes. The deeper depths were provided in the downbound channels to accommodate deep-draft loaded ore carriers. The Corps of Engineers is now engaged in a $136 million project to modernize the Great Lakes system by deepening these connecting channels. This will be a long and tedious job, covering about 130 miles of channel generally from 300 feet to 1,200 feet wide. It involves the removal of approximately 44 million cubic yards of ledge rock, boulders, gravel, sand, and clay, of which about 4 million yards can be removed only by drilling and blasting. In addition, there are estimated to be about 4,300,000 square yards of area which requires sweeping and clearing to remove shoals for depths up to 1 or 2 feet, consisting generally of ledge rock, boulders, and clay in the lower Detroit River. Work began in the Amherstburg Channel of the Detroit River this spring and contracts have also been let for deepening of the Middle Neebish Channel in the St. Marys River. If carried out in an orderly and economical manner, it is possible to have minimum controlling depths of 25 feet for both upbound and downbound traffic by June 1960, full project depth of at least 27 feet in all channels by June 1962. At that time the lake States above Lake Erie will truly be the fourth seacoast of the United States.

Other data on the connecting channels project are stated in detail on the 7-page fact sheet which has been made available to you. The Great Lakes harbors map with it shows the location of the connecting channels about which I have been speaking.

The foregoing will give you some idea of the magnitude and nature of the connecting channels project—primarily a huge underwater excavation job—and its cost—approximately the same as the United States share of the St. Lawrence seaway job. The point I particularly want to make, though, is one which is not generally understood. That is that the connecting channels project is not part of the St. Lawrence seaway, nor is it merely an extension of the seaway. The seaway ends at Lake Erie. The connecting channels project extends from Lake Erie to Lakes Huron, Superior, and Michigan. As a project it was found to be economically justified solely on the basis of present and prospective interlake commerce (which now amounts to 119 billion ton-miles per year) without considering traffic entering or leaving the lakes through the St. Lawrence seaway. However, since connecting channels depth will be equal to seaway depth, the connecting channels project will result in substantial additional benefits to deep-draft seaway traffic passing through the connecting channels into or out of the upper lakes. Whatever the volume of that seaway traffic may be, it will still be only a small fraction of the total traffic on the Great Lakes. Iron ore, coal, stone, grain, and petroleum, and other bulk freight, most of it originating on or near the lakes, will still be the lifeblood of Great Lakes' commerce. It is on this basis that the north central division is now engaged in economic and engineering studies to determine the need for further improvements of the harbors on the Great Lakes in the interest of present and prospective deep-draft commerce. First to be completed will be studies of harbors where movement of iron ore, coal, and stone, is of major importance, then harbors where other bulk commodities are involved, and, finally, those harbors where general cargo traffic is involved. It is not to be assumed that construction of the St. Lawrence seaway and the Great Lakes connecting channels will automatically result in corresponding deepening of harbor facilities at all Great Lakes ports.

So much for the seaway and the connecting channels.

Quoting further from the previously mentioned "Chicago's new horizons" here are further prophecies of things to come, all based in part on the developments which are taking place here at Lake Calumet Harbor and the adjoining Cal-Sag project:

Paul Kunning, director, commercial development division, Chicago Association of Commerce and Industry: "Three waterway developments now underway—the St. Lawrence seaway, the Cal-Sag Channel improvement and the Port of Chicago in Lake Calumet—are expected to produce the greatest commercial, industrial, and population boom Chicago has ever experienced.

"By 1975 enlarged overseas trade and expanded water-transportation operations will in themselves provide job opportunities for 140,000 additional workers. Industrial growth along the Cal-Sag Channel will provide an estimated 300,000 jobs in the new factories erected there. Four hundred and fifty thousand additional jobs will result from interrelated developments, including expansion of present industries to serve the new industries, and expanded retail, wholesale, and service trades to serve the increased population.

"In brief, the grand total of new jobs which can result directly or indirectly from the 3 waterway projects is 890,000. This impressive number of new workers, on the basis of the present ratio of jobs to people in the area, can support an added population of approximately 1,900,000 persons (by 1975)."

Louis M. Kohlmeier, Wall Street Journal writer: "The Chicago metropolitan area and the railroad industry grew up together before the turn of the century. The area long ago became the biggest railroad center in the Nation because of its strategic geographic and economic location. For these same reasons it continues today to be the hub of a 221,000-mile railroad network that plays a large part in lacing together every region of the country into an economic whole.

"Since the days when Chicago and the railroad industry were young, new and important forms of transportation have come to the fore. In part they are competitive with rail freight movement but they also are complementary in this century of vast economic and industrial expansion. Trucks are moving goods generally in smaller quantities and over shorter distances but more quickly than the railroads. Barges on the inland waterways are moving huge quantities but at a slow pace that makes this form of transport particularly adaptable for raw materials."

Ray Vicker, industrial editor, Wall Street Journal: "Port authorities estimate that by 1960 a million tons of general merchandise will move annually in and out of the Lake Calumet Harbor facility, with about two-thirds of it transported by motor carrier. By 1970 the freight total should triple the 1960 figure." He calls Chicago the "world's greatest trucking center."

William Ferris, Associated Press grain markets writer: "It is confidently expected by Chicago grainmen that within the next decade Chicago will become the leading seaport in America for the export of grain.

"Yet it is the St. Lawrence seaway which really fires the imagination of the Chicago grain trade. The seaway will bring the Atlantic Ocean inland and its waves will lap Illinois cornfields. An exhaustive study of comparative ocean and rail routes for export grain, undertaken by a Midwest university, has concluded it will be much cheaper to ship grain out of Chicago directly on oceangoing vessels than to send it by rail to Atlantic coast ports for loading there onto vessels.

"Chicago will become the export port for the major wheat producing State, Kansas. The Chicago territory will include such fertile producing States as Nebraska, Missouri, Iowa, and of course, Illinois. Grain elevators at Lake Calumet will be ideally located for all types of transportation. Grain will come up the Illinois Waterway on barges for unloading into elevators and later transfer into ships. The Calumet expressway passes nearby and a truck interchange will be provided."

Frank C. Byrnes, Midwest editor of Chemical Engineering and Chemical Week: "Freight and distribution costs have become increasingly important. It's more economical to manufacture at the hub of a market and ship in all directions than it is to be located off to one side, shipping in only half as many directions. No location can begin to challenge Chicago as the hub of the world's best water-rail-highway-air trans-

portation system. And further improvement will come as the seaway, Cal-Sag development and Calumet Harbor are dovetailed into the network." He predicts an influx of new plants in the Chicago area, producing fertilizers, sulfuric acid, ammonia, industrial gases, water treatment chemicals, fungicides, and other chemicals. Much of the raw material required would be brought in cheaply by barge.

In view of these authoritative predictions by experts whose opinions must be seriously regarded, what more can be said to convince you that the port of Chicago has a bright future and that prime factors in its continued economic, cultural, and physical growth will be the Cal-Sag and Lake Calumet Harbor? We are standing at a great crossroads of commerce served by all forms of transportation—rail and pipelines, waterways, highways, and airways. In this situation, the Cal-Sag Channel and Lake Calumet Harbor are vital links in a great transportation facility which will contribute mightily to the future prosperity of this region and the Nation. A new and highly integrated pattern of commerce, embracing the free flow of heavy bulk cargoes and other goods, is emerging along the north-south axis of our revitalized and expanding inland waterways system. Cal-Sag is at the center. Cal-Sag is the connecting link. Cal-Sag is the key.

In closing, I have just one recommendation to make. That is that you continue to work together for the common good of the Calumet region. This is a region which is bound together by common interests and common needs which transcend the lesser needs and interests of its component communities. It crosses city, county and State boundaries which cannot be permitted to hamper your efforts to provide the welfare of the entire area. You are fortunate in having leaders with vision, ingenuity and integrity who have brought you this far in the development of this port and this Cal-Sag project, to the point where the dreams and plans of yesteryear are rapidly becoming reality.

Within the past 2 weeks I was pleased to note that the Illinois State legislature passed a bill to create an Illinois-Indiana Bi-State Development Commission to study trade development in the lower Lake Michigan area. This is an action which I hope will lead to coordinated planning of port and waterway development in the Calumet region involving the cooperation of the States of Illinois and Indiana, the Chicago regional port district, the city of Chicago and other municipalities in a manner similar to that of the port of New York. Over 20 years ago the Indiana Legislature passed a bill authorizing an interstate port authority. The same bill failed to pass the Illinois assembly. Now it appears that the time is ripe for both States to pass enabling legislation for a bi-State port authority. Such action is needed if this area is to compete successfully with other ports such as Hamilton, Ontario; Buffalo, Cleveland, Toledo, Detroit and Milwaukee.

I also want to take this opportunity to give credit where credit is due for the accomplishments which have already been made here. There are some among you who have done noble work in bringing to reality the developments here at Lake Calumet and at Cal-Sag. There are several groups, also, which have done much to pave the way for the development of this port and the connecting waterways. First of all I would name the man whose yeoman efforts 2 years ago led directly to the appropriation of the first money to begin work on the Cal-Sag Channel. He is John Killian, regional vice president of the Calumet Region Congress, who obtained the signatures of the entire Illinois congressional delegation on the resolution which persuaded Congress to appropriate $4 million for the start of the Cal-Sag project in fiscal year 1956. His work was publicly recognized at a dinner given by his many friends at the Museum of Science and Industry last Monday night. Honored with him was Judge Walker Butler, of superior court, who is also in the forefront of those who have had the vision to see the potentialities of this great port and who has worked untiringly to bring them into being. I would be remiss if I did not also mention Hjalmar Johnson, who last week made the presentation to Mr. Killian and Judge Butler. As president of the Inland Waterway Coordinating Committee, Mr. Johnson has been a stabilizing influence and a wise counselor in matters pertaining to the Calumet-Sag project.

The Illinois congressional delegation, particularly Representative THOMAS J. O'BRIEN, is also to be commended for the foresight shown in their bipartisan action in unanimously supporting the request for funds to begin the Cal-Sag project. Without their united support the project would not have gotten under way at that time.

I should also mention that the Corps of Engineers has received magnificent cooperation from all local interests involved in the many phases of the planning and construction of the Cal-Sag project. I particularly want to recognize the Metropolitan Sanitary District of Greater Chicago, the Chicago Regional Port District, the Calumet Region Congress, the Inland Waterways Coordinating Committee and the Chicago Metropolitan Council of the Mississippi Valley Association.

It has been a wonderful experience to work with Mr. Killian, Judge Butler, Hjalmar Johnson and the representatives of the groups I have named, among them Admiral Goodall, Great Lakes division manager of the Mississippi Valley Association. The cooperation they have given me has been magnificent and because of it I will remember my tour of duty here in Chicago as one of the most enjoyable periods of my military career. I am retiring from active duty this month and I regret to say that my association with many of you will come to an end. I would leave you with this charge, that you give my successor, Brig. Gen. Louis J. Rumaggi, the same cooperation you have given me these past 2 years. General Rumaggi is an able and dedicated officer of the Corps of Engineers and he is not unfamiliar with the Great Lakes, having served as district engineer, Detroit, from December 1, 1948, to May 25, 1950. He will welcome your wholehearted cooperation.

Introducing John M. Blair

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, industry, when it prospers, makes jobs. United States industry is doing just that. Management and labor generally agree that capitalism is not a monstrous, menacing danger, but, on the contrary, is the free world's stanch counter to the blandishments of communism.

Why then, do we need in Government employment, men who hate and fear capitalism, as their own writing indicate?

Why should such men be hired to conduct antibusiness—and therefore anti-job-creating—investigations?

If reforms are needed, let them by all means be uncovered—and corrected. But how much faith can be put in investigators who believe that capitalism is and of itself, antilabor?

Herewith I include the following article about the return of one of the New Dealers to the green pastures of anti-capitalism:

[From the New York Herald Tribune of May 12, 1957]

INTRODUCING JOHN M. BLAIR

(By Donald I. Rogers)

A couple thousand years before the advent of Christ, a Greek philosophical observer—Solon, I think it was—opined that democracy embodied the seeds of its own destruction. He meant that, given the free franchise, voters would vote their freedoms away (witness Germany, Italy, France, and England).

Nearly a couple thousand years after Christ, another observer, Karl Marx, held that capitalism carried within itself the seeds of its own destruction.

In 1938 a writer by the name of John M. Blair rediscovered both these philosophies and wrote a book called Seeds of Destruction, purported to be a study in the functional weaknesses of capitalism. It was published by Covic-Friede, at $4. It received complimentary reviews in the New Republic, and by Harold J. Laski in the Nation.

This is the same John M. Blair who is chief economist under Senator ESTES KEFAUVER, Democrat, of Tennessee, the much headlined leader of the Senate's antitrust and monopoly subcommittee.

Senator KEFAUVER, with an eye on the White House, entertains the idea that he can reach 1600 Pennsylvania Avenue by riding over the crushed skulls of America's big businessmen. His chairmanship of this vital committee is regarded as a perfect vehicle.

EXPERT ON OIL

He expects this fellow, John M. Blair, to be the chief skullcrusher. So let's take a look at John M. Blair. He's been with Government for 20 years. He's an economist—to use the academic title of this inexact and unscientific science—and he's an expert on oil, one of the areas where Mr. KEFAUVER hopes to strike hard.

It could be understood that in the unsettled, harsh days of 1938, a student of economics might hold unsettled, harsh views, which, in the ensuing years, with maturity and a restoration of capitalistic principle, might be tempered. But as far as can be learned, Mr. Blair has never recanted. Unless he has made private utterances to the contrary, we must assume that he believes the same today as he did in 1938.

He is a dialectic writer. His views are strong because he writes from the premise that we all hold socialistic beliefs, that we all believe business is too big, that we all feel the worker has been abused in our industrialized, capitalistic society.

Some samples:

"Capitalism * * * through the use of machinery and other devices * * * has cast out employment from industry a progressively increasing number of workers and has lowered steadily the relative wages of those employed."

Could a writer ever be more in error? Have the relative wages of industrial workers declined? Have an increasing number been cast out of employment?

Or, regard this:

"The significant fact * * * is that during the decade of American capitalism's greatest expansion and prosperity, 1919–1929, the rise in labor productivity was so marked that more workers were displaced from their positions than were taken into the ranks of the employed. There appears to be no indication that this devastating trend will be

abated; rather existing indexes seem to indicate that it will be accelerated even beyond its present rapid rate."

I like this one, particularly in view of the tremendous expansion of American industry and of the huge sums of capital supplied by the "upper classes":

"Capitalism has distributed a large share of its income to members of the higher income groups, and those income recipients in the upper classes have utilized a large and increasing proportion of their income in such ways as to make it ineffective as mass purchasing power, either through their purchasing of expensive luxuries from other members of the upper classes, or through their trading in outstanding or other nonproductive issues of securities" (p. 155).

This is the man who has been selected by Senator KEFAUVER to help prove that American business is a monster which needs a stronger checkrein. He seems ideal for the job.

A logical question, though, is whether Senator KEFAUVER holds these same views? If so, has he let the people of Tennessee know it?

Drivers Would Accept Drastic Safety Rules

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD, the Gallup poll which appeared in this morning's Washington Post and Times Herald.

As chairman of the Special Subcommittee on Traffic Safety, I was extremely pleased to read this poll and to see how willing the public is to accept much stronger laws and regulations in an effort to reduce the Nation's terrible number of highway accidents and deaths:

The article follows:

[From the Washington Post and Times Herald of July 8, 1957]

DRIVERS WOULD ACCEPT DRASTIC SAFETY RULES

(By George Gallup)

PRINCETOWN, N. J., July 7.—America's automobile drivers today are in a mood to accept drastic measures designed to reduce the number of street and highway accidents.

By an overwhelming vote, they would require:

1. Every driver to take an annual examination to test eyesight, hearing and reactions.

2. Every driver to take a driving course before he is given a license to drive.

3. Twice-a-year inspection of every automobile on the road.

In addition, they would require all trucks to travel at speeds 10 miles an hour less than passenger cars.

These findings, based on a survey conducted by the American Institute of Public Opinion, point to one unmistakable fact: The driving public is ready and willing to go to great lengths to cut down highway accidents.

The interesting thing about the survey results is the size of the majority favoring the five specific proposals.

"Here are some suggestions that have been made to reduce highway accidents. I'd like your opinion on each one.

"1. Require every driver to have an annual examination to test eyesight, hearing and reactions. Do you think this a good idea or a poor one?"

	Percent
Good idea	80
Poor idea	17
No opinion	3

"2. Require every driver to take a driving course before he is given a license."

	Percent
Good idea	80
Poor idea	18
No opinion	2

"3. Require a car inspection twice each year?"

	Percent
Good idea	74
Poor idea	24
No opinion	2

"4. Require all trucks to travel at speeds 10 miles an hour less than passenger cars?"

	Percent
Good idea	61
Poor idea	33
No opinion	6

"5. Require automobile manufacturers to build cars with a top speed not over 65 miles an hour?"

	Percent
Good idea	54
Poor idea	42
No opinion	4

An interesting sidelight on this last proposal is the fact that, among drivers who said they had been stopped for speeding, 59 percent say it would be a poor idea to limit cars to a top speed of 65 miles an hour, while 36 percent say it would be a good idea, and 3 percent express no opinion.

Each car driver also was asked what he thought should be done to reduce the number of highway accidents.

Here are the driving public's own suggestions, in order of frequency of mention:

1. Stricter law enforcement.
2. Improvement of highways.
3. Lower horsepower in cars.
4. More severe punishment for offenders.
5. More patroling of highways.
6. Reduce the speed limit.
7. Better driver tests.
8. Better driver education.
9. Mandatory use of uniform driver signals.
10. Curtail teen-aged drivers.

Means Johnston, Sr.

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. SMITH of Mississippi. Mr. Speaker, the State of Mississippi suffered a great loss in the recent death of the Honorable Means Johnston, Sr., a distinguished attorney of Greenwood.

Considered for many years one of the outstanding trial lawyers in our State, Mr. Johnston had a distinguished career of public service. He was the Leflore County prosecuting attorney from 1916 to 1928, and for more than 30 years, the attorney for the board of supervisors of Leflore County,

As a State senator representing Leflore and Tallahatchie Counties, Mr. Johnston was largely responsible for the passage of a constitutional amendment which removed our State universities and colleges from political control. He served with distinction for a number of years as a member of the board of trustees of institutions of higher learning.

Mr. Johnston's loss is a very personal one to me; he was my friend and adviser from my boyhood days until his death. I had the honor of succeeding him as Leflore County's State senator, and he paid me the high honor of serving as chairman of my campaign committee in my 1950 congressional campaign.

Means Johnston's career illustrates in its finest sense the contribution of public service that is the tradition of the southern bar.

Under unanimous consent I include the following editorial tributes to Mr. Johnston from the Greenwood, Miss., Commonwealth and the Greenwood Morning Star:

MEANS JOHNSTON

The entire State was saddened Thursday upon hearing of the death of Means Johnston, one of Mississippi's most distinguished attorneys.

Mr. Johnston, through his contributions to the legal profession, had earned for him the highest praise and recognition. His brilliant mind, combined with his practical knowledge of public and private affairs, was outstanding in every respect. His services as an attorney were widely sought due to his legal ability and understanding of the law.

Means Johnston loaned dignity to the legal profession. He was a credit to it in every respect. There was nothing small about him. It was his broad understanding of the law that made him outstanding.

During his long and distinguished career, he served with ability. He was prominent in the activities of his State and county and responded to their every call. Everyone relied upon his good judgment and advice.

It is always good to leave a fine heritage to family and friends, and Means Johnston did this in abundance. The memory of him and the good service he performed will continue to live on.

END OF AN ERA IN LEFLORE COUNTY ANNALS

Last week one of Leflore County's greatest citizens passed from the stage when Means Johnston died. It was an end of an era in Leflore County history, one which should be noted by those who wish to preserve for posterity the annals of our county.

Means Johnston was not only Leflore County's most outstanding criminal attorney, but he was recognized over a wide area for his ability in this field. Beyond that, he was recognized as Leflore County's most potent influence in political circles and also as one of the best informed persons, if not the best, in county law in Mississippi.

That Means Johnston was endowed with an unusually keen mind is a repetition of a fact that is common knowledge. However the secret behind his great success, we believe, was his exceptional knowledge of people. Coupled with his refreshing modesty to the point of retirement, Mr. Johnston's ability to analyze people, know and understand their problems, aims, and ambitions, formed the stairway to his success.

For a number of years, Mr. Johnston was so highly regarded by governors that he was chosen on their staffs as a colonel. He was affectionately known to his close friends as the colonel.

The colonel was a "country boy" who never lost his close contact with the people

in all sections of the county, and all walks of life. His success never created a gap in close association with the most humble and they followed his leadership with unquestioned fidelity.

We certainly do not wish to imply the colonel ran Leflore County, for this is not the case. His was a service of advice and guidance and never dictatorship. His valued advice will be sorely missed not only by the officials of Leflore County, but by many who relied upon his keen intellect to help them guide their destinies.

Members of the bar looked to "Means" as they called him, for leadership when events called for such. Those involved in criminal prosecution always felt safer when he was their legal counsel.

He kept abreast of the times, and never blocked progress, but maintained a link with the past, and never became modern to the extent of severing his intimate contact with people.

Yes, Leflore County will miss the colonel and so will the State of Mississippi.

Those who would emulate the triumphs, which he so minimized in his humanity, must perservere in the traits which made him a truly great man.

Labor Is Victim of Inflation

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include the following article from the issue of July 1957 IUD bulletin, published by the industrial union department, AFL–CIO:

The truth is that "industrial labor is the victim of inflation, not its cause," the IUD executive board declared in a statement adopted at its June 5 meeting.

The statement pointed out that there has been a steady decline in industrial employment and that industrial worker buying power is down 1 percent from a year ago. It charged that industry is seeking to discredit American labor by falsely blaming it for inflation. It declared that corporate enterprise is contemplating further price increases under cover of this smokescreen.

"The present lull in production," the IUD board said, "is a clear indication of the need for greater purchasing power. Our problem is not one of production but of getting what we can produce into the hands of the consumer. Labor today can serve America best by continuing its fight for higher wages and better working conditions."

In another statement, the Board charged that "conservatives of both political parties are calling the legislative tune with resulting inaction." It declared that the President can still assert the leadership expected of him to end the tragic lack of direction that has characterized the executive branch of government in past months. It called upon both the Congress and the Executive to rise above partisanship so America may move ahead.

Specifically, the statement urged action on a school bill providing at least $600 million annually in school construction aid; an end to delay on minimum wage extension and passage of the Morse-Kelley bill which would extend coverage to an additional 9.6 million workers; passage of the Douglas area redevelopment bill; 135,000 public-housing units annually and a minimum of $250 million annually for urban renewal; a program of direct low-interest, long-term Federal loans for middle-income housing.

This statement also called upon the Congress to "rescue the Hells Canyon project on the Snake River so that America may obtain maximum benefits from this great natural resource"; pass the Gore-Holifield bill for a $400 million program of atomic-energy development; passage of civil-rights legislation now before Congress; passage of the Celler bill which would establish a rational immigration policy; provide pay increases for Federal employees; pass the Douglas-Ives full-disclosure bill; investigate the antilabor bias of the NLRB.

A third statement adopted by the meeting declared that "our country will gain no benefit from a reduced budget that looks good on paper but does not provide the services essential to an expanding economy." The statement called for an end to political maneuvering on the budget, pointing out that it represents only 16 percent of national production against 20 percent in 1953.

Hells Canyon Dam Legislation

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. ULLMAN. Mr. Speaker, there have been few more astute observers of the Hells Canyon controversy than the nationally syndicated columnist, Mr. Thomas L. Stokes. I am certain that his latest column on this important subject, which appeared in the Friday, July 5 edition of the Washington Evening Star, will be of interest to my colleagues. Under unanimous consent I ask that it be printed in the Appendix of the RECORD:

HELLS CANYON DAM LEGISLATION—SHERMAN ADAMS SEEN TRYING TO KILL ISSUE IN CONGRESS TO AVOID PRESIDENTIAL VETO

(By Thomas L. Stokes)

The White House is pulling all strings possible and using all its power and prestige to avoid the necessity of President Eisenhower having to pass upon the highly controversial Hells Canyon issue which is so full of political dynamite in the West and Northwest.

The aim is to kill off the issue in Congress and stop it there. That explains the sudden maneuver this week whereby Republicans on a House Interior subcommittee were able to shelve the measure that would authorize one high dam, built by the Federal Government, at Hells Canyon in the Snake River along the Idaho-Oregon boundary. This checked the drive for this bill which had passed the Senate a few days before.

It was promptly labeled "as dead as a dodo" by the man who executed the maneuver for the White House, Representative JOHN P. SAYLOR, Republican, of Pennsylvania. He got the support of all Republicans on the House subcommittee and two southern Democrats—Representatives HALEY of Florida and SHUFORD of North Carolina.

There are ways of reviving the bill, including substitution of the Senate-approved bill; but this would require a switch of votes within the full Interior Committee that might be hard for the supporters of the measure to bring about.

Their difficulty is increased by the determination of the White House, which has shown no such determination on any issue as in its aim to turn over development of water resources henceforth to the powerful private utilities which are now in such favor at the White House.

The President's chief political operator and strategist—Sherman Adams—got a surprise when the Senate passed the Hells Canyon bill. He does not intend to be caught off guard again. He is determined that the bill shall get no closer to the White House than it is now.

His evaluation of the situation is that the political damage would be much greater if the President had to kill the bill by his veto, which would fix the responsibility directly upon the administration so all could see. If it were strangled to death in committee, that is a sort of star chamber proceeding which it is often hard for the public to understand. Killing the bill off in a furtive manner is characteristic of the administration's procedure in every step of its determined policy to take resource development away from the people and hand it over to special interests, as if it had a guilty conscience. That has typified every step in the Hells Canyon giveaway, as in the Dixon-Yates effort to cripple TVA.

Even as it is, Sherman Adams is taking a lot on himself in killing off public development of Hells Canyon. He knows by now, as well as do Republicans in the area, how many Republicans went down to defeat on the Hells Canyon issue in the Pacific Northwest last November. It was one of the major issues in the biggest political turnover in that area in this century, extending from races for Senate and House seats, through contests for governor, and down to competition for the State legislature.

Anybody who has ever spent much time with the people of the Pacific Northwest is likely to question any assumption that killing off the Hells Canyon bill in a House committee will fool the people there. They are very much aware of how things are done here contrary to their interest. It wouldn't take a veto by the President to tell them who is responsible.

Last November's election provided a referendum on the Hells Canyon issue among the people who live in the Northwest. The election results showed that a majority are for public development by one high dam, as recommended by the Army engineers, that will develop the full potential of this single biggest power site available on the North American Continent, rather than the piecemeal development by three small dams in the plan of the Idaho Power Co., of Augusta, Maine, which already his started work under a license from the Federal Power Commission here.

If the administration has its way, the people will be the losers—and, of course, the Republican Party. The sad fact about Hells Canyon is that, if it is developed improperly now by the piecemeal method, that is for all time. The mistake can never be rectified. The people will be deprived of this share of their natural heritage which they won as pioneers after many hardships and lose it forever to a private company that is largely owned far beyond this area. They will lose in not getting the full benefits they should in the amount of power, in flood control, and they will lose in the higher rates they will have to pay for power. If, on the other hand, it were developed publicly, as were Bonneville in Oregon and Grand Coulee in Washington, then the people would own it forever, as they should, and its cost would be paid back to the Treasury out of operating revenues.

As a veteran Republican Senator said to this reporter a few days ago about what is happening to our natural resources:

"When the people wake up, there's going to be a day of retribution, and what a day of retribution that will be."

Inflation and Monetary Policy

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. DINGELL. Mr. Speaker, financial difficulties have been brought to this Government by its own monetary policies twice during the last 4 years. In the most recent period, the Secretary of the Treasury has announced his resignation. Shortly thereafter he proudly presented to the Finance Committee of the Senate a report on the development of inflation and monetary policy during the last 4 years. The report does not hesitate to notice that the country is experiencing inflation. At the same time it stresses the comparatively slight increase in money supply, and the favorable balance between receipts and expenditures of the Federal Government in the last fiscal year and in the fiscal year now coming to a close. We are experiencing inflation without an increase in the money supply, during the second of an anticipated 3 years of Federal budgetary surplus. But the monetary policy of the Treasury and the Federal Reserve Board is directed only at curbing the growth of the money supply and bringing a balanced Federal budget. The experience is that the policy does not stop inflation, nor bring success to efforts at financing the Government. However, that has not led the Secretary to declare misgivings about his policy.

In his report, the Secretary claims credit for a long-term increase in personal savings. Increased savings are described as a way to curb inflation. Yet inflation continues. Either the size or the significance of the increase has been magnified unduly. The Treasury apparently is unable to reach savings through bond issues at high rate of interest. Savings bonds sold and held have increased in total amount in the last 4 years, but not by as large an amount as during the previous 4 years. In May, an offering of notes and certificates in exchange for maturing securities resulted in 28 percent of the holders of the maturing securities preferring cash to new securities yielding 3½ and 3⅝ percent. The nominal guide in offering Treasury securities is the market rate of interest; but investors seem to be guided by other considerations. Under this administration the total debt has increased. Expenditures proposed by the administration are at new record levels for peacetime. Tax and expenditure policies have kept the Government dependent on borrowing, and its monetary policy has made borrowing more expensive and less successful.

In his report, the Secretary quotes with pride the estimate that $25 billion of spending power has been added by the 1954 tax reductions, and does not regard that is inflationary. However, it is said to be inflationary to make smaller additions to spending power through more housing loans at low rates, through more credit for new and small business, and through less costly credit for the school buildings, the highways, hospitals, and the other community improvements which are basic to the expansion of the Nation's economic productivity and to its advance in civilization.

The Secretary notices that increased costs of borrowing have added to the burdens of municipalities, individuals, and businesses, and says that (1) higher prices would have been more costly to them; (2) higher prices actually were more costly than higher interest rates; and (3) lots of people are investors and they are better off because of higher interest return. It is to be added that other investors who have sold bonds or other interest bearing investments have taken losses which offset the gain in interest income.

The policy of offering Federal securities at market rates of interest or higher; or adding to bank reserves and lending power only for brief, minor emergency periods; and of charging higher rates at the Federal Reserve Banks for temporary borrowing of reserves, has not prevented increases in commodity prices. If higher interest rates had succeeded in stabilizing prices and costs, they might have proved economical. But they have not brought economy for the home buyer who must pay constantly higher prices for housing and then add 10 or 12 percent to the final total cost of his house because the interest rate on his mortgage has increased 1 percent. It has not brought economy to the local taxpayer who must pay for a higher priced school and also pay 10 or 12 percent more to meet a higher interest rate. It has not brought economy to the Federal taxpayer who has had to pay 30 percent higher prices for military goods, and then an additional billion dollars per year for interest on the debt. If present Federal interest rates of 3¼ to 3⅝ percent continue until all outstanding securities are replaced, the monetary policy of the administration will have added $3 or $4 billion per year to the Federal tax bill. And that cost will have to be borne over the many years, until the debt can be retired or converted into lower rate securities under another administration. The monetary policy has not brought savings. Higher prices and higher interest costs are not alternatives to each other. They accompany and reinforce each other.

The Secretary of the Treasury included in his report some computations to show that interest was not a large part of the cost of things produced and sold. Despite its small size, changes in that cost are the heart of the inflation-control policy of the administration and its Federal Reserve Board. Higher costs of borrowing have not prevented the growth of borrowing, business and municipalities and individuals being more in debt now than at any time in the past. Higher interest rates have changed the form and pattern of borrowing. It could be concluded from this change that the interest-rate policy restrains inflation, but I conclude that the policy has been harmful to production and strengthens the forces of inflation. The monetary policy has kept away from the banks the untried and currently weak competitors in business and municipalities and consumers. Potential borrowers are refused accommodation by banks and other lenders, or are offered loans at rates above those charged to established borrowers, with cost differentials that weaken their competition. The established and strong firms can get sufficient credit at preferential rates and have enough savings from profits to be able to pay or to bid higher prices for their supplies. The present monetary policy only makes it unnecessary for them to use the full extent of their power. The present monetary policy weeds out the financially weaker firms, rather than making the weeding out a result of competition for the consumers' patronage. Having failed to build competition through other means, the administration tries to avoid the full extent of the price increases which could result from that situation by making money unavailable to new competitors. The higher interest cost, therefore, brings a loss of business opportunity, higher prices, and lack of technical progress.

Higher interest costs stand in the way of technical progress. They lead to postponement of school construction because of local inability to meet the costs. Lack of school facilities impedes education, and this loss cannot be made up. Education is a continuous process, not amenable to crash programs such as for national defense. If more school buildings are going up than in earlier years, as Secretary Humphrey says is happening, that is no cause for complacency. The only proper standard is whether there are enough, not merely whether there are more than at some past time when the number being built was inadequate. Education is fundamental to technical advance. So also are other community facilities. Without them, communities cannot attract nor provide healthful living conditions for the employees of factories and mines and shops. And technical advance requires not merely research and knowledge, but also the application of knowledge through physical plant and equipment. Plant and equipment expenditures of corporations are at very high levels, but apparently corporations, like municipalities, have done some postponing, because investment has run below expectations. And most of the expansion has been planned only by the largest corporations.

The tight money policy has failed to curb inflation and in fact has contributed to it, for several reasons. First of all, it does not prevent an increase in bank loans to all businesses; it only leads the banks to dispose of Government bonds and lend the proceeds to business, and to big established firms, but not to small, new, or weaker firms. The movement of corporation funds into short-term Government securities—increasing by $4 billion or $5 billion in only a few years; and the funds tied up in credit to customers, have kept down corporate deposits in banks. The result is a limited growth in funds for lending, yet the total available has grown, and the total of loans has grown. The money supply as conventionally measured, currency plus bank

deposits, has not increased, but the money available for spending has increased through bank lending. Trade credit has increased. Manufacturing corporations alone have extended about $3 billion additional trade credit to smaller corporations and individual businesses during the recent tight-money period. Monetary policy does not prevent an increase in credit; it changes the source of credit so that power becomes more concentrated in the large corporations. The financing of business activity becomes more subject to the will, and the liquidity, of large firms; and the banking system becomes relatively less important. If a widespread contraction of credit begins, the banks will not be in an immediate position to add the flexibility which will be needed.

The development of greater economic power where it already has been concentrated adds to inflation. Prices have not been going up throughout the economy; in textiles, farm products, and elsewhere, there have been declining prices. The push toward higher prices comes from those industries where strong unions bargain with strongly organized employing corporations. Higher wages lead at once to higher prices and profits; and a tight money policy that intensifies concentration and the ability to raise prices makes further inflation inevitable.

The administration junked all the direct controls which are effective against inflation, and the Federal Reserve has not developed qualitative controls that would restrain credit extension where danger of inflation actually is to be found. We are left with an ineffective anti-inflation policy that leads to industrial weakness and to difficulties for programs at all levels of Government.

Joint Resolution of Illinois Legislature

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. GRAY. Mr. Speaker, I have strongly advocated the repeal of our status-of-forces agreements that surrender our American servicemen to foreign nations for criminal jurisdiction. I am indeed hopeful the House will adopt House Joint Resolution 16. Millions of Americans are disturbed and disappointed to say the least over the Government's handling of the Girard case. It is my feeling that if a boy dons the American uniform and helps defend his Government and the American way of life, the least we can do is see that he is given the rights afforded him under the Constitution.

Following is Senate Joint Resolution 22 passed by the State Senate of Illinois on May 1, 1957, and concurred in by the Illinois House of Representatives on June 20, 1957:

State of Illinois, 70th General Assembly,
Senate Joint Resolution 22

Whereas the members of our Armed Forces serving abroad, their civilian components and the dependents of each, are now subject to the criminal jurisdiction of more than 50 countries in which they may be on duty, by reason of the NATO Status of Forces Treaty, the administrative agreement with Japan and executive agreements with other nations; and

Whereas these agreements penalize our servicemen for foreign service by depriving them of many of the rights granted by our Constitution, which they are sworn to defend; and

Whereas it is impossible for any serviceman accused of transgression in a foreign country to receive a fair and impartial trial because of the varying systems of jurisprudence which make it impossible for him to receive the protection of all of the rights and guaranties which our Constitution gives to every citizen and because of the prejudice and animosity sometimes existing against members of our Armed Forces; and

Whereas legislation has been introduced in both the Senate and the House of Representatives of the United States to direct the President to seek a modification of all such agreements so that the United States may regain exclusive jurisdiction over the members of its Armed Forces for all purposes, or if such a modification is refused, then to terminate or denounce the agreements according to the terms of each: Therefore, be it

Resolved by the Senate of the 70th General Assembly of the State of Illinois (the House of Representatives concurring herein), That the member of this general assembly deplore the arrangements now existing which make service in our Armed Forces abroad a hazard by depriving our servicemen, their civilian components, and dependents of each, of the rights and guaranties of our Constitution when they are stationed in other lands; that it is the sentiment of this general assembly that all United States service personnel stationed abroad should be tried by United States military tribunals under the Uniform Code of Military Justice for any offense committed on foreign soil; and be it further

Resolved, That we respectfully request and urge the President of the United States, by negotiation, and the Senate and House of Representatives of the United States, by enacting the legislation now pending or similar legislation directing such negotiation, to secure a modification or denunciation of the provisions of the NATO Status of Forces Treaty and all other agreements which surrender to foreign nations criminal jurisdiction over the United States Armed Forces, their civilian components, and the dependents of each; and be it further

Resolved, That a suitable copy of this preamble and resolution be forwarded by the secretary of state to the President of the United States and to the members of the United States Senate and House of Representatives from Illinois.

Adopted by the senate, May 1, 1957.
ARTHUR J. BIDWELL,
President pro tempore of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Concurred in by the house of representatives, June 20, 1957.
WARREN L. WOOD,
Speaker of House of Representatives.
FRED W. RUEGG,
Clerk of House of Representatives.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Independence Day Address by Hon. Frank Church, of Idaho

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. CLARK. Mr. President, on the 4th of July, at Independence Hall, Philadelphia, the people of eastern Pennsylvania had the opportunity to hear a most stimulating, eloquent, and thought-provoking address by the distinguished junior Senator from Idaho [Mr. CHURCH]. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR FRANK CHURCH DELIVERED AT INDEPENDENCE HALL, PHILADELPHIA, PA., ON JULY 4, 1957

Mr. Chairman, distinguished guests, and fellow citizens, I am highly honored to be your speaker today. My home is in the distant West—the youngest part of our country. What a singular satisfaction it is for me to come to Independence Hall in Philadelphia, the birthplace of our country, and here take part in this observance of Independence Day.

Those of us fortunate enough to be here are privileged to commemorate this 4th of July at the shrine of American liberty. Yet, even as we gather here, a thousand bands are playing and veterans are marching, and countless flags are waving in every part of the land. Flashing fireworks will fill our skies tonight, and Americans will congregate in parks and public squares to give evidence of their loyalty to our great Republic. And many will speak of patriotism.

Patriotism is love of country. How should one love his country? One should love his country as he loves his own child—with a will to serve its inmost needs; to see it reach fulfillment; to dream its best dreams, to labor to make them come true.

As a child grows from infancy to maturity, so does a country. As a child's needs change with the passing years, so do those of a country, with the changing times. The true patriot, like the best parent, seeks to know his country's real needs and to learn how to serve them wisely and well.

In 1776 our utmost need was to secure liberty. George III of England had persistently refused to grant to the English colonists in the new world the rights of Englishmen in the old, hard-won from the days of the Magna Carta. Steadily the rule of the royal governors had grown more insufferable. Again and again the colonists had petitioned their king, but their grievances were ignored, and their entreaties rebuked.

So the day came when no recourse remained but to renounce the Crown. Men of high station, with their lives and fortunes to lose, assembled in this historic hall, to pen their names to a ringing Declaration of Independence, proclaiming to the world that the Colonies had severed the political bands that connected them with England, and had assumed the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them.

Every man who placed his signature upon our Declaration of Independence, on that Fourth of July in 1776, from Thomas Jefferson to John Hancock, writing largely so that the King himself might plainly see, knew full well the peril that now confronted them. It is said that Benjamin Franklin remarked, before signing his name, "We must, indeed, all hang together, or, most assuredly, we shall all hang separately."

The Revolutionary War was hardly a contest between equals. The Colonies were rural, lying out on the fringes of the world, and ill-equipped to wage war against a rich and powerful monarch. But the rebels fought for liberty, a cause that fired the hearts of men who would be free, and American patriots, with gallant determination, battled the Redcoats, from the woods of Lexington and Concord to the breastworks at Bunker Hill—through the wintry agonies at Valley Forge to the final victory at Yorktown.

Yes; in 1776, our utmost need was to secure liberty. By the Declaration of Independence we solemnly announced our purpose; by the waging of a Revolutionary War we painfully achieved our goal.

Today, nearly two centuries later, our utmost need is to preserve liberty. Again we should solemnly declare our purpose to the world. But the method we must now pursue to achieve our goal can no longer be the waging of war. It must be the waging of peace.

Let us see why this is so.

The age we live in is as different from the age of colonial America as a powder horn is different from a hydrogen bomb. War is no longer an instrument by which men can win a worthy goal. A thermonuclear war could utterly destroy its participants, leaving nothing but chaos, ruin, and anarchy in its wake. Liberty depends on life and order. Both can be consumed by the witchfire of atomic war, and liberty lost even to those who yearn to preserve it.

I pray that we shall continue to deter the coming of another global war. But if we must do so by living indefinitely in a state of expectant war; by remaining forever teetering on the brink; by carrying an ever-heavier shield above us, then we must awaken to the fact that our liberty itself is in danger of being stifled in the very cause of defending it.

The debt of past war, and the current costs of military defense, now account for two-thirds of the total expenditures of the Federal Government. Today's bomber costs us 20 times as much as yesterday's Flying Fortress. Tomorrow's weapons will dwarf the cost of those we buy today. If we must continue our present course indefinitely, it will matter not what party controls the national administration. Government will get bigger and taxes will grow larger. From this there is no escape.

As the threat of war becomes ever more important in the formulation of national policy and national budget, the Central Government must continue to expand its powers. The prerogatives of States and communities will further wither. Most importantly, the rights of free men will give way to the interests of a national security that will always elude the mounting frenzy with which we shall pursue it. Thus the foundations of liberty will be eroded, for if we must endlessly prepare for total war, we must be prepared, ultimately, for total government.

So I submit that our country's foremost need today, if liberty is to be preserved for the future, is the need to conquer war in the world at large. That can be accomplished only by waging peace with the same zeal and determination with which we have waged war.

The peace of which I speak is not the cold war in which we now live. Peace is something different than absence from war. An armed truce is not peace, although 20 years continued. A cold war, unless abated, can only end in a hot war.

The time has come to plan a grand strategy for peace; to commit ourselves to its battles, its Lexingtons and Concords; to be prepared to suffer its Valley Forge; and to pursue our goal with strong and abiding faith that we shall at last achieve a Yorktown victory over war itself.

Our forefathers, here at Independence Hall, appealed to the Supreme Judge of the world for the rectitude of their intentions, and solemnly published and declared their purposes, and in support of them pledged to each other their lives, their fortunes, and their sacred honor.

We could do no better.

In a new declaration of independence from war itself, we might list, as did Thomas Jefferson and his colleagues, the failures of the old order, but we must, as they did also, proclaim new objectives that will capture the minds and hearts of men.

Let us declare it to be our high purpose to recognize and promote the cause of colonial peoples who aspire, as we once aspired, to independence and self-government. Their force is crumpling empires. It is the inexorable force of our times. How greatly would be strengthen our moral leadership among free nations if we would honor and befriend the cause of colonial people. It is in our finest tradition that we do this. And such a course offers us our best hope for wresting them from imminent fall to the false and covetous lure of communism, and enlisting them to the cause of liberty and peace.

Let us declare our fixed and unremitting resolve to free the world from the threat of the silent dust of thermonuclear explosion, which could come to fill the air and settle impersonally upon the just and the unjust, and generations yet unborn. Let us lift the monstrous burden of armaments from the backs of men. We must find a way, lead the way, to enforceable disarmament so that tensions may be eased, unreasoning fears dissipated, and the energies of nations turned to the ending of want, hunger, and poverty.

Not least, let us move to the fore to improve and strengthen the United Nations, to make it more effective in its role as keeper of the peace, so that law may replace brute force in the solution of disputes among nations.

In 1776, the governmental principles stated here at Independence Hall were regarded as radical, mischievous, and foredoomed. Instead, they thrived and our Republic became an inspiration for all men who aspired to be free. In the years since, the clean structure of our liberty, like the form and shape

of the liberty bell, has always been treasured in the spirit of the free.

If, in the days of our infancy, we could ignite a flame of freedom so bright as to shine like a beacon around the world, then now, in the days of our greatness, we must do no less.

Now is the time for us to recapture the spirit of our Revolution. Now is the time for us to be willing to venture and to dare, to espouse new methods—for the old have failed. Now is the time for bold and imaginative action—for proposals big enough to match and master the looming challenges of the atomic age.

Then let us hew the track for all men of high purpose and good will to follow—to the end that one day they might live in a world where freedom presides and peace endures.

Idaho Power Co. Fast Tax Writeoff—Chronology of Actions Taken

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. KEFAUVER. Mr. President, at the time the bill to authorize a high dam at Hells Canyon was under consideration, I suggested that it would be in the public interest, and certainly would be useful in the consideration of the matter, if the President directed the departments and the various agencies of the Government which had to do with the rapid tax writeoff benefit to the Idaho Power Co. to prepare a chronology of the events in connection with that action, along the same line as the chronology prepared in connection with the Dixon-Yates matter.

When he was asked about the suggestion at a press conference, the President stated that no request had been made directly to him for such a chronology.

On July 3, 1957, I wrote a letter to the President, suggesting that such a chronology would be helpful. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MY DEAR MR. PRESIDENT: I note from a transcript of your press conference of today that in answer to a question from Mr. Robert Spivack, of the New York Post, as to whether you would ask all departments and agencies to get up a chronology of actions taken in regard to the Idaho Power Co. fast tax writeoff, you had this to say:

"I don't know. Senator KEFAUVER hasn't asked me. If he has said any such thing, he has said it for public consumption, and not to get any action, because he has not made any such request of me."

I made the statement on the floor of the United States Senate and it appears on page 8930 of the CONGRESSIONAL RECORD of June 21, 1957.

Frankly, Mr. President, I had thought that an official statement on the floor of the Senate, carried in the CONGRESSIONAL RECORD, was an official suggestion, and required no further direct communication with you. The only other time that I have had direct communication with you about such a topic was following your press conference on June 29, 1955, when in answer to a question about the role of Adolph Wenzell in the Dixon-Yates deal you said he was never called in or asked a single thing about the Dixon-Yates contract and that as quickly as the Dixon-Yates matter came up Mr. Wenzell resigned. I did feel constrained at that time to write you and inform you personally of the role played by Mr. Wenzell throughout the negotiations, a position similar to that which the Justice Department is now taking in defending the Government against the suit filed by Dixon-Yates.

In order that there may be no misunderstanding in this case, I do indeed think it would be a public service for you to order an official chronology, from all bureaus, agencies, and departments, in the Idaho Power tax writeoff, giving all conferences, all personnel attending the conferences, and making public all papers having to do with this deal.

As in the Dixon-Yates case, we have been met with the plea of privilege concerning the participation of White House staff members who were named in one of the documents we saw. Governor Pyle refused our invitation to appear before the committee. We have been met with the plea of privilege concerning memorandums. We learned about the position of Interior Secretary Seaton in opposing the writeoff only after we had originally been led by the testimony of Mr. Gordon Gray to believe that the Interior Department approved it.

As in the Dixon-Yates deal, we feel that we are not getting the full facts, and that perhaps you, too, have not been given the full facts. It was for these reasons that I made the statement that I did on the floor.

Looking forward to your cooperation, I am,

Yours sincerely,

ESTES KEFAUVER,
United States Senator.

Eighty-fifth Anniversary of Popular Science Monthly

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. NEUBERGER. Mr. President, a magazine dedicated to informing the American public on scientific advancement is this year celebrating its 85th anniversary. I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have issued in connection with the work of the magazine, Popular Science monthly.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

America is recognized and admired throughout the world for its technological leadership. This enviable situation has been brought about not only because of our outstanding scientists, teachers and technical schools, but also because of the hunger for knowledge of the American people.

This interest in technological matters, which is a main source of our industrial strength, is nurtured and encouraged by many springs of knowledge including the government, our fine schools and some outstanding American publications.

One of thes publications, Popular Science monthly, celebrated its 85th anniversary in May of this year, and as a long-time reader and occasional contributor to Popular Science, I should like to call attention briefly to its role in reporting and interpreting science and mechanical advances for these many years. As an example of its treatment of important problems, the magazine has started an edfuational guidance series of articles on how gifted children should be prepared for college, how average students may be aided, how to help children who will not go to college and many other subjects which will be of great aid both to parents and educators. This series is aimed at building a better relationship between parents and educators.

But in addition to analyzing such current problems, Popular Science has also been alert to the advances of science, and the magazine first reported such developments as telegraphic printing in 1872, the telephone in 1876, and the automobile in 1893.

This record of keeping the American people apprised of the progress of science reached a new level when Popular Science editors built a model of an artificial earth satellite.

The first model was placed on permanent exhibition in the halls of the Hayden Planetarium in New York City, a second model was presented to the United States Committee for the International Geophysical Year, and other models were loaned to the Chicago Museum of Science and Industry, the Buhl Planetarium in Pittsburgh and other similar institutions.

One model became a part of the American Dream Pageant, an exhibition of Americana that toured leading department stores throughout the country, where it was seen and studied by thousands.

This spirit of journalistic pioneering, scientific leadership and public service responsibility has helped to advance an understandng of the Nation's progress.

Government Bookkeeping

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial and two letters which appeared in the Washington Post and Times Herald on July 5, 1957, in connection with S. 434, which I introduced, with 48 other Senators as cosponsors, and which recently passed the Senate unanimously, and is now under consideration in the House.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

STILL IN THE BLACK

The fiscal year for the Federal Government has ended, as expected, with the Treasury about $1 billion in the black. This is less than the President had forecast but about what the Joint Economic Committee of Congress predicted on the basis of more recent figures. The surplus, considering the size of the annual budget and of the debt, is hardly anything to write home about. But it does mark the first time in a quarter of a century that there have been two black-ink years in a row, and for this there will be general applause.

The outlook for fiscal 1958 is not at all clear. Prices continue to rise, and there are enough carryover appropriations on the books to allow deficit spending in this new fiscal year despite the cuts in new appropriations made by this Congress. It is anxiety over this prospect, of course, that

lies at the root of the well-intentioned efforts of Senator KENNEDY and a number of his colleagues to put all appropriations on a year-by-year basis.

The Senator explains the proposal in a letter published elsewhere on this page today. We agree and have said that Congress ought to consider more carefully the long-range effects of appropriations that extend over more than 1 year. We certainly believe deficit spending is unjustified in the present circumstances. But we continue to have serious fears that important defense and other programs might be unduly hobbled by the kind of checkrein which Senator KENNEDY proposes. It would, in any case, be no guaranty of balanced budgeting. The pressure for tax cuts is so great that any sizable anticipated surplus will be quickly eliminated by a tax reduction, and a small budget surplus can become a deficit very readily if revenue estimates prove wrong.

CHANGING THE GOVERNMENT'S BOOKKEEPING

Your opposition in an editorial, A Dubious Reform, of June 26, to my bill for putting Government spending on an annual accrued expenditure basis is very surprising. The measure has received the almost unanimous support of the Senate, the House Committee on Government Operations, and top financial officials in the administration.

The measure was conceived by the Hoover Commission as its key proposal for restoring to Congress some of the control over the purse strings which has slipped away from its hands over the years.

The task force of the Hoover Commission, headed by J. Harold Stewart, of Boston, was composed of first-rank authorities on Government financial operations. They asserted that millions of dollars could be saved every year by requiring Congress to make appropriations each year on long-term projects, instead of appropriating the money all at once.

The fact is that under the present system these long-term projects are not adequately reviewed each year, and we currently have a carryover of $70 billion of unexpended appropriations—a sum almost as large as the entire budget for the coming year.

Fifty Senators, including the very economy-minded Senator BYRD, cosponsored the bill with me. It passed the Senate unanimously and has now been reported out unanimously by the House Government Operations Committee.

The only opposition in the Senate committee hearings came from representatives of the Department of Defense who raised technical objections about its administrative implementation by the Bureau of the Budget.

Your editorial stated that, under the annual accrued-expenditure method of stating appropriations requests, the departments would be obligated to pad their requests as a hedge against uncertainties. Since the contemplated projects would be contracted for at a fixed cost, the only uncertainty would be if deliveries on such items as defense equipment were made ahead of schedule so that a year's purchasing were completed in, say, 10 months.

In fact, the difficulty is almost always the other way—that deliveries are delayed. Moreover, padding the request would be futile since unexpended funds will automatically lapse at the end of the fiscal year.

Concomitantly, you state that funds might be recklessly spent to avoid the loss. This fails to take into consideration that, in the granting of an appropriation on the new basis, the agency must justify its request by revealing past costs and accomplishments.

Any reckless spending of an agency would be reflected in increased costs—a fact that would systematically and clearly come to the attention of Congress under this new system. And this is perhaps the central point—the agency would be required each year to justify what it has already spent and what it intends to spend on a long-term project.

The Congress' concern is not only to the long-range spending plans of the Government, but also with the year-by-year rate of spending. It is the latter which determines whether our budget is balanced or whether we have a surplus or deficit.

Everyone is looking for a way to streamline the Government functions to get rid of what Dostoevsky called "administrative ecstasy." This is a measure which the financial experts agree will do this.

JOHN F. KENNEDY,
Senator from Massachusetts.

WASHINGTON.

The proposal embodied in S. 434, which Senator Kennedy and I introduced with 48 other Senators as cosponsors, is a logical follow-up of the vastly improved Federal budget and accounting procedures authorized by P. L. 863.

The basic theme of the editorial opposing S. 434 seems to be that if Congress were to only appropriate funds to be expended in a given year, it would result in needless red tape and confusion by requiring an annual review of long-lead-time programs which under the present system are for the most part considered only once.

As a matter of fact, appropriations for the civil functions of the Army Corps of Engineers, many of which are long-lead time projects, have been on a basis very similar to annual accrued expenditures for several years and the system of appropriating only those funds to be expended in the succeeding fiscal year has worked satisfactorily to all concerned.

Strict control should be maintained at all times over the expenditure of public funds. This was recognized by the Founding Fathers who wrote a provision into the Constitution that no money shall be drawn from the Treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

Yet the practice of appropriating funds in 1 year for expenditure as much as 10 years in the future has deprived both the executive and the Congress of any really effective control over the level of expenditure in a given fiscal year.

This year the accrued expenditure method of stating budget requests and appropriations has met with a more favorable reception in the House of Representatives and was recently favorably reported by the House Committee on Government Operations.

That committee added a provision to limit the authority contained in the bill to a 4-year period. In short, a trial period is proposed. If the proposal is as good as all of the experts firmly believe, it will amply demonstrate its value during this period.

FREDERICK G. PAYNE,
Senator from Maine.

WASHINGTON.

Report to the People

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including an editorial by Mr. M. L. Fleetwood, of the Daily Tribune News, Cartersville, Ga. This article appeared in that paper on June 15, 1957, in the column entitled "Report to the People."

Mr. Fleetwood's article throws light upon the humanitarian attitude of the South toward the Negroes.

The article follows:

REPORT TO THE PEOPLE

(By M. L. Fleetwood)

It has been the privilege of this writer to learn at first hand some information, during recent weeks, all of which proves beyond question, that in the South the real needs of the colored people are being given every consideration.

Readers will recall our report to the people when we recounted how Aidmore hospital for crippled children in Atlanta has made identical provisions for the care of colored children sent to that institution for treatment.

The Elks of Georgia have made it their business to work out a program of child care which does provide "equal but separate facilities for children of both races." The program itself is being worked out in perfect harmony and everybody seems to be happy over treatment accorded those fortunate enough to be assigned to Aidmore.

During the past weekend, while attending the Georgia Press Association meeting in Augusta, it was our privilege to learn first hand just what the Talmadge Memorial Hospital is doing for the sick people who are privileged to have a bed in that hospital when illness overtakes them.

There are 300 beds in the hospital and at the present time there are 200 patients receiving treatment. These patients are assigned to the white wards, if they are white people, and to the colored wards, if they are colored.

We recall a story about a little colored boy who has spent several months at that hospital. He has a condition which continues to require hospital care. On the day we visited the hospital, the little fellow had been stricken with a severe case of chicken pox, and he was isolated from the rest of the colored children patients, but he seemed happy because he was receiving every attention any child would get—even if he were the son of wealthy parents.

The same story was heard in every section of this vast hospital. The latest methods of treatment is available with special attention given to patients whose treatment offers the best opportunity for the student doctors to learn how best to treat such conditions.

X-ray machines of the latest design may be seen in 1 large section of 1 floor, and experiments are daily being carried out, in order to advance medical knowledge.

Dr. Billie Lowry, of Cartersville, has finished up the first part of his medical training, but is remaining over at Talmadge Memorial Hospital, to take a postgraduate course. We had the privilege of talking with him briefly while he was undergoing a special test in one of the laboratories.

In addition to 80 staff members and 100 registered nurses, Dr. Edgar Pund is president of the hospital, and Dr. Rufus Payne is director, Mr. Bob O'Kelly, a former editor of the Douglasville Sentinel, is the purchasing agent for the hospital. He and other staff members went out of their way to make our visit to the hospital a memorable one from every viewpoint.

A visit to such an institution proves most revealing in the scope of treatment available, as well as are the modern methods now available for the people of Georgia.

Governor Griffin, in this address to the editors, said that he is interested in providing more adequate facilities at Gracewood for the unfortunate Negro children. They are receiv-

ing good attention, but the Governor said he would sleep better when the new facilities become available.

It is such revelations as we have recounted above which leads us to tell the people about what Georgia is doing for institutional patients of both races.

We believe this part of Georgia's expanding program has not become of general knowledge. We never heard of some of these privileges now available to both white and colored, until we saw them with our own eyes during recent weeks.

Let's ever keep this more desirable side of Georgia's progress before our own people, as well as those in the Nation at large.

The Caldwell, Ohio, Journal

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. HENDERSON. Mr. Speaker, in southeastern Ohio, many communities are served by excellent weekly newspapers which perform their functions admirably and without fanfare throughout the years. One of those distinguished newspapers is the Journal of Caldwell, Ohio, which is now marking its 98th year of continuous publication.

On June 29, the Marietta Daily Times, which ranks among the leaders of Ohio newspapers, has noted this important anniversary for the Caldwell community in Noble County. I wish to add my congratulations to those so well expressed by the Marietta Times. Its comments are as follows:

IMPROVING WITH ITS AGE

The Journal, Noble County's thriving newspaper published at Caldwell, has just had a birthday, it is noted in its editorial columns. On this it is to be felicitated and it would have been justified in doing a lot of bragging, which it did not do.

Often we have told ourself and other people that the Journal is a fine and improving paper, the best weekly with which we are familiar. Caldwell is a growing, progressive and forward-looking town, its people and officials intent on making the most of its improving prospects. And, it seems to us, The Journal is setting the pace for the community by getting out a paper that is filled with well-displayed news and pertinent editorials that must contribute to the public interest and advancement. It gives some interesting local newspaper history in its comment on its anniversary, which follows:

"With this issue, the Journal completes its 98th year of continuous publication and next week, we will enter our 99th year and then attain the century mark.

"The Journal was established in 1859 and is 1 of 2 weeklies to survive the consolidation trend as well as the cease publication era, due to the high cost of printing, newsprint, and what have you.

"Its companion paper, the Noble County Leader, was founded in 1898 by J. S. Harris, retired publisher, and it is now in its 59th year.

"Both publications are published by the Caldwell Journal Publishing Company, Inc., with headquarters at 309 Main Street, Caldwell.

"During the years past, this company has absorbed or is the successor to the Journal, the Caldwell Press, the Republican Journal, and the Republican."

The "Michigan Plan" for Solving Its School Construction Problems

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD copy for a letter from Mr. Louis H. Schimmel, director, Municipal Advisory Council of Michigan, which sets forth the steps taken by the State of Michigan to solve its school construction problems.

Mr. Schimmel's letter is an excellent presentation of the principles of the "Michigan Plan" and the progress our State has made under the plan toward taking care of its school construction obligations.

I feel, therefore, Mr. Schimmel's letter will be of great interest and would like to bring it to the attention of the Members of Congress. It follows:

MUNICIPAL ADVISORY COUNCIL
OF MICHIGAN,
Detroit, Mich., June 28, 1957.

Hon. WILLIAM S. BROOMFIELD,
House of Representatives,
Washington, D. C.

DEAR MR. BROOMFIELD: Since our telephone conversation, I have reviewed with some of the people who worked with me on the Michigan constitutional amendment the questions which you have asked concerning the adaptation of the Michigan plan at the Federal level. I am sure that the program could be accomplished if we had a little time to work out the details. I am somewhat at a loss dealing at the Federal level because I have not had an opportunity to work with statistics comparable to those which I have on the Michigan situation.

There are four basic principles involved in the Michigan solution which must be considered in any program of State or Federal assistance if we are to avoid an increasing dependence on State and Federal funds to solve our local problems. The principles incorporated in the Michigan solution are the following:

1. Local determination of need: In Michigan we maintain local determination by requiring that the local taxpayers approve the financing.

2. State review of the needs as determined at the local level: In order to be assured that the financing will provide school facilities that meet minimum State standards, the State must approve the financing program.

3. Determination of fair local effort by establishing a minimum local contribution to be made each year: The minimum local effort is tied to a factor that measures, year by year, the fluctuations in taxable wealth.

4. Guaranty of the State to finance the difference between maximum local effort and actual financial need: This determination of how much assistance is needed is made each year. This is the feature of the Michigan plan that has eliminated the "maneuvering" that frequently goes on to prove the "poverty" of a district.

Need and ability to pay vary from year to year and from community to community. Under the Michigan device, these two basic things are measured and evaluated each year.

As you know, the State of Michigan faced a school building crisis in 1954 that was as acute and complicated as any in the country. In Michigan could be found all of the kinds and variety of problems that faced school districts across the Nation. On top of all of the difficulties that existed at the local level, we were likewise handicapped by outmoded State laws and constitutional restrictions that made it legally impossible in many districts to finance new school buildings even though there was local ability and willingness to do so.

Fortunately we were able to weld together, in 1954, the divergent political, economic, and educational forces into a cohesive working unit out of which emerged a solution that has solved the Michigan school building financial problems within the framework of our own State and local tax resources.

In 1955 a total of $87 million of school bonds were sold in Michigan. In 1956, the first full year of operation under the amendment, the volume of school bond sales amounted to $143 million. The first 4 months of 1957 indicates that the volume of school financing for the current year will closely approach $200 million. Over 209 school districts have taken advantage of the new amendment.

We are rapidly solving our school building problems. No school district in the State of Michigan has been unable to sell its bonds. No school district in the State of Michigan is unable to borrow the funds required to build the necessary classrooms if it complies with the provisions of the constitutional amendment.

What has been so well done in Michigan could and should be done by all States before the Federal Government is called on for help.

If Congress does not adopt a Federal assistance program for schools during this session, I hope it will be possible for us to spend some time after Congress adjourns in developing the general outline for a sound approach to a Federal assistance program that you could sponsor in the next session.

Sincerely,

LOUIS H. SCHIMMEL, *Director.*

Importance of Telephone Communications in the Age of Electronics

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. WILEY. Mr. President, this has often been called an age of electronics and communications.

Never before has man been able so quickly to communicate with his fellow man across continents and across oceans.

In the telephones of our Nation, in particular, we possess an invaluable instrument for information, business, and personal communication.

The rapid development of direct long-distance dialing systems is one of the marvels of this age.

I was reminded of these facts in noting that last Sunday one of the great utilities of my State—the Wisconsin Telephone Co.—celebrated its 75th anniversary.

Too often the telephone is taken for granted. In the home, in business, in factory, however, the telephone is ever available for man's service.

The Wisconsin Telephone Co. is truly a servant of my State, as are similar companies across the length and breadth of this land.

Commencing in 1882, with but 15 customers, service has now been extended to more than 700,000 customers throughout the State, using around 980,000 phones.

In addition, the company has become the third largest employer in the State.

I am happy now to convey my congratulations to the officers and to the employees of the company, and to express my thanks, on behalf of my State, for their fine contributions to the development of our Badger communities in time of war and in time of peace; in time of normal affairs, and in time of emergency.

I ask unanimous consent that an article concerning the company's 75th anniversary, as published in the Milwaukee Journal of July 7, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVENTY-FIFTH ANNIVERSARY CELEBRATED TODAY BY TELEPHONE COMPANY

The Wisconsin Telephone Co., which today has almost a million phones and an average of 4,264,000 calls a day, was born unpretentiously here 75 years ago Sunday—July 7, 1882—with a confident foresight by the organizers that the telephone would become a way of life in America.

Three Milwaukeeans gathered that warm summer afternoon in a small room on North Broadway to sign the articles of association of an enterprise which had little more than $100,000 in plant investment, fewer than 200 employees, only 17 telephone exchanges and 1,798 subscribers, 744 of them in Milwaukee.

Charles H. Haskins, who was called "professor" because he was an electrical wizard and lectured extensively, became the first president. The other signers were his son, Harry, and Benjamin K. Miller, an attorney.

FIRST PHONES IN 1877

It was even more quietly that the telephone was introduced to Milwaukee 5 years earlier, in 1877.

Gardiner G. Hubbard, a prominent Boston attorney and future father-in-law of Alexander Graham Bell, inventor of the telephone, sent a pair of hand phones to Haskins for inspection and criticism.

Haskins, then general superintendent of the Northwestern Telegraph Co. here, was impressed and returned a report encouraging Hubbard to throw his financial support behind the invention.

IN APPLETON, TOO

In Appleton that same year, Alfred Galpin, a banker, installed the first telephone there. Like Haskins, he had been impressed when he first saw the instrument at the world's fair in Philadelphia in 1876. Whether Milwaukee or Appleton had the first phone in Wisconsin still is debated.

Haskins obtained rights to start a telephone business and began construction of the first Milwaukee exchange at 411 North Broadway Street.

There were 15 customers at the outset, the first being John S. George, local agent for the North Western road. Two years later there were 40 subscribers and the city's first telephone switchboard was needed. It was completed May 10, 1879, and the Milwaukee Telephone Exchange Co. was formed by Haskins.

Three months later he received a letter from the National Bell Telephone Co. designating him as the agent to operate in the States of Wisconsin, Minnesota, and the northern half of the Dakotas.

LONG-DISTANCE CHESS

In 1881, the Milwaukee and Racine chess clubs attracted widespread publicity by introducing long-distance telephone competition. The Milwaukee club won a close match which started at 8 p. m. and lasted until 2 a. m.

In the early days, boys served as switchboard operators. They soon were replaced by girls because boys were too impatient and sassed too many customers. One of the first young women to be a telephone operator here was Pauline Juneau, a niece of Solomon Juneau, founder of Milwaukee.

It also was discovered quickly that using roofs for telephone-line fixtures and support was "not very good policy." Frequent visits by the spur-booted linemen brought forth complaints from irate householders with leaky roofs. Thus, the evolution of telephone poles to support the lines.

"SHE TALKS SWEDISH"

After the 1882 incorporation, the company moved across the street to 424 North Broadway, site of its present headquarters which rises 19 stories to make a significant mark on Milwaukee's skyline. Later, when streets were renumbered, the address became 722 North Broadway.

The company's first general superintendent, Angus S. Hibbard, was in charge of building the first long-distance lines to Chicago and establishing the original exchanges in many Wisconsin communities.

In his travels through what he called the north woods Hibbard often saw unrepressed enthusiasm for the telephone, like the delighted lumberjack who screamed:

"By yimminy, she talks Swedish."

PLANT VALUE TRIPLED

By 1932, the company's 50th anniversary, there were almost 250,000 subscribers using more than 320,000 phones. More than 45 percent of Wisconsin homes had phones.

But the spectacular growth came after World War II. Total plant facilities, valued at $92 million in 1945, were multiplied more than threefold to $304 million in the intervening 12 years. A long-sought goal, a 100 percent dial system for Milwaukee, was realized in August 1955.

Today the company serves more than 700,000 customers who use almost 980,000 phones. More than half of these phones have been installed since 1945, and 84 percent of all Wisconsin homes now have phones.

The 43 Milwaukee central offices serve 306,234 customers with 441,905 phones. Throughout the State, 97 central offices serve 152 communities.

FOURTH LARGEST EMPLOYER

The company's 10,688 employees, 5,369 of them in Milwaukee County, rank it behind only the Federal and State governments and the Allis-Chalmers Manufacturing Co. among the largest Wisconsin employers.

It is approaching the $100 million figure in annual gross income. Last year the figure was $94,109,462, compared with less than $200,000 in the company's first year.

The company president is Charles E. Wampler, a former vice president of the parent American Telephone & Telegraph Co., who has served here since January 1, 1954.

The cost of a single party residential phone changed little during the company's first 50 years. From 1882 to 1932 the cost per month advanced from $4.17 to $4.75.

Today the price is $6 a month plus 10 percent Federal tax for a $6.60 total. A rate increase request now before the public service commission would boost a single party phone to $6.93 a month, including tax.

SEE PICTURE PHONE

New horizons in the telephone business include direct distance dialing (DDD), which allows a long distance call to be placed without the help of an operator. DDD now connects Milwaukee with 19 southeastern Wisconsin communities.

Company officials estimate that within 3 years Milwaukee will be able to use DDD to call anywhere in the United States that has a dial system.

Further in the future is the picture phone which is being developed in Bell Telephone laboratories. Initial experiments have been held with the instrument, which allows callers to see each other on a televisionlike screen.

Telephone officials predict that there are new marvels in store for the public, perhaps some just as surprising as the invention of the telephone itself which caused Dom Pedro, the last emperor of Brazil, to exclaim in Philadelphia in 1876:

"My God—it talks."

Address by R. W. F. Schmidt to the California Association of Airport Executives

---

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered this morning in California by Mr. "Bob" Schmidt, manager of the Tucson Airport Authority, and president of the American Association of Airport Executives. His address is entitled "Behind the Curtain."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BEHIND THE CURTAIN

(Address by R. W. F. "Bob" Schmidt, manager, Tuscon Airport Authority, and president, American Association of Airport Executives, at the California Association of Airport Executives, Hobergs, Calif., July 9, 1957)

When I first proposed the subject Behind the Curtain in response to the invitation from your president and our national association board member, Wilmer Garrett, he opined that I might infringe on the remarks of at least one other speaker. I hope this is not so, but it is one of the occupational hazards we have to be prepared to encounter when we accept opportunities to appear as speakers on programs such as this, and it is one of those things that tolerant audiences have come to expect. I am fortunate in that I am privileged to get at you early, so that I can say that I said it first, but I shall try to give you a different slant on anything which has been or is yet to be presented to you at these sessions.

My basic approach to you is simply that we are identified with the most costly form of transportation mankind has yet been able to devise. We are all aware of the purported advantages of timesaving, comfort, and convenience air transportation offers, so I shall not engage in a selling job. I shall, instead, offer you a purge.

Air transportation costs must be defined in three categories, namely:

1. Direct costs, or those which are readily apparent to anyone who examines the record. They include all of the fixed charges and controlables, and many of the variables or

uncontrollables. They include, of course, what carriers, operators, and aircraft owners pay the airports for rent, landing and parking fees, service charges, levies and taxes.

2. Indirect costs, or those which are usually not accepted by the operators of air transportation businesses, but which are borne by the airports, other agencies, and ultimately by the customer, patron, or taxpayer.

3. Intangible costs, or those which cannot be reduced to dollars and cents, but which bear on our economic and social health and welfare.

It is presumably obligatory for us to reassure ourselves and the general public that we are paying our way, that except for the local service carriers and a few poorly situated or stupidly managed airports, "subsidy" is a derogatory word maliciously employed by surface competitors and old fogies in public office. I submit to you that, except in the more primitive areas, the true grassroots or bush operations—be they in California, Montana, Alaska, Iowa, or Maine—air transportation is not only subsidized, but heavily subsidized.

You and I know, as airport executives, that the operators of air transport services are not paying their way with us. That is why we are forced to put the bite on every other possible public service to support our airports. In order to make up what should otherwise be a deficit, to pay our costs so that we may brag to our own communities and to each other, we charge the taxis, the limousines, the buses, the car-owner, the restaurant, the saloon which we dignify by calling a cocktail lounge, the barbershop, the newsstand, the gift shop, and even the guy with nature's fundamental urge. We take money away from the kiddies with prancing horses and rocket ships, we hit the jackpot with pinball machines, we even charge to look at the airplanes whether from a so-called observation deck or with a telescope or both. We levy percentages, taxes in effect, on people who come out to the airport just as curious souls, who never use air transportation, so that we can subsidize those who claim they aren't.

Of course, it is argued that bus and truck and rail depots and terminals and stations practice the same extortion, but the significant distinction is that they are not built with tax money, not operated with assurance that deficits will be covered by tax money, and uniquely, pay taxes themselves.

We find the innocent taxpayer, who may or may not be a user of air transportation, who through local and Federal taxes has already paid for a great share of the capital outlay development costs of the airport, if, indeed, not all of it, contributing to the cost of the deficiency in revenue received from users of the facility who proclaim they are not subsidized. He pays to park, he pays to look, he pays to go to the toilet, he pays a commission if he buys a drink or a bag of peanuts, and he also contributes to paying the cost of a lot of incidentals we in aviation don't even put in our books.

Nowhere in our ledgers do we jot down the costs of locating or relocating sewers, drainage channels, water mains, electric power lines, communications cables, belt roads, freeways, schools, churches, hospitals, theaters, residential subdivisions, or whole business and industrial areas which of necessity must take place beyond the airport boundaries, outside the financial fence we prescribe for ourselves, but which are nonetheless required because of the existence of the airport. Oh, to be sure, once in a while an airport bond issue magnanimously includes an off-airport improvement, but usually under general obligation bonds, not under revenue bonds.

We can shrug off these marginal costs on the premise that we're pretty big business ourselves, our tenants do pay taxes, too, and that the impact of airport payroll plus the ease and convenience of rapid transportation to all parts of the globe is vital to our economy. We can even throw in civic pride for good measure. We can say "Look, if it wasn't for the airport and the world it brings to our doorstep, what a miserable down-at-the-heel community this would be."

I attend, as do you, my share of CAB hearings, and at times I'm moved to outrage that certain of our cities have been denied services held to be so necessary, and that several have apparently been economically choked to death by the absence of air transportation. I vision these places with grass growing in the streets, cobwebs in the factories, stores without customers, decline and decay on every corner. Then I go to them, and I stand in awe when I observe that they appear to be just as active, just as prosperous, just as progressive as cities which enjoy the fullest measure of the benefits of air transportation. There are even some other cities without airports of any consequence and certainly without airlines which seem to be content with the status quo. It is true, of course, that some of them cadge these benefits of the air age from their neighbors, but they aren't asking for any pallbearers.

Only 2 weeks ago as this was being prepared I received a telephone call from one of the top 10 cities in generating air carrier passenger business. It was the chairman of a committee to seek ways and means to raise money to further develop the already sprawling multi-million-dollar airport plant. He told me that general obligation bonds were out of the question; not only were they up to the legal limit, but there were too many other things to be done. He told me that revenue bonds had already been sold on every reasonable projection they could shove on today's bond market. He told me that the only hope appeared to be to create new sources of revenue. What did I think, he wanted to know, of a 50-cent or a $1 levy on every airline passenger ticket sold?

My answer was not too coherent, perhaps because I realized in 10 seconds that even at 4 bits per head they'd take in more from this source in a month than I can presently squeeze out of everybody over a year's span. Further, I am not a consultant, and while I admit being asked these questions appeals to my ego, I am reluctant to hand out advice without something to base it on. So I equivocated. I reminded him that effort was being made to repeal the Federal transportation tax. I told him air transportation might suffer if every airport slapped a tax on the boarded business of the airlines. I suggested that he might touch off a political uproar when the carriers made their usual threats of economic sanctions, what with reducing schedules and transferring shops—loss of service and payroll.

Well, he said, they faced loss of service and withdrawal of payroll if they didn't provide additional facilities. Could not, I asked, the carriers revise their use fees upward? No; it seemed they felt they were already paying top dollar. So here is another situation where the local people are expected not only to subsidize the carriers, but to subsidize the through passengers transferring at an international facility. The suggested solution of taxing the local boarded business, substantial though it is, really adds up to no solution because these problems have got to be attacked and solved on a national basis with the end result that the user of air transportation pays for it wherever he originates, wherever he transfers, wherever he is destined. It is not a happy picture to behold when we see that the burden of today is but a fraction of that which it will be tomorrow.

Now, I've touched briefly on the direct and indirect costs of air transportation. For a few moments, let me dwell on the intangible costs. Of just what value is this speed—admitting equal if not superior comfort and convenience to reduce the area of argument—what does it do? Why, you nincompoop, it saves time. Time for what? Consider your personal calendar:

Monday: "Well, I have a tough week ahead. I hope I can make it."

Friday: "Thank God this week is over."

Saturday: "I dread this weekend, but I've got to get my recreation and the family needs a change."

Sunday: "Thank God this weekend is over. Maybe I can get in a little rest this week."

So we can fly from San Francisco to Paris, Rome, Cairo, Honolulu, or Singapore, or from Stockton to Salt Lake City or Tucson. We save time. Time to grasp the significance of what's going on in the world? Time to enjoy our home, our own county, State, region, or Nation? Time to relax? Time to read those books and magazines piling up? Time to soak up a little culture, a bit of knowledge?

No, indeed. You've heard of what the doctors term the side effects of new drugs, particularly the tranquilizers. That's what you get with the time saved. Time to make work out of something else, buying the avalanche of goods and services that have to be sold. Time to drive 500 miles over the weekend, stay at a place just a cut farther or more expensive than the one your neighbor vists. Time to wear your Benrus or Longines, time to gulp Cutty-Sark, Old Fitz, or Jack Daniels, but not time to enjoy it. Time to sleep on a Sealy in a room conditioned by Chrysler Air-Temp after you've dosed yourself with Alka-Seltzer, Fizrin, Bayers, or Bufferin. Time to be a copycat, be a packrat, doing what everyone else is doing, buying what everyone else is buying, time to clean out the garage or basement while you wonder what the hell ever possessed you to believe you would have the time to use or enjoy the junk. In our profit-motivated society, time is the most expensive commodity because we've made it so, so there is no time to pick and choose, no time for genuine leisure, no time for doing what you really want to do, no time to think things through. Shucks, even I didn't have time to develop these thoughts—I had to borrow them from the eminent economist, John Ise at the University of Kansas, whom I have known all too briefly over a span of 40 years.

But now comes the clincher. How many of you are aware of the remarkable progress being made in closed-circuit TV? Do you know that conferences, committee meetings, and after a certain amount of legal skirmishing, even hearings can soon be held visually with everyone participating in his own office with his files and assistants at hand, with witnesses ready to be sworn? Do you realize that the highly touted needs for air transportation, at least as they relate to many facets of personal contact in business, stand to be substantially diminished in the near future? Do you comprehend that even now the necessity for sending many documents back and forth is being eliminated by TV and telephoto processes? It begins to look as though people won't even have time to fly.

A few weeks ago one of our colleagues in the Midwest really had need for the crying towel. The bonds required to build a new airport were defeated by nearly 3 to 1 for no apparent reason. He thought they'd gotten the message across—the old airport is inadequate, certainly no showcase for the community, and there had been loud beefs about the lack of service which could be placed right at the airport's doorstep. There wasn't any visible organized opposition. The electorate simply said "No." But in their wisdom, maybe they're smarter than we. Maybe, they've had a peek behind the curtain and found that the old airport will do.

Reducing the Nation's Staggering Crime Toll

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. WILEY. Mr. President, the morning newspapers report continuing leads developed by police authorities in investigating the underworld connections between gambling czar Frank Costello and various criminal sources, as well as "legitimate" enterprises.

We are reminded, as well, by the current investigation of racketeering being so ably conducted by the McClellan committee that there is a vast amount of illegal activity going on in this country which tarnishes our good name in the eyes of the world, and in the eyes of self-respecting people here at home.

Obviously, infinitely more must be done to clean up the conditions of crime in this country.

Last month, at a meeting of the Washington Criminal Justice Association, it was estimated that serious crime in our land is diverting no less than $28 billion a year from the national economy, and is infiltrating a wide degree of activities of civic and community life.

This was the estimate made by Mr. Aaron Kohn, president of the National Association of Citizens Crime Commissions.

As a former member of the Senate Crime Investigating Committee, I have, on many occasions, pointed out the invaluable role played by civic watchdogs like the Citizens Crime Commissions, the Washington Criminal Justice Association, and similiar groups across the Nation.

I ask my colleagues to think what an enormous amuont of tax revenue the Federal Government must be losing because of underworld evasion of its fair share of taxes.

I ask my colleagues to think how this country could use more profitably the $28 billion which is being diverted into the costs of crime in our midst.

I ask my colleagues to think of the implications of underworld infiltration of legitimate business.

Right now, for example, several of the States are reportedly investigating the extent to which one or more State-chartered insurance companies may have granted loans of a very dubious quality to gambling establishments, perhaps at the request of underworld figures.

I hope, therefore, that the States and the localities will recognize their responsibility to proceed full-speed ahead on investigations to clean up their own areas.

The Federal Government can and must fulfill its responsibilities, but it cannot and it must not usurp the basic responsibilities of the States and cities.

Here in Congress, however, I earnestly hope that the Senate Committee on Interstate Commerce will find it possible to review the anticrime bills which we, of the Senate Crime Committee, recommended to it way back in 1950 and 1951.

In the meanwhile, I wish continued success to the McClellan committee in its own vigorous pursuit of those who use violence in labor or industry to coerce American citizens.

I ask unanimous consent that an article which was published in the Washington Post and Times Herald of June 14, 1957, describing the $28 billion crime cost to our country, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION'S CRIME TAB SET AT $28 BILLION

Serious crime is diverting $28 billion a year from the national economy and is infiltrating civic and community life, Aaron Kohn, president of the National Associations of Citizens Crime Commission, told the Washington. Criminal Justice Association yesterday.

Kohn spoke as the WCJA honored its outgoing president, Ralph D. Pittman, in its 21st annual luncheon meeting at the Ambassador Hotel.

Director of the New Orleans Crime Commission and a former FBI agent, Kohn said there is an intense need for arousing public interest in citizens' crime commissions as a means of forming a united front for a war on the Nation's spiraling crime rate.

H. Holmes Vogel, vice president of the Chesapeake & Potomac Telephone Co., and new president of the Criminal Justice Association, called on John Remon, a WCJA past president, to present a plaque to Pittman at the luncheon.

The plaque expressed "deep appreciation" for Pittman's "splendid and unselfish performance of duty" during his 3 years as WCJA president.

"Your participation and accomplishments for the Washington Criminal Justice Association have resulted in an improved administration of criminal justice and better law enforcement for the District," the inscription said in part.

The Golden Corn Tassel Proposed as the National Floral Emblem

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. DOUGLAS. Mr. President, an editorial entitled "National Flower," in support of Senate Joint Resolution 105, my proposal to make the golden corn tassel our national floral emblem, was published in the Chicago Daily Tribune of July 8, 1957. The editorial closes with a good argument for my proposal and states:

The corn tassel is graceful. No other bloom is so typical of America. If we need a national flower, let it be the tassel.

I welcome this support of my efforts by the Chicago Daily Tribune.

I ask unanimous consent that the entire editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL FLOWER

Senator DOUGLAS does not seem to have started any groundswell of public enthusiasm with his resolution to make the corn tasssel the official floral emblem of the United States.

Current sponsorship of the idea is credited to a lady in Minnesota, and Representative JUDD of that State has a companion resolution in the House, running to no less than 14 resounding whereases, none of them, however, in praise of bourbon whisky.

It is not the bourbon drinkers who have been stirred by Senator DOUGLAS' proposal, but the partisans of other flowers, even including the rose, which for five or six centuries has been the emblem of the British. Yet the flower of corn has its merits, and Senator DOUGLAS need only have inspected some of the decorations of the Nation's Capitol to discover that they have been recognized in the past.

The Capitol was two generations in building, from the time the British burned its predecessor, and it had a number of architects and any number of artists employed on its decoration. Many of its columns are an adaptation of the Corinthian, with tobacco leaves, or ears of corn replacing the traditional acanthus leaves. Latrobe, the first architect, designed the corn foyer, in which the columns are fluted to represent cornstalks and crowned with ears of corn. Latrobe wrote Jefferson that none of his designs had won more approbation from Members of Congress.

The corn tassel is graceful. No other bloom is so typical of America. If we need a national flower, let it be the tassel.

Hope for Refugees

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times of July 5, 1957, entitled "Hope for Refugees," which endorses the bill which I have introduced, with the support of the Senator from Rhode Island [Mr. PASTORE], the Senator from Ohio [Mr. LAUSCHE], and the Senator from Minnesota [Mr. HUMPHREY]. I should also like to point out the significant contribution made by Congressman FRANCIS E. WALTER of Pennsylvania in the development of this important legislation. His long experience in this field and knowledge of it is amply reflected in this measure. I am hopeful there will be an opportunity to have this proposed legislation enacted.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOPE FOR REFUGEES

New hope that Congress may actually pass at this session a decent refugee-relief bill has been raised by the report that leading congressional Democrats have reached substantial agreement on such legislation.

The bill in question, introduced by Senator KENNEDY of Massachusetts, would do away with some of the more cruel hardships and injustices of present law. If the American people really understood how existing legislation permits families to be broken up, orphans barred from entry, admission denied for the most petty or harmless offenses, we are confident that the pressures brought to bear on Congress for remedial action would be irresistible. But, as matters stand, the deepseated prejudice and baleful influence of a few Members (living and dead) has made humane immigration legislation one of the most difficult things to get through Congress.

The Democrats have a heavy responsibility in this matter, and one that Senate Majority Leader JOHNSON is well aware of. The Republicans, of course, share that responsibility; but it is the Democrats who are in control of the Congress. President Eisenhower has recommended legislation that goes further than the Kennedy bill, though it cannot be said that he and his administration have noticeably exerted themselves in its behalf; but Mr. KENNEDY is probably right in suggesting (without actually saying so) that his is the best bill that has a chance of passing.

An important feature of the proposed law would be to grant permanent status to thousands of Hungarians admitted as "parolees" after last fall's revolution. The bill would not revise the national origins quota system; but, in Senator KENNEDY'S words, it "would reunite families, provide for better utilization of currently available quotas which go unused each year, remove the 'mortgages' on existing quotas * * * admit orphans adopted by United States citizens," and make many other changes in existing law in the direction of greater humanity, wisdom and understanding, while fully safeguarding the interests of the United States. Passage of this compromise bill would not by any means be the final answer; but it would be a major step toward bringing our immigration law into conformity with our repeatedly expressed ideals.

The Girard Case

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. BRICKER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a radio broadcast by Karl B. Pauley, over radio station WVKO on June 17, 1957, on the subject of the Girard case. Mr. Pauley is one of the best known and ablest of our political commentators in the State of Ohio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of the cardinal principles of American liberty always has been that a citizen of these United States is guaranteed equal justice under law. Further, such basic steps as grand jury indictment in the case of a serious crime, trial by jury and presumption of innocence until and unless proven guilty and a number of other cardinal points always have been considered inviolable rights of the American citizen. Most of these guaranties are spelled out in the Bill of Rights in the Constitution of the United States.

They are our American heritage, some of it dating back beyond our own national history to England's great Magna Carta, which included a provision that justice no longer was to be sold, but was to be administered equitably. Magna Carta is nearly 750 years old.

Now what is happening with respect to these time-honored principles and guaranties?

Under treaties into which the United States has entered with foreign countries—and even by means of so-called executive agreements which have not been submitted to the Senate for its approval—millions of our citizens are finding these guaranties do not apply to them—that they do not follow them when, either by volunteering or by reason of the military draft, they are sent into foreign countries under our increasing, worldwide commitments.

The flag of the United States may follow them into their military camps and perchance on to a battlefield, but under a new type of international arrangement, known as a status of forces agreement, the flag does not follow them in preserving their rights to equal justice as guaranteed in the Bill of Rights under which they were born.

Under a clause in the peace treaty we concluded with Japan subsequent to World War II, our Government has entered into an executive agreement with the Government of Japan which stipulates that when a United States soldier, sailor, marine or member of the Air Force stationed in Japan commits a crime while he is on duty, he shall be tried by United States military court-martial. But if the crime is committed by a member of our military personnel while the member is not on duty, he shall be handed over to the courts of Japan for trial under Japanese law.

If there is some question as to whether the accused serviceman was on duty or not, the issue is to be submitted to a joint Japanese-American commission for determination. Not an American court, mind you, but a joint committee of Japanese and Americans.

Now we come to the case of William Girard, the GI who last January accidentally killed a Japanese woman on a firing range where she was scavenging the metal from exploded shells. The question arose as to whether the American soldier, Girard, was on duty or not at the time of the incident. The question was turned over to the joint Japanese-American committee, which disagreed, the Japanese on the committee contending Girard was not on duty and therefore should be surrendered to them; the Americans on the committee contending Girard was on duty and that the Americans should therefore retain his custody for court-martial trial.

Here another provision of the Status of Forces agreement came into play. When the committee disagrees, says the Status of Forces Agreement the matter shall be referred to the respective governments. When this was done, the Japanese Government stood its ground, but our Defense Department in Washington ordered the Far East Command to surrender Girard to the Japanese.

When this decision touched off a furor in the United States, Defense Secretary Wilson ordered the Army to retain custody of Girard while the case was reviewed further in Washington. Despite this order, a Japanese procurator (prosecutor) indicted this American soldier on manslaughter charges. You will note that this indictment for a serious crime was not by a grand jury—for the simple reason Japan does not have grand juries.

After a brief delay, Secretary of State Dulles and Secretary of Defense Wilson announced that Girard, the American soldier, should be handed over to the Japanese for trial. In a fine example of hair-splitting, which obviously was designed to appease the Japanese rather than to resolve a doubt in favor of an American citizen whose rights were imperiled, they held that Girard's action—firing an empty cartridge case at the Japanese woman—was "not authorized" and therefore was not in the performance of duty. This despite the fact Girard had been stationed by his commanding officer to guard the firing range. This despite the fact also that Secretary of the Army Brucker has publicly asserted: "Girard was given a command to protect Army property and he was doing just that."

The trial of Girard is set for August before three Japanese judges. You will note this American soldier does not even have the right to request a jury trial—for the simple reason Japan does not have jury trials.

Thus Girard, facing charges on a serious crime for which he could draw a jail sentence up to 15 years, is deprived (1) of a military court-martial and (2) of a trial by jury in a civilian court.

You can readily see, I am sure, that somewhere along the line, the rights of an American citizen serving in the Armed Forces have been sacrificed in the interests of appeasing a foreign nation in which American soldiers have been stationed in the defense of that nation and, presumably, in the defense of our own Nation.

This surrender is embodied in the status of forces agreements with many foreign nations, some of which have laws which are at even wider divergence from our own than in the case of Japan. For instance, we have them with some countries in which an accused person is presumed to be guilty until and unless proven innocent. Where is there equal justice for American citizens in such procedure? Where are the constitutional guarantees?

Incidents such as the Girard case were not unforeseen by some of our statesmen. Senator JOHN W. BRICKER, of Ohio, 4 years ago, when the issue came before the Senate in connection with the NATO treaty, proposed and fought for a reservation which would have forbidden trial of United States military personnel in foreign courts. The reservation was rejected by the Senate. Now the chickens have come home to roost—and we have not seen the end, unless either the courts act to strike down this abrogation of a sacred guaranty in our Constitution, or unless our Constitution is amended to state clearly that no treaty or executive agreement with a foreign country or any group of foreign countries shall supersede the Constitution with respect to the rights of American citizens.

A Federal district court in Washington has been asked for a writ of habeas corpus to bring Girard back to the United States for trial, instead of turning him over to the Japanese. A decision is expected in the case within a few days.

We dare hope that either the district court or some higher Federal court will uphold this soldier's rights under the Constitution and prevent him being tried under Japanese laws and procedure, thereby setting a precedent to apply in all similar cases where American men and women are stationed in the Armed Forces overseas.

Last week the United States Supreme Court ruled in two criminal cases involving Americans overseas—in this instance wives of men in the Armed Forces—that the United States, even by treaty, cannot exercise power under international agreements without observing the guaranties in our Constitution. Those cases are not identical with the Girard case, but there is some hope in them that the same reasoning would be applied and the same conclusion reached by the Federal courts in the Girard case as to the constitutional guaranties of the basic rights of American citizens.

But we cannot afford to overlook the fact that last week's Supreme Court decision was a reversal of a decision rendered in the very same case just a year ago. Nor can we afford

to overlook the fact that this latest decision, upholding a constitutional guaranty, was a 6-to-2 decision, with 1 of the 6 majority justices concurring on very narrow grounds, and another member of the Court concurring only in part. And, of course, 2 justices dissenting completely, and 1 not participating.

Who can say what some future Supreme Court may rule on the relation of so-called treaty law to the Constitution, unless the Constitution is amended to specify that no international agreement shall supersede the Constitution as it applies to the rights of American citizens. Such an amendment to the Constitution has been proposed by Senator BRICKER and is known as the Bricker amendment.

No matter what the outcome of the Girard case, we dare not rest easy in the assurance, or take it for granted, that the rights of American citizens are secure from constant inroads by means of treaties and executive agreements with foreign nations until the Constitution is amended to make it secure from erosion by executive action or the application of so-called treaty law. The so-called Bricker amendment to the Constitution is essential for the protection of the traditional rights of all American citizens, not only those in the Armed Forces but everywhere in civilian life as well.

We have had ample warning in the case of Army Sp3c. William S. Girard, a citizen of the United States serving in the Armed Forces. Let us take heed.

Exchange of Television Between Communist and American Leaders

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, July 8, 1957

Mr. JOHNSON of Texas. Mr. President, the American press has supplied overwhelming evidence that our people are not afraid of the war of ideas with the Communist world. They are confident of the outcome.

The "open curtain" proposal for a free and mutual exchange over television between Communist and American leaders has been endorsed by newspapers in every section of the United States. Their willingness is in stark contrast to the attitude taken by Soviet leaders.

The Soviets have made it plain that they are afraid to expose their people to the facts.

I ask unanimous consent that representative editorials on this subject be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baton Rouge (La.) State-Times of June 13, 1957]

TV EXCHANGE IDEA

Senator LYNDON JOHNSON has advanced an intriguing idea in suggesting weekly television exchange program with Russia. He makes this proposal in full confidence that the United States can more than hold its own in an exchange of ideas with the people of the United States and Russia.

If the Russians can be persuaded to permit uncensored broadcasts of American spokesmen on vital issues, it should be a good thing. We assume we are more than willing to have their spokesmen broadcast to us.

It is possible the Russians will not risk such an exchange. On the other hand, they may feel as confident of their people's approval of their government and its policies in world affairs as we are of ours. It is necessary to remember that the minds of Russians have been long conditioned to their way of thinking. So broadcasts by American spokesmen might not find acceptance. The Russians would have 6 days a week to belittle and rebut any ideas offered.

If the Russians are cold to the Johnson proposal, though, we will be a net gainer in the world propaganda battle. If we can say we are willing to listen, but they aren't, then we'll have quite an advantage in the cold war.

Senator JOHNSON may have neatly put the Soviets on a hot spot. If they don't accept his suggestion, they can be charged with fear of listening to American proposals. If they should accept, we'd have some chance of reaching the Russian people directly. It's truly an interesting suggestion.

[From the Minneapolis Tribune of June 11, 1957]

INTRIGUING SUGGESTION

Senator LYNDON JOHNSON's proposal for a weekly exchange of radio and television programs between the leaders of the United States and the Soviet Union is an intriguing one. The proposal, which now has been endorsed by Senator WILLIAM KNOWLAND, might help reduce tensions between the two countries.

It is unfortunately true that such a weekly exchange of television programs would give the Russians a bigger audience here than the United States could obtain over there. They could present their programs on the many hundreds of television stations in this country and be assured of perhaps millions of viewers—depending on competing attractions—while the United States shows would be presented on only 14 Russian stations because that is all there are in the Soviet Union. We also have more radio stations and radio sets than the Soviet Union.

The Russians probably would use their programs to spread propaganda, as Soviet Party Boss Khrushchev did in his recent television appearance. But as Senator JOHNSON said, we should not be afraid to have Americans listen to Khrushchev or Karl Marx or Lenin because the American people "have the intelligence and the independence to make up their own minds."

President Eisenhower indicated at his press conference last week that if the Russians invited some high American official to appear on Russia TV and guaranteed that there would be no jamming or other interference, he would look favorably on the proposal. Senator JOHNSON has made a logical extension of the President's comment, and his suggestion ought to be studied to see whether it could be worked out on a practical basis.

In our opinion, the United States has nothing to fear from the free exchange of ideas between the Soviet Union and the United States. It may well be that when the truth shines through the Iron Curtain and the people of Russia get the facts, it will become possible, as Senator JOHNSON forecast, to banish the arms race, the nuclear explosions, and the intercontinental missiles, and agree upon systems that safeguard us against world suicide.

[From the Johnstown (Pa.) Tribune-Democrat of June 11, 1957]

SURE, LET'S ASK MOSCOW FOR MUTUAL TV

Mr. Khrushchev has, we suggest, already said "nyet" to the proposal of Democratic Senate Leader LYNDON B. JOHNSON, endorsed by Republican Senate Leader WILLIAM F. KNOWLAND, for a reciprocal exchange of radio and television time between the United States and the Soviet Union.

In the course of his televised interview, which was broadcast in the United States a week ago Sunday, Khrushchev replied to a question whether Moscow would be willing to quit jamming the radio programs of the Voice of America.

"Our country," he said, "is a very musical country, and, you know, we have many good singers, both in the past in Russia and now, too. Therefore, if it's a good voice, we do not jam it. On the contrary, we want it to be heard all over the country. But if it's a voice which cuts on the ear, then every person switches off one's radio, or jams that radio because that voice gets on one's nerves.

"Therefore," Khrushchev continued, "if the Voice of America does become the voice of America—because we respect the American people—it will not be jammed in our country, but when it is not the voice of America, but a sort of wailing over the radio, supposedly the voice of America, in that case we want to avoid our people getting the wrong view of the American people."

This is about as clear a statement as anyone could ask. It says that Moscow will decide what the people of the Soviet Union may hear on foreign radio programs, and that Moscow will not permit any uncensored programs from abroad. Khrushchev does this in an indirect way, implying that only misleading programs will be jammed—but the propaganda experts of the Soviet Union decide what programs from the West are misleading.

The Johnson-Knowland proposal has merit, however, just as the Eisenhower "open skies" proposal had merit in 1955. For it might compel the rulers of the Soviet Union once again to refuse explicitly an offer by the West of mutual concessions. And that would help to persuade doubters, if any remain, that the people of the Soviet Union are a captive audience, and are permitted to hear only what their masters in the Kremlin want them to hear.

So we would like to see this idea developed fully, not because of any hope that it would persuade Moscow to lift the electronic curtain it lowers against Western radio, but because it might be an excellent counter-propagana move on the part of the United States.

[From the Charlotte (N. C.) News of June 13, 1957]

LET UNITED STATES GET EQUAL TIME FROM MOSCOW

Washington's reaction to Nikita Khrushchev's big pitch to United States television viewers seems to be that in ignorance of what the Russian is doing there is some bliss and a great deal of virtue.

Republican House leader JOSEPH W. MARTIN dourly informed the press that he had avoided watching Khrushchev, President Eisenhower chided the Columbia Broadcasting System for interviewing the Red boss, indicating that CBS had sought unfair commercial gain at the risk of misleading the public as to what Khrushchev is really like off camera.

As days passed, the administration's first reaction became final. The Khrushchev appearance was to be ignored, with the hope that it wouldn't happen again. No attempt would be made to have an American official broadcast to the Russian people.

Withal, it was singularly stodgy and unimaginative response to a daring challenge from the Kremlin in the war of ideas. Moscow was chortling over Khrushchev's skillful propaganda coup. Doubtless it also was congratulating itself over the fact that Washington had not asked for equal time. It was significant that Khrushchev's remarks

to the United States were censored before they were printed in the Russian press.

The opportunity remains for the United States to give Khrushchev a taste of his own medicine. Let Washington demand time on Russian radio and TV for American spokesmen to make the United States case to the Russian people. Khrushchev is bound to lose, either way. A good dose of the truth about the United States should be a powerful stimulant to political unrest in Russia. Should the Kremlin refuse the demand, it would prove itself false to a professed desire for a relaxation of tensions, and afraid of a free flow of information.

Senator LYNDON JOHNSON's proposed "open curtain" policy of an exchange of radio and television time between United States and Soviet spokesmen deserves careful consideration by the administration. Any risks involved in the inevitable attempt by Soviet spokesmen to propagandize the American public would more than be offset by the risk the Kremlin would run in permitting Americans to loose a little truth in Russia.

Certainly Khrushchev was up to no good in agreeing to come before United States cameras. And while it is easy to detest him and to wish for the destruction of what he represents, it is neither safe nor wise to ignore him.

[From the Providence (R. I.) Evening Bulletin of June 18, 1957]

LET'S CALL THIS LOUD RED BLUFF

Television guest star Nikita Khrushchev told an American audience that his nation had no doubt of the outcome in a competitive war of ideas and predicted that the grandsons of this American generation will be living under a Socialist rule. Anastas Mikoyan, the Armenian first deputy premier of the Soviet Union, and a really smart cookie, follows up Khrushchev with another wide-open declaration: "We are not afraid of a competition of ideas. We are for any kind of cultural relations."

Senator LYNDON JOHNSON, Democratic leader, who generally has his wits about him, picked up the Russian boasts and called for an "open curtain" by way of television and radio for a contest of ideas between the two great world powers and suggested that the start be made by the presentation of our ideas on disarmament. Secretary Dulles, getting into the act, recalled that in the fall of 1955 he had suggested to the Russians at Geneva "reciprocal presentations" of conflicting ideas but that the Russians failed to reply. And that's as far as we have gone.

What are we waiting for? Are we going to permit the Russian challenges to go unanswered by default and give them a psychological victory by no contest? Are we going to leave them wide open to spread the word that the Americans are ducking an ideological contest? Even if they do not intend to come through by opening the curtain, why are we wasting the chance to call them and set the record straight? It is not correct interpretation to dismiss the Khrushchev broadcast as merely a commercial undertaking.

The American people, lovers of competition and devoted to the truth of their institutions, would relish, would eat up a television contest between representative spokesmen on the validity of mutually antagonistic ideas. The Russian people, we think, would be no less eager for the battle of ideas; indeed, we suspect that their eagerness might bring the Khrushchev-Mikoyan team to sober second thought lest, as Wendell Willkie warned Stalin about universal education, they might televise themselves right out of their jobs.

William James once praised international contests as the "moral equivalent of war." That's what Khrushchev meant, rather prolixly and maybe insincerely, when he said that since we are not going to fight, let's have it out with a battle of ideas. We simply cannot afford to let the chance go by default to uphold our end in the "moral equivalent of war."

[From the Cleveland Plain Dealer of June 10, 1957]

A CHALLENGE DECLINED

Senator LYNDON JOHNSON has come up with a good idea. He has proposed that the United States and Soviet Russia present their ideas on each other's television and radio once a week. Noting that Nikita S. Khrushchev, in his film telecast in the United States last week, called for competition between the capitalist and socialist states, JOHNSON said: "There is one form of competition—the clash of ideas—that Americans would welcome with delight."

This is a challenge we would like to have the Kremlin accept, and which it should accept, if Khrushchev's words about welcoming competition were sincere. Unfortunately, however, it is a challenge which was rejected even before it was made. And it was Khrushchev himself who rejected it.

During the telecast interview last Sunday Khrushchev was asked whether the Russians would stop jamming the broadcasts of the Voice of America. This was his reply:

"Then you asked me about the Voice of America. Our country is a very musical country and, you know, we have many good singers, both in the past in Russia, and now, too. Therefore, if it's a good voice, we do not jam it. On the contrary, we want it to be heard all over the country. But if it's a voice which cuts on the ear, then every person switches off one's radio, or jams that radio because that voice gets on one's nerves.

"Therefore, if the Voice of America does become the voice of America—because we respect the American people—it will not be jammed in our country, but when it is not the voice of America, but a sort of wailing over the radio, supposedly the voice of America, in that case we want to avoid our people getting the wrong view of the American people."

There you have it, Senator JOHNSON. The Russians will compete with us in the realm of ideas, providing the Communist leaders censor those ideas first, to make sure they do not contain any suggestions which are contrary to Communist doctrines. They would be perfectly willing, for instance, to listen to the Voice of America extol the beauties of American scenery, but not the virtues of capitalism and its advantages over communism. They would listen to a commentary on the Civil War, but not one on the promises the Kremlin has broken since the end of World War II.

If any further evidence is needed that the Communist masters of Russia will not permit the Russian people to read or hear anything that might lead to independent thinking, it is to be found in the fact that a portion of Khrushchev's interview, in which he said that the Communist Party reflects the desires and wishes of the Russian people, was omitted from the texts published in Russia.

[From the Fargo (N. Dak.) Forum of June 12, 1957]

"OPEN CURTAIN" SUGGESTION MADE BY SENATOR JOHNSON

After Khrushchev's recent television appearance the suggestion was advanced that the Kremlin be asked to grant permission for the appearance of President Eisenhower or some other American official to talk to the Russian people.

While it can be questioned that the Kremlin would grant such permission, and, if an attempt should be made to get to the people of Russia, the chances, as matters stand, are that an American talk would be jammed.

But rather frequent expression of opinions from both sides could prove worth while.

Senator LYNDON B. JOHNSON, majority leader of the Senate, has now called for an open curtain through which the United States Government could state its case for disarmament directly to the Russian people. Senator WILLIAM F. KNOWLAND, minority leader of the Senate, has endorsed the idea as a possible help in reducing tensions between the two countries.

Senator JOHNSON put it this way:

"We should ask Khrushchev to provide us with Soviet-wide uncensored radio and TV facilities. We should call on him to allow spokesmen of our choosing to come into Russian homes and state our case—the American case—to the Russian people."

Even if Khrushchev went along with the idea, the fact remains that Russian appearances would continue to be propaganda just as the Khrushchev interview was propaganda. But Senator JOHNSON declares that we should not be, and are not, afraid to have the American people listen to them. As the Senator puts it, the American people "have the intelligence and independence to make up their own minds."

In this connection, Secretary of State John Foster Dulles says that the United States favors a monthly radio-television program on a reciprocal basis. He said the idea was first proposed to the Soviet Union by the United States, Britain, and France at the Geneva Foreign Ministers Conference in 1955. He indicated that he had doubts as to the value of a one-shot appearance such as that of Khrushchev's recent broadcast.

He recalled that the Big Three plan in 1955 envisaged a monthly 30-minute program, but that Russia opposed it then, and presumably does now.

President Eisenhower, at his last press conference, said that if Russia invited some American official to appear on Russian TV and guaranteed that there would be no jamming or other interference, he would look favorably on the proposal.

[From the Lewiston Daily Sun, Lewiston-Auburn, Maine, of June 13, 1957]

ON REACHING THE RUSSIAN PEOPLE

One never knows what is going to come out of the United States Senate in the way of ideas, and we had a good example of that this week, in connection with senatorial reaction to the TV propaganda speech delivered recently by Red Party Boss Khrushchev.

There has been considerable anxiety over the fact that Khrushchev has been permitted to reach tens of millions of Americans with his outrageous guff on disarmament and other topics, while we have no way of telling our story to the Russian people through a public figure of equal stature.

So we have had Senator BILL KNOWLAND, of California, rush into the situation with a disarmament plan which he thinks puts the Soviets at a disadvantage. He would have Norway offer to quit NATO in return for a Russian withdrawal from Hungary, and follow this up with successive staged pullbacks by both sides from eastern and western Europe. The Norwegian Government has sharply attacked KNOWLAND's strategy, and so has the military commander of the NATO forces. It looks like a very impractical way of forcing Russia to make good on Khrushchev's offer to get out of the satellite countries.

But getting back to the problem of reaching the Russian people, as Khrushchev reached his huge United States audience, Democratic Senator LYNDON JOHNSON has come up with a thoughtful plan by which American spokesmen can—if the Kremlin permits—refute the baseless Communist accusations that we seek a nuclear war, and that only the United States blocks genuine world disarmament.

Senator JOHNSON wants the administration to ask Moscow for uncensored, free radio and TV facilities in order that our leaders can "come into Russian homes and state the American case." And we would reciprocate by offering equal facilities here. The Senator thinks moreover, that we should hammer on this offer day after day, at every point of contact with Russia until it is accepted or rejected.

We like that plan, because of its immense value to the free world—either in reaching the Russian people, or in forcing the Kremlin to admit that it dares not lift the curtain.

[From the Ashland (Ky.) Daily Independent of June 17, 1957]

TOURNAMENT OF IDEAS BETTER THAN ARMAMENT RACE OR WAR

Senator LYNDON B. JOHNSON'S idea for a reciprocal exchange of ideas between spokesmen of the United States and of the Soviet Union on the air, on equal time and facilities, without jamming or interference of any kind, is a major contribution to a solution of the pressures troubling the world comparable to and supplementary to President Eisenhower's open-skies inspection plan. It is an open-sky plan for ideas.

While the greatest peacetime military forces in history "rest on their arms," the leaders of the two great powers would engage in a contest not unlike the old tournaments of old, man against man, knight against knight, each defending his ideals. The peoples of the two nations would by their response decide the outcome. The prospect is breathtaking.

There is no question but that Nikita S. Khrushchev, the Soviet Party chief, scored a propaganda coup with his willingness to be interviewed and filmed for a telecast to the United States. The interview, with certain questions and answers that would have favored the United States eliminated, was rebroadcast to the Soviet and over all its propaganda channels. So far there has been no official reply either in this country or over the Soviet propaganda system.

Senator JOHNSON would have arranged for the reply before our own airways were opened to Khrushchev and the reply would have been made at once to the Soviet people. In such an exchange we can trust to the human urge for freedom to weigh heavily in our favor. Certainly if equal times and facilities were assured, we could enter such a contest with complete confidence. That is perhaps the main drawback to the idea. The Soviet would not permit their people to listen to our argument for fear of the repercussions. But they first ridiculed the Eisenhower open-skies plan and now indicate a willingness to try it. The time may come when they would accept the Johnson open-airwaves plan. A formal proposal now would lay the groundwork for probable future acceptance.

[From the Columbus (Ga.) Enquirer of June 22, 1957]

OPEN CURTAIN EXCHANGE PROPOSAL GAINS WIDE SUPPORT IN CONGRESS

An open curtain exchange of information with Russia was proposed the other day by Senator LYNDON JOHNSON of Texas, and the suggestion met immediate endorsement from Democrats.

A sample of the reaction was seen in a statement by Senator JOHN C. STENNIS, of Mississippi, who said that there is a good chance that the proposal of the Democratic leader of the Senate will prove to be a "landmark, a turning point, in international affairs, the cold war, or the arms race."

Senator THEODORE FRANCIS GREEN, chairman of the Foreign Relations Committee, complimented JOHNSON for demanding that Russia give the United States the same chance to tell its story to the Soviet people that Khrushchev had on American television a week ago. He referred to JOHNSON'S suggestion as "the splendid work he has done overnight."

There was indication the Democrats might push the open curtain issue after JOHNSON pointed out that since World War II the United States has spent more than $416 billion on the cold war. He stated the national debt is threatening our whole economy. He asked:

"Would we be under that threat today if the people of the world had and opportunity to hear and weigh all the facts?"

In effect, the Texan dared Khrushchev to refuse the proposal, saying:

"If Khrushchev declines the proposal, let him explain why to the world. Let him explain why Americans can hear his case and why Russians cannot be permitted to hear our case. It would be interesting to hear the Communist representatives explain this point in some such forum as the United Nations."

The suggestion initially was made by Senator JOHNSON in a speech in New York Saturday and Senator WILLIAM F. KNOWLAND, Republican leader, was one of the first to endorse it.

It seems a good idea, even though there is no guaranty as to how many Russians would hear the American side of the question even if the Moscow Government should give this country the opportunity to speak to the people behind the Iron Curtain. It is doubted there could be a way of telling to what extent a television broadcast would cover the area dominated by communism.

The suggestion is nevertheless a good one.

Tribute to Dean Karl W. Onthank of the University of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. NEUBERGER. Mr. President, Dean Karl W. Onthank has been a tower of strength to the University of Oregon during the 41 years that he has been associated with the university. As a student at the university, I still can remember the generous guidance he gave to me and to many others.

However, Dean Onthank has not only been active at the university, but has played a leading part in the preservation of our great outdoors. He serves as president of the Western Federation of Outdoor Clubs and he has helped lead the fight to preserve Oregon's beauty in the Save-the-McKenzie Association and the Three Sisters Wilderness Society. I know that Dean and Mrs. Onthank will continue to play a vital and active role in community and conservation affairs.

As Dean Onthank retires from the University, I want to wish him and Mrs. Onthank every success for the future.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 3, 1957, issue of the Eugene (Oreg.) Register Guard entitled "Retire? Never," which tells of the splendid work of Dean Karl W. Onthank.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RETIRE? NEVER

The paper says that Karl Onthank is about to retire, but we don't believe it. Dean Onthank, currently associate dean of students at the University of Oregon, is just not the retiring type, a fact he readily admits when he says he still has "a few irons in the fire." Maybe he'll be away from his desk in Emerald Hall, but he certainly won't be retired, if by retired we mean in the position of sitting in a rocking chair and permitting himself to grow old.

The 41 years that the dean has been associated with the university have been years of development and growth. In most of the changes he took a personal part. His position as associate dean is the third regular job he's held at the university. And once, for a year and a half, he was virtually president of the university. That was when a three-man team ran the place while the regents were hunting a new president.

Turnover on the faculty has been great. You can count on your fingers the number of faculty members who were on the job in the Prince Campbell years. Karl Onthank was one of them. He reached the peak of his career in the depression when, as dean of personnel administration, he took a leading role in helping students prove it's possible to go through college on a shoestring.

We won't say Karl Onthank will be missed, because he won't be missed. And he won't be missed because he'll still be around rubbing elbows with the alumni, helping the students, and sticking his busy fingers into pies all over the State. He certainly isn't the type who can retire.

Henry Fountain Ashurst

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. GOLDWATER. Mr. President, when Arizona became the 48th State of the Union, the legislature in its wisdom sent to Washington two distinguished men as the Senators of the baby State. One of these men, Marcus A. Smith, has passed on to his reward. But the other one, Henry Fountain Ashurst, remains in our presence, delighting those who know him with his keen wit, and inspiring his associates with his constant and loyal adherence to the basic truths of our Republic. This fine gentleman, born in the mountains of Nevada, but becoming at a very young age a citizen of Arizona, has carried with him through life the characteristic optimism of the West. He has as his hallmark the ability to express himself in terms richly tinted with the clearness and beauty of the deserts and mountains of the State he so long represented in this body. His sentences are not merely a connected series of words; they are thoughts born of wisdom, tempered with reason, and festooned with the brilliance of study. They can be as warm as our Arizona sun or, if need be, as cold as the winds which sweep from our peaks. They carry the depths of our canyons and the clarity of the western air washed by a sudden rain.

They are as soft as the wind through the pines, or they can crash with the loudness of thunder. Occasionally Senator Ashurst visits his State, and these visits are eagerly awaited. A recent occasion for such a visit was the meeting of the Arizona Bar Association. To indicate how this man is received at home, I ask unanimous consent that an editorial from the Prescott Evening Courier be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASHURST RETURNS, RETRACES OLD TRAILS

Here for the recent Arizona Bar Association conclave, Henry Fountain Ashurst "took a swing around" the northern half of the State, renewing friendships, and retracing old trails, before returning to Washington. Beyond the four-score span of years, he was the picture of health, the embodiment of contentment, rich in esteem for his fellow man. Laying flower tokens on the local resting place of his departed helpmeet, calling on the few he knows so well and comparing present Prescott scenes with those of other days, he was saddened by finding so many past associates no longer here. It was like drifting in loneliness through the halls of yesterday.

The outstanding figures guiding Arizona during early statehood nearly all are gone. Certainly none is more notable than this fine man whose service as a United States Senator gave full meaning to faith and loyalty. He never faced the charge of violating campaign pledges, no whispers that he sought personal gain ever were uttered; his record was clean and flawless. No challenge to his courage can be recalled, his sympathies were deep and true, his judgment based entirely on the pillars of right. Through the eventful three decades of public life he "kept the whiteness of his soul," always adhering to justice, clear in understanding.

It was good to have Henry Ashurst back, even if only for a little while. His cheerfulness is contagious, his handclasp frank and warm. At least once each year Prescott should recall him for a temporary stay, as he assuredly is the Mile High City's most distinguished son—one whose thoughts do not stray far from the rugged hills which yet are dear to him.

Freedom of Debate in the Senate

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. TALMADGE. Mr. President, One of the excellent witnesses heard by the Special Subcommittee on Senate Rule XXII of the Senate Committee on Rules and Administration on Friday, June 28, was Hon. Edgar C. Bundy, of Wheaton, Ill., president of the Abraham Lincoln National Republican Club.

Major Bundy's defense of continued freedom of debate in the United States Senate was both forceful and enlightening, and I ask unanimous consent that the text of his remarks be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF EDGAR C. BUNDY, PRESIDENT, THE ABRAHAM LINCOLN NATIONAL REPUBLICAN CLUB, BEFORE THE SPECIAL SUBCOMMITTEE OF THE COMMITTEE ON RULES AND ADMINISTRATION, JUNE 28, 1957

Honorable members of the special subcommittee, my name is Edgar C. Bundy, resident of 1407 Hill Avenue, Wheaton, Ill., and I am appearing before this committee today as president of the Abraham Lincoln National Republican Club, Chicago, Ill., as a spokesman in behalf of the membership of this organization which reside in 47 States and Alaska, to speak in opposition to any proposal to limite Senate debate which might change or modify present Senate rule XXII.

The headquarters of our organization in Chicago, upon learning of the intended introduction of proposed changes in Senate rule XXII, sent out a general letter to our members urging them to express their opinion on these proposed changes. Every reply received in our headquarters was in definite opposition to any change in the present rule XXII. I am, therefore, appearing as spokesman for the club at this present hearing.

The United States Senate is one of the last free bodies in a world which is collapsing around us and in which world freedom of expression is being severely limited or entirely crushed.

Every piece of legislation introduced into the Senate of the United States which might affect the future of our Republic, or any sovereign State of that Republic, should be thoroughly examined openly before the people with no restriction placed upon that examination; for, after it is passed, by simple majority vote, it may prove far more difficult to undo, if harmful effects should result from the same when it becomes law.

We are in too much of a rush today to get things done. In this pushbutton, streamlined, jet age we scarcely take time to live any more, let alone examine measures thoroughly which may affect the last semblance of freedom on the face of the earth. We need to slow down and reexamine whither we are bound.

This representative government of ours is being pressurized by highly vocal and well financed minority groups to change its methods of doing things—methods which have proved themselves to be in the best interests of the Nation as a whole through many decades of trial and experiments.

Year after year, since the first Senate met in 1789, individuals in this body have tried to introduce changes in Senate rules to limit full and free discussion, oftentimes in the form of gag rules. But, our Senators have steadfastly refused to adopt such restrictive measures with the exception of the present required two-thirds cloture rule passed in 1917. Why, might we ask, a two-thirds rule? Perhaps this can best be answered by stating that history proves that the majority is not always in the right.

We hear a lot of arguments advanced to the effect that small minorities in the Senate can obstruct the will of the majority, and that therefore this right of the minority must be taken away. This is contrary to the United States Constitution itself. Our form of government was never set up on the basis of stifling the expression of minorities, even by a majority of one.

If we consult the proceedings of the United States Senate, as a continuing body from 1789 until the present day, we will find that the only time the filibuster was used was on some measure against which there was strong minority opinion and a definite basis for opposition. Out of a total of 36 measures against which the filibuster was used, only 11 failed of passage (some of these were the same bills or similar ones introduced over a period of time) and the other 25 were eventually passed, usually after being modified by the elimination of potentially dangerous provisions, or by adding to them features which would benefit particular States or areas of the Nation. That is a pretty good record in the history of American legislation.

Granted that there may have been some inequities resulting from the use of the filibuster in connection with the 11 bills which did not pass, is that any reason to burn the proverbial "house" down in order to destroy a few "rats" in the basement?

It is amazing, to say the least, how opponents of the present two-thirds cloture rule, while demanding a change from two-thirds to a simple majority, conviently ignore the fact that a two-thirds vote of both Houses of the Congress is required to override a minority of one, namely, the veto of the President of the United States; and, a three-quarter vote of all the sovereign States is required to ratify a constitutional amendment.

If the basis for the arguments presented over a period of years by those in favor of a simple majority as a means for closing debate is followed to its logical conclusion, then the President of the United States could be classified as an obstructionist to the will of "the majority," and at least one-fourth of the States also constitute an obstruction to the will of "the majority." These exponents of "majority rule," in order to be consistent in their thinking, should ask that a Presidential veto be overridden by a simple majority of both Houses, and that a constitutional amendment be ratified by 25 States instead of by 36.

It would be well to recall at this point the words of the distinguished Senator John C. Calhoun, when on July 12, 1848, he stated concerning Senator Clay's proposal to introduce the "previous question" in order to limit debate, as follows: "There never had been a body in this, or any other country, in which, for such a length of time, so much dignity and decorum of debate had been maintained."

Despite the fact that there have been what might be classified as exceptions to the usual decorous procedure of the Senate at times in the life of this body, Senator Calhoun's statement is certainly applicable to the years since 1894 as much as to those prior to that date.

Again, in 1881, when a resolution was introduced to amend the Anthony rule and was objected to on the grounds that it was actually a form of introducing the use of "the previous question," Senator Edmonds made a profound observation which could well be taken to heart today by those who propose to stifle unlimited and free debate by changing Senate rule XXII: "I would rather not a single bill shall pass between now and the 4th of March than to introduce into this body, which is the only one where there is free debate, and the only one which can under its rules discuss fully. I think it is of greater importance to the public interest in the long run and in the short run that every bill on your calendar should fail than that any Senator should be cut off from the right of expressing his opinion upon every measure that is to be voted upon here."

I, for one, as an American citizen, and an intelligence officer in the United States Air Force Reserve, who have seen with my own eyes the suppression of free discussion in Juan Peron's Argentina, in Communist China, and in Europe, agree with Senator Edmond's statement wholeheartedly. If minority rights are to be preserved, they should be preserved in the Senate of the United States first of all, as such minorities consist

of men and women who are duly elected to this august body of majorities in their own sovereign States. They are directly responsible to the will of these people. It would be a direct slap in the face to these majorities in the States to tell their elected representatives in the Senate that they will not be permitted to speak as long as they desire on any given measure. If these particular Senators are in the wrong, then it is up to the people who send them to Washington to correct that wrong, and it is not up to the Senators from other States to draw such a conclusion. The ballot box is the finest free weapon we have left for correcting any abuse of Senatorial privileges.

It is interesting to note that since the first motion to invoke the cloture rule was intrduced in the United States Senate on November 15, 1919, that the Senate itself voted in favor of that motion only 4 times out of a total of 22 times that it was made. This proves beyond a shadow of a doubt that the Senate itself, by substantial vote margins, was in favor of unlimited debate on 18 of the 22 measures before it. In each of the 18 instances a substantial number ranging from 27 to 77 opposed the limitation of debate.

In the light of these historical facts, we can only ask: Why are these proposals to limit debate continually presented before the Senate Rules Committee and its subcommittees? History is continually repeating itself, but the tragedy is that we do not seem to learn the lesson of history until it is too late. It is my opinion, after having examined the influences brought to bear on once-free nations in the process of turning them over to totalitarian regimes, that freedom of expression, whether oral or written, has always been stifled first before the country was captured by a dictator or totalitarian regime.

It is a singular fact that the Senate of the United States has passed a higher percentage of bills since its inception, without majority cloture, than the House of Representatives has passed with such a cloture rule. The Senate is known to be the more deliberative of the two bodies of the Congress. I do not believe that the American people want this change through a "speed-up campaign," which would surely result if the present Senate rule XXII were changed from two-thirds to a chance majority.

Some have advanced the idea that the filibuster as used in the United States Senate causes adverse criticism of our Government in foreign countries, especially on the part of foreign governmental assemblies. I think it is about time that we stop paying attention to the criticisms of people who have been receiving continuous handouts from the American taxpayers for lo these many years, and from governments which have various conceptions of justice and freedom which are alien to traditional American Constitutional concepts.

Our country has existed as a free Republic because our people have enjoyed the freedoms guaranteed to them in the great documents written by wise Founding Fathers. Let us not send this Nation down the road which decadent foreign nations have already traveled by restricting full and free debate on the part of our United States Senators, whom we send to Washington for the purpose of representing us and maintaining a position on any measure which is in accordance with the views of the constituency they are representing.

Thank you very much for this opportunity of presenting these views to the Special Subcommittee of the Committee on Rules and Administration.

National Driver of the Year Award to Ernest Roedel, of Missouri

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. SYMINGTON. Mr. President, during the past holiday weekend, by way of radio, television, and newspapers, we heard a great deal about the need for safe driving on American highways.

Mr. President, we, in Missouri, are proud that a young Missourian, Mr. Ernest Roedel, of New Franklin, Mo., has been named as "National Driver of the Year" for his heroism and safe-driving record. Mr. Roedel has never had an accident, either in his own automobile or during the 6½ years he has driven a truck, establishing a "no-accident record" for more than 500,000 miles.

Mr. CARLSON. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Mr. CARLSON. I very much appreciate the comment the Senator from Missouri has made in regard to Mr. Ernest Roedel the Missouri truck driver who has won the national award for safe driving. I am proud to state that he drives for Freight Ways, Inc., of Wichita, Kans., a Kansas corporation. We of Kansas, too, wish to extend to him our congratulations and best wishes. We are proud of his outstanding record.

Mr. SYMINGTON. I thank the Senator from Kansas.

Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a press release entitled "Missouri Truck Driver Named 1957 National Driver of the Year."

There being no objection, the release was ordered to be printed in the RECORD, as follows:

MISSOURI TRUCKDRIVER NAMED 1957 NATIONAL DRIVER OF THE YEAR

WASHINGTON, D. C., June 29.—A 29-year-old Missouri truckdriver has been named national driver of the year for his heroism and safe-driving record, the American Trucking Associations announced today.

He is Ernest Roedel, of 113 Chancelor Street, New Franklin, Mo., a driver for Freight Ways, Inc., of Wichita, Kans. Mr. Roedel drives from the company's New Franklin terminal.

Married and the father of a 5-year-old boy, Mr. Roedel is credited with saving the life of a 3-month-old baby and rendering first aid to her 2-year-old sister after an auto wreck in which both parents were killed.

The driver also was cited for a 500,000-mile no-accident record. He has never been in an accident either in his own automobile or during the 6½ years he has driven a truck.

The driver of the year award is given annually by the American Trucking Associations to 1 of the more than 7 million truckdrivers in the country for his outstanding safety record or acts of heroism. Mr. Roedel, the 1956 Missouri driver of the year, was nominated by the Missouri Bus & Truck Association.

The judges were Congressman KENNETH A. ROBERTS, of Alabama, chairman of the House Highway Safety Subcommittee; Louis S. Rothschild, Under Secretary of Commerce, W. Y. Blanning, Director of the Bureau of Motor Carriers of the Interstate Commerce Commission; and Arthur C. Butler, director of the National Highway Users Conference.

Mr. Roedel, also is the holder of an Arthur Godfrey citation as a gentleman of the highway, awarded last year by the radio-television star in cooperation with the American Trucking Associations for his help to the two injured children.

While driving west along Highway 40, about 10 miles east of Boonville, Mo., on September 5, 1956, Mr. Roedel noticed an old model pick-up truck approaching from the opposite direction. Behind it was a station wagon traveling at a high speed. The station wagon started to pass the pickup truck but swerved back in line when the driver apparently realized he could not pass safely. As he did so, the station wagon went out of control and plunged down a 75-foot embankment, turning over 3 times.

Mr. Roedel pulled over to the side of the road, stopped his truck, and directed a passing motorist to go to Boonville for help. He then ran down the embankment and found that Mrs. Joan Van Horn, 26, of Portsmouth, Va., and her 2 daughters, 3-month-old Nanette and 2-year-old Rebecca, had been thrown from the car. Her husband, Lt. (jg.) John Van Horn, 26, of the Coast Guard, had been killed instantly.

The children had landed in a drainage ditch and were in danger of drowning. Mr. Roedel pulled them out of the water and applied first aid to the older child, who was suffering from shock, a broken collarbone, broken arm, and three broken ribs.

The truckdriver then went to the aid of the mother who was rolling on the ground in pain and bleeding profusely. He took blankets from the station wagon, covered her and tried to quiet her.

When other help arrived, Mr. Roedel directed the aid and stayed with the mother and children until the ambulance arrived. Mrs. Van Horn died soon after the arrival of the ambulance and, with both parents dead, the truckdriver followed the ambulance to the hospital to insure that the children were given prompt and adequate care.

Witnesses said the older child probably would have hurt herself internally and far more seriously if Mr. Roedel had not been on hand to care for her and keep her from moving. The younger child surely would have drowned if he had not pulled her from the water so quickly, according to reports.

The children have since been adopted by Mrs. Van Horn's brother-in-law and sister, Mr. and Mrs. Allen Troutman, of Ottawa, Kans.

A member of Teamsters' Local, 534, of Sedalia, Mo., Mr. Roedel has been employed by Freight Ways, Inc., since 1950 and operates a tractor-trailer out of Boonville to St. Louis, Louisiana, Mo., and Ottawa, Kans.

Mr. Roedel's no-accident record follows his father's footsteps. His father, Herman, also is employed by Freight Ways, Inc., and has never had an accident either as a truckdriver or in private life.

Mr. Roedel entered the merchant marine in 1945 and served for 2½ years. Returning to civilian life, he was employed by the Herman Roedel Beer Distributors from 1948 until he joined Freight Ways, Inc., in 1950. Later that year he joined the Army and served in Korea until his discharge in 1952, when

he returned to Freight Ways. During his Army service he maintained his no-accident record while driving a truck for the ordnance.

Mr. Roedel and his wife, Charlene, are members of the St. Stephen Evangelical Church. He also is a member of the Raymond Warenhoof Post of the VFW in Boonville.

As driver of the year, Mr. Roedel and Mrs. Roedel will be invited to visit Washington and spend a week at the Waldorf-Astoria in New York as the guests of the American Trucking Associations.

Bob Hill, Assistant Secretary of State, Ambassador to Mexico

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. VORYS. Mr. Speaker, the following article from the July number of the magazine Diplomat, gives an interesting background sketch on our friend, Robert C. Hill, who is leaving as Assistant Secretary of State for Congressional Relations to become our Ambassador to Mexico. We all know that maintaining diplomatic relations between Capitol Hill and Foggy Bottom, where the State Department is located, takes tireless energy, rare tact, and great ability. Bob Hill has demonstrated these qualities. As the following article shows, he has the experience as well as the ability to be a worthy Ambassador to our nearest Latin American neighbor. We all wish him well.

OUR NEW AMBASSADOR TO MEXICO—EXPERIENCED AT GOOD NEIGHBORING, ROBERT C. HILL HEADS FOR THIRD POST AS ENVOY WITH PLANS TO GET AROUND THE COUNTRY AND MEET THE PEOPLE

(By Dorothy Williams)

When Robert C. Hill goes to Mexico this month as our new Ambassador to that nation, he'll be returning to a region where not so long ago he did some good neighborly trailblazing. It all came about as the result of a suggestion by Vice President RICHARD M. NIXON. A 39-year-old former W. R. Grace & Co. executive, Hill is well acquainted with most of the countries south of the border. But he can claim a special acquaintanceship with areas that border the Pan-American Highway, since in 1955 he became our first Ambassador to drive all the way—with the exception of a 164-mile stretch—from San Salvador to Laredo, Tex. His attractive, European-educated wife and their two small sons accompanied him.

Hill, then our Ambassador to El Salvador, made the 3,700-mile journey—some of it in low gear—in the hopes of promoting development of the Pan-American Highway. He got the idea when NIXON, at that time a goodwill visitor in El Salvador, asked if he had ever thought of driving home by way of the highway.

Not long afterward he bundled his family into their car, took the wheel and headed north with United States Information Agency cameramen following along to record the event.

Between Tapachula and Orriga, Mexico, the Hills and their car were transported by train because of impassable roads. Such a static role as a train passenger, even through rugged Mexican mountain areas, seems somewhat out of character for Hill.

He's a man who likes activity and, as an Ambassador, he likes to get around a country as much as possible and meet the people. As he puts it, he doesn't think an envoy should confine himself to just visiting the watering spots.

This is the third ambassadorial post to which Hill, a political appointee, has been named by President Eisenhower. He served first as our Ambassador to Costa Rica and then to El Salvador. Since October 1955 he has filled top-level roles in the Department of State, most recently as Assistant Secretary for Congressional Relations.

Robert Charles Hill was born in Littleton, N. H., in the heart of the White Mountains, the son of a now deceased physician. He was graduated from Taft School and Dartmouth College.

Like all youngsters in his neighborhood, he grew up gliding down the open snowy slopes of the New Hampshire countryside on barrel staves. But the introduction of scientific skiing from Austria made him one of the original ski enthusiasts of Peckett's on Sugar Hill. His interest in this sport led, eventually, to his meeting with his wife, the former Cecelia Bowdoin, daughter of a Baltimore banker and a descendant of Andrew Jackson's Secretary of State, Louis McLane, whose portrait hangs in Hill's office.

There won't be skiing for the Hills in Mexico, but they expect to enjoy tennis—she is a former tennis champion of both the District of Columbia and Baltimore—and he hopes for a chance to play squash.

Mrs. Hill is an equestrian of some note and in the past has done considerable jumping. Both of the Hill sons—8-year-old Graham, and James Bowdoin, 3—will have their own ponies. One of the mounts, a gift from the Costa Rican Foreign Minister, is awaiting shipment from that country.

Mutual interests in sports, as well as in other matters, can smooth diplomatic ways, Hill has found. He recalls the part croquet played during his ambassadorship to Costa Rica. That country's President José Figures was about to get married. Hill, searching for a wedding gift that he hoped would please, suddenly recalled that he had read of the President's great interest in croquet. A croquet set was the answer.

Games of croquet quite naturally followed with Figures and Hill and, sometimes others, pitting their skills against each other. One such game with Jefferson Coolidge, chairman of the board of the United Fruit Co., as a player, led to the settlement of a longstanding issue between the firm and the Costa Rican Government.

Hill first came to Washington, D. C., on December 14, 1941, as a representative of the Todd-Bath Shipbuilding Corp. of South Portland, Maine. A short time earlier he had interrupted his Dartmouth studies to work for the shipbuilding outfit as a ship fitter's helper. Then he was selected to represent the firm here in efforts to get war contracts.

A football injury kept Hill from regular military duty, but in October 1944, he went abroad in a capacity that led to work with the American Army. He set out first for Calcutta as a member of the United States Foreign Service Auxiliary, a forerunner of today's Foreign Service Reserve.

From there he was reassigned as a State Department representative to United States Army Headquarters for the China-Burma-India theater at New Delhi. Also, he was in charge of consular activities at our Embassy there.

Returning to this country in 1945, he went back to Dartmouth to get certain credits needed for entrance to Boston University Law School. Soon after enrolling there, however, he quit to accept appointment by the late Senator Charles W. Tobey, New Hampshire Republican, as clerk of the Senate Committee on Banking and Currency.

His next move was to the W. R. Grace & Co. where he was placed in charge of activities of Pan American Grace Airways and served as a representative of the Grace National Bank and W. R. Grace & Co. in Washington. His ambassadorial and more recently, State Department assignments followed.

Independence and the Constitution

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Independence Day editorial of the De Kalb New Era, of Decatur, Ga., as it appeared in the July 4, 1957, issue of that publication.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDEPENDENCE AND THE CONSTITUTION

On July 4, 1788, a great celebration was held in Philadelphia on the anniversary of the signing of the Declaration of Independence 12 years before. It was the first celebration of Independence Day after the requisite number of States had adopted the Constitution.

On that day there were five symbolic groups paraded before the people of Philadelphia. They represented, the independence of the United States as a sovereign nation, the alliance with France, the treaty with England, the convention of the several States and the Constitution.

Of those five subjects all but two of them have either passed out of existence or become obsolete. Two, however, remain to this day. They are the independence of this Nation and the Constitution. So long as this Nation remains a nation these two matters must remain inviolate. To the same degree that they are weakened to that same degree will our Nation become weak. They are the heart and the blood of the United States.

We, as a people, oftentimes lose sight of these two factors in our government. So often we ignore them or indifferently take them for granted. We have enjoyed their benefits for so many generations that we become negligent in their preservation.

Of late years both of these things have been attacked. Independence has been jeopardized more by development and civilization than by deliberate intent. In this day of the so-called one world we are more and more being tempted to form alliances, be they political, economic, social or military. There may perhaps in some distant future come such a time but at present it is but the fancy of a dream. Before the dawn of that day much less its noontide there must be a mighty change in the hearts of men. Only when there is but one God will the time be truly ripe for one world. There is no one world in which a godless nation may find the faith and trust so necessary. There is no place there for a god of hate and fear.

The Constitution is encountering dangers more from within our own Nation than from the forces without. We are united in protecting this document from the aggressive destruction of outsiders. But we are so lax

against the increasing dangers from within our own Union.

This is a new age in which we live. New methods are the vogue. New thinking is making its impression on our people and institutions. There is a definite inclination to interpret this document in the light of modern thinking, to obscure its true meaning in the trappings of the present vogues rather than with a strict adherence to its basic and fundamental truths.

Such notions are unconscientiously held by millions of Americans in their daily living with regard to the laws of the land. This theory is transmitted by the senses into the minds of our institutions. The deception is the overlooking of the fact that our laws can and are changed at will to meet the exigencies of modern thinking, but our Constitution is the fundamental law of the land.

It cannot be changed merely by thinking differently but only by a given process. It is a grievous error to even attempt a change by any other method. If we dare attempt this, be it by the individual citizen or the highest tribunal of the land, we are at once undermining the foundations of constitutional government and are beginning the downfall of ourselves as a free and independent nation.

This, as we celebrate the Fourth of July, we ought to remember these things with the understanding that our Constitution is the cornerstone of our independence and our freedom. If we weaken it through interpretations based on modern thinking we have irreparably weakened our hold on happiness and freedom.

Foreign Students in the United States

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. JAVITS. Mr. President, one of the great subjects before us with reference to foreign policy is the exchange of students and professors with other countries. I am hopeful this program may be extended even further, but at the moment we are at a new high record in that regard with 40,666 foreign students in the United States.

By way of analysis of that very interesting and important development, Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a news story published in the New York Herald Tribune of July 1, 1957, as well as a detailed release analyzing that news story, of the Institute of International Education, New York.

There being no objection, the article and analysis were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of July 1, 1957]

NINE THOUSAND EIGHT HUNDRED AND EIGHTY-SEVEN AMERICANS IN COLLEGES ABROAD—FORTY THOUSAND SIX HUNDRED AND SIXTY-SIX FOREIGN STUDENTS IN UNITED STATES

A record 40,666 foreign students attended United States colleges in the 1956–57 academic year, while 9,887 American students studied abroad, according to a statistical study released yesterday by the Institute of International Education.

Canada had the largest representation in American universities, with 5,379 students. China was next with 3,055, then Korea, with 2,307. In the total of 40,666 from 136 countries, men outnumbered women 3 to 1. From the Philippines, however, there were 877 women and 837 men.

STUDY IN 54 NATIONS

Although there were foreign students in each of the 48 States, two-thirds of the foreign students were concentrated in the schools of 10 States and the District of Columbia. The 10 States are New York, California, Michigan, Massachusetts, Illinois, Pennsylvania, Texas, Ohio, Indiana, and Minnesota.

Of the total 45.2 percent were privately financed. Private organizations, educational institutions, and governments paid for most of the others.

The 9,887 American students who went abroad studied in 387 institutions in 54 countries.

INSTITUTE OF INTERNATIONAL EDUCATION NEWS RELEASE, JULY 1, 1957

The United States attracted more foreign students to its schools last year than ever before thereby establishing itself as the mecca for scholars from all around the world. More than 40,000 foreign students representing 136 countries flocked to the United States for study during the 1956–57 academic year, according to a detailed study on educational exchange just released by the Institute of International Education.

A leader itself in the field of international scholarship exchange, IIE for a number of years has survey the number of foreign students here and American students abroad financed either under private means or through scholarship funds. The results of this census have been compiled into an annual report called Open Doors, which is becoming a bible in the field of international educational exchange.

Of the 40,666 foreign students attracted to United States schools, the IIE survey revealed that almost a third (31 percent were from the Far East indicating the intense struggle of these Asian nations for a higher standard of living through better education. More than a fifth (22.4 percent) of these foreign students were from our Latin-American neighboring countries.

The single country that sent the largest representation was Canada (5,379), followed by China (3,055), and then Korea (2,307). The nation of Korea had the biggest increase in scholars studying here, having jumped from eighth place 2 years ago to third place during 1956–57 when 2,307 Koreans were reported to be enrolled in our colleges and universities.

The status of women in the world was reflected in the preponderance of male over female students, according to the IIE census. Men out-numbered women three to one generally but the disparity was even greater in the Middle East and Far East countries. One startling exception was the Philippines where the women edged the men by 877 to 837, possibly indicating the greater westernization that has taken place in the former United States possession.

What kind of study these foreign scholars pursued also reflected the needs of the countries from which they came. The Far and Middle East scholars majored heavily in engineering with the humanities and social sciences as second and third choices, whereas more than a quarter of the Europeans and Canadians preferred courses in humanities with engineering a close second.

The IIE study also revealed that more and more United States schools are opening their doors to foreign scholars. Every State in the Union had foreign students enrolled in their colleges and universities, although more than two-thirds of the foreign exchangees were concentrated in the schools of 10 States and the District of Columbia. The States were: New York, California, Michigan, Massachusetts, Illinois, Pennsylvania, Texas, Ohio, Indiana, and Minnesota. Thirteen universities reported more than 400 foreign students in attendance, 7 being State supported and 6 privately supported. Four universities—University of California (1,473), Columbia University (1,356), University of Michigan (1,109), and New York University (1,021)—had more than 1,000 foreign students enrolled.

Another significant trend that continued in educational exchange is the large number of students who were self-supporting. Nearly half (45.2 percent) of the foreign students were studying in the United States through private means indicating that more and more individuals throughout the world are taking the initiative in pursuit of education abroad. Schooling for a large number (over 40 percent) of the exchangees was still being made possible through aid from private organizations, educational institutions, and governments.

The open-door survey also gave figures on Americans studying abroad for the 1955–56 academic year because of the length of time required to survey the institutions abroad. The IIE census reported that 9,887 Americans traveled overseas to enroll in 387 institutions in 54 foreign countries during 1955–56.

Figures also were compiled on foreign faculty and doctors in the United States, and on American faculty abroad. More than 1,100 foreign professors representing 61 nations were teaching in American colleges and universities, during 1956–57, while almost 7,000 foreign doctors from 88 countries were training as interns or residents in American hospitals throughout most of the Nation.

The IIE census reported that almost 1,500 United States professors taught or carried out research projects abroad with 781 of them concentrated in European schools.

Rural Development Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "'Point 4' for United States Farms," published in the Washington Post of July 7, 1957. The editorial is timely and informative.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"POINT 4" FOR UNITED STATES FARMS

In the planning of new policies to aid the farmer the rural development program, now still in the experimental stage, may be expected to occupy an important place. This venture in cooperative rehabilitation of depressed agricultural areas has gotten off to a slow start despite the President's enthusiasm for it in the legislative phase. No doubt that was inevitable because of its nature. It involves the cooperation of Federal, State, and local agencies along with many private community groups. Even the administration's rural development program committee is composed of the Under Secretaries of Agriculture, Interior, Commerce, Labor, and Health, Education, and Welfare, as well as the Small Business Administrator and a member of the Council of Economic Advisers. To move such an unwieldly organization is a task in itself, and to date the teamwork leaves much to be desired.

Nevertheless, rural development committees have been organized in 43 counties, and

pilot projects are underway in 49 counties and 8 other areas in 24 States. The aim in all cases is to encourage and assist local initiative. Special effort is exerted to improve the productivity of farms that do not provide an ample living for their occupants. In some instances income has been substantially increased by shifting farms in the South from cotton growing to dairying. But it is also recognized that, in many instances, the need is to move people off the farms or provide them with part-time nonfarm employment.

If lack of education and poor health are contributing to the malaise of these communities, direct attacks upon those problems are contemplated. In some instances great improvements have followed the location of a new factory in a depressed farming section. Part-time jobs and higher incomes contribute to the solution of many other problems. The basic effort is to develop in these low-income areas a balanced economy.

What the program needs most at this moment is a full-time executive who can direct the efforts of the many varied participants with a large measure of imagination and inspiration. The President promised last October to name the best man he could find in this field, but the 1957 appropriation for this purpose was not sufficient to permit such an appointment. That deficiency has been corrected in the 1958 budget. Urgently needed also is a spirit of accommodation among the agencies that are expected to contribute their technical assistance.

The possibilities of this venture are obviously great. With a little Federal help, the depressed hunting and fishing communities in Alaska could be made independent once more through their arts and handicraft for which there is great demand. Indian reservations could be rescued from their poorhouse atmosphere, and hundreds of low-income farming areas could be made contributing units in the national economy. The venture seems to merit a great deal more drive than has been accorded it to date.

An Important Step Toward Greater Governmental Economy

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mrs. DWYER. Mr. Speaker, during this session of Congress much has been said in this Chamber about the need for greater economy in Government; much concern has been voiced for the welfare of the taxpayer; much criticism has been leveled against the size of the budget.

Now, I do not believe that any of us in Congress challenge the need for economy in Government. But I do believe that we should back up our words with action.

I have said it before on the floor of the House, and I will repeat it again: I do not believe sound or lasting or sizable economies can be effected by merely chopping away indiscriminately on the budget. I do believe, however, that we can produce large savings for our taxpayers by carrying out the blueprints for governmental economies charted by the Hoover Commission.

Among the many recommendations still awaiting action, one in particular would be an important step toward greater economy in Government. That is the recommendation to establish annual accrued expenditure budgeting—a recommendation embodied in H. R. 8002.

I most certainly will give my support to this measure, and it is my hope that a majority of the House will do the same. Such action would be a significant contribution to the cause of economy.

In this respect, the New York Times of June 27 carried an excellent editorial on this vital subject. I would like to enter that editorial into the RECORD today; it expresses a viewpoint that warrants serious study by every Member of this body.

The editorial follows:

POWER OF THE PURSE

There is a popular illusion that because Congress votes the money necessary to run the Government of the United States it must automatically have control over all expenditures. It doesn't, as the Hoover Commission and many other people long ago discovered.

Today the Rules Committee of the House is scheduled to consider a bill that would go far toward restoring to Congress, where it belongs, the power of the purse. This bill is described by the Citizens Committee for the Hoover Report as "one of the most fundamental" of all the Commission's recommendations. It is H. R. 8002, to establish annual accrued expenditure budgeting, which means in simple language that Congress would grant money to the departments and agencies to be spent on a yearly basis only.

The bill would do away with carry-overs which represent appropriations, annually running into the billions, made in one year but not spent until the next year or years following. The result has been that Congress itself never knows just how much money is actually being expended within the Government each year or, because of changes of program, for precisely what purposes. The bill would not prevent authorization of long-term contracts, but it would limit the funds actually appropriated to estimated expenditures for the next 12 months. A companion bill passed the Senate earlier this month.

It is particularly odd that the most vociferous opponents of this measure in the House include some Members who beat their breasts most loudly over the size of President Eisenhower's budget. If Congress is really serious about controlling expenditures and is willing to take the responsibility that goes with this power it will pass this bill, which has the endorsement of the President, many leading Members of Congress and thoughtful private citizens.

Rights Bill and the Negro Ballot

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rights Bill and the Negro Ballot," written by David Lawrence, and published in the Washington Evening Star of July 9, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHTS BILL AND THE NEGRO BALLOT—ECONOMIC BETTERMENT LEGISLATION CALLED STRONGER INFLUENCE ON VOTE

(By David Lawrence)

The biggest phony in American politics—the idea that, if you favor particular racial or ethnic groups, you win their votes in the next election—is one of the main fallacies behind the so-called civil-rights controversy in Congress.

Actually, every scientific poll taken shows that the Negro vote in the United States follows the pattern of economic influence as it usually affects other groups of comparable income.

Despite the attitude of the southern Democrats, a heavy majority of the Negroes in the North cling to the Democratic Party. Even in the face of the Republican effort to take credit for Chief Justice Warren's leadership in formulating the desegregation decision handed down in 1954 by the Supreme Court, the Negro voters in the 1956 presidential election gave the bulk of their support to the Stevenson-Kefauver ticket.

Notwithstanding, also, all the fanfare of Republican speakers who pointed to President Eisenhower's measures in putting integration into effect in the schools of the District of Columbia and other acts and speeches on his part between 1952 and 1956 avowedly opposing segregation, the Negro voters gave the Eisenhower ticket in last year's election only 36 percent of their vote, according to a postelection study and poll made by the survey research center of the University of Michigan and published in March. It backs up the Gallup news release of January 16 last, which showed the Republicans as having obtained 39 percent among Negro voters in 1956.

While both these studies recorded a marked gain over 1952 for the Republicans, it is significant that, according to the University of Michigan study, the Republicans in 1948 had 35 percent of the Negro vote, while in 1956 they got 36 percent—only 1 more percentage point than 8 years before. In fact, the research staff of the Republican National Committee in its summary report of the 1956 election issued in May of this year says:

"In spite of considerable improvement in the Republican vote among Negroes, indications are that more than three-fifths of the Negro voting population continued to vote Democrat in 1956."

Why isn't all the civil rights agitation by the Republicans more successful in winning Negro votes? The answer is to be found in looking at the same Michigan study with respect to low-income groups as a whole. It shows that those voters earning below $2,000 a year—both white and Negro—went from 39 percent Republican in 1948 to 58 percent in 1952 and then to 40 percent in 1956.

But in the wards in and around Chicago which are composed predominantly of Negro voters with low incomes, the election statistics show the Republican percentage of the vote to be 23 percent in 1952 and about 32 percent in 1956. This was a substantial gain, but still the Democrats got 68 percent in 1956.

Looking, however, at the wards with Negroes of higher incomes, the Republican percentage was 40.1 percent in 1952 and 43.1 percent in 1956—a more normal division for a labor group. The Gallup poll shows union labor throughout the country was 39 percent Republican in 1952 and 43 percent Republican in 1956.

The reason the percentages for the Republicans among the lower income Negro voters are below the lower income group in the Nation as a whole is because a higher proportion of individuals with lower incomes is to be found among Negroes than among whites. There is still a feeling

moreover, among Negro voters that the New Deal was an economic emancipation for them. The WPA, for instance, and the vast relief appropriations happened to do more for the Negroes than for any other single group.

Back in 1936, this correspondent interviewed in Pittsburgh the late Robert L. Vann, editor of the largest of the Negro newspapers of the country and director of Negro political activities in Pennsylvania for the Democratic Party. He told me why he had switched to FDR, and I asked him if the Negroes were aiming at social equality. His reply was:

"My goodness, no. We have our own pride of race."

"Then is it economic equality?" I asked.

"That's it; that's it," he replied. "Equal pay for equal work, and equal opportunity in jobs is what we really want."

The political party that improves the economic status of the Negro worker will gain far more than the party that doesn't. The civil rights issue is important to the Negro voter, but it will not swing an election for the Republicans in times when there is a recession or depression. That's why, even with the handicap of the southern opposition to civil rights, the Negro voters in the North are still betting on the Democratic Party as their economic savior.

Decisions Emanating From the Board of Veterans' Appeals Make It Necessary That Legislation Be Enacted Clearly Defining Presumptive Periods

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. SAYLOR. Mr. Speaker, there are pending before the Committee on Veterans' Affairs two bills in which I am very much interested. I refer to H. R. 420 which provides for a presumptive period of 2 years for malignant tumors, and H. R. 924 which provides for a 3-year period.

Presumptive periods are well established in Veterans' Administration law. For example, World War I veterans had until January 1, 1925, to show that a tuberculosis or neuropsychiatric condition was service connected. The medical officials frown upon presumptive periods and I, as a general rule, do not favor them either. However, some of the decisions which are emanating from the Board of Veterans' Appeals make it necessary that some legislation along this line be enacted.

To deny that rigorous basic training in the Army, Navy, Marine Corps, or the Air Force could aggravate a cancerous tumor is to adopt a position which is ridiculous in the extreme. If decisions of this sort prevail, they will only result in the rankest sort of injustice to all veterans who have the misfortune to suffer from such condition.

I, for one, am willing to go ahead on such legislation and hope that the chairman of the full committee will shortly see fit to schedule action on these bills.

All God's Chillun in Jail

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the Richmond News Leader on July 2, 1957. Sardonically, but eloquently, it speaks for itself and its grim humor points up the need for a pondering of the current loss of reason in sociopolitical thinking.

The editorial follows:

ALL GOD'S CHILLUN IN JAIL

The National Association for the Advancement of Colored People has been holding its 48th annual convention out in Detroit, and we have been following the proceedings with a remarkably cheerful eye. There is, in fact, a tie that binds. In any fraternity of oppressed minorities, the Southern States and the NAACP might find a great many things in common.

One notes, for example, the convention's presentation of an achievement award to the Reverend Martin Luther King, "a foremost exponent of the Ghandian philosophy of nonviolent, passive resistance," for his role in the Montgomery bus boycott. In accepting the award, the reverend allowed that passive resistance might even mean going to jail, but he added: "If this is the case, we must with dignity and love fill up the jails of the South.

Well, brother, we would say to the reverend, move over. Several million white folks in these parts share precisely the same point of view. We spell the adjective with an "m," as in massive resistance, but passive or massive, it all amounts to the same thing. And when it comes to dignity and love, let us all go to jail with dignity and love and a few pairs of clean socks besides. Who has a monopoly on dignity and love?

Then there was the closing speech on Sunday by the Honorable Roy Wilkins, executive director of the NAACP, who went on at some length about the poor Hungarians. When Hungarians resist oppression, he said, they are called heroes. "But when American Negroes legally and peacefully resist oppression they are called agitators."

Well, Doctor, we would say to the Honorable Wilkins, white southerners have been nursing the same complaint for lo, these many months. The Hungarians are heroes, all right, but when American southerners legally and peacefully resist oppression, we are called bigots, Fascists, anarchists, and reactionaries. Times are tough all over.

"In Hungary," added His Excellency, "men were jailed or fined or sent to labor camps or shot for not obeying some new decree. In some parts of our South, new decrees providing for fines and jail terms are being issued every day as legislatures shout them to passage."

Professor, we would say, let us commiserate together. The only persons threatened with jail right now, for any activity stemming from the school segregation controversy, are 16 white residents of Clinton, Tenn., who face fines and/or imprisonment because they dast to disagree with a judge. There is, to be sure, a small matter of a $100,000 fine hanging over the NAACP for its failure to produce some records before a State court in Alabama, but with the Fund for the Republic standing behind you, who should worry? Meanwhile, in any accounting of people who are not free to protest, the southern white man stands at the head of the list.

The more we have been reflecting on these matters lately, the more inclined we are to say, Let the troops come in. Things have changed since grandpa's day. The reconstruction of 1865–76 was a terrible time, for the United States Government was a primitive and unenlightened crowd a century ago. But suppose Albemarle County were to be occupied by Federal troops come fall? Under the new way of doing things, pretty soon we would all be hip deep in clover—all that army spending, foreign aid, plush new consulates. There would be a risk, of course, that Eisenhower might send in Herr Doktor Conant as head occupier, but that is a small risk to weigh against the blessings that have befallen, Bonn, West Berlin and Tokyo.

Friends, the new Jerusalem awaits. With dignity and love, we will all march off to the jail house together—massively and passively together—all us oppressed minorities singing hallelujah while the troops descend on Charlottesville. Let us get in step, Reverend. Who touches a hair on yon grey head, march on!

Advantages of Friendship Airport

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. BEALL. Mr. President, we are privileged today to have with us three distinguished guests from the great city of Baltimore: Mayor Thomas D'Alesandro, Jr., who, as we all know, once served in the other House of the Congress; Thomas J. O'Donnell, director of public relations for the city of Baltimore; and City Councilman Leon Rubenstein, chairman of the council's aviation committee.

Earlier this afternoon a helicopter brought these visitors to Washington, landing them on the Mall only a few blocks from where we are assembled. They had made the trip from Baltimore in less than half an hour, and had covered the distance between Friendship International Airport and Capitol Hill in about 10 minutes, thus dramatizing the advantages offered by Friendship to air travelers of the Washington-Baltimore area.

Mayor D'Alesandro delivered a brief statement after stepping from the helicopter and being greeted by most of Maryland's congressional delegation. I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MAYOR THOMAS D'ALESANDRO, JR., OF BALTIMORE, MD.

The recent inaugural of helicopter service between Friendship International Airport and downtown Baltimore is a most progressive step for our city and the airport.

Institution of similar service between Friendship and Washington and/or direct service between Washington and Baltimore likewise will be of great benefit for all parties concerned.

Rapid helicopter service between Friendship and Washington could mean much to the development of Baltimore's great international airport and, at the same time, result in safer, more convenient travel for Washingtonians.

As mayor of Baltimore, and speaking in behalf of Friendship International airport, which can serve both Baltimore and Washington, it is my earnest hope that a heliport can be established at a convenient location in Washington.

The officials of Chesapeake and Potomac Airways, Inc., deserve commendation for the pioneering spirit they are demonstrating in their efforts to establish this much-needed helicopter service.

Washington Report by Congressman Bruce Alger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following July 6 newsletter to my constituents:

WASHINGTON REPORT, BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

A roundup of odds and ends seems appropriate for a light legislative week accompanying July 4. First, should Congress be televised? Yes, though its debatable. The pitiless eye of the kinescope and John and Jane Doe at home could straighten out some of our problems. True, grandstanding would be possible—and important unpublicized work by committees might be overlooked. But our government is based on informed public opinion. I'm for citizens knowing what's going on. That's why my extra effort in newsletters, questionnaires, radio, and television. (The 1957 questionnaires are pouring in. It is my hope that every recipient will express himself. The difficulty of "yes" and "no" answers is the same faced by a Congressman in his voting.)

Taxpayers should know how Congress appropriates (spends) their money. It's quite a system. For example, we have passed the conference report of the Departments of Labor, Health, Education, and Welfare appropriations bills for 1958 after the conferees of the House and Senate adjusted the differences between their respective bills. Let's examine the system, taking a specific item; for example, the salaries and expenses for the Bureau of Employment Security, one of the Labor Departments' many bureaus. Here's how it started:

Item: salaries, expenses, appropriated 1957, $5,558,000; budget estimate 1958, $6,358,000; recommended 1958, $6 million.

Bill compared with: Appropriated 1957, +$442,000; estimated 1958, −$358,000.

Let's review the steps. The House committee studied and held hearings on the budget estimate for $6,358,000, $800,000 more than 1957's appropriation. Responsibly, with "cut the budget" cries from constituents, the committee recommended to the House a total of $6 million, $358,000 below the budget request, but still $442,000 above last year. The House then voted to cut this further to $5,558,000, the same amount as last year. Then the House bill went to the Senate. The Senate committee, too, started with the budget request of $6,358,000 and cut this to $6 million, which the Senate approved. Then the conference of several Senate and House representatives, the conferees, debated and compromised the $5,558,000 House figure and $6 million Senate figure at $5,958,000, which both House and Senate approved.

Now, note the results: 1. More money was appropriated than last year ($400,000) but everyone is on record for economy (both Senators and Representatives cut the figure with which they started). 2. Every Member when necessary can proclaim support for the Government program, but can equally proclaim he's for economy and cutting the budget. 3. The Senate usually adds money and shows less fiscal responsibility than the House. 4. Politicians can demagog and straddle the fence. 5. Politicians are this way because they can't or won't say "No" to constituents' demands for more and more Federal aid. 6. The situation won't change unless people change, both constituents and Congressmen. Such is the appropriation story.

Typical inconsistencies from constituents: 1. Economize, cut the budget, but not my project, pension, or special interest. 2. Get me a tax cut, but give me all (and more) the Government service that I've had in the past.

Floorwork inconsistencies include: 1. Government with a "heart" means a Federal solution with taxpayers' money for every problem—housing, food, employment, wages, financial security, floods, droughts, polio and sickness, charity, relief, countless business operations, etc.—Government has the money and the power, besides it's smart politics, it means votes. 2. A do-something versus do-nothing Congress is measured by the number of new laws passed (every law subtracts a measure of individual freedom)—we can correct anything with another resolution. 3. Everyone's for States rights in principle but not in practice. 4. A nameless vacuum exists into which either Federal or State Government must move—if the State won't, the Federal must (X amendment?). 5. To some in voting it's, "What's politically the right move?" or "My party, right or wrong, but my party." 6. This is just a temporary or emergency measure (this always just precedes its permanent adoption). 7. It may be a bad program, but we must spend this much more to protect what we've already spent. 8. You can't buy friendship, but let's keep trying (foreign aid). 9. Elimination of waste and duplication in government is good (Hoover Commission bills) but * * *? (No political sex appeal; bills are shelved.) One thing I know, the people of Dallas County will be told what's going on in their Government so far as I have the ability and strength. Can we expose and eliminate some of the inconsistencies? It's worth while, isn't it?

Hon. James. A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the dedication ceremonies of the New Tomkins Cove School, at Tomkins Cove, N. Y., on June 29, 1957. Tomkins Cove is in the town of Stony Point where Mr. Farley was born and raised and started his early political activities:

This school building is another example of the great progress which we are making in this country and this State in providing for our children fine physical surroundings in which to get an education. But we must never forget that building and grounds and equipment are the incidental, not the principal part of education. They are the frame and not the picture. The case, not the contents.

True education is a matter of the mind and spirit. It is earnest teachers and wholesome children and cooperative parents. It is the lessons that count.

We in New York State can take pride in our schools and in the quality of our education, and in the spirit and training of our teachers.

We have provided for the entire Nation a standard to be lived up to and an example to follow. We are living proof of what a State can do without direction from above or below in building, operating, and maintaining an educational system.

Education is the means by which the lessons taught by the experience of the past are given to the present and the future. It is a business of sharing with our children what we have learned from our elders and from our own contacts with the world which we have passed through.

Of course, as we all know, children do not always take for gospel truth the words of their parents. Sometimes I think that children become wise, perhaps overwise, in their own day and generation and feel that the experience of the past is merely the useless teaching of the elders. However, as those children go out into the world they may well find that what we have learned the hard way might better be taken from us by word of mouth than to be taken by them through the hard knocks of experience.

But we parents have a great opportunity to assist in the process of education by cooperation with teachers. The teachers are those who are skilled in transmitting to the children the lessons that we know out of our own experience.

Another thing that is essential in education is that as society becomes more complex, as the number of people increases, and as the size of our cities grows, education must keep pace with these new conditions. That means that the need for formal planned education becomes greater and greater. There was a day when, as one educator put it, it was enough to have a student at one end of a log and a great teacher at the other. I grant that education without great teachers is not education at all. But there must be more organization now than when those of us who have passed the middle span of life went to school. I, for one, am amazed at the difference in education and particularly in the opportunities offered between the present and those days back there when I went to grade school at Grassy Point and then on to high school in Stony Point. I am not complaining. It was sound education and it served me well. But the children of this day are facing an infinitely more complex world than I faced 50 years ago.

As I see it, there are certain essential qualities that all teaching must have if it is to be in a true sense education.

It must be free of dogma, and it must be free of dogmatic assumptions and arbitrary definitions. By that I do not mean that there are not solid and important lessons that must be learned by diligent application and that do not change with the years. But in the true sense education is the freeing of the mind to reach out and search for truth on its own account.

Next, education must be humane, in the sense that it teaches people true consideration for the rights of others. It ought to teach people to live in society with other people and exercise toward them the kindness and the consideration that ought to

characterize a good neighbor in every walk of life.

Next, education must be useful. I do not mean merely that education ought to teach nothing but the means of making a living. That is essential, too. But to be truly useful education must give the student a broad grasp of the realities and a capacity to understand the outside world in all of its complex manifestations.

Next, I believe that education ought to teach true Americanism. By that I mean that, after our God, and our parents and our children, the Nation comes first. The teaching of Americanism consists of teaching the great truths that America stands for—freedom of religion, freedom of thought, freedom of speech, freedom of communication of all sorts. It must teach that our form of government, created out of the wisdom of the ages, is for us the best form of government. It must teach that, despite our consideration for the fact that we are living in a world of neighbors, we shall not be good neighbors if we do not look to the preservation of our country, its prosperity, its solvency, and its strength.

Education must also teach good citizenship. It must teach children what they owe to their communities, the State and the Nation, in the way of observance of the law, in the way of participation in active political affairs, in intelligent voting, and in every conceivable effort to become well informed about the great issues of our time.

But, above all, education must build character. For character is the basic factor upon which our civilization is built. Included in that expression are truthfulness, industry, and personal responsibility, as well as consideration for others and obedience to the law.

Our educational system is so constructed in this country that it is possible for those who wish to combine religion with education are privileged to do so. It is, however, so constructed that within what we call the public schools there shall be no observance of any specific religious belief or ceremony. However, in the last analysis it is possible for all schools to teach character, and character is, of course, a form of religion expressing itself in human conduct.

I would say finally that if I were a teacher I would avoid giving children any idea that all will be well despite what they may contribute. I would teach that all will in the future be exactly what they choose to make it. If they neglect their duty, if they are sometimes less than industrious, if they count on the Government to support them without effort on their own part, then they will find that the very basis of free civilization will crumble away.

For the individual is the basic factor in society. He can make it to be what he will.

No doubt this warning is unnecessary here in this community and in the county which is so truly characteristic of the American way of life. But we must be ever alert and prepared to protect that way of life.

A Prayer by the Chaplain

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the prayer offered by the Reverend Frederick Brown Harris, D. D., Chaplain of the United States Senate, at the 20th anniversary national membership meeting of the National Small Business Men's Association at the Hotel Mayflower in Washington, D. C., on May 21, 1957.

As we of the Senate know, Dr. Harris' words in prayer are truly inspiring. I am pleased to offer this particular prayer for insertion in the RECORD so that it may be available to the wider audience thus afforded.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

A PRAYER

(By Dr. Frederick Brown Harris)

Our Father, God, who has made and preserved us a nation—our fathers trusted in Thee and were not confounded. In Thee we trust.

Thou hast taught us to love truth and beauty and goodness. May Thy truth make us free—free from pride and prejudice and from all the ugly sins of disposition that doth so easily beset us.

Lift us above the mud and seum of mere things into the holiness of Thy beauty so that even the common task and the trivial round may be edged with crimson and gold. Lead us in the paths of righteousness for Thy name's sake.

For our faith is all a doubtful thing
Wove on a doubtful loom
Until there comes each showery spring
A cherry tree in bloom.
And Christ who died upon a tree
That death had smitten bare
Comes beautifully back to us
In blossoms everywhere.

Enrich us with those durable satisfactions of life so that the multiplying years may not find us bankrupt in those things that matter most—the golden currency of faith and hope and love.

And in these dangerous and desperate days when the precious things we hold nearest our hearts are threatened by sinister forces without pity or consicence, help us to give the best that is in us against the wrong that needs resistance, for the right that needs assistance, to the future in the distance and the good that we may do.

We ask it in that name that is above every name.

Healthy Oil Industry Vital to the National Security

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. JOHNSON of Texas. Mr. President, the Sherman, Tex., Democrat, recently published a thoughtful editorial entitled "Oil Problem Affects You, Too," which gives some striking facts regarding the effect of excessive oil imports into this country.

The information contained in the editorial is worthy of study by all Members of Congress. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sherman (Tex.) Democrat of June 23, 1957]

OIL PROBLEM AFFECTS YOU, TOO

Now the world oil situation will be felt by all Texans—in their pocketbooks.

Not you? You don't own any oil wells or royalties?

Most of us don't. But so much of our State's tax revenue derives from oil that when something happens to oil we wind up having to pay the taxes out of our pockets, sooner or later and one way or the other.

For July, the Texas Railroad Commission has ordered 13 producing days, the low point since the start of World War II. That means just what it seems to mean—instead of wells producing 31 days, they will be allowed to produce only 13 days.

For that 1 month, the tax loss to the State is estimated at $1½ million, as compared to June which has 15 producing days.

Root of the problem is foreign oil imports. The usual seasonal drop in demand for oil is a factor, and so are refinery strikes. But if we were not importing foreign oil, the entire oil industry would be drilling like mad trying to find enough oil to meet United States demand.

But we do have foreign oil imports. They increase every month despite all efforts at voluntary control.

This is not a matter of sympathy for the oil barons. Generally speaking, keeping already discovered oil in the ground won't cost the owners anything. It may mean more money for it, in the long run.

But the losses are there. Few independent operators or small companies can stand arbitrary cuts in their volume of business, and if they are compelled to go borrow money they have to pay high interest rates for it.

Worse, the situation is seriously hampering drilling operations in this country. Between tight money, rising foreign imports, and rising exploration costs as drillers must go deeper and deeper to find new oil reservoirs, it is no wonder that United States drilling activity is sharply down this year.

Less drilling means less oil found, less reserves against the day when we may need domestic oil desperately. It also means unemployment and sales slumps in a vital part of our economy.

It is not a matter of choice. We must keep the oil industry healthy enough to meet all our foreseeable defense needs, plus our normal nondefense needs. We might as well run out of airplanes—or hydrogen bombs—as oil.

So, as Texas taxpayers, and as American citizens, this action of the Texas Railroad Commission and this steadily worsening oil import problem has direct and significant bearing on every one of us. Maybe it's time we insisted these oil imports be brought under reasonable control before it's too late.

What the President Doesn't Know

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The President Doesn't Know," by Hon. James H. Gray, editor and publisher of the Albany, Ga., Herald, which appeared on the front page of that publication in the issue of July 5, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESIDENT DOESN'T KNOW?

(By James H. Gray)

Many foolish and highly extravagant words have been uttered about the virtues of the administration's so-called civil-rights bill in the past few months. They have advertised the proposed legislation as a triumph of good over evil, as a landmark in the relations of the races in the United States, as a forward step of enormous historic significance. In fact, the impression has been given that, if President Eisenhower would cement his reputation as a man of decency and moderation in public affairs, he could do nothing better than tie his career to this very special concoction of social enlightenment.

But, as the saying goes, the best laid plans of mice and men have a way of falling apart, especially when such plans are heavily freighted with political caprice, and sectional prejudice. And so it has happened in this civil-rights issue. When Senator RICHARD RUSSELL, of Georgia, stated in a speech the other day that this bill would cause "unspeakable confusion, bitterness, and bloodshed in a great section of our common country" because of its provisions of force with respect to the commingling of the races, many thoughtful persons in the Senate pricked up their ears. For our Senator enjoys a national reputation as a distinguished legislator, and he spoke with becoming solemnity and deep conviction.

One result of this heart-felt criticism was that at a subsequent Presidential press conference Mr. Eisenhower was queried as to the Senator's ringing objections to the administration's civil-rights proposals. Was this bill a "potential instrument of tyranny," as Mr. RUSSELL declared? Would raw Federal power be used to club the South into submission? Were unusual powers being granted the Federal Government, which would circumscribe traditional liberties of all American citizens?

The President's remark was a classic in unwitting frankness. He said that he didn't know.

As someone once remarked in disgust, this is where the political tripe really hit the fan smack in the middle. By all that is understandable, if the President does not know, who does? Presumably, Attorney General Brownell, who, apparently, does not think it important to discuss the details of the measure, or at least is reluctant to do so. And, in all probability, this reluctance comes from the knowledge that if the tightly wrapped civil-rights package were undone for public inspection some things would pour out that would emit nauseous odors.

Indeed, we can thank Mr. Eisenhower for his candor, even if we are appalled at his lack of insight and fact on which to base fairminded judgment in this particular. Here is a bill that is supposed to usher in a new era of harmony between the races—relating to a national issue—not just a sectional one—and the President is not acquainted with the details or, at any rate, he is confused.

Well, we are confused, too, Mr. President—and we are downcast at the signs of political irresponsibility which have thus been exhibited. What is plainly indicated is that this measure is a vote trap, which, in other conditions, might easily be relegated to the legislative dump pile if it did not involve matters vital to the American governmental system.

For Mr. Eisenhower's inspection, we should like to suggest that he consider something that has already happened in this civil-rights situation, and not rely on the do-good theories that are swarming around his administration's civil-rights proposals.

What about the school issue in Clinton, Tenn.? There, the State government, which has exclusive right under the Constitution to maintain law and order, to insist on trial by jury, and to punish through its own courts all criminal cases of assault and battery and threats to the safety of an individual, was pushed aside by an injunction of a Federal judge. This judge asserted that there were no limits to his authority, that he could punish anybody, even outside the courtroom, for speaking or urging a course of action that he might not like.

What does all this mean? It means that the Bill of Rights which guarantees free speech, free assembly, and trial by jury, does not stand above the powers of the all-knowing, allwise Federal Government.

As we have noted, this action has already been taken in Cliton, Tenn. It is one of the tragedies of our times that it was allowed to happen. And yet similar procedures are being proposed in the administration's civil-rights bill—to the detriment of constitutional privilege and individual freedom.

Where were the stout defenders of civil rights in this instance? Probably, smirking behind hands to the effect that "we put another one over on the southern dissenters." In short, it matters not that the means being used to change a social order should circumvent traditional rights. What is important, unfortunately, is that the political battle be won, by any expedient, by any club that may be at hand.

But we would like to pose this question, Mr. President: After the battle has been won, over the torn body of the Bill of Rights, what, then, Mr. Eisenhower?

Where do we go from here?

Address of Charles H. Silver, President, Board of Education, at Commencement Exercises of High School of Music and Art, Carnegie Hall

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an address by a very distinguished New Yorker, the Honorable Charles H. Silver, the president of the Board of Education of New York City, delivered to the graduating class in the 21st year of the High School of Music and Art, a most unusual institution in New York of an uplifting and highly patriotic character.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT COMMENCEMENT EXERCISES OF HIGH SCHOOL OF MUSIC AND ART, AT CARNEGIE HALL, JUNE 25, 1957

Twenty-one years is considered an adequate period for "coming of age," and these ceremonies today, which mark the 21st year of the High School of Music and Art, are an important milestone in the cultural life of our city.

For many reasons we may all be proud of this vast metropolis in which we live, and not the least is the fact that, with all of its bigness and its busyness, it has retained an appreciation of what we call "the finer things in life." It has not lost its ear for music or its eye for art.

Since the founding of this school our world has plunged into the industrial and electronic atmosphere of the atomic age.

The music of the spheres has become the thunderclap of a jet plane breaking the sound barrier.

The art of designing instruments of destruction sometimes seems to have monopolized the galleries of civilization.

In the onslaught of such concentration on the material and physical things of life, when science and the machine appear to dominate the contemporary scene, you may wonder when I say that your school assumes a new and compelling importance. Indeed, I consider the High School of Music and Art, dedicated to the training of talented students for leadership in esthetic achievement, to be of greater importance today than ever before in its distinguished history.

The world is desperately in need of the gifts you bring in times as troubled as ours. We live in an hour of tremendous decision, nerves tense to the breaking point as each day's headlines tell of disturbing dangers in the growing struggle between the free world and the forces of intellectual slavery.

Under stress such as this, mankind might lose its precious sense of stability, perhaps its very sanity, were it not for the blessed solace of music, the soaring inspiration of art. That is your great destiny, to help men find peace in their hearts and among themselves. That is the dedicated purpose of this school, to lift our souls above the shambles of disorder and discontent into a high place where we may glimpse the mind of God.

Twenty-one years ago, when this school began, the lot of the musician and the artist was a meager one. These were ill-paid callings; rich in prestige, but little else. Today, the arts of the theater, and widening opportunities in every branch of entertainment, offer you the chance to make a living as well as a name for yourself.

Television, literally unknown 21 years ago, has come of age with you, and is waiting to bring the talents of many among you to the millions who need the hopes and dreams you will express for them.

There is a certain program on television that some of you may have seen. It starts by showing a news commentator seated at a desk and turning the calendar back to a celebrated day in history. Then he says: "What kind of a day was it? It was a day like any other day, and you are there." The scene changes and the past unfolds, and we watch, reliving a great moment in history.

The past can teach us a great many things, but this is the present. This is June 25, 1957. What kind of a day is it? It is a day unlike any other day in the last 4 years you have spent at high school, and you are here, about to graduate. Now, your scene will soon change as your future unfolds.

You have come to a strange and wonderful turning point in your lives. You are shutting a door forever on a great adventure which you have shared with thousands of other students in one of the most honored academies in the world. More than that, you are opening another door upon even greater adventure, the golden years of further study, the launching of your career, the exciting everyday trials and joys of living. You could not be better equipped for the tasks ahead. Your diploma from this distinguished school is a precious symbol of preparation for the artistic life. Hold it as a torch to light your way.

Carry it with pride as a token of achievement on this unforgettable day when you take into the world all that you have gained from the great tradition of the High School of Music and Art, from its remarkable faculty, and that devoted educator, your principal, Dr. Benjamin M. Steigman.

Even in the short while I have been among you, thrilling to the wonderful program you have presented, I feel a stirring awareness of the very special contribution of this very special school. Our city is far

richer for the existence of the High School of Music and Art, and, as long as I am president of your board of education, its existence as a valued and dynamic part of our school system will never be threatened.

This school of yours has a soul—and it will always remain a part of your own souls wherever the pattern of your destiny may take you. When I say that your school has a soul, I do not mean just the heritage of your glorious history. Your school is more than history, more than stone and steel, piano and paints. Most of all, it is the people who work within its walls. They give it life and meaning—your teachers and your fellow students. And, just as the High School of Music and Art will always be a part of you, you will always be a part of music and art.

The splendid record of this graduating class will be woven into the golden tapestry of your school's enduring achievements. I know how many of you have made outstanding progress in your studies. I know your fine records in winning scholarships and artistic recognition. I know that a world trembling on the brink of potential destruction, preoccupied with the panic of a mad race for mechanical and technical dominance will pause to hear your message.

Above the thunder of arms, your music will rise. Beyond the mushrooming clouds of ill omen, the rainbow of your art will bend. You are the promise of the future—the hope of the world.

William Lyons Phelps, the eminent critic and teacher, once said of the importance of a liberal education: "How essential it is to be able to live inside one's own mind with attractive and interesting pictures on the walls." And, I may add, "With majestic music in your heart."

In congratulating you, the graduating class of the High School of Music and Art, on behalf of the entire board of education, I think it is quite fitting that I congratulate your parents, as well, and your teachers, and your principal. They all have reason to share the pride we feel in the magnificent work you have done to reach this moment of reward.

I thank you, on behalf of all of us, for the moving and heartwarming program you have presented here on the stage of Carnegie Hall, a most proper setting for the perfection of your performance. I wish for each of you, as you go forth with our blessing, the most attractive and interesting of pictures on the walls of your mind—the most majestic music in the secret chambers of your heart.

And I would like to look ahead to another hour, to a far-off day to come, when some all-seeing commentator may turn to the calendar and say: "It is June 25, 1977. What kind of a day is it? It is a day better than other days. It is a brighter, greater tomorrow—enriched by the melody and rhythm, the color and design, you have given to it from the wealth of your talents.

"It is a better world—because you are there."

Pay Increases for Scientific Personnel

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. YARBOROUGH. Mr. President, the Abilene Chamber of Commerce has handed me today, through its president, Mr. Walter F. Johnson, of Abilene, Tex., a copy of its resolution urging higher pay for Government employees with special skills, as recommended by the Cordiner report.

The purpose of the resolution is to enable the Government to attract and retain Government employees with scientific, professional, and technical skills.

The resolution requests that it be brought to the attention of the Senate. As a member of the Committee on Post Office and Civil Service, I have consistently urged higher pay for Government employees. These increases in compensation are needed now.

I ask unanimous consent that the resolution of the Abilene, Tex., Chamber of Commerce be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas it has been brought to the attention of the Board of Directors of the Abilene Chamber of Commerce that Senate bill 2014 and House bills H. R. 7574 and H. R. 7642 have been introduced in the United States Senate and House of Representatives which would provide compensation plan to pay people what their services are actually worth, instead of paying people on the basis of longevity of service, and in this way encourage and reward outstanding performance, advanced skills, and military careers for high quality personnel; and

Whereas it appears to this board that through modern management of the manpower in the armed services, it can simultaneously reduce the cost and increase the effectiveness of the national defense program; and

Whereas adoption of this program in its entirety will, in our judgment, make it possible to attract, retain, and motivate the scientific, professional, technical, combat leadership and management skills required by our Department of Defense today and in the future: Now, therefore, be it

Resolved by the Abilene Chamber of Commerce, acting by and through its duly elected president, That this organization express its enthusiastic support to the proposed legislation that will establish a method or appropriate funds for compensation of officer and enlisted technicians and civilian personnel in the upper grades in order to attract and retain the competent personnel required by our defense activities; be it further

Resolved, That this resolution be brought to the attention of the Texas Congressmen in the United States House of Representatives and in the United States Senate, and further brought to the attention of the members of the appropriate congressional committees considering the proposed legislation dealt with in this resolution.

ABILENE CHAMBER OF COMMERCE,
By WALTER F. JOHNSON,
President.

The Civil-Rights Issue

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two columns which appeared in the Evening Star of June 25, 1957, and July 8, 1957, entitled, respectively, "On Supreme Court Employees" and "Real Issue in Civil-Rights Fight." These outstanding columns were written by Mr. David Lawrence, who is one of the most widely read and distinguished newspapermen of this era.

There being no objection, the columns were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of June 25, 1957]

ON SUPREME COURT EMPLOYEES—UNITED STATES COMMISSION'S REPORT URGING STEPS TO INSURE LOYALTY OF AIDS IS CITED

(By David Lawrence)

Who really writes the decisions of the Supreme Court Justices? Do they use ghost writers, as Presidents occasionally do? Should the public be told what part of a decision is actually written by a Justice and what part is the composition of his law clerk? Is this a part of the right-to-know privileges which the press has been insisting on lately?

These questions have arisen, not only because of the occasional expressions and phrasing which appear in Supreme Court opinions that seem conspicuously different from the accustomed writings of a Justice in his previous career but because the whole subject has just been opened up by the Commission on Government Security.

This Commission of 12 prominent citizens, appointed by the President and by the Senate and the House, issued a recommendation last week that hereafter the judicial branch of the Government should take effective steps to insure that its employees are loyal and otherwise suitable from the standpoint of national security.

Can it be that the Commission was thinking about Alger Hiss, who served in the 1930's as a law clerk to a Supreme Court Justice now dead? There were said to be discussions about this and its implications among the members of the Commission before it reached its conclusions. Here is what the Commission says in its formal report:

"It is fundamental that there should be no reasonable doubt concerning the loyalty of any Federal employee in any of the three branches of the Government. In the judicial branch, the possibilities of disloyal employees causing damage to the national security are ever present. As an example, Federal judges, busy with the ever-crowded court calendars, must rely upon assistants to prepare briefing papers for them.

"False or biased information inadvertently reflected in court opinions in crucial security, constitutional, governmental, or social issues of national importance could cause severe effects to the Nation's security and to our Federal loyalty-security system generally.

"There appears to be no valid reason why an employee of the judicial branch should not be screened, at least as to his basic loyalty to the United States. Certainly, the judiciary proper and the public generally should have the assurance that the men and women who carry the administrative responsibilities of the courts or assist in the preparation of decisions are loyal, dependable Americans.

"The Commission therefore recommends, as in the case of the legislative branch, that the judicial branch and the executive branch endeavor to work out a program under which adequate investigation or screening can be provided for all judicial employees."

One member of the Commission on Security recorded a vigorous dissent on this phase of the problem. He is James P. McGranery, formerly a Federal judge and later Attorney General in the Truman administration. He writes that "no evidence was presented at Commission conferences tending to indicate" that there ever was any

judge on the bench anywhere in the Federal courts who was thus imposed upon.

It will be news to many people that the Supreme Court Justices are dependent to some extent on their law clerks in writing their opinions. For years it has been an open secret around Washington that the big eastern law schools selected their top scholars for a year's service as law clerks to Supreme Court Justices. Today, when so-called liberalism amounts almost to a fanaticism, some of the law-school professors engage in active campaigns to advance publicly the views with which they indoctrinate their students.

The book on the fifth amendment written by Dean Griswold of the Harvard Law School was exploited and widely distributed by the "Fund for the Republic." In its annual report, the same foundation admits that, but of the $5 million it has already spent, much of it has been for distributing literature of this kind and other educational materials on the subject of communism and congressional investigations. What part do such so-called liberal law professors play in selecting law clerks for Supreme Court Justices?

Maybe the Congress ought to appropriate enough money so that each Justice of the Supreme Court could enjoy the bipartisan luxury of 2 so-called liberal and 2 so-called conservative law clerks. Maybe the Supreme Court opinions would be better balanced then. At least, they might be more accurate as to facts. Last week, for example, Chief Justice Warren's opinion criticizing congressional investigations said that "in the decade following World War II, there appeared a new kind of congressional inquiry unknown in prior periods of American history" and that "this new phase of legislative inquiry involved a broad-scale intrusion into the lives and affairs of private citizens."

Just why it was not realized by someone who went over the manuscript that Representative MARTIN DIES, Democrat, conducted for 7 years—from 1938 to 1945—exactly the same kind of hearings for the House Committee on Un-American Activities as were conducted "in the decade following World War II" is somewhat puzzling. Did the law clerks fail to read anything about those 7 years of the Dies committee? What the Justices evidently need to worry about in connection with law clerks is not security but accuracy.

[From the Washington Evening Star of July 8, 1957]

REAL ISSUE IN CIVIL RIGHTS FIGHT—THREATENED USE OF FORCE TO OBTAIN CONFORMITY ON PROBLEM IS DECRIED

(By David Lawrence)

What is the real point at issue in the battle over civil rights now being waged in the Senate? It is the possible enactment of a law threatening the use of military force in order to obtain a conformity of viewpoint on social problems. It is the substitution of a program of compulsion and coercion for faith in the voluntary processes of reason.

It involves not solely a means of assuring voting rights—for many Negroes do vote in the South and several have been elected to city councils there—but a question of reaching into the whole social order in the South with laws authorizing the use of military power to secure obedience to the Supreme Court's decision on school integration. Yet the Court itself admitted in the same decision that it was influenced primarily by sociological doctrines rather than constitutional precedents.

For the school question and the voting problem are interwoven in the civil rights controversy and, curiously enough, the remedy proposed would take away the civil right of a citizen to a jury trial, the principle of which is imbedded in the Constitution.

Just because there have been a few instances of racial prejudice in some jury trials in the South, it now is argued by various Members of Congress and executive officials in their speeches that none of the tens of millions of people in the South can be trusted to give an impartial trial by jury.

This is a blanket indictment more severe than ever has been leveled in America against a substantial number of fellow citizens by the representatives of another segment of the Nation.

For the proposal implies that because the processes of reason are beset with difficulties there must be resort to the theory that "the end justifies the means."

This same thing happened once before in perhaps the most shameful chapter in American history when, after the War Between the States had ended and a general amnesty had been proclaimed, military units from the North were sent into the legislative chambers of the southern States. At the point of a bayonet, ratification of the 14th amendment to the Constitution was compelled in 10 States after each had rejected it. Southern Members of Congress, thereupon were arbitrarily disqualified from voting in either the House or the Senate, notwithstanding the fact that previously the southern Members and their legislatures had in due form approved the 13th amendment abolishing slavery and this action had been accepted as legal ratification. No historian of standing in either the North or the South disputes these facts.

For 90 years there has been a virtual truce in the northern and southern conflict as to the scope of the 14th amendment, and the racial problems it presumably covered. Meanwhile, there has been nevertheless a gradual evolution with tremendous progress toward a better understanding between the races. The doctrine of separate but equal facilities in public schools which was upheld as the "supreme law of the land" until 1954 was a kind of modus vivendi—a compromise between apparently irreconcilable viewpoints yet one that actually encouraged more and more flexibility through the years.

Now the truce has been broken and, instead of trying to adjust conflicting viewpoints by letting each State or each community within a State decide for itself how it shall move toward the solution of its own social problems—a basic American concept of self-government—the confusing court decisions and the threat of coercive civil-rights legislation are retarding progress. Impatiently the doors are opened to bitter resentments which will grow in intensity because compulsion is the wrong way to deal with social problems in a democracy. Inevitably also there will be revived the whole controversy over the unmoral and illegal way by which the 14th amendment itself was forced into the Constitution in the first place.

"I speak in a spirit of great sadness," said Senator RUSSELL, Democrat, of Georgia, the other day in the Senate. "If Congress is driven to pass this bill in its present form, it will cause unspeakable confusion, bitterness, and bloodshed in a great section of our common country. If it is proposed to move into the South in this fashion, the concentration camps may as well be prepared now because there will not be enough jails to hold the people of the South who will oppose the use of raw Federal power forcibly to commingle white and Negro children in the same schools and places of public entertainment."

Thus after nearly a century of debate, America is again hearing speeches in Congress about the use of military forces to back up social viewpoints. This comes, ironically enough, at a time when spokesmen for the United States in the world at large are appealing constantly for the renunciation of the use of force as a means of dealing with human friction.

Idaho Power Co. Fast Tax Writeoff

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. CARROLL. Mr. President, on previous occasions I have had printed in the Appendix of the RECORD the skilled writing of Robert H. Hansen, editorial writer of the Denver Post, concerning the Idaho Power Co. fast tax writeoffs. The last of the series of articles by this outstanding newspaper writer, culminating weeks of effort in trying to give the people the information about this most important project, was published in the Denver Post of June 26, 1957. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOP POWER POLICY PERILED BY WRITEOFFS

(By Robert H. Hansen)

The $65 million fast tax write-offs which Idaho Power Co. finally renounced are important not so much because of the Hells Canyon controversy, but for three more fundamental reasons.

1. Administration approval of the Idaho Power application, over the strong objections of several influential Senators and the Secretary of Interior, finally sparked an indignant Congress into action on the entire $23 billion fast writeoff program.

2. The Idaho Power case for the first time illustrates what a windfall fast tax writeoffs are for regulated private utilities, and how they affect electric power financing, rates, and dividends.

3. Public realization of these enormous tax concessions may finally knockout the battered partnership policy. That policy was devised by the Eisenhower administration as a compromise—loaded on the private utility side—on the public versus private power issue.

Of course, it is because Hells Canyon is the symbolic battleground of public versus private power that the Idaho Power case has assumed such importance and caused such furor.

Politically, public power groups seized on the utility's writeoffs for two smaller Hells Canyon dams on the Snake River to bolster their last chance of passing a high Federal dam instead. Their unexpected 45-to-38 Senate victory now sends the bill to the House.

CRITICISM OF WRITEOFFS DATES TO 1948

The Democratic Party picked up the issue, expanded it to the whole field of water and power development in a stepped-up assault on the partnership policy, and carried it over to an investigation of the public costs, discriminatory aspects and monopolistic tendencies of the entire fast writeoff program.

And two 1960 Democratic presidential hopefuls, Senators KEFAUVER, of Tennessee, and MORSE, of Oregon, jumped in to enhance their own statures by leading the plight on the principles involved.

Actually, congressional criticism of fast tax writeoffs dates to 1948, when a Senate committee headed by Senator BREWSTER (Republican) of Maine scored the World War II program as legal profiteering.

In 1951, even as the Korean War raged, a House committee called the revival of wartime writeoffs the biggest bonanza that ever came down the Government pike. Adminis-

tration of the program was called unsound and detrimental to the public interest, and characterized by confused thinking on the proper use of fast writeoffs for incentives to private industry.

The defense justification of many writeoffs was questioned, together with the need for large tax concessions to private industry for normal civilian expansion, planned in many cases before the Korean War ever started.

Steel writeoffs drew heavy criticism because the pattern set in the steel industry closed the door, even before the program began, on the prospect that small business or competitive enterprises would yet receive any real benefits.

THREE BECAME MILLIONAIRES ON $600 INVESTMENT

The committee cited several examples of fast tax writeoff approvals that it said almost defy belief. One involved three men who became millionaires with an original investment of $600, a fast tax writeoff, and a Government loan of $8 million.

Another company estimated its gross annual profits for 5 years at $18 million, of which $14 million a year would be exempt from income taxes under a fast writeoff.

Fast tax writeoffs, the committee concluded, were discriminatory hidden subsidies, with vital effect on prices, and involving, as they do, billions of taxpayers' dollars.

But the committee's eight specific legislative recommendations to end misuse of fast tax writeoffs and abuse of the original intent of Congress largely went unheeded, despite periodic flareups from Senators MORSE, MAGNUSON, JACKSON, DOUGLAS, CARROLL (then a candidate), and others.

Last year Virginia's two conservative Democrats, Senators BYRD and ROBERTSON, joined the growing congressional unrest. They urged denial of the Idaho Power writeoffs and opposed the reopening of the steel writeoff program, pending a complete review by their finance and defense production committees.

Congressional "heat" was finally on in earnest. The administration cut down sharply on fast writeoffs, which had boomed from a 1953–54 lull into a $3.4 billion program again by early 1956. The steel program remained closed, and $2.4 billion in steel writeoff applications was rejected.

Then on April 29, only days before Senator BYRD's tax-writing committee was to open an investigation of fast tax writeoffs, the Idaho Power writeoff was approved. Some of the most powerful men in the Senate were outraged, including Senator BYRD, who declared:

"I believe this is an utterly indefensible act, because the law providing for the rapid writeoff depreciation was intended to apply only to those industries which were engaged in defense operations. A public utility is guaranteed its profits."

In 2 days of hearings, the budget-conscious Virginia conservative built a strong case against fast writeoffs except for strict new defense items.

Treasury Secretary Humphrey supported BYRD's proposed repeal and testified, for example, that the total program will cost the Nation's taxpayers $3 billion in interest alone. Three years of peacetime extension of the Korean wartime program, it was estimated, will cost $1 billion.

Senator BYRD drew heavily from a report on the fast writeoff program made last December by the staff of the Joint Committee on Internal Revenue Taxation.

That report contained many of the same charges of the 1951 house committee, questioned success of the freight-car program, and asked whether there was a need for the primary aluminum program in the first place.

The Nation's taxpayers, it was estimated, will have to pay $5 billion to $6 billion more in taxes between 1950–60 to make up for revenue lost by fast writeoffs.

Senator KEFAUVER's antitrust subcommittee soon began an inquiry into the operations of fast tax writeoffs in the electric-power industry, their monopolistic tendencies and effects on financing, rates, and dividends. In all, 927 electric-power writeoffs for $3.3 billion have been granted, including, for example, 28 writeoffs for $103 million issued to Virginia Electric Power Co. Another $1 billion worth were denied.

The chief accountant of the Federal Power Commission, Russell Rainwater, verified Senator MORSE's calculation that the Idaho Power writeoffs would have been worth $339 million to the company at the end of 50 years, and would have cost the public $83 million in interest.

These estimates, incidentally, date back 3 years and still stand up despite desperate Republican and private power efforts to knock them down.

It was the patient probing of Senator KEFAUVER, Democrat, of Tennessee, which brought out that Gordon Gray, the new head of the Office of Defense Mobilization, approved the Idaho Power writeoffs against the express opposition of Interior Secretary Seaton.

INVESTIGATION REACHES INTO WHITE HOUSE

The Byrd committee earlier established that Gray also acted without knowing of the urgent request for denial or delay pending congressional review, made to ODM last year by 19 Senators and Congressmen.

But when Senator KEFAUVER turned up the names of four White House advisers who were implicated in the Idaho Power decision, the administration rang down a curtain of "executive privilege" to block testimony about their roles.

The four were Sherman Adams, assistant president; Gerald Morgan, attorney to the President; Gen. Wilton Persons, congressional liaison officer; and Howard Pyle, State and local liaison man.

Sensing another Dixon-Yates deal (which Ike finally had to cancel when "conflict of interest" was uncovered), Senator KEFAUVER dug deeper—into Wall Street transactions in Idaho Power stock, into FPC control of writeoffs as they affect dividends, into Idaho Power's repeated claims that private Hells Canyon dams would not cost the taxpayers a dime, into why ODM reopened the power writeoff program in late 1955 despite repeated protests from the Interior Department.

James P. Madigan, legal expert for the Library of Congress, testified that the Idaho Power writeoffs appear "contrary to the legislative purpose and spirit" of the law. Some private power facilities, he conceded, might qualify for fast tax writeoffs from a defense standpoint, "but not in this particular case."

Charles H. Kendall, General Counsel of the ODM, disagreed, but earlier he had acknowledged that some private power writeoffs were denied since January 1, 1955—about 4.6 million kilowatts' worth against 13 million kilowatts approved for fast tax writeoffs. Senator KEFAUVER brought this out in an attempt to discredit the claim that Idaho Power was "morally" entitled to fast tax writeoffs "because all the other utilities got them."

Kefauver investigators learned that fast writeoffs, although they are not supposed to affect dividends, do work in such a way as to increase dividends substantially, legally, and untaxably. And while fast writeoffs do save utilities millions of dollars in interest they would have to pay on money borrowed for expansion, they do not directly result in lower utility rates.

If anything, fast tax writeoffs would appear to raise utility bills by increasing the rate base, despite industry claims that lower operating costs from fast writeoffs tend to reduce rates for their consumers.

So a group of Senators led by Senator MAGNUSON, Democrat, of Washington, introduced legislation to force deduction of fast writeoff benefits from utilities' rate bases, passing these savings on to consumers in lower electric bills despite FPC and court decisions to the contrary.

In the House, an Oregon Democrat introduced a bill to repeal Idaho power's writeoff, and the revocation was supported by the lone Oregon Republican who survived the 1956 Democratic sweep attributed at least in part to the Hells Canyon issue.

Then legislation authorizing a high Federal Hells Canyon Dam instead of the 2 private Idaho power dams was brought to the Senate floor by Senator JOHNSON, Democrat, of Texas, majority leader, and Senator MURRAY, Democrat, of Montana, chairman of the Senate Interior Committee.

HIGH DAM PASSED DESPITE RENUNCIATION

The 28 Senators who cosponsored the high dam bill pinned their previously dim hopes of reversing last year's 10-vote defeat on the fast tax writeoff issue.

Several Republicans, including Senator THYE, Republican, of Minnesota, indicated they would switch this year "and vote against the writeoff." On the eve of the Senate vote, Idaho Power Co. announced it would turn back its $65 million writeoffs. But the high dam passed anyway by 7 votes, sending the bill on to an uncertain fate in the House under the cloud of a likely Presidential veto.

Meantime, Senators BYRD, KEFAUVER, and MORSE keep on plodding, deeper and deeper into Hells Canyon, fast tax writeoffs, and administration "favoritism" of big business.

Importation of Crude Oil

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. YARBOROUGH. Mr. President, on July 2, 1957, there appeared in the Houston Press an article entitled "Hoover Says We Must Import a Lot of Crude." It relates to foreign oil importations, and was written by Mr. Neil McNeil, an able Washington news writer.

The article points out the influential role of Herbert Hoover, Jr., in the importation of foreign oil in increasing amounts into the United States. It raises the question as to whether Mr. Hoover is influenced by oil holdings in the Middle East.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOOVER SAYS WE MUST IMPORT A LOT OF CRUDE

(By Neil McNeil)

WASHINGTON, July 2.—The man who may have a major influence on an administration decision on oil imports, Herbert Hoover Jr., already is on record with the prediction the United States must import appreciable quantities of foreign crude for years to come.

Hoover, who resigned February 1 as Under Secretary of State, is slated to have a major role in the oil import investigation ordered by the President Wednesday.

A six-man Cabinet Committee, headed by Commerce Secretary Sinclair Weeks, will look into the situation and report back to Eisenhower whether large imports endanger the national security by harming the domestic industry.

Hoover has not been officially named to any position with the inquiry. But he's conferred with Secretary of State John F. Dulles about the oil situation. Dulles is a member of the Cabinet Committee.

State Department sources said today that although Hoover is using an office at the Department his mission is to work with White House officials on the oil situation.

And White House Press Secretary James Hagerty has announced he's sure Hoover's advice will be sought by the Cabinet group.

Speaking last year before the Interstate Oil Compact Commission in Dallas, Hoover made his position on imports clear.

"The United States petroleum situation today involves the balancing of rapidly increasing consumption against available production and reserve. And yet domestic reserves are increasing at a relatively slow rate.

"Therefore, our import policy must be one that will actively encourage the maximum practical effort toward oil exploration here at home through the use of constantly improving techniques in discovery and production.

"In the years to come we will probably require appreciable quantities of petroleum from friendly countries elsewhere."

Hoover, himself an oilman, was accused during the 1956 presidential campaign of having oil interests in the Middle East. Senator ESTES KEFAUVER, Democrat, of Tennessee, made the allegation, which was denied.

Civil Rights

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two items from the Charleston, S. C., News and Courier. One is an editorial under the dateline of July 4, 1957, entitled "Unless Citizens Fight Against Tyranny Independence Will Perish in the United States of America." The other is a column written by Dr. John Temple Graves and entitled "South's Most Civil Right Is Right To Be Let Alone." This column appeared in the News and Courier on July 8, 1957.

The News and Courier, which is one of the Nation's most outstanding and outspoken newspapers, is ably edited by Mr. Tom Waring, who has rendered a great service to the public in recent years through his editorial writings and his speeches on the subject of preserving constitutional government in America.

Dr. Graves is one of the South's most distinguished newspaper men, and he has long stood in the forefront of the fight to preserve constitutional government.

There being no objection, the editorial and column were ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) News and Courier of July 8, 1957]

SOUTH'S MOST CIVIL RIGHT IS RIGHT TO BE LET ALONE

(By John Temple Graves)

"The right to be let alone."

That is our most civil liberty.

Remember it and be of good cheer as Senators from the South filibuster against the so-called civil liberty bill.

Civil liberty is indivisible.

It is the whole Constitution, the whole ideal. When you sacrifice one part for another you decrease and endanger the total. When the right to jury trial is impeached to save the right to vote there is net loss, and the same loss runs the whole constitutional gamut.

Basically, all American rights are civil rights. States rights are civil. The rights of Congress against the Supreme Court are civil, and of the Executive against each, and vice versa.

And when the Federal Government (or the State) invades areas never intended or authorized there is violation of the most civil right of all—the right to be let alone.

If the Founding Fathers made a mistake, if they failed to look ahead enough, if they should have anticipated a future so social and interrelated that nothing short of a totalitarian central government and law would serve, we should face it and get a new Constitution. Certainly we should not undertake to cover the situation by ignoring the Constitution in one place and insisting on it in another, sacrificing one civil right to make another safe.

Most of us believe no mistake was made, that liberty and justice can still be had in the great terms of the Constitution.

If the President could just be reached on this jury-trial issue in the civil-force bill, many of us who go on liking him believe he would see the South's case as the Nation's. The Baltimore Sun nails it thus: "The injunction contemplated would forbid actions already forbidden under Federal criminal laws. This being so, the injunction procedure is obviously a judicial shortcut, and one which would deprive those cited for contempt of a right which would be guaranteed them under the Federal Constitution (if they) were indicted for the same offense. It is proposed to assure one right—the right to vote—by ignoring another right—the right to a jury trial."

As pointed out here many times, jury trials should be stretched just as far as contempt is stretched, you would think. The civil-rights bill would stretch contempt into areas that ordinarily involve jury trial. It should not be permitted to deny jury trial, therefore, on the plea that contempt cases don't allow for them.

This column was guilty of a below-below-the-belt when it undertook to make something of the fact that Chief Justice Warren doesn't indicate his religion in Who's Who. I think the Chief Justice shows lack of moorings, but he happens to be a Baptist and, I believe, in good standing. Religion has nothing to do with his case.

Perhaps his trouble is California. He was born in moorless Los Angeles, city of a few angels and more lunatics of left and right. Yet his career has been in San Francisco, gem of the West, compact amid its surrounding waters, moored to much that's basic and fine.

[From the Charleston (S. C.) News and Courier of July 4, 1957]

UNLESS CITIZENS FIGHT AGAINST TYRANNY INDEPENDENCE WILL PERISH IN THE UNITED STATES OF AMERICA

The 181st anniversary of the signing of the Declaration of Independence in 1776 today finds independence at low ebb in these United States.

There is a real question as to whether Americans of this day are capable of keeping whatever measure of independence is left to them, let alone restoring lost liberties.

The original Independence Day was celebrated a long time ago.

The national memory of what it means is dim. There is a certain amount of speechifying by political leaders. And the White House will hand reporters a mimeographed Fourth of July statement, written by one of the President's ghostwriters.

But the deep meaning of the day will not be especially clear to millions of Americans who are looking forward to a long weekend at the beach or other pleasure resorts.

There is no reason why the Fourth of July should be a long-faced affair. Nor is there any reason why it should be just another holiday—another day for family picnics, parties and romping in the surf.

Except for a few lines of it embodied in newspaper stories, no one will read the Declaration of Independence. And yet our ancestors read it with the greatest care, for it touched their lives.

It is an angry document, full of resentment toward a government that was steadily pushing Americans into a corner. Finally, in the Declaration, the people said they had enough.

Throughout June 1957 the American people were being pushed into a corner, precisely as the people of the province of South Carolina and 12 other colonies were being pushed in the broiling summer of 1776. No one attacked Sullivan's Island last month, except possibly mosquitoes. But liberties of South Carolinians and their fellow citizens in 47 States were under attack.

Who knows ti? Who cares? Today Fort Moultrie, which should be a national shrine, is padlocked and the grounds overgrown with grass. Today, grass is growing over American liberties.

Americans cared in 1776. Of George III, the signers said: "The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world."

And so they submitted the facts. They said that King George "has combined with others to subject us to a jurisdiction foreign to our Constitution and unacknowledged by our laws; giving his assent to their acts of pretended legislation; for depriving us in many cases of the benefits of trial by jury; for taking away our charters, abolishing our most valuable laws and altering fundamentally the forms of our governments; for suspending our legislatures and declaring themselves invested with power to legislate for us in all cases whatsoever."

Does this have a familiar ring?

Is not the Congress, on recommendation of the President, preparing a civil-rights bill that would deny trial by jury to some Americans? Isn't the Supreme Court striking down State laws, abolishing important laws of Congress and altering fundamental forms of our State and Federal governments? Isn't the Supreme Court legislating school laws for the South?

The answer to all these questions is "yes."

The Declaration of Independence says that it is the duty of a free people, when a design to reduce them to despotism has been perceived, to provide new guards for their future security.

That is what Americans living in 1957 must do. There is no need for flag-waving demonstrations—nothing of that sort. All that is needed is for millions of Americans to halt one moment, in the midst of holiday pleasure, to resolve that they will support their

elected representatives in setting up new guards against tyranny.

Unless there is such a resolve, there won't be much independence to celebrate in the years ahead.

Military Construction Bill

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. HARDY. Mr. Speaker, the vote on final passage of the military construction bill is scheduled for Wednesday, July 10. Prior to that vote, action will have to be taken on the Arends amendment which proposes to strike out section 411. I want to reemphasize my conviction that the Arends amendment should be defeated and that section 411 should be retained.

This section is essential for retaining the congressional authority which is ours. If the Arends amendment is adopted, the effect will be not only to delegate congressional authority to the administration, but it will make administrative action final and will constitute blanket approval of administrative judgment before the decisions are made.

Some of the discussions of this matter have been confusing and have erroneously contended that section 411 affects the fundamental philosophy concerning the participation of Government in business-type activities. I subscribe wholeheartedly to the general objective of eliminating governmental business activities which compete with private enterprise. Section 411 is in complete consonance with that general objective because it is not concerned with philosophy, it is merely concerned with the exercise of judgment.

I believe section 411 is highly desirable and that it will preserve for the Congress the right to check on the judgment of administrative officials. This section in no way reflects upon any official. The Congress has heretofore authorized, in most cases on an individual line-item basis, all of the business-type activities conducted by the military departments. We have appropriated the funds to finance the construction of buildings occupied by these activities, to purchase the equipment and to pay the employees. Defense Department officials have justified these authorizations and these appropriations year after year with arguments supporting their continuance. It has always been our responsibility to approve the establishment and financing of these functions, and to be consistent we must retain the right to require that those which should be conducted in the public interest are continued. We have in the past, and we should in the future, refused to give the military departments blanket authority to establish business-type activities without approval by the Congress. Neither should we give them blanket authority to discontinue such activities and to dissipate the assets involved without at least retaining an opportunity for congressional review.

I hope the Members of the House will join me in resounding defeat of the Arends amendment.

World Integration—A New Challenge to United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 9, 1957

Mr. HUMPHREY. Mr. President, the former Secretary of the Air Force, the Honorable Thomas K. Finletter, recently delivered a challenging commencement address before the graduating class of Hampton Institute, Hampton, Va. His address was entitled "World Integration—A New Challenge to United States Foreign Policy." I consider this address to be very germane to the subject matter which is now before the Senate, namely, the consideration of civil-rights legislation.

I ask unanimous consent that this provocative and significant address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD INTEGRATION—A NEW CHALLENGE TO UNITED STATES FOREIGN POLICY

(By Thomas K. Finletter)

I deeply appreciate the honor of speaking to this graduating class at Hampton Institute as it finishes its academic career.

All graduating classes in this year 1957 face responsibilities far beyond the normal, far beyond the personal problems of making a career and of living one's life with which all men and women have to deal as they finish their formal education. A graduating class in the United States today faces the special duty of helping its country in a time of trial and danger.

But, you may ask, what have you to do with these great problems of government and of foreign affairs. Is not that for the men in Washington and in our foreign embassies to handle? What, you may ask, can young men and women just graduating from college do about such momentous matters?

True, the Government of the United States is in the hands of older people and is not being run by the graduating classes of 1957. But it is not true that the citizenry, whether they be new graduates or something else, can divorce themselves from the problems of the country. Public opinion, the thinking and emotions and determination of the people, particularly those who have had the benefit of higher education, must and does have a great influence on foreign policy. Indeed I do not believe that our country can have a proper foreign policy without the interest and support and participation of all the important groups in the country. In a democracy such as we have the good fortune to live in, foreign policy is essentially the expression of the will and character of the people.

This idea has been called the principle of the river and the source. Just as a river cannot rise higher than the place where it begins, so the foreign policy of a free people cannot be better than the quality of the people. It cannot be stronger than the intensity and the wisdom which the people bring to bear on the problems with which the Government must deal.

Now it is this foreign policy of ours about which I want to talk to you today.

Let me start by pointing out to you that when you think of our foreign policy problems today, you must think of them as being made up of three broad divisions. I intend to concentrate my remarks today on one of these divisions only. But I must mention the other two in order to keep our discussion in perspective.

The first of these three divisions is the pursuit of peace; or, to put it in more earthy terms, how the United States is to defend its interests abroad in the hydrogen age without getting the country into an atomic war which will destroy us whether we win it or not.

The second grand division of our foreign policy is geographical. It has to do with our so-called Grand Alliance, the alliance of the North Atlantic, of which the North Atlantic Treaty is the legal core. The North Atlantic Treaty, as you know, is an agreement signed by the United States and most of the countries of Europe whereby each of us has agreed that we will all fight together against Russia, if Russia attacks any one of us.

Important as is this business of defending ourselves against a possible Russian atomic attack, this is not the question which I intend to talk to you about today. Rather I intend to talk of the third of these three major divisions of foreign policy, the problem of the relationship of the United States with the peoples of Asia, the Near East, and Africa.

This latter problem is as difficult as any we are facing in the foreign field. In many ways, it is the most difficult. Whether it is the most important I am not sure. One cannot say that any 1 of these 3 main divisions is any more important than the others. We have to handle all three of them if we are to have a successful foreign policy. But, in any case, I am certain of one thing. It is that there is no possibility of our having a foreign policy which will safeguard the interests of the American people properly unless we handle successfully our relations with the peoples of Asia, the Near East, and Africa.

Let me now get on with discussing this question.

There are today two major revolutions with which our country has to deal in its foreign affairs.

One is the technical revolution which has come about from the fact that man has been able to release the power of the atom. In this revolution, which is of a material kind, the United States has done well. We are keeping apace with our rivals and our possible enemies in the race for bigger and better fission and fusion bombs, and more of them, and in the airplanes and guided missiles to carry these horrid weapons against any enemy who might attack us. Also, we have some official plans for the eventuual conversion of the power of the atom for peaceful purposes.

However, there is a second revolution which affects us seriously, in the handling of which we are not doing so well. This is the revolution of the formerly colonized peoples of Asia, the Near East, and Africa.

This is the part of the world where Western mililtary power created the condition known as colonialism, which is another way of saying that many of the peoples of this vast area were under the mililtary and political dominion of the coutries of the West.

The day of colonialism, of the domination of all this part of the world by the white man, has come to an end. The revolution of

which I speak is irresistible. The peoples of these vast areas are determined to be independent and to follow their own destiny, and their determination is not to be denied.

Let us understand how important are all this part of the world and the peoples who live there. Let us understand also the particular problems which affect the people who live in these wide areas of the world. All these peoples are nonwhite. They are of different races from the peoples of Western society. And they are numerous. These peoples, when we include the Chinese who have fallen under the Communist yoke, make up two-thirds of the people of the world. They amount to nearly 1½ billion human beings.

The people who make up this two-thirds of the world have not had in recent centuries anything like the position they are going to have in the world of the future. The world has been through a period of so-called white supremacy, when the man with the white skin has had a rule over those of different race and different color far beyond that to which his culture or his numbers entitle him.

This day has changed and any foreign policy, or any national policy, of our country which fails to understand that this change has taken place for good is a policy which is doomed to failure.

Now, this question of our relationships with the peoples of Asia, the Near East, and Africa brings me back to what I said a moment ago about the river and the source, that is to the proposition that what a people is at home governs what they are able to do abroad.

In a sense, the problem of the relationships of our country with the peoples of Asia, the Near East, and Africa is the problem of integration.

I would define integration in a broad sense as the necessity for making those changes in status which will guarantee legal, political, and psychological equality and equal economic opportunity to peoples who previously were in a lower status position.

This is a challenge we are facing within our own country in the struggle to create the proper status for all Americans regardless of their race or color. It is the same question which we are facing in the foreign field. For the great obstacle which is tormenting the peoples of Asia, the Near East, and Africa and is making them hesitate to work in the cause of freedom, is their feeling that the countries of the West still continue, if not the practices of colonialism, the colonialist attitude which looks down upon them because of their race and their color.

This problem of status is sometimes stated as the hatred of the peoples of the formerly colonized areas for colonialism or imperialism. For centuries, the peoples of Asia, the Near East, and Africa have been colonized by the western powers, by which we mean that the superior military weapons of the western countries have enabled them to dominate the peoples who lived in the continents outside of Europe and of North America. Colonialism, in short, is the use of military power to create political dominion, and this is what the peoples of all these vast areas of the world have been suffering for some time.

Now military conditions have changed. No longer are China and these other formerly colonized countries weaklings to be carved up at the will of the Western Powers. In China and in all the rest of these areas the revolution of which I have spoken is irresistibly demanding freedom for the peoples who were formerly colonized. This revolution is in many respects like our own Revolution here in the 18th century, out of which came the United States of America.

But, you may say, is not the right to independence of all these formerly colonized peoples being rapidly established? This is true. Nevertheless, there remain huge chasms of lack of understanding between the United States and the other western countries on the one part, and these peoples of the formerly colonized areas on the other part.

Of all the factors which make up this lack of understanding, the most powerful one is the difference of race and color. The most powerful force making for misunderstanding between the peoples of the West and the peoples of Asia, the Near East, and Africa is the survival of the notion of racial superiority or inferiority, the persistence of the horrid thought that men are to be treated differently because their race or their color is different.

I emphasized a moment ago that military superiority was the core of the colonial idea. But there is another idea which ranks with it and is inextricably entwined in the colonial approach. It is that the people of a colonizing country are superior to the people who are or were colonized. This is another way of saying that there still persists the notion of racial and color supremacy as between those men of Western society and those of different race and color in Asia, the Near East and Africa. This notion is rapidly disappearing, but we would be deceiving ourselves if we were to think that it has been eliminated from the international scene. Not until this problem is solved, not until there is an integration of thought and understanding and respect between the countries of the West and the peoples of Asia, the Near East and Africa, will there be hope for a successful foreign policy by the United States in all these vast areas of the world.

If any of you are not convinced that this idea of racial supremacy is at the core of the colonial idea, let me quote to you from a recent speech by a great friend of the United States, Carlos Romulo, the delegate from the Philippines, in his opening speech to the Bandung Conference.

This is what General Romulo said:

"I have said that besides the issues of colonialism and political freedom, all of us here are concerned with the matter of racial equality. This is a touchstone, I think, for most of us assembled here and the peoples we represent. The systems and manners of it have varied, but there has not been and there is not a western colonial regime which has not imposed, to a greater or lesser degree, on the people it ruled, the doctrine of their own racial inferiority. We have known, and some of us still know, the searing experience of being demeaned in our own lands, of being systematically relegated to subject status not only politically and economically and militarily—but racially as well. Here was a stigma that could be applied to rich and poor alike, to prince and slave, boss man and workingman, landlord and peasant, scholar and ignoramus. To bolster his rule, to justify his own power to himself, Western white man assumed that his superiority lay in his very genes, in the color of his skin."

The Russians understand this: and they have been making a major drive to win the minds of the people of Asia, the Near East, and Africa. The Russians' technique is to identify themselves with hostility to colonialism and imperialism and affirmatively to put Russia on the side of partnership, that is of integration, with the people of all these formerly colonized areas. No wonder the Russians have been doing so well with all these people. The United States must do something about this. We cannot let the Communists win this battle, as they have been doing.

Let me now talk about some practical measures to get this worldwide integration I have been talking about.

The fact that integration is being worked out and is going forward in this country, in my mind, gives us a substantial asset. It gives us an understanding of the problem and an insight into the emotional attitudes involved.

I don't mean to suggest that we must seek, and get, integration solely to further our foreign policy objectives.

I believe that integration in the United States has a significance wholly apart from its effect abroad, for, in fact, what we are witnessing in this country today is a clear-cut victory of national principles and beliefs over deeply ingrained emotional attitudes and deeply entrenched customs and social forms.

But it is also a fact that recognition of integration as a worldwide phenomenon and success in reaching solutions here, within our own country, will redound to our credit in all the other parts of the world where racial inequality has been experienced. If, on the other hand, we fail at home, we will have little credit with the peoples abroad who are also concerned with the same question.

It is obvious, therefore, that it is of the highest importance to us that we get to work on this problem.

I suggest that the basic weapon for us to use is the weapon of knowledge. When one has a problem about which there are violent emotional differences of opinion, the best approach to a solution is to get at the basic truths and to consider as dispassionately as possible the facts with which one has to deal. In other words, knowledge is power. Knowledge applied to this process of integration will produce significant results. If the full light of knowledge is brought to bear on it, the barriers to full integration, worldwide and within these United States, will yield much more quickly than you may think.

In answering the challenge of the technological resolution, the great institutions of higher learning created centers that worked ceaselessly on revealing the secrets of the atom.

To prepare for our role in the political revolution, I believe it essential to return to the academic resources that this great Nation contains.

Now I know that various studies are being made on this question, both as it exists in our own country and abroad. But I think I am right in saying that there is no one center where the process of integration is studied in all its aspects. It seems to me that a very valuable start can be made by creating such a center. The center I have in mind would, as I say, be a focal point for study of all the problems of integration on a worldwide basis. It would recognize the interdependence of the domestic problem with the international one.

I would see this center as having two general functions. One would be, as I say, research into the facts and emotions of the problem, worldwide, the purpose of which is to be to bring knowledge to bear on the facts.

But I would not confine this idea merely to the function of study, indispensible as that study is. I envision this center as an integrated microcosm of those societies in which our young people will be working. I believe that living in such a setting will better equip Americans to divest themselves of those preconceived stereotypes that will bar them in their assignments abroad from communicating our essence, our policy, to the new free peoples of the world.

In other words, I see in this center a postgraduate 6 months of internship that would bring a new perspective intellectually and emotionally to the future USIA staffer to Ceylon or the future sales representative of United States Steel to Ghana.

I propose the following: that a southern college or university take up this vital project. Under its auspices, I suggest that a group of distinguished social scientists who

are separately interested in this area be brought together to form the initial planning group for the proposed center.

The group should be interdisciplinary. It should include political scientists, economists, sociologists, psychologists, social psychologists, geographers, and specialists trained in the Asia, Africa, and Near East areas. I believe that their recommendations should be formally stated to the leadership of the political, business, and industrial communities of this country.

I suggest that the first of these institutes might most appropriately originate in the South—not because I think that this is a challenge which belongs to any one region of our country, but because if it were to begin in the South, it would be free of any charge that there was meddling by people of the North, or other parts of the country where the problem was less acute, with the affairs of the South, where the problem is more difficult.

And then another reason, too. Much of the best thinking on integration has come from men and women in the South. What is more natural and sensible than to take advantage of this skill?

And then, too, I would hope that on the basis of this one center, other centers might grow in all parts of the country, all to the end that we, the United States, would take the lead in bringing knowledge to bear on this problem.

Perhaps we cannot expect to go that fast. And so my specific suggestion is that one single center be started as the pilot plant for the purpose of using the techniques of knowledge to make a breakthrough toward a worldwide solution of this, one of the most intransigent and important problems of our time.

I realize that this is a subject on which you who are graduating here today cannot take the initiative. I put it to you, however, in the hope that if you find merit in it, you may think it is worth your support.

I congratulate you on your graduation here today, and I wish you all happiness in your future lives.

House Postmaster Honored

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. WATTS. Mr. Speaker, it gives me a great deal of pleasure to bring to the attention of the Members that the Postmaster of the House of Representatives, Mr. H. H. Morris, was recently honored with the presentation by his fellow employees of a silver plaque commemorating his 25 years of service as an employee of the House of Representatives.

Although "H," as he is known by his many friends here on the Hill, hails from Henry County, New Castle, Ky., and is therefore technically a constituent of mine, I would not be presenting a true picture of the situation if I did not add that "H" is a real "constituent" of every Member. I say this because in his 25 years on the Hill "H" has won many friends on both sides of the aisle and has rendered faithful and competent service in the best tradition of an employee of the House of Representatives.

"H" came to the House in 1932 as an employee of the late Virgil Chapman—then a Representative from the Sixth District of Kentucky. In 1952, it was to my benefit and pleasure to have him serve as my secretary until he was elected to his present position as House Postmaster.

I consider it a real privilege to commend him at this time for his achievement and excellent service.

Airlines Mark Anniversary of Ocean Crossing

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BROYHILL. Mr. Speaker, it is hard to realize that commercial flying operations across the Atlantic Ocean are now 20 years of age. However, it was on July 5 of 1937 that Pan American Airways pioneered service from the United States to Europe on a survey flight of Atlantic routes from Newfoundland to Southampton, England.

Two years previously, Mr. Speaker, Pan American had instituted regular service between the west coast of the United States and the Orient via Honolulu, Wake, and Midway Islands. Likewise, Pan American flew from Key West to Habana in 1927 to blaze the trail for regular airline service of Central and South America and the Caribbean.

Mr. Speaker, under leave to revise and extend my remarks, I ask unanimous consent to have published in the RECORD an AP dispatch from the Washington Evening Star of July 5 commemorating this most worthy milestone in commercial aviation history.

AIRLINES MARK ANNIVERSARY OF OCEAN CROSSING

Commercial aviation passes a major anniversary today, but plans no formal observance.

It is the 20th anniversary of the maiden survey flights of the Atlantic, which proved that regular air service was possible between the United States and Europe.

A 32-passenger Sikorsky flying boat of Pan American World Airways took off from the Waters of Botwood, Newfoundland, and flew to Southampton, England, made one of the first crossings.

In mid-Atlantic it exchanged radio messages with a flying boat of British Imperial Airways, which had taken off from Foynes, Eire, for Botwood.

SIXTY CROSSINGS A DAY

Two decades later the Atlantic is being crossed 60 times a day by commercial airlines flying the colors of 15 different nations.

While it took the Pan American boat 28 hours to fly from the seaplate base at Port Washington, Long Island, to Southampton in 1937, the airline's DC-7C's, flying 350 miles an hour, now cover the distance in about 12 hours.

Pan American said the Sikorsky flying boat had cost $210,000, less than one-tenth that of the DC-7C. The airline plans to operate Boeing 707 jet planes, costing $6 million each, on the trans-Atlantic route next year.

Most of the men involved in the two historic flights still are in the airline business.

WHERE THEY ARE NOW

Harold E. Gray, captain of the Pan American plane, is now executive vice president of the airline's Atlantic division in New York City.

The members of his crew and their present positions: First officer, W. B. Delima, now a pilot with the Pan American Pacific-Alaska division, San Francisco; second officer, William M. Masland, a captain with the Atlantic division; radio operator T. J. Roberts, also a captain with the Atlantic division; engineering officer C. B. Wright, now with a plastics firm at Canadaigua, N. Y.; assistant engineer, E. W. Smith, with Pan American's overhaul base at Miami; steward, W. T. Thaler, Hempstead, Long Island, now on the staff of the La Guardia Airport restaurant.

British Overseas Airways Corp., successor to Imperial Airways, said the captain of its pioneering plane, A. S. Wilcockson, was operations controller for BOAC in London.

Radio officer, T. E. Hobbs, also has remained with BOAC, and has more than 500 Atlantic crossings as a radio operator.

The other two members of the British crew, first officer Charles Bowes and radio officer Tom Valette, are dead.

Washington's Right To Know

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial which recently appeared in the Richmond (Va.) News Leader:

WASHINGTON'S RIGHT TO KNOW

A keenly interesting story appeared the other day on the city page of the Washington Post and Times Herald. The headline read, "D. C. Seen Facing Catastrophe in Illegitimacy," and the text of the story, which was based upon a hitherto unpublished report by Dr. John R. Gates of the Southwest Health Center, went on to spell out some horrifying facts upon the extent of illegitimacy in Washington's public schools.

A study of 13 junior high schools found a problem of illegitimacy more serious than in New York City, Philadelphia, or Richmond. The problem demands immediate and serious consideration. Pregnancies are increasing among teen-aged girls. So are abortions, and these latter present an alarming medical problem. Some male teen-agers have confessed to fathering 2 to 8 children. One boy, 8 years of age, has been expelled for abnormal sex play. One mother, having 7 illegitimate children of her own, reported that her 12-year-old daughter is now pregnant. That the situation is growing rapidly worse is indicated by the fact that in 1948–49, only 7 pregnancies were reported to the Southwest Health Center, while this year 82 pregnancies have been recorded among girls 13 to 17 years old.

These sordid and distressing facts were reported by the Washington Post and Times Herald; and what interests us, among other things, is that Mr. J. Russell Wiggins is

executive editor of the Washington Post and Times Herald, and Mr. Wiggins has established a national reputation and won many kudos for his defense of what is known as the people's right to know.

It would not seem too much to suggest that the people of Washington have a right to know the extent to which this problem of illegitimacy exists among Negro teen-agers, and the extent to which it exists among whites.

Yet amazingly enough, though one may read the Washington Post and Times Herald's story from top to bottom, this rather essential fact never appears.

What, we would ask Mr. Wiggins, do his people have a right to know?

Natural-Gas Legislation

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JARMAN. Mr. Speaker, today the House Interstate and Foreign Commerce Committee favorably reported H. R. 6790. This is a compromise bill designed to eliminate some of the confusion and uncertainty now facing the natural-gas-producing industry, which is not only one of Oklahoma's greatest industries but one of vital importance to the whole Nation. Those of us who in the past have advocated natural-gas legislation and now support this bill have been forced to compromise in an effort to obtain some legislative relief for the independent producer now faced with regulation which threatens to stifle the incentive to explore and develop this resource. Congressional attempts to enact a more desirable law by completely removing the producer from these onerous and unneeded controls have been thwarted twice by Presidential veto and once by Supreme Court interpretation in the Phillips decision of 1954. H. R. 6790 is legislation actually providing for Federal control of certain producers' contracts.

It should be made clear in the beginning that it is still our belief that Federal control and price-fixing at the producing level of this or any other industry is contrary to the fundamental principles of our Constitution, contrary to the intent of past legislation, and contrary to the interests of our people and country as a whole. It is our belief that Federal control of this industry can only result in fewer natural-gas reserves, less gas for nonproducing States, and an eventual increase in cost to the consumer. Further, it is still our belief that natural gas is a commodity and its production has none of the characteristics of a utility service. Natural-gas producers are now under regulation by the Federal Power Commission. The Natural Gas Act of 1938 was designed to apply to the utility service aspects of the interstate movement of natural gas and not to the commodity itself, and, we believe that its present application is in error.

H. R. 6790 falls far short of this position, but as shown by testimony by industry spokesmen, administration officials, and Federal Power Commission representatives, the public utility formula of control is absolutely unworkable for this industry, which bears no resemblance to a utility. Something must be done to ameliorate the present confused situation. This bill tends to clarify the producers' status and to delimit the areas subject to regulation by the Federal Power Commission and eliminates many of the undesirable features of the present formula of control.

While not all we would ask for in natural-gas legislation, it is a bill which, if enacted into law, would tend to encourage the independent producer to explore, drill, and develop sufficient gas reserves to supply fuel to all States of the Union at reasonable prices. It is our belief that this Congress with the interests of the industry and consumers in mind must provide this encouragement.

The United Nations Assembly Should Convene Immediately To Deal With Hungary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JUDD. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of June 28, 1957:

HOW SOON IS IMMEDIATE?

When the United Nations Committee of Inquiry on Hungary sent in its report a week ago yesterday our own State Department declared that the report merited the most immediate and close study by all governments. Our Government called for an early meeting of the 24 countries that sponsored the resolution setting up the committee, and that meeting was held on Wednesday of this week.

But there our sense of urgency seemed to lag. There seemed to be no question in the minds of those representing the 24 countries that the United Nations Assembly ought to deal further with this outrage. The question was when the Assembly should be called into session for this purpose. Yesterday the United States formally requested that it be reconvened as soon as possible, with the understanding that his would be some time after Labor Day, maybe around September 10.

In a way, there is time enough. The Kadar misgovernment of Hungary will doubtless still be in power on September 10. The facts presented by the U. N.'s five-member committee representing Denmark, Tunisia, Uruguay, Ceylon, and Australia will still be facts.

What are these facts? If we turn back to the report we will realize again that what happened in Hungary last fall was a spontaneous uprising against an intolerable tyranny enforced from without; that the legitimate Hungarian Government headed by Premier Imre Nagy was betrayed and brutally suppressed by Moscow; and, finally, that the Kadar government is purely and simply a government of occupation.

This is the situation. The question is what to do and how soon to do it. We must not hold out hope to the people of Hungary that armed help will come to them from anything the United Nations can do. We must recognize the limitations under which in this case justice labors. The United Nations could proceed against the real culprit, which is Russia, only at the cost of breaking up the United Nations and of increasing the possibility of war.

Our own Government and other governments may be particularly sensitive at this moment to the situation in London, where Mr. Stassen has just presented some proposals under which the Soviet Union might cooperate with other countries in reducing the burden of armaments. He may feel that this is no time to annoy Moscow. It may also be argued that if a demand for justice annoys Moscow we may put small hope indeed in Moscow promises to disarm or to do any other good and wise thing. Shall we now take back the protests made last November when the General Assembly condemned "the use of Soviet military forces to suppress the efforts of the Hungarian people to reassert their rights"?

We are left with the question of what to do and when to do it. What to do cannot include action against Russia, even though we believe that Russia is the offender. It cannot include sanctions that would hurt the people of Hungary, who have been hurt enough already. It can, however, comprise one simple act. Since the Kadar government is not the legitimate government of Hungary it follows that the Kadar delegation to the United Nations has no business to pretend to represent the people of Hungary and should be told so.

As to when this action should be taken, we believe the word "immediate" means what it says. The Assembly may be called back into session on a day's notice. A few days might be needed for consultation among the free nations, but it is certainly not necessary to consult practically all the rest of the summer. We believe that the United States should take the lead at once in action on this issue.

Airline Fares and Costs

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BOLLING. Mr. Speaker, the following editorial appeared in the Kansas City Star of June 27, 1957. The case for a prompt increase in airline fares is further strengthened by the fact that although since 1942 the consumer price index has risen 66.7 percent, the average revenue per passenger mile of all class I railroads has risen by 39.6 percent, and the revenue of intercity class I motor carriers by 28.5 percent, the average revenue per passenger mile of the scheduled domestic air lines has increased by only eight-tenths of 1 percent.

AIRLINE FARES AND COSTS

Six of the country's major airlines have assembled a plausible case for 6 percent fare increase. A main point they make is that airline fares are at the approximate level of 1938. Yet the passenger today gets much more for his money in speed, comfort, and service.

Until now air transport has been able to absorb higher operating costs with technical advances such as larger and more efficient planes. But now the youngest type of trans-

portation is up against what its leaders regard as a cost crisis.

The recent financial history of Trans World Airlines supports the argument. Last year TWA had a 10.5 percent increase in gross revenue over the profitable previous year. Even so, TWA had to report a net loss of $2.3 million for 1956.

Now the airlines are getting ready for jet travel. They have $1.5 billion worth of turboprop and jet airliners on order. They are financing this equipment on faith in public acceptance. Meanwhile this Government-regulated industry sees its payrolls and other expenses going up.

The Civil Aeronautics Board has started a general fare investigation which won't be completed until next spring. Most of the larger airlines feel that they can't wait for the outcome of this inquiry and so they have petitioned the CAB for an immediate rate increase. These carriers aren't worrying about a resulting loss of passengers to competing rail and highway travel. They consider the need so urgent that they are willing to take the risk.

The CAB is due to rule on their request in the next few months. With access to all the facts it will be able to act on the basis of what is best for both the public and the fast-growing airline industry.

Enact in Haste, Repeal at Leisure

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Drew Pearson, which appeared in the Washington Post and Times Herald of July 9, 1957:

SOUTH COULD GAIN FROM FBI FILES

(By Drew Pearson)

Sincere, scholarly JOE O'MAHONEY, the Democratic Senator from Wyoming, argued at length on the Senate floor recently that it was dangerous to rush legislation through Congress; that the Senate must never bypass its own Senate rule 14 requiring legislation to go to an appropriate committee. He was talking about the civil rights bill, recently passed by the House.

Last week, however, the same Senator O'MAHONEY rushed the so-called FBI bill through the Senate Judiciary Committee in record time, only to have other colleagues prove the truth of what he had argued before—that haste makes for sloppy legislation.

For the FBI bill, jammed through the Judiciary Committees of both Houses allegedly to protect FBI files, is now found to have alarming loopholes which would set back judicial procedure in the United States for many years.

Senators SAM ERVIN, of North Carolina, and JOHN MCCLELLAN, of Arkansas, both former judges, seemed a little concerned over the haste when the bill came before them in the Judiciary Committee. Now Southern legal experts point out that, if the civil rights bill passes, the South will benefit most from the right to examine pertinent portions of FBI files. For it will be the FBI which will be sent South to investigate violations of civil rights.

Senator ERVIN has spent weeks arguing for the right of jury trial. But either in jury trials or in trials before a judge, defense lawyers now have the right under Supreme Court rulings to examine earlier statements made to the FBI in order to impeach the testimony of witnesses. The FBI bill would curtail that right.

Yet Senators JAMES EASTLAND, of Mississippi, and OLIN JOHNSTON of South Carolina, both members of the Judiciary Committee and vigorous opponents of civil rights, were among those who wanted to O. K. the FBI bill in record time.

Legal experts now find the FBI bill would override not merely the Supreme Court but years of judicial procedure worked out by the courts and the American Bar Association to protect an individual from an oppressive government. Here are some of the things it would override and the people who should be worried about it:

The National Association of Manufacturers: The FBI bill would permit a field day to the Government in antitrust prosecutions. General Motors, Du Pont, any other corporation could be prosecuted without giving them the right to see the files of a competing firm on which the prosecution is based.

Of interest to taxpayers: In tax cases against you, the Government could seize your files and financial statements and you would have no access to them.

Of interest to lawyers: The FBI bill wipes out rule 16 of the Federal Rules of Criminal Judicial Procedure, namely the right of discovery. This has nothing to do with the Jencks case.

To get a clearer picture of what the FBI does, it is necessary to go back to the Mooney case where Tom Mooney, a California labor leader, was convicted in connection with the bombing of the San Francisco preparedness parade in 1916. Twenty-three years later, Mooney was released from jail, because the government of California had withheld evidence in the trial.

In other words, the State had evidence which indicated Mooney was not guilty, but Mooney's defense attorneys had no way of getting that evidence, because they could not see the records of the State or the State's police files. Since then the "right of discovery" under Rule 16 has been established by the courts with the approval of Congress. Under this rule, any citizen being prosecuted for a crime has a right to see the documents the Government has taken by judicial process.

The new FBI bill now wipes this out.

Catholic War Veterans Oppose Trade With Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at a meeting of the Kings County Chapter, Catholic War Veterans, on June 28, 1957:

Whereas communism is a conspiracy which would seek to destroy our democratic way of life and Red China is an important member nation of those countries promulgating this conspiracy; and

Whereas Red China stands condemned by the United Nations as an aggressor nation; and

Whereas by its own admission, the government of Communist Red China has murdered millions of its countrymen who opposed the Communist form of government; and

Whereas the United States does not recognize the government of Red China, either diplomatically, economically, culturally, or socially, and in effect, has a ban on trade with that country; and

Whereas on June 6, 1957, on the WCBS–TV presentation Face the Nation two Senators advocated moves toward opening relations with Red China; and

Whereas the Catholic War Veterans are on record as opposed to the granting of recognition in any form whatsoever to the government of Red China: Now, therefore, be it

Resolved, That the Kings County Chapter, Catholic War Veterans, and its member posts, reaffirm their oppoistion to the granting of diplomatic, economic, cultural, and social recognition by the United States to Red China, and to trade, in any form, with this Communist country; and be it further

Resolved, That our views be brought before the President of the United States, the United States State Department, the United States Delegate to the U. N., the United States Senators from New York, and the Congressmen from Brooklyn.

Our Far East Friends Want Sovereignty

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. LAIRD. Mr. Speaker, under unanimous consent, I include in the RECORD an editorial from the Wisconsin Veteran, published monthly by the Department of Wisconsin, Veterans of Foreign Wars of the United States, entitled "Our Far East Friends Want Sovereignty":

OUR FAR EAST FRIENDS WANT SOVEREIGNTY

The case involving William Girard has again focused attention to the controversial Status of Forces Agreements.

Generally, under these treaties, the United States has jurisdiction over its military personnel in offenses against property, security, persons under United States control, and on strictly military cases.

However, our military personnel are subject to the laws of the country in which they are stationed, except as noted.

And actually there are very few servicemen in comparison to the number of cases who have been actually tried by foreign courts. In fact, a year or so ago Congressman CHARLES HALLECK, of Indiana, on returning from Europe, reported the American servicemen had been fairly treated by the European courts—many times better than if they had been tried by court-martial proceedings.

We are faced with a serious situation in the Far East.

These people are concerned with their sovereignty as we are with ours. One of our best friends in the Far East is Gen. Carlos Romulo, Philippines Ambassador, who put it in this way:

"We in Asia recall with gratitude and admiration that it was the United States that pioneered in exposing, denouncing, and opposing the extraterritorial rights in China. It is therefore difficult for Asians to understand why Americans should now insist in denying court jurisdiction to civil authorities for its soldiers.

"To us, court jurisdiction is part and parcel of our national sovereignty, and espe-

cially to peoples newly liberated, national sovereignty, is sacrosanct."

Our President is a man with a long military background. Certainly he is as conversant with our "rights" in a foreign country as any of us are. And certainly he is in a position to see this matter more clearly than most of us.

Isn't that one time when it might be wise to let the executive branch of our Government take over and settle a matter as it sees fit?

Our President and his advisers are men of integrity, who will make sure that William Girard receives justice, we may be sure.

Tighter Bank Credit

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 5, 1957

Mr. PATMAN. Mr. Speaker, a very interesting and informative article entitled "What's Wrong With Tighter Bank Credit?" was prepared by the president of the Phoenix Finance Co., Mr. Joseph K. Wexman, of Chicago, Ill., for publication in the most recent issue of the Industrial Banker.

Mr. Wexman has for a number of years directed the management seminar for smaller business at the University of Chicago and is also a teacher at the university. He is constantly in touch with those who feel most keenly the effects of the Federal Reserve Board's tight bank-credit policy.

In the article, Mr. Wexman has summarized his findings from a recent informal poll of several hundred businessmen outside the field of finance on this policy.

For the information and benefit of the Members of the House, I am at this time inserting the article in the RECORD. It is as follows:

WHAT'S WRONG WITH TIGHTER BANK CREDIT?

(By Joseph K. Wexman)

Those of us in the finance industry know what the Federal Reserve Board policy on bank credit has accomplished. By and large, it has tightened credit for the smaller finance companies and left the larger companies untouched. Has it had similar effects in other lines of business?

The writer has directed the management seminar for smaller business at the University of Chicago for the last 10 years. This seminar meets annually for a period of 6 to 8 weeks (it varies from year to year), and authorities in various fields are invited to lecture on new product development, research, sales methods, record keeping, finance, etc. The students are mature businessmen, some owners and managers of smaller companies, others executives in similar companies. Most of the attendants are manufacturers; a good number are retailers.

Being curious about the effects of the Federal Reserve policy on businessmen outside of the field of finance, I informally polled several hundred of the men who had attended the seminar during the last few years. My findings may be summarized in two parts:

Almost all of the manufacturers and many of the retailers reported that the present monetary controls, aimed at curtailing expansion, had succeeded in hobbling their smaller businesses, but seemed to have left larger business free to expand. At least, such have been their individual experiences.

Most of the manufacturers and many of the retailers seemed to prefer selective credit controls at points where major speculative situations may exist (e. g., auto financing, home buying credit, or inventory speculation), plus some hobble on Government spending which is said to add fuel to the inflationary fires.

For these conclusions, various businessmen cited different arguments. Here is a summary of the major points made by the heads of smaller companies.

1. Prices have risen over 3 percent in the past few months as against a relatively stable price level prior to the steep rise in rediscount rates over the past year. These price rises many businessmen attributed, in the main, to Federal Reserve Board policy, which was instituted in order to have an opposite effect. "While increased labor costs have played a small part," one manufacturer said, "the coincidence of price rise and the increase in the redisount rate by the Federal Reserve, at least suggest that there may be a causal relationship between higher interest rates and price rises out of proportion to the increased cost of the money." Evidently in a time of full employment, it appears that some of the accepted theory of monetary controls must be reexamined.

2. While the Federal Reserve policy has increased interest rates and indirectly led to a temporary expansion in bank lending, many businessmen found that it had resulted in making more credit available to larger corporations, but smaller business got squeezed.

That banks have dumped a good deal of their Government bonds in order to provide more funds for lending at the more profitable rates, is perfectly clear in the fact that from September 1954 through September 1956, Federal Reserve member banks increased their reserves by $621 million (about 3.5 percent), and the money supply went up by $4.8 billion (about 4 percent), but the banking system expanded its loans by $20.6 billion, or about 30 percent in the period. This was partly accomplished by bank liquidation of Government securities.

Despite the fact that the Federal Reserve Board figured that lower bond prices would "freeze-in" many banks and prevent them from lending more, the banks merely sold off their new maturities and willingly took losses on the sale of longer term bonds in order to realize substantially higher interest charges on loans. Most of these loans went to the larger borrowers, most manufacturers reported to me. As loans increased, the ratio of bank risk assets to capital began increasing, and it was this practical matter, rather than monetary controls, which slowed up bank lending subsequently.

For this latter point, there seems to be evidence from the Federal Reserve Board itself. The latest Federal Reserve Board Bulletin shows clearly that the average number of new loans by banks increased by 30 percent from June 1955 to June 1956. "The sharpest increase," says the Bulletin, "was in loans of over $200,000." Certainly loans of this magnitude don't go to smaller business.

3. Even in the area of insurance company lending and securities issues, monetary controls seemed to have had little effect on the amount of big business borrowing. The controls merely increased the cost. Insurance companies sold a good part of their governments and loaded up on corporate bonds through private placement sales. In 1956, I find, according to the Securities and Exchange Commission, private placements totaled a record $4.3 billion, as against $3.6 billion in 1955.

And as for flotation of new issues of securities, this, too, has shown a record rise. In the cases where large companies had postponed issues because of rising cost, they merely borrowed short-term funds from banks (thereby decreasing the funds available for smaller business), and started plant improvements with bank loans and promise of long-term renewals. Larger companies hoarded their security market credit while they used short-term, renewable bank funds. Small business, as a result, found bank accommodation much more difficult to get, as most of the smaller businessmen reported to me.

Of course, high interest rates are not deterrents in the bond or security markets. What is a deterrent, are rising rates, and then, only temporarily. A corporate treasurer, finding rising interest rates in the bond market, takes refuge by borrowing short-term funds from banks while he waits to see which way rates will stabilize. Then, when rates reach a plateau, the corporate treasurer sells his bonds. Higher rates have not stopped larger corporations from borrowing from insurance companies and the stock market, according to all the indications, and these two sources are generally not readily available to smaller borrowers.

4. Further, besides making money more expensive and less available for smaller businessmen, the tight money policy has also tended to shorten the period for which businessmen can borrow. While this is a worthwhile objective in times of inflation, smaller business needs bank loans for longer terms than big business (which can get long-term loans in the security markets or from insurance companies), and hence this situation works a special hardship on small business borrowers.

5. Since tight money means a greater selectivity by lenders, many credit-worthy smaller businessmen with borrowing requests, report that they are shut off from added funds at a time when they need the credit to survive. The fact that larger combanks can provide larger bank deposits, are better bank customers year in and year out, and have better and cheaper access to capital markets (the security market, the insurance companies and the commercial paper market), makes the present situation one of overwhelming disadvantage to smaller companies, is the plain conclusion after talking with several hundred of the smaller businessmen who have attended the seminar at the University of Chicago.

By and large, it is perfectly obvious to me that smaller businessmen are as anxious to avoid inflationary trends as are larger corporations—but they resent the imposition of controls which work hardship mainly upon small business. If regulations are called for, a much more equitable arrangement is said to be credit restriction that limits activity for large and small firms alike. For that reason, many smaller businessmen indicate that they favor selective credit controls at the points where inflationary pressures may be present—e. g., auto financing, home buying based on minimum down payment with 30 years to pay, and speculation in inventories. In addition, Government spending, now at record levels, has much to do with inflationary pressures, many businessmen believe, and they urge restraint there most of all.

Diversion of Water From Lake Michigan

SPEECH
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1957

The House in Committee of the Whole House on the State of the Union had under

consideration the bill (H. R. 2) to authorize the State of Illinois and the Metropolitan Sanitation District of Greater Chicago, under the direction of the Secretary of the Army to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway, and for other purposes.

Mr. GRAY. Mr. Chairman, as a member of the Subcommittee on Public Works it has been my pleasure to work for the passage of H. R. 2. Without giving the Army Corps of Engineers this increased diversion, there is no possible way to determine whether or not damage will result. I might say to the opponents of this legislation that the engineers may stop this diversion at any moment they feel it is causing material damage. The great metropolitan area of Chicago is badly in need of this diversion, and I am happy to join with my distinguished colleague, the Honorable TOM O'BRIEN, and other sponsors of this legislation in urging its enactment. I am proud to have introduced a companion measure to H. R. 2.

The Over-60 Employment Service of Northern Virginia

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following article which recently appeared in the Ladies' Home Journal concerning the Over-60 Employment Service of northern Virginia. This fine program was started by members of the Soroptimists International of Arlington County, an outstanding organization in my congressional district, and I feel that they are to be commended for their great contribution to their community.

OVER 60 AND LOOKING FOR A JOB?—ARLINGTON, VA., OFFERS HELP

The telephone on Mrs. Vossen's desk has been busy all afternoon. Calm and businesslike, and looking not at all like her 72 years, she answers promptly, "May I help you?"

"This is B——'s real estate," a harried voice on the line says. "Can you send me somebody who knows what the inside of a file cabinet looks like—and who has a notion of what a day's work is?"

Mrs. Vossen puts down the receiver and riffles through the green metal box on her desk until she finds the name she wants. "Indeed I can. I'll send Mrs. George over first thing in the morning."

In an ordinary employment service, such calls are routine. But the fact that many are now coming to the Over-60 Employment Service of northern Virginia means that a number of business firms are beginning to recognize that older people can fill jobs reliably and efficiently.

"You never have to worry about whether she is going to show up," is the current report from the real-estate man who interviewed—and hired—68-year-old Mrs. George, a white-haired widow who believes in punctuality. "And she keeps the office running smoothly when I'm out with a client," he adds. Mrs. George's employer previously had hired high-school girls part time, in the hope that they would fit in as permanent employees after graduation. But this didn't work out. The girls quit, were married, or did their work so carelessly he had to let them go.

Mrs. George hadn't expected it to be easy to find a job after the company where she had worked for several years closed down. But she did think her experience ought to count for something. Interviewer after interviewer, however, had the same curt smile and the same "We'll let you know," and Mrs. George soon realized they really mean, "You're too old."

In January 1956, a newspaper item about a new employment service for older people changed all that for Mrs. George and many others in the same situation.

The service, now located in the office of the Recreation Center on North George Mason Drive, Arlington, Va., was started by a group of 27 women—the Soroptimists International of Arlington County, a women's service club. Their interest in senior citizens began in October 1954, when at the request of the Recreation Department they agreed to serve refreshments at Silver Age Club meetings. But they soon learned that the silver agers wanted more than a cup of punch and a good time on Saturday afternoons. They wanted jobs, and not volunteer jobs either. Some needed money to help pay their taxes on their homes, which social-security benefits couldn't possibly cover. One member, her income having dwindled since retirement, wanted to be able to continue to contribute to her favorite charities. Another wanted to earn money to pay her bus fare to and from silver-age meetings. A number wanted something to do. "I looked forward to retirement for so long," one elderly gentleman remarked sadly, "but it's turned out to be pretty monotonous."

Several silver agers had left applications at the State employment service. "Over there they consider 45 a senior citizen," a spry little woman commented. "What chance have you got when you're 70?"

This was a problem for Mrs. Evelyn Devers, chairman of the Soroptimists' service objective committee, to solve. She asked three members—Mrs. Pearl Sharpe, a building contractor; Miss Martha Schubmehl, a secretary on Capitol Hill; and Dr. Lois Platt, a cancer researcher—to work with her. Together they called at the office of Carroll Early, manager of the Northern Virginia State Employment Service, for ideas and suggestions.

"We do try to place these older people," he told them. "They make up about 4 to 5 percent of all our applications, but it's largely a matter of getting employers interested—and frankly, we don't have the time to make personal contacts."

"That's where we could make our start," the Soroptimists decided.

When Evelyn Devers and her committee talked with W. A. Richardson, director of the Recreation Department, about setting up an employment service, he offered them use of a desk and telephone in his offices. That was in October 1955. With the help of Mr. Early, the Soroptimists drew up an application blank containing information a prospective employer would want. Then they ordered 500 forms printed. Next they began scanning newspaper ads for jobs that elder-agers might fill, including those that stated "not over 40," and called the firms to ask if they would be willing to list their vacancies with the service. Nearly everyone was willing—whenever anything suitable came up. Only a few admitted their policy was to hire within a specified age bracket.

On January 23, 1956, the Over-60-Employment Service opened officially, with scheduled hours 1:30 to 3:30 on Monday, Wednesday and Friday and staffed by volunteers from the Silver Age Club and by Soroptimists who could leave their jobs or businesses.

During the next month Soroptimists sent out 1,500 letters to businessmen on the chamber of commerce mailing list. More and more job offers came in—until the volunteers found it hard to keep track of their placements and complained they couldn't read one another's notes. Mrs. Libby Deaver, director of the Silver Age Club and a recreation department worker, found herself shouldering more and more responsibility.

Soroptimists convened a hasty meeting to discuss hiring a permanent part-time manager to take charge of the service. With Mrs. Deaver's concurrence, they decided to ask Mrs. Fannie Vossen, a charter member of the Silver Age Club and a volunteer worker at the employment service, to act as manager. Her salary of $30 a month would be raised through Soroptimist fund-raising projects.

Mrs. Vossen had worked during World War II in the censorship division of the post office in New York City. In recent years she had been living with her son in Arlington. The $30 extra income now meant that Mrs. Vossen could leave her son's crowded household and share a house with a friend.

Shortly after Mrs. Vossen took over in May, the Over-60 Service moved from the recreation department building to the new center in an apartment-development neighborhood close to two modern shopping centers and buslines.

When Mrs. Vossen first arrives at the office, which she shares with Libby Deaver, supervisor of the center, she looks over the newspaper ads for possible jobs for senior citizens, puts through calls to prospective employers to find out if they would be willing to consider an applicant over 60. At first, some are hesitant. Can they keep up the pace? is their first concern. The personnel director at one large department store is one who has come to realize that age limits deprive employers of the qualified workers they need. Arlington County is short of good workers because so many people under 35 are in the Armed Forces or employed by the Government. "I'm tired of these irresponsible teen-agers," the personnel man who previously had refused to hire anyone over 55 told Mrs. Vossen. "Do you think you could find us two salesladies, a guard and a man for our receiving department?"

Mrs. Vossen immediately began lining up appointments. Her friendly, poised manner ("She has simply bloomed since she took that job," her friends say) often helps reassure the older man and woman sensitive about being unemployed for the first time in their lives. She tries to place people in jobs near their homes whenever possible—though some applicants come from Washington, D. C., and from towns as far as 100 miles away. Applications must be made in person, and references, other than Government service, are checked by telephone when an applicant is being considered for a specific job.

A supervisor at another store which has no age policy does try to fit the older person to the job he can do best, even if it means as many as four transfers. A 62-year-old man hired in the receiving department sometimes had to handle only two packages at a time. But when as many as 70 flooded in, he got a little rattled. This was solved by transferring him to the packaging platform where he is "working circles around his 50-year-old partner," according to his supervisor. The same supervisor discovered the "gift of gab" in another employee past 60 and stationed him at the sidewalk pickup station to pacify impatient customers waiting for their purchases to be sent down from the storerooms.

The manager of a bank, which only recently became interested in hiring older peo-

pie in an effort to stem high turnover in personnel, follows the same procedure. Keep the older people away from the pressures of deadline production work, and they do an excellent job.

Through the Over-60 Service this bank employed 65-year-old Mr. Brown, who had retired at 62 after 32 years of Federal Government service, in its stockroom. Mr. Brown's earnings are a welcome supplement to his Government retirement pension, a few investments, and the income from his wife's dressmaking.

From May to December 1956, 42 applicants were placed. Altogether, though, there were 99 applicants and 133 openings, for babysitters, companions, housekeepers, clerical workers. One young mother called in September to request a babysitter for New Year's Eve; at Christmas there were four requests for Santa Clauses. Mrs. Vossen explains that many of the job openings could not be filled because some applicants had no means of transportation. A number of the offers were for live-in baby care, which few wanted, although one woman did respond to the plight of the father of a 6-week-old baby whose mother had to spend several months in a hospital. Some applicants could not be placed because they were hard of hearing. One opened a business of her own.

Many of the jobs, unfortunately, offered ridiculously low pay for the duties involved. And there are practically no offers of professional or executive positions. One attractive, young-looking woman, a former teacher, had followed up a dozen leads without success before coming to the Over-60 Service. Now she is selling in a store—and doesn't like it. Other women, among them former business and professional women, have resigned themselves to babysitting. "It seems sometimes," Mrs. Vossen laments, "that employers come to use with jobs nobody else wants."

In her followup calls to employers, Mrs. Vossen keeps tab on the progress her clients are making. One employer reported that his new clerk was inclined to be childish and a little jealous, but made an extra effort to do things right. Sometimes it's hard for an older person, especially one who has formerly been a boss, to take orders from a younger person and do things differently from his accustomed way. But for the most part, employers are well satisfied. One woman with 40 years' experience in bookkeeping systems in insurance companies and mortgage banks now is working part-time for a plastics manufacturer, has her own office and chooses her hours. A 65-year-old man who had to give up his contracting business after a back injury, but is still wiry and strong, now is the night manager of a gasoline station, earning $90 a week. For Mrs. Rose Landry, a Silver Age Club member, the service has filled the crushing need to earn enough to live. "You see," she explains to Mrs. Vossen, "when my husband died his pension died with him." She is now taking care of three small children in a motherless home.

Soroptimists understandably are concerned about the future of the Over-60 Service. They feel it should be located in an office all its own and have a full-time director. And they're meeting with other service groups to find out if this can be done. There's certainly no question about continuing interest in the service. Applications are pouring in. A number are even registering several months to a year before their planned retirement in order to have a job waiting for them.

Hells Canyon, TVA, and Niagara

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 9, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD one of my weekly newsletters which I send to the people of South Dakota. It deals with the subject power at Hells Canyon, TVA, and Niagara.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

HELLS CANYON, TVA, AND NIAGARA

WASHINGTON, July 1, 1957.—It's time for plain speaking in South Dakota on power—public and private. Bills now pending in Congress point up the subject.

BILL NO. 1—HELLS CANYON

The Senate has passed a bill that would direct the Federal Government to build a high dam on the Snake River in Idaho

I voted against it. Why?

Because it will cost you your share of $500 million, possibly $600 million, plus damages to the private power company which has already spent about $20 million building some low dams under a license issued under President Roosevelt's 1936 Federal Power Act.

The issue was blurred by a tax amortization certificate that should not have been issued although the Idaho Power Co. was only getting what others have been getting since accelerated depreciation was resurrected with the Korean war. I did not like that—said so—introduced a resolution to stop it and stop all fast writeoffs.

Idaho Power then turned back its tax amortization certificate before the vote—but even if it had not, it does not make sense to make a $600 million mistake just because you've made an $18 million one.

Under either plan—there would be 750,000 kilowatts of firm power. A high dam might get 15,000 more. It might also get some dump power if you take water away from the upstream irrigators to fill a high dam. But I do not see using crop water to create dump power when the British are producing atomic power competitively.

So, I voted "No" which was to say, "Let the private company continue and let them put up the dough. We need lower, not higher, taxes."

BILL NO. 2—TVA

In the Senate Public Works Committee, I have helped to shape and report a bill that will let the Tennessee Valley Authority issue its own bonds up to $750 million to increase its facilities to meet growing power needs in its territory.

TVA is public power. My friends who think TVA is creeping socialism will probably themselves get the creeps on this one. And my REA friends who have been educated to think that one should be damned politically and perhaps eternally if he did not vote for a publicly built Hells Canyon Dam may give me no credit for supporting TVA public power.

But you, my fairminded reader—don't let anybody poison your mind. FRANCIS CASE is neither under the control of the private power trust when it comes to Hells Canyon nor the Socialists when it comes to TVA. I simply think it makes sense to let the cost of these things fall somewhere else than on the backs of the taxpayer.

Since TVA, a proven operation, can sell bonds and finance its needed expansion, why do it by taxation or an increase in the national debt?

BILL NO. 3—NIAGARA

Another bill which I have helped to shape and report from Senate Public Works would let the State of New York, through its State Power Authority, develop the hydroelectric potential in the Niagara River. It will cost them $566 million.

Again, I'm in the middle. Between the folks who wanted the original Miller-Capehart bill that would turn Niagara's potential over to five private power companies and those who wanted the Lehman-Roosevelt bill to have Uncle Sam do it and pick up the check.

This will be public power—State public power—but the so-called public power people are unhappy because we did not tack on the full preference clause for public bodies and cooperatives.

I voted for modifying the preference clause because I think if New York State finances the job, the people of that State are entitled to at least 50 percent of the power in that State. And less than 5 percent of them are served by the so-called preference bodies.

Also, I respect the claim of New York to some of the power that will be produced from waters rising and dammed in their State. (You know I also think that for South Dakota, too.) New York, under Republican Gov. Charles Evans Hughes over 50 years ago asserted that claim and it has been continued through Democrat Franklin Delano Roosevelt, Republican Tom Dewey and present Democratic Gov. Averell Harriman. All have asserted the doctrine of our Western States that a State has certain rights in its waters.

So, I have never favored requiring New York to accept a Federal preference law that would require them to export their State-financed power from a State dam on waters rising partly at least in their State to cities and co-ops in Pennsylvania, Ohio and Indiana and deny it to the 95 percent of their own citizens who are served by private distributors.

Now if I seem to have written this a bit bluntly, it is because the time has come to call the turn on a tendency to damn or praise in terms of "public power" and "private power." We have both in the United States—and should.

Without the drive that men have when there is a prospect of making a profit from enterprise and hard work, this country would not do any better than Russia does with state enterprises exclusively; without the yardstick of TVA and the example of what people will do with abundant electric power when they can get it at rates they can afford, we would not be the country we are today.

Not in our generation would the farm homes of America be lighted and modernized as they are had there been no Rural Electrification Administration. It has meant more to improve rural living than any other farm legislation you can name.

And the simple existence of a TVA yardstick makes it safe to have private power development when private capital and enterprise are able and willing to undertake the venture.

In each of these three cases, FRANCIS CASE voted—not on a public-power or a private-

power basis—but for the solution which appeared likely to get the job done with the most protection to the public purse and to you as a taxpayer. I would save on—

Hells Canyon—private power	$600,000,000
TVA—public power, private funds	750,000,000
Niagara—public power, New York funds	566,000,000
Total in 3 bills	1,916,000,000

That much power development for a growing United States without any demands on the Federal Treasury. Without any increase in your taxes.

That's the way I voted. But whether you will be saved that first $600 million depends on what happens to Hells Canyon in the House of Representatives or at the White House.

If you want to help pay for a high Hells Canyon Government-built dam, write your Congressman that you are willing to have the national debt increased or your income tax raised or your share of the tax cost hidden in the price of a new tractor, cornpicker, or TV set.

And if you'd like to have the full-preference clause tacked onto the Niagara bill, write your Congressman that you are willing to have the Niagara Dam built by the Federal Government. That's a sure way to pick up the tab New York State stands ready to accept.

And, if you want TVA to be public enterprise, pure and simple, tell us that you want all TVA growth financed by Federal appropriations instead of TVA bonds. That's a quick way to add $750 million to the Federal budget for the next 6 years.

Thanks for letting me report to you so frankly.

Move for Federal Tax Reduction Spurred by Decentralization Plan

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. HIESTAND. Mr. Speaker, H. R. 6452, introduced by the gentleman from Connecticut, our good friend and colleague, the Honorable ANTONI N. SADLAK, has received much approval from the district I represent.

Not the least important of these comments is an editorial from the San Fernando Valley Times of July 2, 1957, which I herewith insert in the Appendix of the RECORD:

In President Eisenhower's set of Government reform proposals presented to the State governors' conference, a program for Federal tax reduction came in strong. But not in a way to challenge or relieve the necessity for another pending taxcutting program, the one embodied in a bill recently introduced in Congress.

The taxcutting proposed by President Eisenhower would be a part of the program he presented to the governors for decentralization of Government powers and finances, his plan for shifting rights and responsibilities from Washington to the lower levels of Government authority—State, counties, and cities.

The program pending in Congress was presented in a bill recently introduced by Congressman SADLAK of Connecticut, who proposes income-tax reduction by stages timed to allow the losses in revenue resulting from the lowered income-tax schedule to be made up—in whole or most part—by growth of the national economy.

There is no connection between these two tax-cut programs. But neither is there conflict. Though independent of each other in origin, they are enough alike in purpose to make them look almost as if they were designed to complement each other. They have much in common.

One thing they feature in common is an implied, if not actually expressed, recognition of the fact that the present Federal tax system is confiscatory.

From the point of view of the Sadlak program, the income tax system is confiscatory in terms of money. For example, the part of the personal income tax schedule that takes 91 percent of some persons' income is licensed confiscation of property.

In almost so many words, the Eisenhower address—recommending reforms that would shift more rights, responsibilities, and tax revenues to State governments—charged that the Central Government has confiscated States' authorities and prerogatives. Mr. Eisenhower said that the Federal Government has "syphoned away State authority." He also talked of forces and factors which have "developed the excuse and fed the temptation for the National Government to poach on States' preserves." Further, he spoke of the "tendency for bureaucracy to grow in size and power."

The Eisenhower proposals contained broad suggestions for a program to pair functions assumed by the States with Federal tax reductions—on an arrangement that "presupposes Federal taxes would be cut more than State taxes would be raised" in any specific instance.

Translating from the Eisenhower proposals to the Sadlak tax-cutting program, we deal with bureaucracy in its growth in size and power, with the central Government's poaching on States preserves, with the siphoning off of powers, in terms of the effects of a confiscatory income tax system. Congressman SADLAK was talking about those very evils when, in an address introducing his bill, he said: "The growing dissatisfaction with the income tax rate structure goes much deeper than normal taxpayer irritation with a heavy tax load. It reflects a growing recognition that there is something fundamentally wrong with a tax structure which penalizes hard work, risk-taking, and achievement."

By the very nature of the case of the relationship between Federal and State Governments, particularly the relationship between the offices of President and governors, the prospects as to what may be accomplished through the Eisenhower program are obscure. But the machinery for action on the Sadlak program, action in Congress, is ready at hand. The bill is now in committee, the House Ways and Means Committee. If sufficient interest is shown—through citizens' letters and other contacts to Members of Congress—committee hearings may be scheduled and the machinery set in motion. Interested taxpayers should write their respective Congressmen, urging early committee hearings and full opening of the vital issues.

Some of the chief features of the bill are:

It provides coordinated reduction in all the progressive rates of individual tax, with the first bracket reduced from 20 to 15 percent, top rates dropped to 42 percent from present 91 percent, corporate tax rate reduced from 52 to 42 percent. Specific examples of individual tax rate drops over 5-year reduction period: $4,000–$6,000 taxable income bracket, 26 to 17 percent; $12,000 to $14,000 taxable income bracket, from 43 to 21 percent; $20,000 to $22,000 taxable income bracket from 56 to 25 percent. Scheduled reductions would be by annual stages for 5 years, this period possibly to be extended to 9 years in event postponement of reductions should be found necessary.

Procedures are provided for postponement—not more than 1 year for each scheduled reduction—by order of the President or by joint resolution in Congress, if loss of revenue from reduction in taxes might throw the national budget out of balance. This keying tax reductions to balancing of the budget has the effect of compelling big Federal spending programs to compete with regularly scheduled reductions, thus putting a brake on future spending plans.

Progressively reducing the Government's confiscation of individuals' and industry's earnings should result in increased investment capital available for building and expanding in the industrial field. This factor should stimulate production, boost earnings and thereby produce an enlarged source of revenues, in addition to those coming naturally from the normal economic growth. Here is a twofold factor giving rise to the prospect that most, if not all, loss of revenues from lower taxes would be made up.

Rough estimates place the 5-year period's total of individual tax savings at $10.6 billion, 60 percent of the sum going to taxpayers in the brackets of $6,000 and less. Total corporate tax saving for the period should be about $4.2 billion, making a grand total of $14.8 billion less taxes to be paid in that period.

The rally of popular support for the Sadlak bill, the call for committee hearings, is more than a bid for those savings. This bill represents the first concrete and formalized endeavor to root out the evils of the supergrowth of centralized government power.

Declaration of Independence

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial written by Mr. John Finney for the Daily Herald, Columbia, Tenn. In my opinion this is an excellent article commemorating the 181st anniversary of the signing of the Declaration of Independence.

The editorial follows:

OUR LIVES, OUR FORTUNES AND OUR SACRED HONOR

Tomorrow is the 181st anniversary of the signing of the Declaration of Independence, a document which takes its place with England's Magna Carta as a milestone in the continuing fight for individual, as well as national, freedom and justice.

This Declaration of the Continental Congress, drafted by Thomas Jefferson and approved and signed by a great assemblage of men, is worth study on this anniversary date in 1957.

Its signers included John Adams, Benjamin Franklin, Benjamin Harrison, Richard Henry Lee, Francis Lightfoot Lee and George Wythe, among many other notables, as well as Button Gwinnett, who became well known for the scarcity of his signature, and John Hancock for the flourish of his, the first.

It is a moving document.

Its first paragraph shows that it signers had a sense of history. This first paragraph said:

"When, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect for the opinions of mankind requires that they should declare the causes which impel them to the separation."

Immediately this document plunges into the basic reasoning, the political philosophy of these founding fathers. Thus the second paragraph opens:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government."

The Declaration goes on to say that this should not be done for frivolous causes, and then lists a long catalog of injustices depriving the governed of their just rights, taking the King of Great Britain to task for refusal to allow the passage of certain laws, for dissolving the governing body, for unjust taxes and for waging war against us, adding that he has plundered our seas, ravaged our coasts, burnt our towns and destroyed the lives of our people, and besides, he has excited domestic insurrection amongst us, and has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages. It is then mentioned that the people have petitioned for redress in the most humble terms but without avail and that now, therefore, in General Congress Assembled we are appealing to the Supreme Judge of the World in dissolving the former governments and setting up a new.

Then come the immortal closing lines, a vivid reminder that had the colonies lost the Revolution, which at times there seemed no hope of winning, it would have been a rebellion, its leaders would have been hung and their estates confiscated, and we might have been, until this day, a colony of Great Britain.

Here are the closing words which should give us pause today:

"And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Caught in the Wringer

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. ABBITT. Mr. Speaker, for the past several years, tobacco producers, manufacturers, and processors have met with serious problems. The demands for different types of tobacco have changed drastically. With the changing patterns problems have arisen.

In the July 8, 1957, issue of the United States Tobacco Journal there appeared a very enlightening editorial pointing out the difficulties confronting our tobacco people.

Under leave to extend my remarks in the Appendix of the RECORD, I desire to include the editorial which is entitled "Caught in the Wringer":

CAUGHT IN THE WRINGER

The shifting patterns of cigarette consumption have caused drastic changes in the marketing of leaf tobacco and tobacco products. In a brief span of a few years, smokers' tastes have undergone a dramatic transformation with the result that today the conventional-size cigarette is smoked by only half the cigarette smokers.

Filter and king now account for the other half of the cigarette market. And the evidence is growing daily that these two newcomers will seize an even larger share of cigarette sales in 1957.

Perhaps the most violent dislocation stemming from the smoking revolution has been felt in the leaf end of the industry. Not only do the newer sizes of cigarettes require less tobacco than the regular type but, to some extent, they utilize different kinds and grades of leaf.

This has produced a heavy demand for leaf types which traditionally were accorded a secondary role in the popular cigarette blends. But the newer sizes of cigarettes and the changing of blends suddenly have given a premium value to leaf tobacco formerly carrying lower price tags.

Grades of leaf historically regarded as earmarked for the export buyers or for the noncigarette domestic market (such as pipe and chewing tobacco) no longer are available at attractive prices or ample quantities. The bidding for these once easy-to-buy types has become highly competitive.

Thus, through no fault of their own, the traditional purchasers of these types have been hard-pressed to obtain their customary leaf requirements on the auction markets. These exporters and smoking tobacco manufacturers are the victims of fate—or foible of the smokers. They are caught in an economic wringer.

Certainly, under the free enterprise system, neither the leaf grower nor the cigarette manufacturer can be criticized for this unhappy turn of events. The grower seeks the highest return for the fruit of his toil. The cigarette producer seeks to give his customers what they want when they want it.

Of course, the harshness of the facts of economic life does not add any solace to the manufacturer of smoking tobacco, for example, who must pay sky-rocketing prices for his tobacco. It does not make any more pleasant the prospect of raising consumer prices on a product which for years has been plagued with sales atrophy.

If pipe smokers are wondering why their favorite blend costs more than it did a few months ago, they can blame it on the filter cigarette smokers.

Stand of Sudeten Germans

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. BOSCH. Mr. Speaker, we are all still very much concerned with the problems of the refugees and expellees in Europe—problems attributable in the major part to the Potsdam and Yalta Agreements. These problems have given great concern to peoples interested in justice and the right of peoples everywhere to enjoy the fruits of their labors in their respective homelands.

Under leave to extend my remarks, I include a letter which appeared in the New York Times on June 30, 1957, dealing with the problem of expellees and refugees in Germany:

STAND OF SUDETEN GERMANS—LIBERATION OF CZECHS, UNIFICATION OF EUROPE SAID TO BE GOAL

(EDITOR'S NOTE.—The writer of the following letter, a member of Parliament in Bonn, was before the war a member of the Czech Parliament representing the trade unions within the (Sudeten) German Christian Democratic Party.)

To the EDITOR OF THE NEW YORK TIMES:

Having spent the last few weeks as guest of the Department of State in your wonderful country, I have only now had brought to my attention the article by your Bonn correspondent, M. S. Handler, dated April 11, Refugees in West Germany Seek Return of Lands Hitler Annexed. Since it is not just a news item but deals with a basic question of interest to millions of refugees, permit me to comment upon it.

According to your report the all-German bloc stated "that any future government of reunited Germany must insist on the reincorporation of * * * the Sudetenland." While this may be the position of the all-German bloc, your readers may want to know the official stand of the Sudeten German Association and their leadership, of which I am a member.

The Sudeten German Association has a membership of about 350,000 out of a total Sudeten German population of 3,500,000, of which about 2,000,000 today live in Western Germany.

RIGHT TO HOMELAND

We do not believe that the Sudeten German question should be argued from the angle of frontiers or boundaries. We hold this to be an obsolete viewpoint. We maintain that every individual has a right to live freely and undisturbed in his homeland, just as he has the inherent right to life, liberty and pursuit of happiness. This aforementioned right is a new political term. We call it "Heimatrecht" in German (right to the homeland).

In a declaration called charter of the expellees the latter in 1950 solemnly renounced every thought of revenge and retaliation.

In addition, we believe more than ever in self-determination for all peoples as proclaimed by President Woodrow Wilson in 1917. In practical terms this would mean the right of every Sudeten German, wherever he may live today, to return to his native country, if he wishes, and to decide freely upon its future political status. We are, of course, fully aware that no Sudeten German would want to return to his homeland while it is under Czech Communist domination.

CZECH ATTITUDE

Therefore, the liberation of our Czech friends from their own Communist dictatorship is a prerequisite for any just solution. We believe that after the experiences of the last 12 years Czechs would reconcile themselves with or even welcome the return of the Sudeten Germans with whom they have shared Bohemia and Moravia for a thousand years. Our successful negotiations with a growing number of Czech exile groups bear out this contention.

The Sudeten Germans believe in and work for a united and federated Europe in which the question of frontiers will have lost its

importance for the Czechs and Sudeten Germans as well as for other peoples.

Wherever I went in the United States I have found a great deal of understanding and sympathy for the ideas outlined above. Therefore it seems to me that all peoples concerned would welcome it if the United States were to take the lead and made an official declaration in this direction.

HANS SCHUETZ.

NEW YORK, *June 22, 1957.*

Pearson Replies to Loyd Wright

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. MULTER. Mr. Speaker, the following article by Drew Pearson, which appeared in the Washington Post and Times Herald of July 4, 1957, makes most interesting reading, and I commend it to the attention of our colleagues:

PEARSON REPLIES TO LOYD WRIGHT

(By Drew Pearson)

Loyd Wright, the Los Angeles friend of Vice President NIXON who wants newsmen sent to jail for revealing unauthorized information, has just charged a group of national magazines, newspapers and columnists as "purveyors of information vital to national security, purloined by devious means" which "gives aid to our enemies as effectively as the foreign agent."

The Army's Chief of Information, Maj. Gen. Guy Meloy, subsequently informed Congress that he didn't know of a single case where a newspaperman had "stolen or purloined secret military information."

However, since Wright singled me out among 119 well-known magazines, newspapers, and writers and chose to mention me alone by name, I should like to diagnose the columns to which he refers and let the public decide whether they gave "aid to our enemies." Here are the columns cited by Wright:

Wake Island conference: On January 23, 1951. I reported the stenographic record of the talk between President Truman and Gen. Douglas McArthur in their mid-Pacific conference at which MacArthur said: "I hope to be able to have the Eighth Army back in Japan by Christmas." The conversation included various other direct quotes.

When the New York Times published an almost identical story April 21, 1951, using the same quotes, it was awarded a Pulitzer prize.

Chinese report on United States retreat: On January 31, 1951, I published the partial text of a captured Chinese combat bulletin giving the enemy's secret estimate of American fighting ability. The report was humiliating to the United States in that it pointed to United States inefficiency and lack of morale. However, it revealed nothing to the enemy, since the enemy wrote it.

On the other hand, it pointed to weaknesses which the United States had to cure if it was to win in Korea. The United States has always operated on the theory that it could not only take criticism but benefit from it.

MacArthur's intelligence: On December 30, 1950, I published extracts from General MacArthur's own intelligence reports on the size of the Chinese army which were at wide variance with his own public statements on that matter.

MacArthur, in trying to alibi his retreat from North Korea, stated on December 2, that there were about 500,000 Chinese troops in Korea. On December 4 he upped his estimate to more than 1 million Chinese in Korea or on the border. On December 15 he announced that "a bottomless well of Chinese Communist manpower continues to flow into Korea."

I had reported that the Chinese forces were nowhere near as great as MacArthur claimed, only to be met with MacArthur's own official denials.

Therefore, on December 30, I published excerpts from the reports of MacArthur's own intelligence chief, Gen. Charles Willoughby, estimating on December 6, 2 days after MacArthur's million-man announcement, that there were only 96,000 Chinese opposite the U. N. Eighth Army. I also published General Willoughby's report: "Lack of CCF (Chinese army) on Eighth Army front due to deep withdrawal executed by Eighth Army, it is evident that enemy, lacking any great degree of mobility, has been unable to regain contact."

This, in military language, meant that the Chinese, lacking transportation (mobility) had been unable to keep up with the fast retreat of the Eighth Army. In other words, MacArthur's troops, according to his own intelligence officer, had run too fast.

Wright states that this revealed secrets to the enemy. It was published 1 month after the enemy knew all too well about the most ignominious retreat in American military history, but when the American people had not yet grasped the full portent of that retreat.

Incidentally, the above Willoughby report was published only after checking with a top Pentagon spokesman to make sure no military security would be breached.

Ridgway's promotion: On April 30, 1951, I published an abbreviated exchange of cables between the Pentagon and General MacArthur in Tokyo in which Washington notified MacArthur that it planned to promote Gen. Matthew Ridgway, newly appointed Korean combat commander to be a full general; and in which MacArthur opposed his promotion. This column, which Wright complains about, revealed nothing more than military politics.

Less consumer goods: On December 4, 1951, I published the minutes of a meeting at the Office of Defense Mobilization at which it was argued that the production of refrigerators, autos, and other consumer goods might have to be curtailed. I quoted production chief Manly Fleischmann: "If the production of consumers' durable goods is reduced more than an additional 10 percent, it will be necessary to convert entirely to defense." This revealed that the American public might have to tighten its belt, but it gave no secrets to an enemy.

Korean prison riots: On May 17, 1952, after Gen. Francis Dodd had been captured by rioting North Koreans on Koje Island, I published the teletyped bawling-out which Gen. Omar Bradley sent to Gen. Mark Clark and Gen. Charles Colson for letting the prisoners get out of hand. The riots were already front-page news. The fact that Bradley acted promptly and indignantly was healthy for the American people to know.

Subsequently on August 14, 1953, I received a letter from General Bradley as he retired as Chairman of the Joint Chiefs of Staff: "As I look back over the past 8 years I think of the many times you and your assistant Jack Anderson have had our interests at heart and in this way have contributed to my getting my job done."

Apparently he would not agree with Wright.

This year the Defense Department wrote a similar letter of appreciation for the cooperation of my office in submitting a copy of the now famous Nickerson memo on guided missiles in order to make certain nothing in it would breach national security.

United States Policy on H-Bomb Testing

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. ANFUSO. Mr. Speaker, on June 13, 1957, I addressed a letter to Secretary of State John Foster Dulles concerning H-bomb tests and the dangers of nuclear fallout. I have now received an official reply from the State Department which I believe is most interesting since it outlines American policy and thinking on this matter at the present time.

Briefly, I had proposed in my letter that the United States should issue a declaration to the world stating that this country will make no H-bomb tests for a period of 6 months regardless of what other countries do. In this declaration the United States is to state clearly that we are taking this action in the interests of safeguarding humanity and civilization against the mortal perils of nuclear fallout.

Furthermore, I proposed that the declaration is to call on Soviet Russia and Great Britain to follow our example in accepting "this brief moratorium or trial period for the suspension of nuclear tests," and that if this 6-month trial period proves a success on the part of all concerned then it can be extended for a longer period of time.

On July 8, 1957, the State Department addressed a reply to my letter, signed by John S. Hoghland II, Acting Assistant Secretary for Congressional Relations.

It is worth recalling at this point that at the disarmament conference, now going on in London, the United States recently proposed the suspension of H-bomb tests for a period of 10 months. I prefer to believe that my letter to Secretary Dulles had something to do with the formulation of the proposal made by our delegation at the London conference.

Mr. Speaker, for this reason I believe it will be worth while to insert into the RECORD the text of the State Department's reply and my original letter.

The letters follow:

JUNE 13, 1957.

Hon. JOHN FOSTER DULLES,
Secretary of State, Department of State, Washington, D. C.

DEAR MR. SECRETARY: I am writing to you not only in my capacity as a Member of Congress and as spokesman for the people of my district, but also as the father of five children. During these past few weeks I have given considerable thought, as millions of others have done, to the mortal perils of nuclear fallout—the perils for our own generation, but even more so for our children and grandchildren.

Scientists seem to be generally agreed that radioactive elements which were unleashed by A-bombs and H-bombs since 1945 are already damaging human health all over the world. There may be some debate as to the degree of such damage, but no one questions the danger involved. As more of these bombs are exploded the physical danger increases since the atmosphere becomes more polluted with radioactive material.

It has been suggested that the three major nations experimenting with nuclear weap-

ons, the United States, Soviet Russia, and Great Britain, should agree to stop these experiments for the safety of the entire human race. Others have maintained that if we stop testing nuclear weapons, then we might face the danger of losing our position of leadership in this field and in due time the United States would assume an inferior position to Russia who would utilize it for its own selfish purposes.

If there is no imminent danger to the security of our Nation, I should like to propound this question: Could we continue our nuclear research without tests for a period of 6 months and yet not suffer to any material extent the loss of our present leadership position? Would we be in a vulnerable spot if we abstained from such tests for 6 months? If the answer to these questions is that we could continue our research without tests and yet not endanger our position, then I would like to suggest the following proposal:

Let the United States come forward with a flat declaration to the world that we have decided to make no further H-bomb tests for the next 6 months, regardless of what other countries do, because we earnestly believe it to be in the best interests of humanity and civilization. At the same time we will call on Russia and Britain to do likewise during the same trial period. In other words, declare a brief moratorium or trial period for the suspension of nuclear tests. I believe that public opinion throughout the world would force Russia and Great Britain to follow our example.

By our action, we would demonstrate to the world that the American people are taking the initiative to end the destruction of the human race. It would also show that the American people and its Government are sincerely and genuinely dedicated to world peace.

Naturally, if this 6-month trial period proves to be a successful experiment on the part of all nations concerned, it can then be extended for a longer period of time. In this way, perhaps, we can avert the threat to our own and to future generations. In this way, too, we can provide our children and grandchildren with an equal opportunity of coming into this world as normal human beings and with the hope of living a normal life free from the perils of radioactive fallout which are threatening them.

I believe, Mr. Secretary, that millions of people in this country and abroad would be most interested in your views regarding this proposal.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

JULY 8, 1957.

Hon. VICTOR L. ANFUSO,
House of Representatives.

DEAR MR. ANFUSO: I refer to your letter of June 13, 1957, concerning fallout and a proposal that the United States halt nuclear tests for 6 months.

It is believed that a review of the testimony given at the recent fallout hearings of the Joint Committee on Atomic Energy would not bear out the statement, "scientists seem to be generally agreed that radioactive elements which were unleashed by A-bombs and H-bombs since 1945 are already damaging human health over all the world." The record will show that there is general agreement among scientists on the amount of fallout received and the amount of strontium 90 in the body. It is recognized that the extra radiation from the test fallout is a small fraction of the natural dosage individuals receive from their own bodies and surroundings and cosmic rays. Radiation from test fallout is very small when compared with the radiation produced by medical and dental X-rays to which many individuals are exposed. Dr. Libby, of the Atomic Energy Commission, you may recall, has pointed out that an individual may receive doses which far exceed those from fallout by living in a brick house or in the mountains.

The Committee on Genetic Effects of the NAS–NRC noted in its report released in June 1956 that "the fallout dose to date (and its continuing value if it is assumed that the weapons-testing program will not be substantially increased) is a small one as compared with the background radiation, or as compared with the average exposure in the United States to medical X-rays." The following excerpt is taken from its conclusions: "The fallout from weapons testing has, so far, led to considerably less irradiation of the population than have the medical uses—and has therefore been less detrimental. So long as the present level is not increased this will continue to be true; but there remains a proper concern to see to it that the fallout does not increase to more serious levels." At the recent fallout hearings Dr. H. Bentley Glass, who is a member of the Committee, commented that no data have become available in the past year to warrant changing the earlier conclusion.

From the foregoing, one should not conclude that there is no risk to be taken in connection with nuclear testing. There is a small risk, however, it is small in comparison with the ordinary risks that we take all the time. At the fallout hearings, Dr. Libby asked the following question, to which only an affirmative answer can be given: "Are we willing to take this very small and rigidly controlled risk, or would be prefer to run the risk of annihilation which might result if we surrendered the weapons which are so essential to our freedom and our actual survival?"

Regarding the advisability of a 6 months' unilateral suspension of nuclear testing, a detailed review of the entire disarmament problem (as it relates to nuclear weapons) has led to the conclusion that the heart of the nuclear threat is ever-increasing stockpiles of nuclear weapons. Accordingly, the United States has proposed that, under effective inspection, at a given date, all future production of fissionable materials for weapons purposes should cease and that transfers from past production to peaceful uses should begin. Within the framework of such an agreement it would be possible to undertake either a suspension or a complete elimination of all nuclear weapons testing. For these reasons, a unilateral move merely to suspend testing for a short period would appear not to attack the most important and potentially dangerous aspect of the nuclear threat. It might tend instead to give a misleading impression of progress toward a safeguarded disarmament agreement. It is the view of the Department of State that any agreement on testing should be a part of a first step in a general disarmament agreement that would include provisions for the cessation of production of fissionable materials for weapons purposes.

Sincerely yours,

JOHN S. HOGHLAND II,
Acting Assistant Secretary for Congressional Relations
(For the Secretary of State).

A Note on Patriots

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of July 6, 1957:

A NOTE ON PATRIOTS

The cynics of this world often poke fun at the dedicated, patriotic citizen who remains in the armed services—usually at relatively modest pay, at least in the noncommissioned ranks—to serve his country. Yet we are not so sure that the patriots of earlier times do not receive their rewards.

As an example of what we are talking about, we recently enjoyed a true story on television depicting the life of a master sergeant of the Air Force who had spent 20 years in the service and who was highly qualified to keep the planes flying. The sergeant had become a highly trained and vital cog in the Air Force machine, and there was no one available to replace him when he was offered a more lucrative job by private industry.

In spite of the fact that his family did not enjoy the luxuries and advantages some other families enjoyed, and in spite of the fact that he could obtain many of these things by accepting private employment, the master sergeant—who loved the service and liked the idea of serving his country—refused the tempting offer and remained in the Air Force.

In specialty fields, such as aviation, electronics and guided missiles, one can find many examples of this type of loyalty and devotion to one's country. These men and even women are the unsung heroes of their time.

It is the availability to the services of citizens who love their country, their work, and their service which strengthens our country and which gives us greater security than we could otherwise obtain. We salute the specialists in the armed services whose jobs are of vital importance and who often turn down more money in order to serve their country and be a part of the defense team of the United States. The satisfaction of leading such a life must be great. Their pay should be more.

Farmers Disgusted About Eggs, but no Spare Money

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a series of letters from my constituents: Mr. and Mrs. Joe Fuxa, of Bejou, show eggs going for 21 cents, top grade, 15 cents lower grade; Mr. Albert Katrba, of Goodridge, has too much rain, but inadequate egg prices to even cope with the feed costs; Mr. Adolph Brevik, of Kennedy, says egg prices are 23 cents, but were 19 cents. So you see the poultry raiser is not laying away any spare money. George M. Johnson, of Trail, Minn., urges support prices above the inadequate 23 cents per dozen for grade A eggs; Mr. Robert Sundberg, of Grygla, quotes extra large A-grade eggs at 21 cents, A-grade—medium—18 cents, B-grade, large, 15 cents, No. 2, 15 cents, pullet eggs, 15 cents This is the amount per dozen. Hens,

springers, and roosters all sell for 8 cents per pound.

Consumers should realize the hardship our farmers are going through:

BEJOU, MINN., *July 2, 1957.*

DEAR REPRESENTATIVE COYA KNUTSON: We are very disgusted with the egg prices.

I am enclosing one of our egg tickets.

Sincerely,

Mr. and Mrs. JOE FUXA.

BASTYR HATCHERY & PRODUCE CO.,
Mahnomen, Minn.

EGGS, grade: S. P., 21 cents; medium, 18 cents; C grade, 15 cents.

GOODRIDGE, MINN., *July 5, 1957.*

COYA KNUTSON,
Member of Congress,
Washington, D. C.

DEAR COYA: Enclosed you will find a sales ticket on eggs for June 10.

The farmers sure are disgusted with the egg prices. Very few have young pullets for replacement. The cost of feed is too high before these pullets come into production.

I live about 20 miles north of Gully. We have had too much rain since June 17 so I haven't been able to put up any hay yet. Our grain crop will only be about 50 percent. Some farmers suffered a 100-percent loss of their crop where the ditch backed up or the river ran out of its banks. With all the surplus why don't they give some of these farmers feed for their cattle. I remember in 1937 we were hard hit by water at harvest time. In the winter we received feed free. We were able to fatten our lambs and hogs and still had some left for the cattle.

Hoping to hear from you soon.

Sincerely,

ALBERT KATRBA.

LAND O'LAKES CREAMERIES, INC.,
Thief River Falls, Minn.

EGG RECEIVING RECORD

Grade A, large, 20 cents; grade A, medium, 16 cents; grade C, No. 2, 15 cents.

TRAIL, MINN., *July 8, 1957.*

COYA KNUTSON,
Member of Congress, House of Representatives, Washington, D. C.

DEAR COYA: * * * The egg prices as of this week in our local community are: Eggs, No. 1, 23 cents; eggs, medium and extra, 18 cents; eggs, No. 2, 15 cents.

This is the highest they have been for several months. For a time they were a mere 19 cents for No. 1.

We are urging you to try and get supports on egg prices.

Your truly,

GEORGE M. JOHNSON.

World Government: The End of a Fantasy

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting as part of my remarks an article which appeared in the Wall Street Journal yesterday by Mr. William Henry Chamberlain. He states that the foolish but once popular dream of world government is gradually being demolished by time and experience. His article follows:

What has become of the fantasy, so popular immediately after the end of the last war, of setting up a world federal government that would make good the writ of international law?

There was a time when world federalist organizations made a considerable splash in this country, when State legislatures passed resolutions favoring world government, when college professors abandoned bridge and crossword puzzles for the more exciting diversion of drawing up constitutions for a world state, with attempts to balance the competing claims of population, literacy, political and economic power in voting procedures for a world parliament.

Now there is a vast silence on this subject. Some of the State legislative resolutions have been rescinded; the others have been forgotten. Little is heard of the young man who once made headlines by proclaiming himself a citizen of the world and getting himself expelled from various countries for lack of proper passport credentials. The groups which still plug the cause of world federalism attract scant attention.

Decisive proof of the fadeout of support for the idea of a supranational organization with coercive power is the failure of any nation to take advantage of the provision in the United Nations Charter which authorizes the calling of a convention to revise the charter 10 years after it went into effect. For a time there was much talk of "strengthening the U. N." by means of such a convention. One form of this strengthening was to be the abolition or limitation of the right of the five permanent members of the Security Council to veto any action by that body.

INSUPERABLE ROADBLOCK

It was obvious to any observer that the Soviet veto, cast so many times on much less important issues, was an insuperable roadblock to any attempt to eliminate the great power veto from the U. N. Charter. Still, it would have been possible to call a conference for the revision of the charter and place responsibility for frustrating this aim on the Soviet Union if there had been any general belief that any good purpose could have been served thereby.

But a long series of experiences, including the developments last autumn in Hungary and the Middle East, plainly indicated the futility of trying to invest the U. N. with the attributes of a supergovernment. In the case of Hungary, which was about as clear a case of right against wrong as could be imagined, the U. N. achievement was precisely zero; its reaction consisted of a series of disapproving resolutions with no suggestion of sanctions or action.

It's just as in the old story of the Scottish nobles who were discussing how to get rid of an unpopular court favorite; the whole issue came down to the question: "Who will bell the cat?" Clearly the U. N. was in no position to "bell" such a formidable and predatory cat as the Soviet Union.

Formally the U. N. succeeded in stopping the fighting in Egypt. But this was only because, most unusually, the two great powers of the postwar world, the United States and the Soviet Union, were in agreement on the question—for somewhat different reasons and objectives. Had the United States and the Soviet Union been backing different sides, the deadlock would have been insoluble by anything the U. N. could have done.

The forging of a nation in which people live by consent under the constitutional authority of a government is no simple or easy task. It presupposes many generations of shared patriotic memories, of political, economic and cultural traditions.

More than once experience has shown that peoples of quite similar general backgrounds, geographically adjacent to each other, can be better friends and neighbors if they lead separate national lives. Norway and Sweden, Belgium and the Netherlands are examples.

MISSING LINKS

A world state would completely lack this cement of shared ideals, common experiences, development of constitutional and political traditions. Where would be the essential link, for instance, between Switzerland and Ghana, between Denmark and Burma, between Luxembourg and Liberia?

The phrase "one world," tossed out during World War II, is highly inaccurate and misleading in its implication that there are common purposes and objectives uniting all the nations of the world. Actually the world is much more deeply and fundamentally divided in 1957 than it was in 1857, when there was no ideology aiming at world conquest, no systematic exclusion of ideas as part of a cold war.

Means of travel and technical communication have indeed vastly improved. But this is of little practical significance when peoples under dictatorial regimes are deliberately kept in ignorance of living conditions and ideas which might inspire in their subjects dangerous thoughts and unfavorable comparisons.

The upsurge of former colonial peoples, most pronounced in Asia, but spreading to Africa, creates another split in the imaginary one world. Is there any common denominator of agreed law and justice that could be successfully applied to the fierce struggle that goes on in Algeria, to the tension in South Africa, to the controversy over the nationalization and operation of the Suez Canal?

POLES APART

Unfortunately there is no such common denominator. What seems right and natural to the French settler in Algeria or to the Boer farmer in South Africa does not satisfy Algerian and South African native nationalists. There was a similar failure to agree on terms of reference between the chief users of the Suez Canal, Britain and France, and Egyptian dictator Nasser.

The cry for world government was to some extent an outgrowth of the belief during the war that the coalition which called itself the United Nations was really permanently united. As it became clear that this was very far from being the case—that Soviet purposes and objectives were widely different from those of the Western Powers—the idea of world government was more and more appraised as an unreal and unrealizable fantasy. Once again time and experience seem to be furnishing the best cure for a foolish notion.

Platform of the Young Republican National Convention

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. MICHEL. Mr. Speaker, I was very privileged recently to sit in on several sessions of the Young Republican National Convention held here in Washington at the Statler Hotel, June 19 to June 22. These young people represented every State in the Union and hammered out a platform that deserves the thoughtful consideration of all of us interested in the future well-being of these United States:

PLATFORM OF THE YOUNG REPUBLICAN NATIONAL FEDERATION, ADOPTED IN WASHINGTON, D. C., JUNE 22, 1957

PREAMBLE

We believe that America is a great Nation because, among other things, its citizens look to the future. Always, there is a driving effort for improvement.

As young people, we must assume a major role in the determination of today's national policy for, in the American tradition, it is today's policy which establishes the pattern for tomorrow.

We must assume this role on the basis of demonstrated ability and responsibility. We must provide a "power for progress."

We believe today's policy for tomorrow must rest on certain basic principles:

A strong and nonappeasement policy with respect to the conspiratorial menace of international communism; a program based firmly on principle in our relations with our allies and neutral nations; a domestic policy which strives unceasingly for the promotion of our free enterprise system; a reduction in the national debt; a decrease in the heavy tax burden that our citizens carry and which, at its present rate, tends to destroy individual initiative and progress; a firm adherance to the constitutional separation of the powers between the congressional, executive, and judicial branches of the Government and a respect for the limited powers of the Federal Government, which in the Constitution sustains the authority of the respective States of the Union to deal with those issues that traditionally have fallen in the States rights field.

As young people, we believe the Republican Party provides the superior vehicle for the application of these principles.

We are proud of the leadership which Dwight D. Eisenhower has given to the Republican Party and to the American people in today's policy decisions for tomorrow. We deplore the acts of a Democrat-controlled Congress, alien to these principles, which are bent on the destruction of President Eisenhower's program.

We pledge ourselves to work unceasingly for the election of a Republican Congress in 1958.

We further recommend that the national party exploit every means of more firmly establishing the party in those areas in which it has been previously the minority party and that cognizance be given the necessary issues essential for such expansion in the hitherto weaker sections of Republican Party strength.

Since we are a truly national party, unlike our opposition, and particularly since our party governs the executive branch of our Government, there will be a strong emphasis on national issues in the 1958 campaign. But even though national issues might be a strong factor, it is vital that Republican candidates for United States Senate, House of Representatives, State office, State and Territorial legislature, and county government run on a basis of their own records, objectives, and proposals. Each of these candidates will be elected to represent the people of a limited area, and it is their duty to represent these areas to the best of their ability.

We strongly believe, however, that the President's program is just and rests on sound Republican principles of government and that the Republican Party platform gives ample evidence of our party's desire and ability to provide the people of this Nation with the best possible government.

We believe that the 1957 Young Republican platform reflects the views of a majority of our Nation's youth and is not just a reflection of the personal opinions of a majority of Young Republicans attending this convention.

As Young Republicans, we pledge ourselves to the continued integrity and competence of our National Government. The Republican administration will continue not to tolerate any diversion from an uncompromising code of honesty and ethics in Government service.

AGRICULTURE

We, as a generation of young people, resolve that we will seek an agriculture that is expanding to keep pace with our changing economy, prosperous in providing an abundant life for farm and ranch people in fair comparison with that of other groups of our population, and free to manage its own affairs.

We all agree that agriculture is entitled to a fair share of this Nation's record prosperity. We propose to see that it gets its. Our goal is to raise the net income per farm family.

We recognize that agriculture's problem is basically one of overproduction with resulting low prices and low incomes. We believe that the responsibility of government is to help farmers and ranchers adjust their production, so that they can sell in competitive markets at prices which will give an hour's labor or dollar invested a comparable return with returns received in other segments of our economy.

Because agriculture's problem is one of income, not prices, we commend the gradual transition from rigid price supports which have priced agricultural produce out of the market at home and abroad, encouraged substituted accumulated surpluses and otherwise interfered with production and sound farm and ranch management.

We recognize that there is at present a clear and serious problem confronting agriculture which was inherited by the Republican administration from the inept social planners of the previous administration.

While we believe that the Republican administration's Agricultural Acts of 1954 and 1956 were first steps in the right direction and while we support the disposal programs, the soil bank, and the beginning of flexibility in price support as major tools to deal with current farm problems, we know they are not the complete solution to our farm and ranch problem.

We commend the Department of Agriculture for its administration of drought relief, disaster, and credit programs which have permitted tens of thousands of young farmers to remain in operation in spite of natural hardships.

We need to revise some of our programs, however, so that they may better serve the needs of our farm people. Now is the time, while the soil bank and the disposal programs are in effect, to make the transition to a sounder policy.

We believe markets for food and markets for industrial and nonfood uses of agricultural products should be and can be greatly expanded with proper programs directed to the consumer and with adequate research.

Because America is fortunately blessed with a healthy, expanding, productive agriculture, our greatest need at present is to find economic use for the God-given abundance. We believe markets for food and markets for industrial and nonfood uses of agriculture products should and must be greatly expanded. We therefore urge an immediate expansion of farm product utilization research, believing this to be one of the most desirable means through which Government can bring about a permanent solution to our farm problem.

We recommend that the entire imported farm labor program be removed from the Department of Labor and placed in the Department of Agriculture.

We support the rural development program which gives special attention to the problems peculiar to small farmers. It can help open the doors of opportunity to more than a million farm families with incomes of less than a thousand dollars a year. We hope this program will grow in scope and effectiveness.

Because of the mechanization of agriculture it takes increasingly larger amounts of capital to establish a farm operation. This prevents many able young men from entering farming. Therefore, we urge the establishment of intermediate and long-term credit facilities to provide funds for operational loans with 5–15 year repayment periods to deserving young farm families. We feel these funds should be supplied by private lending agencies with Government guaranty.

We do not subscribe to the thinking that the agricultural programs are undeserved special treatment of a segment of our economy. A free productive prosperous agriculture is vital to our Nation's peacetime prosperity and wartime security. We see no reason why agriculture should be singled out to stand alone while other segments of our economy receive protection and assistance.

Realizing that agriculture produces some 300 varied commodities which have vastly different problems we recommend a commodity by commodity approach toward farm programs. We again suggest that employment of a two-price system on certain commodities would be an example of this approach.

ANTITRUST

We believe in nurturing and strengthening our system of free enterprises which has contributed in great measure to making this country strong.

We urge continuing vigilance by the Department of Justice in its role of protector of freedom for initiative.

We commend the Federal Trade Commission, revitalized by Chairmen appointed by President Eisenhower, for its vigorous administration of the antitrust and trade regulation laws.

We recognize that the Commission by its greatly accelerated activity against hardcore violations of the antitrust laws and its abandonment of the previous Commission's predilection for peripheral law enforcement again fulfills its historic purpose in the maintenance of the American competitive system.

We recommend that the Commission continue its enlightened program of consultation and cooperation with business so that industry and particularly small business can determine the actions that it must take to comply with the law.

BUSINESS

Historically, the Republican Party is the party of free enterprise under whose leadership we have had the most prosperous years in our history. We shall continue to fight for sound aids to small business and to promote a climate favorable to profitable research, invention, development, production, and marketing to maintain the highest standard of living in the world. Prosperous business increases the prosperity of everyone.

We commend the Republican 83d Congress for creating the Small Business Administration which has done so much to assist this key segment of our economy and urge a restudy of SBA policies to allow the inclusion of additional types of American business not now eligible for loan assistance. These additional inclusions should be in keeping with current SBA economic and financial requirements.

As young people, many of whom are just starting out in small businesses, we express our appreciation to the Republican administration for creating a climate favorable to small business, recognizing its great contribution to our economy and our national standard of living.

CENSUS

We recognize the necessity for better, faster, and more extensive data on our economy if public and private decisions are to be soundly blessed. We applaud the successful efforts of the Eisenhower administration to streamline the collection and dissemination of business statistics.

CIVIL RIGHTS

We firmly believe in the fundamental truth that all men are created equal. We urge the strengthening of the birthright of each American to grow and work, to learn and worship freely. We favor an unceasing program of positive policies in civil rights.

We applaud the great progress which has been made under the Eisenhower administration in the area of equal opportunity and justice for all Americans. We believe that the only form of true progress in this field is achieved where there is mutual understanding and good will by all concerned. Recognizing the inherent worth and dignity of each individual, young Republicans realize that this Nation will reach its total strength only where there is an opportunity for each individual to employ his talents to the full extent of his ability, free from discrimination and prejudice.

We endorse the President's civil-rights program.

EDUCATION

We believe that the youth of America are at once a priceless resource. From their ranks must come the men and women of the next generation whose talents and skills constitute our fundamental strength as a world power.

We therefore pledge our every effort to assure today's generation of children and youth the quality of education tomorrow's citizens must have. There can be no escape from the fact that to keep our economy growing and dynamic, and to strengthen the Nation's security, our school system must be expanded.

We reaffirm our faith in the American tradition to insure freedom of education by removing our schools and colleges as far as possible from politics and relying upon control by local communities rather than upon control by the Federal Government.

We favor the proposals of the Eisenhower administration to encourage greater State and local building efforts and we call upon the States and communities to act vigorously to discharge their responsibilities.

Mindful of the inevitable connection between subsidization and control, we are unalterably opposed to Federal financial aid for general public education and school construction.

FISCAL POLICY

We believe in continued balancing of the budget at the lowest possible level of expenditure, a gradual reduction of the national debt, and reduction in the very heavy tax burden on the American people. These are important in the fight against inflation and in the effort to preserve the purchasing power of the dollar.

The budget

We commend the Republican administration for presenting three successive balanced budgets to the Congress.

The administration's leadership in the reduction of Federal expenditures has made possible the accomplishment of surpluses for the Government in the fiscal years 1956 and 1957 and the administration is committed by its present estimates to another surplus for the fiscal year 1958. If this commitment is realized—and we have no doubt that it will be—a record of surpluses in 3 successive years will have been made for the first time since the years 1928–30. This Republican achievement is a basic one and makes good one of the most important promises of the administration when it took office.

We recall also that the Republican 80th Congress gave the American people a balanced budget in opposition to a Democrat-controlled administration dedicated to deficit financing.

Nevertheless, there must be a concerted, self-deciplined and continued effort to reduce systematically Federal expenditures.

The administration should take whatever internal action is necessary to make certain that those who are responsible at the lowest levels of government for the preparation of the 1959 budget have been directed to utilize every means for the elimination of unnecessary personnel, nonessential administrative functions, and proposals for new expenditures.

We pledge ourselves to resist demands for new Federal spending programs and to insist that local and State governments assume responsibility, wherever possible, for those programs where there is serious need for government action.

Taxation

Federal taxes remain at levels which impose a great hardship on our people, particularly upon those young people who are trying to accumulate the resources to build a better future for themselves and their families. We believe taxes should be equitably reduced as soon as the Government's financial position is such that a reduction in a substantial amount can be made without incurring the risk of new deficits.

We are opposed to any use of borrowed money to finance further tax reduction. We recognize that deficit financing is a mortgage on the future security of our young people. We are certain that the Treasury's policy of applying to the public debt such surpluses as were realized in the fiscal year 1956 and 1957 meets with public approval.

Substantial tax relief has become a vital necessity for the maintenance of a strong and expanding economy here at home. We must never forget that the economy of the United States is the great bulwark of the free world. The present tax burden has a stultifying effect upon the healthy development of our economic system. It is a matter of simple justice, as well, that we should permit our people to spend a greater percentage of their incomes as they choose. It is time that rates of taxation enacted for the purpose of financing a war were ended.

The Republican Party is the party of low taxes. It was the Republican 80th Congress which reduced taxes for the first time in years. It was the Republican 83d Congress which enacted the largest reduction in taxes in the history of our Nation. It will be the Republican 86th Congress which next gives the American people the further relief which they so rightfully deserve.

Debt management

We commend the foresight with which the Treasury Department in dealing with the many problems of Government financing and debt management has faithfully coordinated its actions with the sound money policies of the Federal Reserve System. The Treasury has abstained from calling on the Federal Reserve for artificial support of the market for Government bonds; it has regulated its offerings of new securities so as to interfere as little as possible with the normal financing requirements of private business and industry; it has taken advantage of whatever opportunities there have been to lengthen the public debt maturities; it has maintained a vigorous sales program for United States savings bonds. Continuation of these policies will be to the Nation's great benefit.

Control of inflation

We commend the efforts of this Republican administration to check the ravages of inflation upon our people which during the previous Democrat administrations destroyed the savings of Americans, undermined the security of our aged citizens, and placed the American consumer in a losing battle against rising prices.

We endorse unreservedly the restrictive measures of the Federal Reserve System and related policies of the Treasury Department by which credit expansion of runaway proportions has been prevented and inflationary tendencies within the Nation's economy have been kept in check during 1956–57. By the actions of the Federal Reserve in the field of monetary policy and by the Treasury in the fields of debt management, taxation and Government economy, further price increases have been held to very small percentages during a period of markedly high economic activity and continued business and industrial expansion. Seldom if ever in the Nation's history has there been a more impressive demonstration of the effectiveness with which proper policies of the Federal Government can be made to encourage private enterprise while at the same time helping avoid economic pitfalls.

FOREIGN POLICY

We commend the Republican administration led by President Eisenhower for its foreign policy based on three interlocking principles—peace, justice, and liberty for nations and peoples. We accept change as a law of life and seek to assure that change will be benign and not destructive, promoting not merely survival but freedom and well-being.

We heartily applaud this administration for its many applications of these principles. We commend President Eisenhower for proposing, and the Republicans in Congress for supporting, the American doctrine for the Middle East—a vital example of action born of this policy.

Atoms for peace

As individuals and Republican Party members, we support the consecration of the gigantic power of the atom to help the world out of fear and into freedom, always bearing in mind that competitive enterprise is one of freedom's greatest bulwarks.

Disarmament

In the interest of promoting and perpetuating the era of peace which has been introduced by the Eisenhower administration, we call for the use of all possible resources of our Government and our people to support the present administration's negotiations on mutual disarmament.

Collective defense

We applaud our friends abroad for joining together with us in common defense arrangements against the aggressive and devious designs of international communism. We are proud of our collective defense system in which each member nation is completely sovereign.

We recall the warning of President Eisenhower that "unity among free nations is our only hope of survival."

Recognizing that adequate unity among democracies cannot be achieved solely by their governments but must extend to their peoples, we believe that all practicable means to this essential objective should be employed.

We, therefore, urge our Government to arrange a conference composed of eminent citizens from NATO nations, appointed to investigate comprehensively and extensively how the peoples of these nations might achieve greater unity.

Mutual security

We applaud the Republican administration for its enlightened and realistic proposals in the field of mutual security.

With respect to the economic aspects of the mutual security program, we urge that greater emphasis be placed upon the use of private investment, believing that this will produce a more efficient and sustained rise in the welfare of underdeveloped countries

and better relations between the United States and these nations. Where private investment is not feasible or where funds from the Export-Import Bank and other existing international lending agencies are not available, and direct action on a government-to-government basis is necessary to assist in the development of such countries, we favor the use of government loans wherever possible rather than the use of direct grants.

We oppose all military assistance to Communist nations.

Trade

We know that behind the shield of our collective defense arrangement, there must be growth and development or that shield will be a paper one. We support the administration in its advocacy of trade policies which promote the interchange of goods to mutual advantage. Under no condition, however, should such an interchange of goods be to the detriment of our American industrial, mining, processing, and developing segments of the economy, ending with a resultant loss in operation and income to both employer and employee. Furthermore, we call for an immediate review of tariff legislation to bring relief to hard-hit American industries.

We believe that the sharing of markets and of development capital, and positive cooperation with other nations to promote vigorous and expanding private initiative, assures that the free world will be a vigorous, hopeful community corresponding to our interests and to our ideals.

We believe effective control over foreign trade and the trade agreements program should be retained in the Congress.

As members of the age group which is most likely to be called upon to withstand future Communist aggression, we believe that trade with countries behind the Iron and Bamboo Curtains should not be permitted wherever the effect will be to strengthen their war machines or to entrench their Communist rulers.

We support American participation in international trade fairs which are of special value not only in promoting trade but also in better acquainting the world with the American way of life and the fruits of free enterprise.

At the same time we recognize the dangers implicit in an indiscriminate expansion of so-called cultural exchanges with Communist governments whose true purpose is the degradation of all culture and the extinction of freedom itself.

Newly independent nations

We support the Republican administration in its belief that all peoples should have self-government and independence if they desire it and show the capacity to sustain it. Nineteen new nations with 700 million people have come into being, within the free world, during the past 10 years. International communism is on the prowl to capture these peoples. We reaffirm our championship of their independence from foreign domination and support the Eisenhower program to assist them in reaching political maturity.

CAPTIVE NATIONS

We support President Eisenhower and Secretary Dulles in their pledge that our country will never make a political settlement at the expense of captive nations. We oppose the recognition of a regime in China erected on the bones of freedom-loving men. We revere and honor those who as martyrs gave their blood for freedom in all captive nations around the world.

We particularly command the administration's continuing demands for the withdrawal of Russian troops from all nations where they hold subject peoples by force and terror, and its demands for the institution of free elections.

TREATIES

We note with concern that many of the rights and liberties guaranteed to American citizens by the Constitution of the United States are in jeopardy of being compromised by certain treaties and agreements with other nations. We specifically refer to the rights of American servicemen overseas defending the United States who, if accused of criminal acts, are subject to tribunals which in many cases do not recognize the traditional safeguards of Anglo-American law.

We therefore recommend that our Government reexamine the various status of forces agreements with the purpose of insuring that the American flag and all it stands for will protect each member of our Armed Forces, even as they are defending this Nation and the Constitution.

UNITED NATIONS

We urge upon all citizens and understanding of the processes, potentialities and limitations of the United Nations, the Charter of which Secretary Dulles has described as "* * * coupling peace with justice and providing the most significant body of international law yet known." We reiterate our approval of the administration policy of cooperation with the U. N.

We continue to oppose U. N. membership for Communist China and note with pleasure the almost unanimous concurrence of the 84th Congress in this opinion.

We commend Senator KNOWLAND for his identification of and positive efforts toward the correction of five basic defects in the functioning of the United Nations: (1) The abuse of the veto power by the Soviet Union; (2) a growing double standard of international morality; (3) the increasing trend to bloc voting; (4) an expanding tendency to interfere in the internal affairs of member nations; (5) and the unwillingness of many member nations to share equitably the monetary costs and other obligations of the United Nations and its related activities while insisting on a full and equal vote in the making of decisions, the burdens of which must be assumed by others.

We,, as Young Republicans, recommend serious study of the possibility of establishing an independent U. N. armed force for the preservation of peace to reduce the need for costly individual nation military machines.

Vice President and Mrs. Nixon

We commend Vice President and Mrs. Nixon for the significant contributions they have made to international good will as representatives of President Eisenhower and the American people in their trips abroad.

GOVERNMENT REORGANIZATION

We commend and endorse the Hoover Commission, headed by former Republican President Herbert Hoover, for its extensive study of the executive branch of the Government in the quest for better government at less cost to the taxpayers of America.

Its many recommendations to improve and modernize the organization, methods, and procedures of the executive branch have been of great value. We pledge our untiring support to the Republican administration and to the Congress in their efforts to implement these important recommendations, and we denounce those who, for selfish and partisan reasons, oppose these efforts.

IMMIGRATION

We urge adoption of the President's proposed legislation to humanize the Immigration and Nationality Act. We support his proposals which would correct hardships and would make the administration of the law more flexible; and which would provide a solution to the problem of providing asylum to persons fleeing from aggression and persecution.

We also favor simplificaton of the administrative procedure under the Immigration and Naturalization Act to achieve the purpose of the act.

INTERNAL SUBVERSION

In recent years, a series of judicial decisions have rendered more difficult the administration and enforcement of an effective internal-security program. The following specific legislative proposals deserve the expeditious attention of the Congress and the appropriate executive agencies:

1. A clear-cut declaration that the enactment of internal-security legislation by the Federal Government shall not operate to suspend the enforcement of State legislation in the field of sedition and related fields.

2. An amendment to the Summary Suspension Act of 1950 expressly extending its application to all agencies and departments of the Federal Government and to all employees thereof, without regard to the so-called sensitive or nonsensitive nature of the positions held.

3. Establishment of a uniform rule of evidence authorizing the court in a criminal case to conduct a preliminary inspection of classified reports received by the prosecution, with a view to determining their relevancy to the case of the defense.

4. An unmistakably clear declaration that the penalties of the Smith Act are to apply to all cases in which overthrow of the Government is advocated.

In addition, the executive agencies concerned should take all necessary steps to halt the maraudings of the ostensible diplomatic representatives of the Soviet Union and its satellites, who in their true capacity as police agents have frequently, and in some cases successfully, sought to tertorize refugees from Communist despotism into returning to their enslaved homelands.

Finally, it should be the continued policy of all three branches of the Federal Government to give all possible assistance to those executive and congressional agencies (such as the Federal Bureau of Investigation, the House Committee on Un-American Activities, and the Senate Internal Security Subcommittee) which are daily investigating and thereby effectively combating the subversive influence of the Communist Party and its fellow travelers upon the lives of the American people.

We commend the Federal Bureau of Investigation for its immeasurable contribution as a bulwark against internal subversion. We honor J. Edgar Hoover whose immense practical experience and unparalleled moral and technical qualifications have made the work of this agency so effective.

INTERIOR AFFAIRS

We endorse the solid record of achievement by the Department of the Interior in promoting the sound conservation and development of the Nation's vital natural resources.

National affairs

We commend the farsighted and vigorous effort to improve our great national-park system. Under the Republican administration, some 400,000 acres have been added to our national parks and 90,000 acres to wildlife refuges. The first new national park since 1947 has been authorized. The rapidly growing need for recreational areas requires that we continue to expand and develop our park system to accommodate adequately the 80 million park visitors expected by 1966.

Minerals

We support the fostering of a long-range minerals program to assure the development and wise use of mineral resources. The work of Department of the Interior agencies in

finding new domestic sources of minerals and developing improved minerals processing techniques should be continued.

Public lands

We favor the fullest sound use of our public lands under the multiple-use policies of the Republican administration. The effort to spur the development by private initiative of the vast oil resources of the outer Continental Shelf over which the Federal Government has jurisdiction should be continued.

Indian lands

We urge expanded effort to assist our Indian citizens to assume their rightful place in our society which should be promoted by continued emphasis on soundly conceived programs for Indian education and welfare and by wise development and use of Indian land and forest resources.

LABOR

We again commend the administration, as we did in 1953, for its steadfast determination to initiate and pursue policies which have encouraged the development of this Nation's economy to its highest peacetime level. This effort, however, would have been of little avail if the period since 1953 had not been one of harmonious labor-management relations, a result which has been in no little part attained by the administration's equal determination to maintain the integrity of free collective bargaining by refraining from entering into labor disputes on the side of either labor or management.

We, therefore, believe wholeheartedly in, and support Secretary of Labor Mitchell's frequently stated proposition that mature management and mature labor are capable of reconciling their differences without the interference of Government.

We commend this administration for faithfully following this principle when it would have been easier to yield principle to expediency.

We commend Secretary of Labor Mitchell for proving the workability of the principles in which he believes. We believe that this effort sets an example in labor-management relations from which only benefit to the whole community can accrue if management and labor leaders follow it.

We recognize the great contributions made by many leaders and members of organized labor in helping to improve the working conditions and standard of living for the American worker and his family. The fact that certain improvements in legislation affecting the scope of activity and internal operations of our unions need be considered in view of existing facts, should not be the signal for any hysterical campaign to undermine the strength and, therefore, the effectiveness of organized labor.

We condemn those individuals who would seek to destroy unions because of the misdeeds of some union leaders and union practices. We believe, however, that certain corrective measures should be considered by the States and Federal Government in order to protect more fully the rights of the individual worker, the integrity of the union movement itself, and the general public. In this connection the following proposals are submitted:

1. We urge the National Labor Relations Board to conduct a reappraisal of employer-employee relations so as to exclude unlawful action by labor leaders which have heretofore permitted wrongs against person and property and interference with the use of highways under the guise of serving as a legitimate function of union activity in the course of employer-employee relations.

2. We urge that legislation be enacted so that labor unions are subject, insofar as possible, to the same liabilities and legal responsibilities as business organizations in connection with their activities, especially with respect to harmful combinations which would violate our antitrust laws.

3. We urge that the Taft-Hartley law be amended to prohibit compulsory union membership as a condition of employment.

4. We urge the necessary Federal legislation to protect funds in union welfare plans and in union treasuries, which funds are often accumulated on a checkoff system of collection, from any corruption and unlawful use. We favor vigorous enforcement of the laws which prohibit both the direct and indirect use of union funds, collected on a mandatory basis, on behalf of candidates for Federal office.

These recommendations are intended to develop legislation under which both business and labor are held to the same standard of conduct, and become equally responsible for the welfare of their organizations and the public good, working together in a spirit of mutual respect and cooperation.

We believe that joint Federal-State action directed to the reduction of on-the-job accidents resulting in substantial injury rates is meritorious and urge the Congress to favorably consider the administration's legislative proposal to accomplish this purpose.

NATIONAL DEFENSE

Under President Eisenhower's leadership, our Armed Forces are better prepared than ever before to meet the threat of surprise attack against our homeland and to support the nations of the free world in their opposition to Communist expansion.

Throughout a series of crises in the Middle East, the presence of our naval forces in the area, backed up by airpower and mobile ground forces in Europe and at home, advanced the cause of peace by discouraging other nations from attempting military exploitation of the region's problems.

Here, as in other parts of the world—notably along the Iron Curtain in Europe and the Bamboo Curtain in Asia—our Armed Forces have demonstrated that ready strength, coupled with strong moral principles, represent truly a power for peace.

We commend the Republican administration for the skillful manner in which it is introducing major technological advancements into our Armed Forces without materially increasing the burden upon our economy.

Nuclear power for ships, atomic warheads for battlefield missiles, supersonic aircraft for continental defense, and rapid progress in development of the intercontinental ballistic missile are providing the American people with more and better defense for their tax dollars.

Most of all, we commend efforts to improve the training and status of Armed Forces personnel, for, in the final analysis, trained young people are our most precious national asset. The program of 6 months' military training, followed by service in the Reserve forces, has met with outstanding success. Measures are being drawn up to make service life more attractive to skilled technicians. Only by fully developing the potential of our young people in the Armed Forces as well as in science and the arts can we assure our peace, our prosperity, and ultimately our survival as a Nation.

PATENTS

Patent protection is vital to the retention and advancement of America's industrial position and, consequently, the system must be protected and strengthened through the development of more efficient procedures in the Patent Office.

POST OFFICE

We commend the Post Office Department, in the face of an ever-increasing amount of mail and population, for its accomplishment in reducing the staggering Post Office deficit and placing the Department on a more nearly break-even fiscal basis while at the same time providing the American people with improved and expedited mail service.

Since there has not been any appreciable increase in postal rates since 1932, we endorse an increase in postal rates as recommended by Postmaster General Summerfield and urge passage this session of the legislation now pending before the Congress.

The reduction of the postal deficit, and an increase in postal rates, are most important and necessary if we are to maintain a balanced Federal budget and make possible a future tax reduction.

PUBLIC WELFARE

Health statistics reflect the remarkably high level of health of the American people. Our life expectancy continues to increase; the more serious communicable diseases, including poliomyelitis, are being brought under control. Unexcelled sanitation programs have produced safe food and water; advances in industrial hygiene have brought protection from industrial hazards; research in medical science has pushed nearer the day when successful prevention or treatment of cardiovascular diseases and cancer may be achieved; voluntary health insurance of many different kinds have been made available through competitive enterprise that is cushioning the shock of the cost of illness to the majority of our people.

To maintain these advances and promote continuing progress we pledge our support to the healing professions in their enterprising efforts to promote better health for all Americans.

We support the free-enterprise system in health because of its proven ability to achieve its objectives. We oppose all efforts to impose Government control over the medical profession and other healing arts through compulsory health insurance or any other proposal that seeks that end.

We endorse Federal financial support of research in health as long as such funds can be used with maximum efficiency.

We commend the constructive steps taken in vocational rehabilitation which have provided medical services and vocational training to help record numbers of handicapped persons into productive employment. We support continued progress in this work.

We support the changes made by the Eisenhower administration to expand the coverage and increase the benefits under the old-age and survivors insurance program. We believe that the primary role of this program should be to provide basic protection against loss of income and that private pension plans should be expanded and improved to provide supplementary benefits.

We favor the development of programs for the aged and applaud the establishment by President Eisenhower of the Federal Council on Aging as a means of assuring a coordinated and constructive approach to the problems of our senior citizens.

STATEHOOD

We favor and urge immediate statehood for Hawaii, and for Alaska with adequate provision for defense requirements.

We favor and urge that each Territory be considered on its own merits; that is not necessarily in a single piece of legislation.

To assure future statehood for the Commonwealth of Puerto Rico, we believe that the Congress should recommend to the Puerto Rico Legislature that an election be held to determine if the people of Puerto Rico want statehood.

TRANSPORTATION

We advocate the maintenance and expansion of a strong, efficient, privately owned and operated and soundly financed system of common-carrier transportation by rail, water, air, and highway, that will serve all the needs of our Nation and that will enable each mode of transportation to pass on to the shipping and consuming public the savings implicit in

full demonstration of their inherent economic advantages.

Recognizing the extraordinary growth of aviation and the advent of the jet age, we commend the Republican administration for expediting the manning and equipment of air traffic control and navigation facilities for greater safety. This improvement program, however, should be stepped up to even higher levels to prevent impeding of air commerce and national defense by outmoded ground facilities.

We favor continued development of a sound civil air transportation system by America's privately owned air carriers, under the statutory responsibilities for regulation and administration vested in the Civil Aeronautics Board and the Civil Aeronautics Administration. We urge their continued vigilance to prevent military control of the public airways.

We support the time-tested principles of the Civil Aeronautics Act so that the scheduled air transport industry can continue to develop and finance the revolutionary-type equipment it proposes to offer the public in order that the public receive the expanded benefits of the jet age.

We encourage the continued development of a healthy shipbuilding industry and merchant marine as a vital arm of defense and instrument for world trade.

We urge greater effort toward equitable rail freight rates.

We commend the leadership of this administration, as part of its atoms-for-peace program, in exploring the future of nuclear propulsion of merchant ships and in successfully promoting authorization to build the first nuclear-powered passenger-cargo vessel. We urge that every effort be made to encourage private development in this program.

We endorse the administration program to protect the public investment in the greatest public-works project in world history by regulating billboard construction on the National system of interstate and defense highways, but providing adequate protection for the historic rights of the States and for the right of the motoring public to appropriate information for their safety and convenience.

VETERANS

We believe that active duty in the armed services of the United States of America during a state of war or national emergency constitutes a special service to our Nation and entitles those who have so served to all due consideration, including adequate aid and compensation in return for this service.

We favor the continuance of the Veterans' Administration as an independent Federal agency handling veterans programs.

We favor continued effort by the Veterans' Administration to improve systems which will bring about prompt and equitable determinations of veterans' claims, and will expedite action on real-estate loans.

We favor adequate compensation for the service-connected disabled and for the survivors of those who died in service or from service-incurred disabilities, with pensions for disabled veterans and for the dependents of those who have died who are in need and unable to provide for themselves.

We oppose Federal bonuses and general pensions as being class legislation and unrelated to the real needs of individual veterans and tending to set veterans apart from their fellow citizens. We do not advocate benefits for veterans except in hardship cases.

We favor maintenance of the Veterans' Administration hospital system, with no impairment of the high quality of medical and hospital service now being rendered for veterans with service-connected disabilities.

We favor increased employment opportunities for handicapped and disabled veterans.

VOTING

We urge that the minimum voting age be lowered to 18 years of age.

We oppose the poll tax as a prerequisite to voting and we favor its elimination by the States as soon as possible.

There has been much publicity given to absentee, shut-in, and servicemen's ballots as a result of the last election in Rhode Island. After the 1956 gubernatorial election in Rhode Island, there arose a long count and court battle which made a sham of that State's election laws and procedures.

We propose, therefore, that the members of the Young Republican National Federation promote a program of research into absentee-voting laws in their respective States.

WATER RESOURCES

We recognize that accelerated demands for water and increased generating capacity, both by urban and agricultural areas, require a cooperative program of partnership under which all agencies, both public and private, do their proper share. We support the Republican Party's effort to have the electrical needs of the Nation built and expanded by private industry, which is eminently well equipped to do this at private rather than public expense.

We commend the Republican administration for leading the way with Federal development of the upper Colorado project, and we favor the continued development of the Arkansas River Basin. We specifically commend private initiative for doing its share in the development of power potentialities on the Snake River in the Northwest.

To help meet the urgent demand for additional supplies of water for irrigation and municipal and industrial use, we support vigorous reclamation programs, expanded research on converting saline water, and integrated water-conservation projects in important watershed areas.

YOUTH FITNESS

We commend Preident Eisenhower for establishing the President's Council on Youth Fitness to develop a broad understanding of the premise that fitness of youth pertains to the total human entity containing all components of mental, emotional, social, spiritual, and physical attributes of young citizens.

We agree that national policies will be no more than words if our people are not healthy of body, as well as of mind, putting dynamism and leadership into the carrying out of major decisions. Our young people must be physically as well as mentally and spiritually prepared for American citizenship.

We urge every young American to support actively the program of the President's Council on Youth Fitness. We commend Vice President Nixon for his untiring efforts, as chairman of the council, to promote these vital, nonpartisan activities.

DEDICATION

In recognition of their devotion to the ideals and future of young people, we dedicate this platform to Dwight D. Eisenhower, Richard M. Nixon, and to the Republican Members of Congress, and pledge ourselves to service on behalf of its principles and to the welfare of the Republican Party and our Nation, to the end that people everywhere shall live in peace with freedom.

By direction of the platform and resolutions committee.

DON BOSTWICK,
Chairman.
GRACE MAFFEY,
Cochairman.

Proposed Changes in Senate Rule XXII

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. ABBITT. Mr. Speaker, presently, a subcommittee of the Rules Committee of the Senate is holding hearings on the proposal to change the rules of the Senate. This is a matter of vital concern to the entire Nation.

The United States Congress has been a great bulwark for freedom. The United States Senate has provided a forum where each Senator could present the views of the people of his State in full, unhampered by lack of time or opportunity to state his case.

There are those in this country who for political expediency and in an endeavor to accomplish their purpose would change the present rules so that limitation of debate could be invoked whenever it suited their purpose. I know that the Senate will give grave consideration to this matter and will go into its merits thoroughly before adopting any rule that would cut off full and free discussions of momentous problems.

Today, the Honorable Ernest W. Goodrich, Commonwealth's attorney for Surry County, Va., appeared as a witness before the subcommittee and made an extremely enlightening, intelligent, and important statement clearly demonstrating the importance of allowing full and free discussions by each individual Senator. Mr. Goodrich is from my district and has rendered great service not only to the people of his county and our district but to all of the people of the Commonwealth of Virginia. He has appeared before various committees of the Congress on a number of vital measures.

Due to the importance of this matter and under leave to extend my remarks in the Appendix of the RECORD, I desire to include Mr. Goodrich's statement.

The statement follows:

STATEMENT OF ERNEST W. GOODRICH, REPRESENTING THE DEFENDERS OF STATE SOVEREIGNTY AND INDIVIDUAL LIBERTIES, BEFORE THE COMMITTEE OF THE SENATE ON RULES AND ADMINISTRATION AT THE HEARINGS ON PROPOSED CHANGES IN SENATE RULE XXII

Mr. Chairman and members of the subcommittee, my name is Ernest W. Goodrich, of Surry, Va. I am appearing for the Defenders of State Sovereignty and Individual Liberties upon an invitation from the Honorable HERMAN E. TALMADGE. I have been a member of the bar in Virginia since 1935 and am admitted to practice before the Supreme Court of Appeals of Virginia and the Supreme Court of the United States. From 1935 through 1939 I was associated with the United States Department of Labor, in Washington. Since 1940 I have been attorney for the Commonwealth for the county of Surry, in Virginia, except for 4 years spent in the United States Navy during World War II doing labor relations work for the Bureau of Yards and Docks here in Washington.

At the outset, I should like to make crystal clear the fact that the Defenders of State

Sovereignty and Individual Liberties is not a rabble-rousing, hate-engendering organization, as some segments of the press have inferred. Over a large area of Virginia the finest people are members and active workers in this organization. While the organization came into being following the Supreme Court's decisions in the segregation cases, it has from its inception concerned itself, as its name implies, with matters other than segregation and integration. We are dedicated to the preservation of our republican form of government, wherein the several sovereign States retain all functions of government not specifically delegated to the Federal Government. It is because of this dedication that we oppose the present resolutions pending before this group which are the subject of these hearings. From our view, the present attempt to change the rules of the Senate to make it possible for less than two-thirds of the Senators to cut off debate is but another manifestation of the determination of certain elements in our society further to throttle and ultimately destroy our State governments.

While I am not familiar in detail with the resolutions which are the subject matter of this hearing, it is my understanding that the purpose of the resolutions is to change the cloture rule, making it possible to cut off debate in the Senate with less than a vote of two-thirds of the Senators, and it is to this general idea of making it easier to apply cloture that I shall address my remarks.

While it is considered old fashioned and out of keeping with the modern philosophy of government to refer back to our Founding Fathers, it seems to me that a great many people in Washington need to review the genesis of our Government. I think that we need to study again the formation of these United States of America. Subsequent to the Declaration of Independence, and prior to the adoption of the Federal Constitution, I do not believe that anyone would argue that the State governments were not completely sovereign in every sense of the word, answerable only to the people of the States in which always reposes final sovereignty. The architects of the Constitution—and I might say that my State contributed its full share—were zealous to retain within the several States every element of sovereignty consistent with a workable Federal system. As you gentlemen well know, the great issue before the framers of the Constitution was how to preserve this balance of power. Had Alexander Hamilton had his way, the States would have been destroyed, and I believe firmly that we would not have survived as a Nation. The great strength of our Government is the division of power between the Federal and State governments and, within the Federal Government, between the executive, legislative, and judicial branches. The present philosophy which permeates the Supreme Court, the executive department, as well as the legislative branches, harkens back to the philosophy of Alexander Hamilton.

Realizing the necessity of safeguarding the powers of the individual States, our Founding Fathers very wisely provided that in this august body, the United States Senate, each State, regardless of its size, territorially or population wise, should have equal representation. Thus, the Senator from Delaware has as much voice in the deliberations of this body as does the Senator from New York. I have not studied the history of the cloture rule, but certain it is, that no rule of the Senate affords greater protection to the several States of this National than does this rule. While much of the encroachment on the sovereignty of the several States has come about as a result of the grasping for power by the executive departments of the Federal Government, and by Judicial legislation by the Supreme Court, it is sad but true, that the elected representatives of the people in the Congress of the United States have also constantly, through legislation, extended the powers of the Federal Government. While the United States Senate has played its part in this unfortunate movement, it has, at the same time, served as a bulwark against wholesale extension of Federal control.

Except in isolated cases of filibusters against legislation of minor significance, I believe that the record will show that the recurrent attempts to apply cloture have come when there was before the Senate legislation affecting the basic fabric of our Government. Certain it is, the current interest in changing the rule is because of the insistent demand of minority groups that the so-called Civil Rights legislation be enacted. It is somewhat ironical that the minority groups interested in the civil rights legislation are willing to sacrifice one of their greatest protections, that of unlimited debate in the Senate, in order to insure passage of legislation that, when the final history is written, will be termed the most destructive of civil rights ever enacted by the Congress.

There is perhaps no one who has followed to any extent the proceedings of the United States Senate who has not had, at one time or another, a feeling of disgust at the waste of time as a result of filibustering. The difficulty, however, is in deciding which filibuster is a waste of time and which serves a useful purpose. It is my firm conviction, that in those cases where a filibuster has no merit, 64 United States Senators will be men enough to stand up and be counted for cloture.

In order to legally change the Federal-State relationship, two-thirds of both Houses of the Congress, and three-fourths of the State legislatures, must approve such change by amendment. Opposition to legislative attempts to change the Federal-State relationship should not be silenced by less than two-thirds of the Senate. During the past 25 years repeated efforts have been made in the Congress of the United States, in effect, to amend the Constitution through the passage of legislation aimed at the further weakening of the sovereignty of the individual States. It is essential, it seems to me, that we preserve the right of unlimited debate in this body to help, in some degree, stem this tide.

One of the great dangers in this country today is that militant vocal minority groups are able to exert great pressure on the Congress and secure the enactment of legislation not favored by the great majority of the people in the country and so often inimical to the best interest of the country as a whole. No one today is so naive as to believe that minority groups do not exert an influence far beyond their numerical strength. Were it not for the right of unlimited debate, the dangers inherent in legislation so often sought by minority groups would never be brought home to the great bulk of the American people. During the hearings before the House committee on the civil rights legislation, the chairman indicated very early that further hearings were not necessary, because everything had been said on the subject. In the course of my testimony before that committee I tried to point out that the hearings should be continued until the American people were awakened to the dangers in such legislation. Even though the same arguments may be used over and over, unlimited debate serves a useful purpose in bringing to the attention of the American people the evils inherent in legislation which seeks to destroy the sovereignty of the several States. If the civil rights legislation is debated enough in the Senate, the American people will finally wake up and demand its rejection by an overwhelming majority. If the legislation is right, then there should certainly be 64 United States Senators who are willing to stand up and be counted for cloture. However, to permit a bare majority of the Senators to shut off the debate will prevent, in this case and perhaps many cases in the future, the American people from ever understanding the full impact of the proposed legislation, now and in the future, on their freedom and liberty.

While at the present time the great reformers are bent upon bringing about the millenium, they will, surely as the sun shines again, be faced another day with a majority bent upon destroying their freedom and liberty. Failure of the Congress to enact legislation, however noble its purpose might be, can never be as bad as the enactment of oppressive legislation. The most the filibuster can do is to prevent the enactment of legislation. It may prevent the enactment of some good legislation, but if it serves to prevent the enactment of any bad legislation, then the right of unlimited debate will have served a useful purpose.

Twenty-three years ago when I was a student at William and Mary College in Virginia, the Honorable Josiah Bailey visited our campus and spoke at a convocation. Conversing with him at a luncheon on that occasion, I asked him if the filibuster should not be completely eliminated. I shall never forget his reply to that question. He said that the United States Senate is the only place where a man may talk as long as he wants about anything that he wants and that this right should be preserved as a citadel against oppression.

I say to you gentlemen, that when the Senators from 17 States believe that legislation before this body is inimical to the best interest of this country, strongly enough to conduct a filibuster against such legislation, then it should not be enacted into law. If less than the Senators from 30 States are convinced that the legislation deserves to pass, it should fail. The failure of many pieces of good legislation to pass at a given time will not result in as much evil as the passage of one piece of bad legislation.

We hope that this committee will recommend that no change be made in the present Senate rule XXII, and, that in this body at least, men who are convinced of the soundness of their position may speak unshackled as to time.

Farm Problem

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster (S. C.) News of July 1, 1957:

FARM PROBLEM

"Today's farming is more highly capitalized, per man-job, than is the rest of our economy." That statement comes from no less an authority than Secretary of Agriculture Benson, in his book Farmers at the Crossroads. He adds that it take an average of about $20,000 worth of investment per worker on commercial family operated farms.

This illustrates the extraordinary extent of the agricultural revolution in this country—a revolution that has made it possible for each farmer to produce enough for himself and 19 other people, where 50 years ago he could produce only enough for himself and 6 others. The driving force in that revolution has been mechanization.

Mr. Benson also said: "Had it been possible to transport, by magic, a farmer from Biblical times to an American farm of 100 years ago, he would have recognized almost every implement then in use—the flail, hoe, and rake, for example. Today he would recognize hardly any—tractor, haybaler, milking machine, or combine."

Moreover, that revolution has been a far more potent force in this country than elsewhere. Mr. Benson points out that the Russian farm delegation which visited this country a year ago was much impressed to find a father and his 12-year-old son operating a 320-acre Iowa farm without hired help. One of the Russians said it would have taken 100 men to operate a farm of that type in his country.

What the Russians didn't know and what Mr. Benson fails to point out is that the increasing need for capital to operate a farm makes it difficult or impossible for a young man to get a start in farming. Unless he inherits his acres and machinery or a sizable chunk of money farming is almost a closed career to beginners.

Supreme Court Decisions

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks of Harold W. Kennedy, county counsel, county of Los Angeles, and formerly general member of the counter-subversive activities committee of the American Legion, at the American Legion Department of California convention, Long Beach, Saturday, June 29, 1957:

SUPREME COURT DECISIONS

Because it is the basic responsibility of the United States Government to protect its people, the far-reaching effect of the recent decisions of the Supreme Court of the United States curbing the power of the Congress to control the worldwide Communist conspiracy through a system of committee hearings and investigations and prosecutions under the Smith Act cannot be disregarded.

During the past 9 years the county counsel's office, which is the legal department for the county of Los Angeles, has actively engaged in a program which has pioneered the Nation in establishing the legal right of any unit of government to exact an oath of loyalty from a public employee and in preparing legislation and presenting test cases to our trial and appellate courts with the object and purpose of barring Communists from teaching in the public school system of this State as prohibited under the Dilworth Act.

As the county attorney I cannot disregard the far-reaching implication of the Watkins, Sweezy, Yates, Schneiderman, Richmond and Jencks decisions handed down by the Supreme Court of the United States within the last month.

Every good American, by this late date, now knows that the Communist movement has as its ultimate objective the overthrow of government by force and violence or by any means, legal or illegal. It is crystal clear that a Communist is one who knowingly intends to participate in any actions that will bring about the ultimate overthrow of our Government by force and violence.

When the Congress of the United States adopted the Smith Act in 1940, it was the Communist Party of the United States as a part of the worldwide Communist movement that the Congress sought to curb. A careful reading of these decisions points up the necessity of asking the Congress to appraise the devastating impact of these cases upon our national security and give consideration to adequate legislation which will protect our form of Government and our people.

As past president of the National Association of County and Prosecuting Attorneys, and recognizing the heavy burdens placed upon public law officers throughout the Nation, I am alarmed that the Yates, Schneiderman, and Richmond cases place in doubt the firm ruling of the High Court in *Dennis* v. *The United States of America* in the original opinion written by Chief Justice Vinson, arising out of the successful prosecution by the Government under the Smith Act. If the decisions of Mr. Justice Black and Mr. Justice Douglas in the latest Smith Act cases are taken as the true rule, it will be extremely difficult for the Congress to amend the Smith Act so that it will stand as a bulwark against the infiltration and clever intrigue that actually has been going on in this country since the original Communist Party of the United States was organized in 1919.

As I read constitutional law, it is the exclusive province of the Congress, and not the Supreme Court, to define what constitutes a crime against the security of this country. The power of punishing Communists is vested in the legislative branch and not in the judicial department under the balance of powers theory of our Government.

It is incumbent, of course, upon a public law officer representing a great governmental unit such as the county of Los Angeles to speak cautiously and temperately respecting the last word of the Supreme Court of the United States, as he is bound by his oath to recognize it as the law of the land until it is modified or repealed by the Court itself, or its effect nullified by additional congressional action. However, it is not an exaggeration to say that a close scrutiny of these cases reaches the conclusion that the private rights of the revolutionist, be he past, present, or potential, are elevated above the right of American society. Through the ruling in *Sweezy* v. *New Hampshire* the door is now wide open for the revolutionist to remain silent about his revolutionary beliefs and evil theories, even though they be included in classroom lectures, so long as his instruction merely preaches revolution but falls short of a call to arms in a movement of violent overthrow of our Government.

The Department of California of the American Legion has a strong and consistent record in being in the forefront in its wise and patriotic belief that we do not have to await a declaration of extreme emergency, a military alert, or a Soviet-inspired Pearl Harbor before taking steps to protect this Government.

If, as indicated in the Jencks decision, the time has arrived in our American life when the Federal Bureau of Investigation is called upon to open its secret files to a saboteur or one who is engaged in espionage against this country, then indeed, my comrades, the time has arrived to reappraise the dire and distressful situation in which our country finds itself.

As a public law officer who has devoted a large part of his adult life to the study of constitutional principles, it is still my firm and unqualified belief that the fundamental purpose of the Constitution of the United States is to preserve the Government and not to serve as a protective shield for those who, while claiming its privileges, seek to destroy it.

People, Not Propaganda

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1957

Mr. MULTER. Mr. Speaker, the Arab refugee problem has still not been resolved and is as acute as ever. In this connection, I commend to the attention of our colleagues the following article recently published by the American Jewish Congress:

PEOPLE, NOT PROPAGANDA

For 9 years the problem of the Arab refugees has engaged the attention of the world. Their unfortunate plight has disturbed the conscience of mankind. The Jewish people, themselves the object of centuries of persecution and homelessness, are particularly sensitive to suffering.

This sensitivity arises not only from the basic moral concepts of Judaism but is related to the emotional identification of Jews the world over with all victims of such tragic experiences.

But the condition of these refugees has been exploited by the governments of Arab States as their most effective weapon in prolonging instability in the Middle East. It is being employed as a cynical technique for stirring up hatred and bitterness against the State of Israel. Agencies of the United Nations, the United States, and the State of Israel itself have repeatedly offered assistance in expediting a realistic solution of the refugee problem, but the Arab States have refused to cooperate toward this end. It serves their purposes that this problem of human misery remain unsolved and be used as an instrument of propaganda to confuse world opinion.

The time has come for a final solution of the problem of the Arab refugee. The stability of the Middle East, the peace of the world, and the welfare of thousands of homeless people must not be sacrificed to the expediency of political propaganda.

A just and lasting solution of the Arab refugee problem must be based on a knowledge of the facts which brought it about.

Presented here are some of the salient facts concerning the cause and possible solution of this refugee problem.

1. Who created the Arab refugee problem?

The Arab States, not Israel. Israel did not expel the Arabs from Palestine. They fled at the behest of the Arab leaders who urged and threatened them to leave their homes in order to "clear the field" for the Arab armies who, in May 1948, had declared war against Israel, in defiance of the United Nations.

"It must not be forgotten that the Arab higher committee encouraged the refugees' flight from their homes." (The Near East Arabic Broadcasting Station, April 3, 1948.)

"Every effort is being made by the Jews to persuade the Arab populace to stay and carry on with their normal lives, to get their shops open and to be assured that their lives and interests will be safe." (Report by district police headquarters, Haifa, to police headquarters, Jerusalem, April 26, 1948.)

"We left the country of our own free will, believing * * * that we would soon return as if nothing had happened." (Mahmaud Seif e-Din Irani, a refugee from Jaffa now living in Jordan, in his book Ma-e Naas, Jordan Publishing House, Amman, 1956.)

2. How many Arab refugees are there?

The exact number of Arabs who left Palestine in 1948 is difficult to determine. In November 1949, the First Interim Report of

the United Nations Economic Survey Mission estimated that the total number of bona fide Arab refugees did not exceed 726,000, and it indicated that about 150,000 of these were self-supporting.

The 1956 Report of the Director of the United Nations Relief and Works Agency for Palestine Refugees (UNRWA) indicated that there are now a total of 922,279 refugees. In May 1956, Edward Kennedy, the British member of the review board of the International Refugee Organization, in commenting on the increase in the number of refugees since 1948, stated that many thousands of indigent natives of the surrounding Arab countries have been posing as former Palestine residents to take advantage of the U. N. aid given to refugees.

"Admittedly, the Arab population of the refugee camps is not as big as Nasser's press agents would have one believe: Their figure is a nice, round 1,100,000. The United Nations Relief and Works Agency, which feeds and cares for them, counted them at 922,279 as of the end of last June. However, the refugees have been known to hide their dead to hang onto old ration cards and have been known to pass newborn babies around from family to family to acquire new ones. The total may well be closer to official Israeli estimates ranging from 600,000 to 650,000" Israel and the Refugees of the Gaza Strip by Frank Gervasi, the Reporter, February 7, 1957).

The actual distribution of the refugees in 1956 is reported as follows:

"Gaza, 216,971; Jordan, 512,706; Lebanon, 102,625; Syria, 89,977—total, 922,279" (annual report of the Director of UNRWA covering the period July 1, 1955, to June 30, 1956). It should be borne in mind that most of the half-million refugees listed for Jordan are not actually "refugees" but are former Palestinian Arabs living in their original homes located in the former Palestine territory which has been annexed by Jordan.

3. What has Israel done to help the Arab refugees?

Israel has already accepted more than 45,000 refugees who are now living as full-fledged citizens of the land; and has offered full cooperation in the solution of the refugee problem as part of a general peace settlement. She has released $6 million of blocked Arab accounts and has offered to compensate the Arabs for their abandoned lands.

"On November 7, 1950, Israel informed the United Nations of its willingness to compensate the Arab refugees for their land; such compensations would be paid by Israel into the United Nations reintegration fund and would be used for resettlement purposes" (reported in U. N. document A/AC.38/SR.35; November 7, 1950).

In October 1952, Israel agreed to release all blocked accounts of Arab refugees. In its report to the seventh session of the U. N. General Assembly, 1952, the Palestine Conciliation Commission welcomed this action by Israel "as an important step to alleviate the plight of the Arab refugees."

4. What have the Arab States done to help the refugees?

The Arab States have consistently denied any responsibility for helping the refugees. They have refused to resettle them in the large Arab States that have thousands of acres in dire need of farmers. They have repudiated any moral or legal responsibility for the maintenance of the refugees and feel strengthened in that negative attitude by the generous help of the U. N.

"It is perfectly clear that the Arab nations do not want to solve the Arab refugee problem. They want to keep it as an open sore, as an affront against the United Nations, and a weapon against Israel. Arab leaders don't give a damn whether the refugees live or die." (Sir Alexander Galloway, former representative of the UNRWA in Jordan, 1952.)

"The attitude of the Arab Governments to the Arab refugees is worse than their behavior toward non-Arab refugees." (Al Harvadith, publisher in 'Amman, Jordan, May 18, 1953.)

5. What has the United Nations done to help the Arab refugees?

In 7 years, from 1948 to 1955, the U. N. has spent more than $200 million for the resettlement, relief, and rehabilitation of the Arab refugees. The Arab refugees, representing less than 3 percent of the world's estimated 40 million refugees, receive more aid in money, food, clothing, medicine, and rehabilitation than have all the homeless of China, Korea, and Pakistan. The main goal of the U. N. in working with the refugee has been to "integrate them into the economic life of the area on a self-sustaining basis through constructive work projects."

Little progress, however, has been made in this direction because the U. N. has been completely frustrated by the Arab States. These states have felt no qualm in exacting customs duties on supplies imported for the refugees; they have refused work permits for the refugees; and have refused to cooperate on setting up work projects. Their main objective has been to keep the refugee problem unsolved—a festering trouble spot of discontent and hostility toward Israel.

"Unless there is a complete change of attitude on the part of the country (Arab countries) and the refugee concerned, it appears unlikely for the U. N. that any general employment plan would be found that could provide work for the majority of these refugees." (Report of the Director of UNRWA to the Fifth General Assembly, 1950.)

"The existence of the refugee problem as it stands is an importat harassing factor vis-a-vis the Jews and the West. As long as the problem remains unsolved, Israel's political and economic existence is acutely endangered." (Mr. Abdullah Rimaw, member of the Jordan Parliament, in Falastin, June 3, 1952.)

"It must be emphasized, however, that in the long run only the open and active support of the host governments concerned (that is, Israel's neighboring Arab States) can enable the agency (UNRWA) to develop projects offering substantial opportunities for self-support to a large number of refugees." (Report of UNRWA to the 11th Session of the U. N. General Assembly, 1956.)

6. Why is it impossible for Israel to repatriate the Arab refugees?

All objective observers agree that Israel cannot, both for economic and security reasons, be expected to repatriate the bulk of the Arab refugees. During the past 8 years Israel has more than doubled its population; it has, in fact, absorbed more than 780,000 Jewish refugees largely from Moslem lands, and has had the difficult task of providing employment, housing and welfare services for these people. The Arab refugees' hatred of Israel and their spirit of revenge, which has been deliberately fanned and kept alive by the Arab leaders, would make their return to Israel a serious threat to the security of that nation.

"It is doubtful whether it is in the interest of the refugees themselves to return en masse. It is questionable whether the refugees fully appreciate the conditions to which they would return and the implications of their return. Are they aware that they must be prepared to live as peaceful citizens of Israel, accepting all the obligations of citizenship? There is a grave danger that the legacy of mistrust and bitterness will make the task of mutual adjustment of populations extremely difficult. Moreover, it is probable that the Arabs of Palestine would have great difficulty in adjusting to the highly organized economic structure of Israel, which runs counter to the economic outlook of the Arabs. It is unlikely that an Arab would whole-heartedly accept the regime of austerity, directed toward the achievement of goals for which at the best he has no enthusiasm and which might well arouse his active resentment." (Lord Macdonald, United Kingdom delegate, Ad Hoc Political Committee of the Fifth General Assembly, November 29, 1950.)

"These new lands (Arab lands that could be reclaimed by irrigation) could absorb the 750,000 Arab refugees from Palestine, at present the gravest source of unrest in the Middle East." (Report to the President of the United States International Development Advisory Board, March 1951.)

7. What proposals have been made to solve the Arab refugee problem?

The United Nations Palestine Conciliation Commission, a special study mission of the United States House of Representatives, Secretary of State John Foster Dulles, and the Special Political Committee of the U. N. have made recommendations to solve the refugee problem; Israel is ready to accept these proposals, but the Arab States refuse.

Implicit in all of these recommendations is a recognition that the Arab refugee problem cannot be solved by attempting to force the small State of Israel to absorb 700,000 Arab refugees whose hatred of Israel has been inflamed by unceasing indoctrination. The answer must be the resettlement of the refugees within the Arab States with whom they have religious, social, and cultural ties. The resolution adopted on February 28, 1957, by the Special Political Committee of the United Nations offering economic aid to those Arab States willing to assume responsibility for the Arab refugees—can become an important beginning in such a program of resettlement.

A. RECOMMENDATION OF THE U. N.

"Concentration (should be laid) on resettlement in the Arab countries, with both the technical and financial assistance of the U. N. and coupled with payment of compensation for their property." (Supplementary report of the U. N. Palestine Conciliation Commission, October 24, 1950.)

B. SOME OF THE RECOMMENDATIONS OF THE SPECIAL STUDY MISSION TO THE NEAR EAST OF THE HOUSE COMMITTEE ON FOREIGN AFFAIRS (1954)

"1. The Arab refugees should be encouraged to help work out permanent solutions of their problem.

"2. The refugees should become citizens of the Arab States.

"3. Responsibility for the refugee program should be transferred to the Arab States.

"4. The United States should press for compensation by Israel to Arab refugees for homes and other property lost through seizure."

C. RECOMMENDATION OF SECRETARY OF STATE JOHN FOSTER DULLES (JUNE 1, 1953)

"Some of these [Arab] refugees could be resettled in the area presently controlled by Israel. Most, however, could more readily be integrated into the lives of the neighboring Arab communities."

Progress in Puerto Rico

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD and as a commentary on the continuing excellent relations between the

United States and the Commonwealth of Puerto Rico I ask that there be printed with these remarks two items of interest in that regard. The one is a copy of Mrs. Eleanor Roosevelt's column of July 2, 1957, pointing up the great progress made in the Commonwealth in recent years as a result of the enlightened cooperation between us. The other is a letter from Dr. Persio C. Franco, well known for his advocacy of democratic government in the Caribbean area, which appeared in the New York Times in July 1942, commenting on President Roosevelt's announcement on July 4 of that year that thenceforth the governors of the island would be elected by the people rather than appointed by the President. This, as we know, was the first step in achieving self-government for the citizens of Puerto Rico, a status they now enjoy.

The outstanding progress made by the Puerto Rican people since that time is a tribute to the generous spirit of friendship prevailing between us and our fellow citizens in Puerto Rico, and to the outstanding leadership of the Governor of the Commonwealth, Luis Muñoz-Marín.

The article and letter follow:

PROGRESS IN PUERTO RICO

A number of publications covering the present situation in Puerto Rico have just been brought to my attention.

Sometimes we feel that we have not moved as well as we should in dealing with our overseas situations, but such should not be the case with Puerto Rico.

The association between the United States and Puerto Rico is that of a Commonwealth and the basis is a common citizenship. The Governor of the Commonwealth of Puerto Rico, in a speech on November 12, 1954, explained the political status of Puerto Rico this way:

"The Commonwealth, whose basic characteristic is voluntary association with the United States on the basis of common citizenship, is not perfect, just as there is nothing perfect under the sun, and we Puerto Ricans who created it are desirous of finding, at the proper time and after calm study, means of perfecting it within the association which is the basic part of the concept."

This makes very clear our association with Puerto Rico, and I think we ought to be proud of the manner in which this association has been carried on, particularly of the famous self-help program known as Operation Bootstrap, which is solving many of the island's most difficult economic situations.

Puerto Ricans are expanding their industry, new factories are being built constantly there by United States firms, the island is attracting more tourists, and one important product—rum—is being promoted and being received well in the United States.

Many of its people came to this country because they could not find work on the island which they love, so industrialization is essential to the improvement of living standards.

These standards are going up. In 1950 the average Puerto Rican family had an income of $600 a year; today it is $2,500. I think both Puerto Rico and the United States are to be congratulated for these achievements.

JULY 4, 1942.

On this the most glorious day of the greatest of nations no more important announcement for the Latin-American peoples could have been made than that President Roosevelt has approved of a plan under which the people of Puerto Rico would elect their own governor commencing in 1944 at the time of the regular insular vote or, if the war lasts longer, at the close of hostilities.

That would be indeed a very important step toward the solution of the problem of the political status of the people of Puerto Rico, which should be solved in accordance with the will of the Puerto Ricans and at the earliest opportunity.

Puerto Rico is an integral part of Latin America. Once its political status is satisfactorily settled, the only important cause of spiritual disharmony remaining between the peoples of the United States and Latin America would have been eliminated.

Let President Roosevelt crown his immortal work for Pan-Americanism by bringing about at the earliest possible time a just solution of this delicate problem.

PERSIO C. FRANCO.

States "Lawstrung"

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article appearing in Outlook of June 28, 1957:

STATES "LAWSTRUNG"

(By David Lawrence)

WASHINGTON.—President Eisenhower unwittingly opened a Pandora's box when he urged the conference of governors to assert the rights of the States. He said:

"Never, under our constitutional system, could the National Government have siphoned away State authority without the neglect, acquiescence, or unthinking cooperation of the States themselves."

But the question now being asked is how can the States today assert their rights if the Supreme Court of the United States can pass laws or adopt legislation that takes away from the States the rights they always thought they had under the Constitution?

This Capital today has in it many officials and legislators who are angry over the latest Supreme Court decisions, and many of them are in the administration itself. The President shows an outward calm and urges respect for the Court as an institution. He said, however, with remarkable restraint to his press conference this week that "possibly in their latest series of decisions, there are some that each of us has great trouble understanding."

The Supreme Court has rendered decisions which many officials believe will endanger the security of the Nation and make it easier for Communists to infiltrate the American Government. Likewise, many officials believe the States have been rendered powerless to carry on effective law enforcement against criminals.

Rarely has there been such a sense of frustration in Government as there is today as the Supreme Court goes on releasing Communists as well as various types of criminals, including a confessed rapist, on technical grounds described conveniently as "individual rights." The idea that society as a whole needs protection against traitors and crooks is brushed aside, and the "individual right" is ruled to be supreme.

Congress is told by the Supreme Court that its investigating committees hereafter cannot punish the refusal by a witness to answer questions even if the fifth amendment isn't invoked. The edict also is issued by the Supreme Court that free speech includes the right to preach the forcible overthrow of the Government and that, only when the conspiracy is well under way and there is an actual step taken to overthrow the Government, can effective steps be taken to protect the Nation.

Naturally this type of reasoning doesn't sit well with Congress, though here and there are so-called liberals who are rejoicing over the decisions.

The FBI and police agencies of States and cities, moreover, are worried. For the Supreme Court says detectives' reports about any witness that the defendant's counsel asks for must be made public, or the right of the prosecuting attorney to use the witness must be forfeited. The difficulties this introduces for the law-enforcement agencies of the country are incalculable.

Congress doesn't know now how to proceed with its investigations on any subject. For the Court has said questions directed to a witness must be phrased with the same explicitness and clarity as is required in a law court. The witness must be told just what the purpose of any question is before an answer need be made and then, if the witness chooses, he can regard the question as not "pertinent" to the "legislative purpose."

This is a virtual sabotage of congressional procedures. But it is also a crippling blow to investigating committees of State legislatures, cities, and counties.

The Supreme Court has certainly taken away many other powers of the States in the last few years. Thus, the Court feels it has authority now to say how schools shall be operated, how pupils shall be assigned, how admission requirements shall be written, and to pass upon what parents of children in a community may say in urging other parents what to do about their children's attendance at certain schools. This amounts to virtually complete regulation of the schools under the jurisdiction of the Supreme Court. This power is one that the States for generations have thought was reserved to them.

Senator THURMOND, Democrat, of South Carolina, has a direct solution. He has introduced legislation to define the appellate jurisdiction of the Supreme Court. The Constitution gives that power to Congress. A law which says what Federal statutes may be appealed to the High Court and what actions by the supreme tribunals of the States can be accepted for appeal to the Supreme Court of the United States would be constitutional. It has been tried for brief periods before in American history.

This isn't the whole answer, but the movement to curb the Supreme Court is growing. Bills to provide for reconfirmation of Supreme Court Justices by the Senate after 4 years of service, bills to provide for selection of only lawyers of qualified experience, and bills with other limitations are being introduced in Congress in a general revulsion of feeling against what Mr. THURMOND calls judicial tyranny and judicial usurpation.

The People Have a Right To Know

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following edi-

torial taken from the Rock Hill (S. C.) Evening Herald of July 1, 1957:

THE PEOPLE HAVE A RIGHT TO KNOW

The United States State Department has tried to keep American newsmen from traveling in Communist China. Secretary of State Dulles has hedged on whether he will allow American newsmen to travel in Red China for the purpose of reporting the news.

If we Americans must depend upon foreign news sources for reports of what is going on in Communist countries, we will learn mostly what those countries want us to learn. We will have no guaranty that we are getting truthful reports.

The best way to make sure that the American people get honest, factual reporting of news from Communist countries is to let American newsmen cover the news for Americans.

We would not be surprised if some of the Communist countries should keep out American newsmen, for fear the American people would learn too much of the real truth. We are surprised that our own State Department wants to keep American newsmen from going and digging out that truth.

United Nations Should Act Promptly on Report of Its Special Committee Exposing Soviet Aggression in Hungary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution on Hungary adopted by the Assembly of Captive European nations, meeting in New York on June 28, 1957:

ASSEMBLY OF CAPTIVE EUROPEAN NATIONS

Noting that the Union of Soviet Socialist Republics, an original member of the United Nations, has assumed the solemn obligation to refrain in her "international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations" (Charter of the United Nations, art. 2, point 4);

Pointing to the wartime and postwar agreements, such as the declaration by United Nations of January 1, 1942, the Declaration on Liberated Europe, etc., concluded by the Western Great Powers with the Soviet Union, by which Hungary among other states, was promised undisturbed exercise of her inalienable right to choose by free and unfettered elections a government under which it wanted to live;

Recalling that on November 1, 1956, the Imre Nagy government: (1) repudiated the Warsaw Treaty—the military instrument of Moscow—no clause of which provided for or justified "intervention by armed forces of the Soviet Union to dictate political developments within any signatories' frontiers" (report of the U. N. special committee); and (2) "declared Hungary's neutrality, turned to the United Nations, and requested the help of the four great powers in defending the country's neutrality" (Mr. Imre Nagy's letter to the U. N.);

Recalling that even after this declaration the U. S. S. R. continued to recognize officially the same Nagy government as a legal government of Hungary, particularly by offering to negotiate with it on the details of withdrawal of Soviet forces;

Stressing that the U. N. Special Committee on Hungary also concluded that "consideration of the Hungarian question by the United Nations was legally proper and moreover it was requested by a legal government of Hungary";

Pointing to the finding of the United Nations special committee that no written text or any other proof could be procured which would confirm that the Soviet armed forces were invited to intervene in Hungary;

Remembering the conclusion of the U. N. special committee's report that the Hungarian freedom fight "was led from start to finish by students, workers, soldiers, and intellectuals many of whom were Communists or former Communists," and that it was a general and spontaneous national uprising backed by the entire Hungarian nation without having been planned and fomented in advance or from abroad;

Quoting the finding of the U. N.'s special committee's report according to which the alleged counterrevolution consisted in the setting up by Soviet armed forces of Mr. Kadar and his colleagues in opposition to a government which enjoyed the overwhelming support of the people of Hungary and that there has been no evidence of popular support for Mr. Kadar's government;

Stating that for all these reasons the U. S. S. R. Government is guilty of aggression against the independence of Hungary, as well as of massacre, deportations, mass arrests, and various other crimes against the Hungarian nation and that, therefore, since October 25, 1956, there exists an undeclared state of war between the U. S. S. R. and the Hungarian nation, which has been brought about by the Soviet Union's breach of peace within the meaning of the United Nations Charter;

Considering that the Soviets have not only failed to comply with the United Nations resolutions but have imposed a new regime of terror, harsher, more cruel, and more unabashed than ever before on the Hungarian nation;

Considering that the agreement on the temporary stationing of Soviet troops in Hungary of May 27, 1957, has been concluded in defiance of the resolutions of the General Assembly calling for the withdrawal of these armed forces from Hungary, with the Kadar regime which is the local organ of Soviet colonial administration and which rules against the will of the Hungarian nation as expressed by the freedom fight which was tantamount to a plebiscite;

Requests: All governments of the free world to instruct their delegations to the United Nations to ask for the most urgent reconvening of the 11th General Assembly in order to (1) endorse the report and the conclusions of the special committee; (2) to decide upon appropriate and effective collective measures against the U. S. S. R. in order to enforce the previous resolutions of the General Assembly, first of all those concerning immediate withdrawal of Soviet armed forces, the ending of persecutions and deportations, and the conduct of free and unfettered elections under international control; (3) to expel the delegates of the spurious Kadar regime from the United Nations.

Resolutions Adopted by Nebraska Stock Growers Association

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to place in the Appendix of the RECORD my own remarks and to include some resolutions adopted at the 68th annual convention of the Nebraska Stock Growers Association held at Alliance, Nebr., June 13–15, 1957.

Mr. Speaker, the Nebraska Stock Growers Association in their convention last month passed some sensible, down-to-earth resolutions. The resolutions reflect the thinking of the large group of outstanding Americans in their desire to promote and protect the livestock interests in Nebraska and the Nation. In presenting the resolutions they have kept in mind the necessary safeguards in order to keep the general welfare and the prosperity of the State and the Nation in a healthy condition. I commend the reading of these resolutions to my colleagues.

The resolutions follow:

RESOLUTIONS OF THE NEBRASKA STOCK GROWERS ASSOCIATION

RESOLUTION 3. GOVERNMENT ECONOMY

Whereas under existing procedures there are no effective controls over expenditures by Congress or the executive branch of the government: Therefore, be it

Resolved, That we, the members of the Nebraska Stock Growers Association endorse and recommend passage of legislation which would provide that governmental appropriation be in terms of estimated annual accrued expenditures, namely charges for the cost of goods and services estimated to be received; be it further

Resolved, That the Nebraska Stock Growers Association endorse all efforts to encourage more interest in governmental affairs with special emphasis on economy; be it further

Resolved, That recommendations made by the Hoover Commission which would save approximately $7½ billion be given full consideration by Congress.

RESOLUTION 4. CHECKOFF

Whereas provisions of the Packers and Stockyards Act have retarded voluntary deductions from sale proceeds of livestock at public markets for an effective beef promotion program; and

Whereas there is a bill pending in Congress to permit a checkoff from proceeds of livestock sales at posted markets for the purpose of meat research and promotion; and

Whereas passage of this bill is vital to an adequately financed meat promotional program: Now, be it therefore

Resolved, That the Nebraska Stock Growers Association strongly endorse its passage and a copy of this resolution be sent to each of our Senators and Congressmen.

RESOLUTION 5. CONSENT DECREE

Whereas the Nebraska Stock Growers Association recognizes that the consent decree establishes conditions limiting the free marketing of beef through four major meatpacking companies; and

Whereas it is believed that changes have occurred since the consent decree went into effect that have voided the primary arguments for the decree that were used 26 years ago; and

Whereas the Nebraska Stock Growers Association believes that all avenues of free competition should be kept open and every method explored to widen the market base for beef; and

Whereas this decree is a restraint of open competition and prevents the packers affected from utilizing to the fullest, their experience, research, and ability in developing wider markets for beef: Now therefore be it

Resolved, That the Nebraska Stock Growers Association recommend to the Secretary of Agriculture and to the Attorney General of the United States, that the Gov-

ernment agree to the modification of the consent decree requested by the packers, which is now restricting their competing on retail level with chain stores and other major marketing agencies.

RESOLUTION 6. CHANGE OF CONTROL

Whereas there is pending in Congress of the United States a bill which would remove from the Secretary of Agriculture all jurisdiction and control of the meat packing industry and give such control to the Federal Trade Commission; and

Whereas the whole system of marketing and processing of livestock and meat is an inseparable part of the business of agriculture; and

Whereas the marketing and processing livestock of the Growers Association have been regulated by the Packers and Stockyards Branch of the United States Department of Agriculture for the last 35 years: Therefore, be it

Resolved, That the Nebraska Stock Growers Association oppose the transfer of regulation of the meat industry from the United States Department of Agriculture to the Federal Trade Commission.

RESOLUTION 10. REPEAL FEDERAL TRANSPORTATION TAX

Whereas the Nebraska Stock Growers Association recognizes the recent rate advances of 15 percent and 7 percent in transportation charges and the association feels that these raises plus the existence of the Federal transportation tax of 3 percent is unduly burdensome upon the cattle industry and all users of our common carrier systems: Therefore be it

Resolved, That the Nebraska Stock Growers Association support all efforts for the repeal of the Federal 3 percent transportation tax which was instigated as a World War II emergency measure; be it further

Resolved, That copies of this resolution be sent to our representatives in Congress and the chairman of the Ways and Means Committee.

RESOLUTION 12. WILDERNESS PRESERVATION SYSTEM

Whereas H. R. 1960 if enacted would establish a national wilderness preservation system covering and setting aside many, many thousands of acres of Federal land to the exclusion of all private or economic use in productivity; and

Whereas this would represent a serious step backward from the multiple use principle in management of Federal lands: Therefore be it

Resolved, That the Nebraska Stock Growers Association opposes this type of legislation and recommends H. R. 1960 and similar proposals, be not enacted into law.

RESOLUTION 15. OUR CONGRESSMEN AND SENATORS

Be it resolved, That the Nebraska Stock Growers Association express appreciation to our representatives and Congressmen and our Nebraska Senators in Washington, and commend them for their work in Congress for the best interest of Nebraska and the cattle business, its principal industry, and hereby instruct the secretary of the Nebraska Stock Growers Association to write letters of appreciation.

Our Benefits to Germany Bearing Fruit

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. CELLER. Mr. Speaker, on previous occasions I have called attention to the new look in postwar Germany and the great industrial strides that have been made by that country during the last decade. Today, as part of that series, I would like to show how the effects of the United States policy toward Germany have redounded to our benefit, not only here in the United States of America but throughout the entire Western Hemisphere.

I cite as an excellent example the progress of a single German company which chose to inaugurate an important milestone of industrial advancement on this continent. This milestone is the world's first completely automatic steel-tube mill, which was opened in Sault Ste. Marie, Ontario, this month.

This $20-million marvel of automation is Canada's first truly push-button operation, and was built by Mannesmann, A. G., of Duesseldorf, one of Germany's oldest and largest steel producers. The Mannesmann brothers, about 1890, originated the process for manufacturing seamless pipe and tubing which is so essential to modern industry.

Mannesmann, whose products are in daily use throughout the United States as well as other parts of the world, has its United States headquarters located in New York City. Here the distinguished American industrialist, Dr. Gerhard Wagner, directs the Canadian and United States operations, since the company also maintains several plants in Pennsylvania.

In Brazil the Mannesmann company has recently completed a seamless-tube mill, which is headed by Dr. Sigmund Weiss, a brilliant engineer whom Mannesmann installed in South America when he had to flee Hitler's Germany. I was very much impressed with Dr. Weiss, whom I visited while recently in Brazil.

The Mannesmann company felt the Canadian opening of such world significance that three of its top executives flew over from Germany to attend the inauguration. The Mannesmann management long appreciated the importance of cooperation with the New World and encouraged the industrial opportunities to be found in the Western Hemisphere, and thus Canada welcomes with great warmth the visit of Mr. Wilhelm Zangen, president; Dr. Hermann Winkhaus, executive vice president; and Dr. Walther Eisenbraun, director of foreign operations, all officers of the global parent company, Mannesmann, A. G.

The new plant, located on the banks of the St. Marys River, permits the company to ship by water route through the Straits of Mackinac to Lake Michigan and Chicago, or eastward through the St. Lawrence to the seaboard. The seamless tubes are used largely in deep-well drilling in oilfields throughout the United States and Canada.

I have here two newspaper articles that show the importance, both to the United States and Canada, of this seamless-tube mill. One is an editorial appearing in the June 15 issue of the Sault Ste. Marie Star, entitled "Today Marks Historical Event"; and the other is from the June 18 issue of the New York Journal of Commerce, entitled "Only One of Its Kind." They follow:

TODAY MARKS HISTORICAL EVENT

The opening of the Mannesmann Tube Co.'s newest industrial plant in our city creates an historical event. Today, Sault Ste. Marie has 10 major industries, and promises to become one of the major industrial centers of Canada. We should be proud that our city has been chosen as the site of these great industries which have, and will contribute so much to the greatness of our country.

Though to most people the way to manufacture seamless steel tubes will forever remain a mystery, there is something exciting in the thought that in our city we have one of the most modern factories in the world; that at Mannesmann's automation is at the highest point so far reached in pushbutton manufacture; and that our city, already renowned for its steel, will soon become a household word to all parts of the country connected by oil and gas pipelines.

For parents, youngsters, and new immigrants, the Sault's newest industry offers the chance of a fine future. The skills required can be learned in our city; and with Canada's need for steel tubes, as her oil and gas industries progress, there will be plenty of work for many years to come. It is heartening to know also, that our main industry, Algoma Steel, in which Mannesmann's are shareholders, has a permanent customer right on its doorstep.

It takes a great deal of courage to launch a new industry in these days of cold war and panicky markets. To launch one from Europe where labor is cheap and money readily available into Canada, which has the highest currency rate in the world, and in a city where the pay is among the highest in the country and money is possibly the tightest on record, takes foresight of a particular order.

Those of us who have ourselves made some effort to demonstrate our faith in our city, welcome Mannesmann's to the brotherhood of Sault industries. We hope they will be happy, prosperous, and that they will fulfill all their hopes and aspirations.

The Sault, its people, its history, and its future mean much to us. With this great new industry, we can see greater security, greater happiness, and better conditions than we have ever before known.

ONLY ONE OF ITS KIND—CANADA'S STEEL TUBING MILL IS FULLY AUTOMATED

(By Wilber J. Brons)

SAULT STE. MARIE, ONTARIO.—What shapes up as another important phase of Canada's increasing effort to lessen her dependence upon outside markets for steel products has been formally initiated here.

The occasion was the official opening of a completely automated seamless tube mill by Mannesmann Tube Co., Ltd., a subsidiary of Mannesmann A. G., major steel producer of West Germany. The mill, said to be the first of its kind anywhere, will free Canada from importing seamless casing, tubing and line pipe for her growing petroleum production and continuous process industries.

Mannesmann Tube will be able to produce 225,000 tons a year of seamless steel tubing ranging from 4½ to 10¾ inches outside diameter. Whatever surplus exists after Canadian needs have been satisfied will be exported to oil producing areas in the United States and elsewhere.

NEAR SEAWAY LINK

Significantly, the new Mannesmann mill is located a scant half mile from the St. Mary's River, a vital link in the new St. Lawrence Seaway. Dr. Gerhard Wagner, president of Mannesmann Tube Co., pointed out that the company will be able to ship oil country goods by water to Texas fields via the Port of Chicago and the Mississippi River waterway.

Significant, too, is Mannesmann's intention to offer participation in the new enter-

prise to Canadian investors. Dr. Wagner said this would be done when the enterprise had proved itself a profitable and stable one. Mannesmann A. G., the parent company in Germany, has followed a similar policy in Turkey and Brazil where local capital was invited to come in after a period of trial operation.

Canadian equity investment, when it comes, will be through Mannesmann International Corp., the Mannesmann A. G.-sponsored company which recently acquired a one-third interest in Algoma Steel Corp., Ltd., Canada's largest producer of primary steel and iron, with indicated ore reserves of more than 500 million tons.

RAW MATERIAL FROM ALGOMA

Algoma, a Sault Ste. Marie neighbor of Mannesmann Tube, will provide the latter with its raw material in the form of tube rounds. Tube rounds will be transported by Ross straddle carriers between the two plants, a distance of less than a quarter mile. From the time this semi-finished steel is cut to proper length its progress through the casing and line pipe mill will be completely automatic.

Although tube mills have been rated as automatic for many years, the Mannesmann mill here is said to be the first in which all operations from heating the steel billets through the various inspection cycles to the final cooling of the finished casing and line pipe are done in one continuous process.

The Mannesmann mill also claims another distinction. Total connected power exceeds 22,000 horsepower, said to be the highest rating in the industry. The mail mill drives total 14,000 horsepower, exclusive of auxiliaries.

USES SINGLE-GROOVE ROLLS

Another innovation is substitution of single-groove rolls for the old multi-groove rolls which have been standard in the industry for many years. Each single-groove roll is driven by a 2,000 horsepower direct current motor, which adds substantially to rolling speed and helps keep down costs. Small diameter casings can be rolled at the rate of 1 tube every 20 seconds, and Mannesmann technicians believe the rate can be stepped up somewhat if need be.

Mannesmann International Corp. acquired its interest in Algoma Steel Corp. from the estate of the late Sir James Dunn, British industrialist. Its Algoma holdings are said to constitute some 200,000 shares, or about a third interest.

Bankers believe Mannesmann aims toward adding to its Algoma holdings whenever the opportunity presents. The combination of Algoma steel and Mannesmann machinery and techniques is regarded here as one which will provide increasingly tough competition for United States mills rolling similar products.

Mr. Wilhelm Zangen, Mannesmann president, outlined the history of his company in a speech at the plant's opening. He said in part:

The world has shrunk. Due to today's rapid transportation facilities, the Atlantic is, in my opinion, not much more than a lake amidst the Western Hemisphere, and after completion of the large St. Lawrence River Waterway, the city of Sault will play a very important role. We not only see for this special district but for the whole of Canada, a great future because of the enormous natural resources and other enormous sources of wealth. The continuously rising prosperity of your country will thus contribute to the welfare of the whole world. To participate in this development is a special pleasure and satisfaction to our company.

One of the best-known German bankers, Mr. Herman J. Abs, of the Deutsche Bank, at the 100th anniversary celebration of Phoenix Rubber Co. in Hamburg, at which the chairman of the Firestone Tire and Rubber Co., Mr. Harvey S. Firestone, Jr., was present, commented on the question of foreign investments. Both gentlemen expressed the opinion that highly industrialized countries can best aid in developing other territories through private capital. They pointed out that Government credits, due to their anonymity, cannot bring about the confidence between creditor and debtor that can be achieved by private loans and participation which genuine personal contacts can produce. The Government as such should help to encourage the development and protection of foreign investment interests of its citizens and business establishments. It should not attempt itself to run business enterprises because the governmental apparatus as such is too unwieldy. Bad experience in the past, according to Abs' opinion, might be the reason why, despite inherent goodwill and the help of Government guaranties, one is reluctant to enter more than necessary into the risk of foreign investments. Mr. Firestone emphasized that private initiative could also help to solve the problem of future shortages of important raw materials which would be of equal importance for all countries. Private capital set aside for foreign investments does not wish special privileges, but only fair treatment.

I thought it worthwhile to mention the foregoing because we believe that these objectives in the countries of the Western Hemisphere can be fulfilled and we, for our part, are eager to make our contribution.

Generally speaking, these are our reasons for investing in this country, and all our hopes are for Canada's further development.

Mr. Speaker, I firmly believe that this type of international cooperation such as a German firm building in Canada, utilizing American and Canadian firms in the construction of this mill, is an outstanding example of a living partnership displaying the enterprise and ingenuity of free people who strive to build for a better way of life for all men. This is how free people man the bastions against communism.

The Boy Scout Jamboree

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. CANFIELD. Mr. Speaker, a youthful army in forest green shorts and multicolored neckerchiefs took over the Capitol yesterday and I for one was thrilled by its occupation.

The uniformed "invaders" were some of the 60,000 Boy Scouts from every State in the Union, the Territories of Alaska and Hawaii, Puerto Rico, and many foreign lands, who for the next 10 days will be camping in a city of 25,000 tents on the rolling hills of historic Valley Forge for the 1957 Boy Scout Jamboree. Many of these jamboree Scouts stopped off at this Capital City for a brief glimpse of their Government in action en route to the Valley Forge campsite while still others will be visiting us on their homeward journey.

I am told that the Scouts will be consuming some 509,000 eggs and more than 599,000 quarts of milk during the jamboree, and the 3,000 acre tent city that will house them, for the time of its occupation will be the 16th largest city in the Keystone State. I know that one of the major jamboree activities will be the swapping that goes on wherever Boy Scouts get together. There will be swapping of neckerchief slides, camporee badges, ceremonial gear and industrial samples from their respective areas, but even more important than this exchange of tangibles will be the swapping of ideas and friendships, the swapping of folkways and colloquialisms of speech. And out of all this the development of deep and lasting understanding and acceptance of the many differences that blend and merge into the harmonious pattern of our American way of life.

I recall so well my visit to the 1950 jamboree at Valley Forge when my own son was one of that great army of American boyhood encamped on the sun-warmed hillsides. I heard the rollicking Scout songs echo from rise to rise and thought how those old hills must have rocked to the strains of Yankee Doodle and Let Tyrants Shake Their Iron Rod, as the ragged Revolutionary soldiers sang to forget the misery, the hunger, and the cold.

I remember that thrilling pageant in the huge amphitheater, where the Scouts heard an address by the President of the United States and another by the top military leader of the day, the man who now sits behind the President's desk in the White House. There was a never-to-be-forgotten climax to that 1950 jamboree program when every light on the vast field was extinguished and a blanket of soft darkness fell over the buzzing, wriggling body of boys, bringing down a hush that seemed somehow sacred. Then in a far corner of the field one Scout lighted a tiny candle, its yellow flame leaping up and cutting through the enveloping blackness. One after another the boys lighted their candles until the whole amphitheater was shining with light, a moving demonstration of the power of a single candle to pierce the dark.

I like to think of those boys out there, swapping experiences and inspirations on the green hills of Valley Forge, as the shining candles of hope in this dark and weary world. May the ideals of Scouting burn brightly through all their lives and may these days at Valley Forge help them to appreciate and cherish the precious heritage that has been placed in their young and eager hands.

High Court's Errors Must Be Corrected

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in

the RECORD, I include the following editorial from the Santa Monica, Calif., Evening Outlook of July 3, 1957:

HIGH COURT'S ERRORS MUST BE CORRECTED

One way to insure validity of our laws when tested in the Supreme Court is to plug all loopholes before they are subjected to High Court test. Another way is to enact a new law covering the same subject after the Court has virtually nullified the old statute. The Eisenhower administration, plainly dismayed by the Supreme Court's edict in the Jencks case, has responded swiftly to this challenge.

On June 3, the Supreme Court ordered a Federal judge to give Clinton E. Jencks, New Mexico labor organizer, access to relevant statements and reports collected by the FBI. These had been used by Federal authorities to win a two-part conviction of Jencks for falsely swearing that he was not a Communist when he filed an affidavit required by the Taft-Hartley Act.

Within 48 hours, 14 Federal judges reportedly had opened up various governmental records to defendants. In his recent appearance before a Senate Judiciary Subcommittee, Attorney General Herbert Brownell testified that the way one Rhode Island court had interpreted the Jencks decision could result in "the freeing of a convicted tax evader and four convicted kidnapers." The Court held, incidentally, that even the national welfare was secondary to the rights of the defendant. Suppose the Government says that letting the defendant see the FBI files would endanger the national welfare. In that event, the Supreme Court ruled, the Government must drop its case.

To fashion specific plugs to stop such leakage is the job of Congress, aided by the Eisenhower administration recommendations, Attorney General Brownell has made these recommendations in the Jencks case. After a 1-hour hearing the Senate Judiciary Subcommittee unanimously approved a bill closely modeled after the Brownell proposal. Later the fully approved bill was rushed to the floor with a must priority.

The proposed measure provides that a defendant could inspect only the FBI information that a judge holds is pertinent to the trial. Thus the FBI files could retain most of the confidential character that J. Edgar Hoover wisely regards as essential, and yet defendants gain the privilege of inspecting documents pertinent to their own case and to none other.

Congress should enact this measure speedily. It should also pass other and tighter laws until all the mischief created by the Supreme Court's ill-advised decisions is nullified.

Facts About Fallout

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. DINGELL. Mr. Speaker, I read with considerable interest an article appearing in the July 1, 1957, issue of the New Republic magazine giving the facts about fallout.

Because of the great danger inherent in radiation and nuclear fallout I think that as many people as possible should read this article.

Of particular interest to me is the renewed outline of what my good friend and distinguished colleague, the Honorable CHET HOLIFIELD, has done on behalf of his constituents and the people of this country to understand and wisely harness the great force for good which is inherent in the atom. I pay tribute to CHET HOLIFIELD also for his work on the tremendous danger which is present to each of us and to our children yet unborn from the radiation with which we are filling the atmosphere.

I hope all will read the article which follows:

FACTS ABOUT FALLOUT

The 5,000 pages of testimony on radiation from nuclear-bomb tests which Congress gathered in its inquiry from May 27 to June 7 gives us the most complete public library on this subject ever assembled. A very small part of the evidence has reached the American people thus far through newspaper and news-magazine accounts—though journalistic coverage of these hearings was thorough when compared with the attention paid to the majority of congressional investigations.

The complete record will not be published for another 2 months, but the 4-foot pile of papers stacked in a basement room of the Capitol in Washington, directly under the Dome, is already available to scientists and writers. It is from that accumulation of papers that the following report has been compiled by the editors.

On the last day of the recent radiation hearings before the Joint Committee on Atomic Energy, the following exchange took place between Representative CHET HOLIFIELD, Democrat, of California, and a witness, Dr. Charles L. Dunham, of the Atomic Energy Commission:

"Representative HOLIFIELD. Has this committee been presented with all the pertinent information in regard to strontium-90, which is in possession of the AEC?

"Dr. DUNHAM. This constitutes the present body of knowledge of the AEC on the contamination of the environment by strontium-90.

"Representative HOLIFIELD. So there has been no withholding.

"Dr. DUNHAM. We have presented you with all the material we have developed."

It is fair to conclude that if this inquiry did not produce all the answers which the Congress and the public sought, it is because the scientists themselves are not yet in possession of sufficient data. They themselves are exploring a frontier of knowledge—one in which the disciplines of physics, meteorology, soil chemistry, biology, and the medical sciences intermingle. A working knowledge of each of these special branches of science is required of anyone who presumes to come to general conclusions about the hazards of nuclear bomb fallout. All these disciplines were represented among the 40 witnesses at the 8-day hearing.

For a congressional investigation, this assembly of experts was extraordinary. It was a carefully planned scientific inquiry, proceeding in proper order from a 30-page outline and questionnaire which had been sent to all witnesses in advance. There were no surprise questions. The witnesses themselves had been selected after wide consultation among the scientific community. And since 35 of the 40 participants were either employees or contractors of the Atomic Energy Commission, there could be no basis for charging that the hearing was organized to embarrass the administration. The hearings were almost wholly free from politics, so much so that both Republicans and Democrats praised the chairmanship of Representative HOLIFIELD, and the professional skill of the younger physicist, Dr. Hal Hollister, who had prepared the outline, and directed the roundtables in which scientific differences were narrowed.

Dr. Dunham, the witness quoted above, is director of the Division of Biology and Medicine for the AEC, in charge of the research program which traces the movement of harmful bomb particles from the mushroom cloud into the earth's atmosphere, thence to the soil, to plants, to animals, to the human dinner table, and finally to skeletal deposits. It is his division which is most directly concerned with the most important question the congressional inquiry hoped to have answered:

"How much radiation from cosmic rays, medical X-rays and weapons tests combined can man tolerate before this radiation does appreciable harm to the life span and health of the present generation, and brings about a significant increase in deformed children born in succeeding generations?"

There was no clear and concise answer. Nevertheless, the Government research program on atomic fallout, which Dr. Dunham outlined to the congressional committee, is much more impressive than the public has had any reason to believe.

For example, daily specimens of bomb debris fallout are gathered on gummed paper at 94 stations in the United States and 75 foreign countries. Similar sampling with stainless steel pots, a newer method, has now been established at 7 points in the United States and 14 abroad. Testing of bomb debris in the soil was made in 39 countries by the Department of Agriculture in 1956, and expanded this year. Sampling of the Pacific Ocean in relation to weapons tests (with Japanese help) is extensive.

"We endeavor to follow the radioactive material as it moves along with the current," Dr. Dunham said.

At Gongelap Atoll, in the Pacific, scene of some of the megaton bomb tests, there are annual followup studies of soil, plants, animals, seafood, and the human population.

The worldwide collection of human bone samples from autopsies, and the measurement of bomb debris deposited in them, is concentrated at Lamont Laboratories in New York City.

In order to test bomb debris in the stratosphere, weather balloons are sent to altitudes of 50,000 to 90,000 feet, where attached instruments filter radioactive particles from a defined volume of air, and bring the specimen back to earth. The balloons are launched from Minneapolis, San Angelo, Tex., and an Air Force base in Panama.

Samples of milk are regularly tested in Chicago and New York, and less frequently at other milk sheds, to determine the degree of contamination by strontium 90, a bomb particle. Other kinds of food are tested by the Department of Agriculture, and this food analysis is being extended worldwide.

In addition to charting the movement of bomb particles, the AEC has a series of studies on radiotoxicity—that is, how harmful is nuclear debris to animals and man? At the University of Utah a study has been going on for 6 years to determine the lifetime accumulation of bomb fallout materials in dogs—dogs having been chosen because their bone development closely resembles the human pattern. On the Davis campus of the University of California, a womb-to-womb study of dogs has just begun: the mothers are fed strontium 90, and as soon as the pups are born they are given strontium 90 throughout their lifetime. But it will be 15 years before definitive results are obtained.

A half dozen new projects are just getting underway for determining the discrimination of the digestive system in absorbing calcium and strontium 90 in the diet. This, the hearings demonstrated, is one of the important unknowns in our study of radiation. For while man obtains most of his calcium from milk products, he gets less of his

strontium from this source than one might assume, and this is because the cow's digestive system rejects six-sevenths of the strontium in the cow's diet. By contrast, vegetables which man eat show a greater capacity to absorb the radioactive poison. In the case of the human body, the precise measurement of the absorptive process, and especially the wide variation between individuals, are still unknown.

Researchers have also gone into the question of how to treat the human body after it is injured by radiation, and are experimenting with a prophylactic pill which will guard against the extreme effects of radiation. To illustrate, Oak Ridge National Laboratory has developed a bromide salt called AET which has doubled the resistance of rats, mice, and monkeys to radiation, but dogs will not tolerate it, and it is doubtful that man could take a sufficient quantity without injuring himself. Nevertheless it is being tried as a treatment for radiation sickness among cancer patients. The chief difficulty is that it must be taken in advance of exposure, and though it might be of value to troops going into battle, when the time of radiation exposure is known in advance, it would be of no help to a general population attacked by surprise. It cannot be taken habitually. Another treatment, if attempted within 48 hours after extreme exposure to radiation, is the transplanting of bone marrow. This has been done only within the past few months in the United States, using patients whose marrow was injured by radiotherapy during cancer treatment. The AEC expects to know shortly whether this might be a feasible technique in time of disaster.

Another approach to treatment is the search for a chemical agent which will remove radioactive particles from the bloodstream before they are deposited in bones. Two chemicals have been found which will divert the bomb particle plutonium away from bone and into the urine, but none has yet been found for the removal of strontium from human bones, once deposited there, although experiments toward that end are going on at Los Alamos.

Investigation of how civil defense workers can decontaminate a fallout area after attack has produced some results. A small object like an automobile can be decontaminated by soap and water. The roof of a house can be rendered safe with an ordinary water hose, so long as the material is washed some distance away from the building, but if the material is allowed to build up at the edge of the building, it may actually be more radioactive than if it were left alone. Researchers have tried spraying the fallout area with asphalt spray, then bulldozing the debris, a method which proved effective but uneconomic for large areas. Farmers can treat contaminated land only by deep ploughing, thus diluting the strontium in the topsoil. Contaminated milk can be treated by removing all the calcium and strontium, and then adding uncontaminated calcium, but this is costly.

"I think the listing of research projects which you have made in this speech," commented Representative HOLIFIELD at the end of Dr. Dunham's testimony, "will reassure the American people that there is a deep concern and a very wide range of studies."

If the reader is less reassured than he would like to be, it is no doubt because the congressional inquiry exposed the gaps in knowledge but provided few firm answers to anxious questions. The scientists' greatest contribution may have been in helping the Congress understand why some of the questions are so hard to answer.

Take for example one of the key questions of the fallout problem; when strontium 90, one of the cancer-causing bomb particles, is blown out of the earth's weather zone into the stratosphere, which begins from 6 to 12 miles above the earth's surface, how long will the bomb particles stay up there and at what rate will they drift down to earth? The best answer is that 4 to 7 years are required for half the strontium to fall. Why the uncertainty? Because, in order to get an accurate measurement, we must know the exact amount of strontium blown up there by American, Russian, and British bombs; then we must determine over how wide a zone it is falling and with what variations of intensity; and finally, from measuring the amount of strontium in the soil, we can tell how long the fallout will continue. But none of those factors can be established with certainty.

Or take the question whether cow's milk has become hazardous as a food for American children. One scientist testified the hazard was "negligible" and he would certainly feel safe in giving milk to his three children. Another scientist replied: "Suppose you assume the chances of a child contracting cancer from milk is one in a million. That is certainly negligible, as a personal risk. But when you apply the ratio of 1 in a million to the world population, you find 3,000 case of cancer resulting from cow's milk."

Then there are the various suppositions the scientists derive from medical history: the United States Government is basing its assumptions about how strontium 90 will affect man entirely on the previous experience with radium 236. Why? Because strontium 90 is a new element, unknown before the nuclear bomb, and is assumed to behave like radium. But our experience with radium is based upon a relatively small sample of persons—very small compared to the world population, and the measurement of tolerance for radium was based almost entirely upon observation whether the patient developed any adverse symptoms during or shortly after treatment. Research has been inadequate whether radium treatment of children under 15, for example, while causing no ill effects at the time, has appreciably shortened their lives or caused abnormalities in offspring.

So it makes a great deal of difference whether the scientist is testifying upon measurable risks to the individual today, or whether he is talking about the epidemiological effects upon 2.6 billion people, over the next generation. "Actually, our concern should focus not upon acute effects in man, which are highly unlikely from peacetime bomb testing, but rather with the chronic debilitating, long-term effects, say 50 years after the entry of radioelements into the body." That was the comment of physicist Ralph Lapp, a writer whose article in the Bulletin of Atomic Scientists for February 1955, first broke the story of the fallout menace produced by the Bikini superbomb burst of March 1, 1954. The AEC announcement followed Lapp's article by several weeks and almost a year after the bomb test.

If the layman accepts this yardstick for measuring long-range damage, he will find a number of points on which the scientists do agree, and the consensus on these points helps to clarify the degree of hazard:

1. The fallout of bomb particles from the stratosphere, which continues for 40 years after each big bomb tested, is not uniform around the world, as had previously been assumed by the Government. It is concentrated in some areas by rainfall, and possibly by high altitude air currents. The Northern Hemisphere gets much more than the Southern, the high rainfall areas much more than the arid zones. This is confirmed by balloon testing of air at high altitude, by soil sampling, and by examination of human bones. This newly verified variation may substantially change the danger level for contaminating the atmosphere.

2. Geneticists agree there is no safe level of radiation. Even a small amount produces some adverse changes in future generations.

3. As to the increase in bone cancer and leukemia in this generation from strontium 90, scientists do not know whether there is a safe level, or a threshold, below which no damage occurs. The majority of experts assumed there is no safe level, even though the increased incidence of cancer cannot yet be proved. This assumption contradicts the safe level on which present Government policy rests.

4. The number of persons who could be damaged by increased radiation in this generation—either with cancer or with abnormal offspring—is roughly calculable. Estimates by individual scientists using various hypotheses ranged from 50,000 to several million in a world population of 2.6 billion. It will never be possible to show a causal relationship between these injuries and bomb testing, other than to note the increased number of cases. The increase will be proportionate to the increase in total radiation: that is, if bomb testing has thus far raised total radiation 1 percent, cancer and leukemia should go up 1 percent.

5. As a technical term, "permissible" dosage should not be applied to bomb tests. The term "permissible" originated in medical practice when the patient gave his permission for an X-ray, based upon his doctor's judgment that possible healing effect of the radiation outweighed the possible damage. This situation does not apply in bomb tests since the entire world population is exposed to bomb tests by three nations—the United States, U. S. S. R., and Britain. Nobody gave permission.

6. A group of 5 scientists, including 3 AEC officials, concluded that once the atmosphere is saturated with bomb particles—a situation which 1 witness estimated would arrive in 10 years—the maximum rate of bomb testing without jeopardizing the entire race would be between 2 and 10 megatons of bomb materials blown annually into the stratosphere by all nations. The upper limit—10 megatons—is the average rate at which the United States has been testing for the past 5 years.

These conclusions which are shared by the scientists justify a public attitude of most serious concern, but not, we think, of alarm.

But it is impossible not to be greatly disturbed over the fact that the world has been exposed to more than the maximum rate of bomb testing, as defined above, in 3 of the past 4 years, and the total amount of bomb debris flown into the stratosphere is still rising each year. In the 1954 Castle series of American tests in the Pacific 30 megatons of fission products were blown into the stratosphere in a 2-month period, March 1 through May 6. That is 3 times the maximum rate allowed by the scientists for all nations. Little wonder that President Eisenhower told a recent press conference that he did not expect the United States ever again to test the big dirty Bikini-type bomb.

Russian testing of dirty bombs in Siberia during 1956 raised the strontium content of American soil by a third in a single year (and the fallout over Japan was much heavier). Five of the Russian tests in 1956 were judged by fallout analysis to be over the megaton size, and two were over 10 megatons.

In 1957 the continuation of American and Russian tests combined with the entry of Great Britain into the H-bomb test competition (2 superbombs in the Pacific so far) will almost certainly carry the year's total far above the maximum estimate of the scientists. And if any fourth nation enters the nuclear weapons field, it will almost certainly want to test a dirty bomb, since without it, no equality is gained in the armaments race.

From reading the record, we conclude also that the National Academy of Sciences report on radiation hazards is almost certainly out of date and needs revising. One of the

principal authors of that report, Dr. Shields Warren of Boston, told the hearing: "If there is no threshold (or safety zone in which no radiation injury occurs), then I would be reluctant to see the average strontium-90 content of bones, particularly in children, go much above 10 times the present level." The present level in scientists' jargon is 1 "sunshine unit." So Dr. Warren is suggesting a limit of 10 sunshine units in children's bones. Yet the "maximum permissible concentration" approved by the National Academy report last year was 100 sunshine units. By this new judgment, the Academy report sets a safety level 10 times too high. This is the same Academy report described by President Eisenhower at his press conference of June 6, 1957 as "the authoritative document by which I act up to this minute, because there has been no change that I know of."

The Court and the Congress

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. OSTERTAG. Mr. Speaker, a brilliant and penetrating evaluation of the judicial revolution through which we are passing has been appearing in the editorial columns of the Buffalo Evening News. Under leave to extend my remarks, I include in the RECORD, the first two of this series of editorials, entitled "Revolution in the Court":

REVOLUTION IN THE COURT, I—SHAKING UP THE CONSTITUTION

The United States has gone through two political revolutions in the last quarter century—and now it is deep in the midst of a third.

The first was the domestic (depression-New Deal) revolution of the thirties, which shook the Nation's social, economic, and political structure to its foundations.

The second was the foreign-policy revolution of the forties, which recognized that the protected environment in which America had grown up had been destroyed and that the Nation was in a new and fundamentally exposed position that called for a radically altered global outlook.

The third revolution is the one currently being staged by those pillars of continuity and respectability, the nine men of the "new" Supreme Court.

The full scope and significance of their many far-reaching recent decisions cannot yet be more than dimly comprehended. Yet it grows more and more apparent that what we are seeing is nothing less than a revolutionary recasting of our constitutional system of checks-and-balances—in all three of its most vital aspects:

1. The rights of individuals versus the powers of government;

2. The rights of States versus their individual citizens on the one hand and the central government on the other, and

3. The balance of political power among the three coordinate branches of the Federal Government—legislative, executive, and judicial.

Make no mistake about it. The Supreme Court's new majority is throwing the old notion of "judicial restraint" to the winds, and has embarked on a new, "strong" phase which has already gone far toward subordinating both the executive and the legislative branches to itself; toward "preempting" the States' powers in the name of the National Government; and toward enthroning the constitutional rights of individuals when these conflict with the constitutional powers of any arm of government.

This "Warren Court," in short, is making history—and not just judicial history, but political history. In fact, during this Eisenhower era of so-called political conservatism, it is making more significant history than either of the other branches of the Government—just as the "strong" Court of a century and a half ago did during the 35-year "reign" of John Marshall.

For proof of this, one need only try to name any legislation of the last 10 years that has been as significant in fixing the national policy on a new course as was the antisegregation decision of the Supreme Court in 1954—or the Steve Nelson decision of 1956, which struck at States rights by declaring that the whole field of antisubversive legislation had been "preempted" by Congress—or the Watkins case of 1957, which handed Congress a whole new rule book to police its investigative powers so they do not infringe the rights of individual witnesses.

In one field after another—and just within the last 15 to 18 months—the Court has brushed off precedent and reached boldly into the Constitution itself, or stretched the "intent of Congress" far beyond the recognition of any congressman, to find a rationale for doing what, in the Court majority's judgment, "ought" to be done.

Is this "judicial usurpation"? Or is it only a bolder and broader use than we are accustomed to see of the latent powers of judicial policymaking that have properly resided with the Supreme Court from the beginning?

The purpose of this editorial, and several others to follow, is not to attempt any sweeping judgment on that steadily mounting controversy. It is rather to explore dispassionately what is happening; to see, if possible, where it is leading; and to ask what, if anything, the people through their elected representatives should be doing about it.

REVOLUTION IN THE COURT, II—THE WARREN INFLUENCE

Ours is supposedly a government of laws, not men—but the Supreme Court, in its bold new policymaking shift to the left, is increasingly a government of men more than law. And two of the best guides to understanding it are to understand (1) the man who has become its strongest influence, Chief Justice Earl Warren, and (2) the concept of the Court's mission he has drawn from a great Chief Justice of the past, John Marshall.

The Chief Justice is only 1 of 9 members of the Supreme Court and his "vote" weighs no more than any other. And yet it is clear that a combination of circumstances has made Chief Justice Warren the dominant influence on today's Court, almost as much as Marshall was in his era.

The Warren impact has been felt only gradually, and not until this spring was it pronounced enough to justify calling the high tribunal a "Warren Court." Indeed, during most of the 1956 session, the Chief Justice was more conspicuous in company with Black and Douglas as one of a triumvirate of liberal dissenters than he was for the cases on which they spoke as part of the majority.

But this year they have been joined by a newcomer, Justice Brennan, on most types of cases. And the remaining five, while more precedent minded and disturbed by the new tendency to throw "judicial restraint" to the winds, have no cohesion as a "conservative bloc." So the Warren group will usually find one or more of them—Harlan or Frankfurter, or sometimes Clark or Burton, concurring in the result, even if offended by the sweeping rationale, of the history-making decisions.

Chief Justice Warren's conception of the Court's function is no secret. He has elaborated it many times, on and off the bench. He gave the first real clue in the breathtaking directness of his 1954 antisegregation opinion, which he rooted not in law or precedent but in the writings of modern sociologists. The rationale was blunt and forceful: the 14th amendment guarantees "equal protection"; never mind what the Nation intended when the amendment was adopted, the modern facts of life are that segregated schools are "inherently unequal"; therefore segregation could not be squared with the Constitution and had to go.

"It is the spirit and not the form of law," Justice Warren has declared, "that keeps justice alive. The beginning of justice is the capacity to generalize one's private sense of wrong." The Chief Justice has gone further; he has made clear that his controlling principle for today's Court is drawn from Marshall, who declared that his Court had never sought to enlarge the judicial power beyond proper bounds nor feared to carry it to the fullest extent that duty requires.

But what are proper bounds, and what does duty require? To many a constitutional lawyer, judicial duty requires respect for precedent, that the meaning of the law may have clarity and continuity—and proper bounds impose on the Court some sense of self-restraint about encroaching on the legislative and executive functions or on the rights of States. And in all these respects, they see the Warren Court treading dangerously close to usurpation.

To Chief Justice Warren, however, the Court's duty requires far more in today's ideological world than it once did. He declared in a 1955 speech at the Marshall bicentennial that, with the eyes of a critical world all staring at us, the mission of the bench and bar is to make the world see that the provisions of our Constitution, guaranteeing human rights, are living things, enjoyed by all Americans, and enforceable in our courts everywhere.

This is the issue with which Warren and his Court have been preoccupied in most of their precedent-shattering decisions since. And in almost every case arising out of the age-old dilemma of individual liberty versus national security, they have not only come down hard on the side of the individual, but they have entered such sweeping decrees that they have left a train of confusion and consternation among all those agencies, State and Federal, legislative and executive, which have a primary duty of preserving order, punishing criminals, ferreting out conspiracies, and otherwise protecting society against subversion by its enemies, foreign and domestic.

Address of Secretary of the Interior Fred A. Seaton, at Chautauqua Institution, Chautauqua, N. Y., July 8, 1957

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. REED. Mr. Speaker, under leave to extend heretofore granted to extend my remarks, and include extraneous matter, it affords me great pleasure to insert in the RECORD an address of the Secretary of the Interior, Hon. Fred A. Seaton, delivered before the 84th Annual Assembly of the Chautauqua Insti-

tution at Chautauqua, N. Y., on July 8, 1957.

This remarkable address should be read by every American because it bears out the injunction that where there is no vision the people perish. The importance of conservation to the future of this country is so great and so pressing that statesmanship requires a long look into the future.

Such a program as Secretary Seaton presents requires that all unnecessary expenditures of Government should be reduced to the end that necessary expenditures such as he suggests may be met without creating an unbearable burden of taxation.

I am very proud to have had this fine address delivered by Secretary Seaton in my congressional district.

The address follows:

"There can be no greater issue than that of conservation in this country."

That was Theodore Roosevelt speaking in 1912.

At the outset let me make this emphatically clear: Conservation is still an issue of the first magnitude. It affects our lives, the lives of our children and grandchildren, the fate of freemen everywhere. It's a vital and a huge undertaking—so vital and so huge that it is the proper concern of all our people—and I do mean all.

It requires, of necessity, enormous Federal expenditures, totaling hundreds of millions of dollars every year.

It requires, of necessity, a galaxy of State and local works, public and private.

And it requires, of necessity, the widest possible public knowledge and understanding and support.

I am therefore delighted to join with you here. I applaud what Chautauqua is doing to widen public interest in, and support for, the wise management and use of our natural resources. This series is another magnificent accomplishment in a long line which, going back for more than 80 years, have brought Chautauqua its justly deserved fame.

Our responsibility in 1957 is unmistakable: As was in the case with Alice in Through the Looking-Glass, we have to keep running just as hard as we can in order not to fall behind, if we are to have sufficient natural resources in the future.

Why is this so? One immediately apparent reason is the enormous growth in the American population. Only a few months ago we passed 170 million. By 1975 we shall number 221 million and probably more.

Really, though, the greatest reason is the inexorable appetite of our modern industry. Since 1900, our daily per capita use of water has nearly tripled. Since World War II our per capita electrical energy consumption has more than doubled.

Of all the oil and natural gas ever consumed in this country, half has been used since 1940. Of all the coal ever burned in this country, half has been burned since 1920. Year by year these consumptive totals go up and up.

As a nation, by 1975 we shall need about 453 billion gallons of water per day, nearly twice as much as we need now.

As a nation, by 1975 we shall need 321 million kilowatts of electrical generating capacity, nearly 2 times as much as we need now.

Have you ever turned the handle on a faucet and had nothing but a cough of air come out? That's a water shortage, right in your own home. Thousands and thousands of Americans have endured this experience in recent years.

Six to twelve months ago families in nearly 1,200 communities from coast to coast had experiences like that. Water use in those areas was curtailed, often to an alarming degree. The Southwest recently suffered under a severe drought of long duration. For a while, drinking water in Dallas sold for nearly three times the price of gasoline.

Today water is more plentiful. But can we be sure that our supply will continue to be adequate? Certainly not. Despite all our hopes, water shortages in certain areas will come again. And if we were so foolish as to lull ourselves into a false security, to stop our many water conservation efforts—like Alice, stop running—region after region throughout American would inevitably find itself short on water for baths, for lawns, for crops, for livestock, and for a host of industrial products from steel to plastics.

That's why the Corps of Army Engineers and the Bureau of Reclamation have to keep on building huge multiple-purpose dams, the scope of which is beyond the capability of non-Federal interests.

That's why, last year, in the biggest single piece of legislation ever enacted for such a purpose, the Congress of the United States authorized the upper Colorado project, a development which will bring water to 360,000 arid acres in the West.

That's why the Federal Government must continue to work in harness with municipalities, farmers, and local irrigation districts in protecting upstream watersheds and preventing devastating floods.

Such measures today are a matter of simple and incontrovertible necessity. Through them we capture an ever greater fraction of the water that falls from the skies and courses down our watersheds, from the Continental Divide to the oceans. Presently the 17 Western States put only 31 percent of their available fresh water to full beneficial use. The Eastern States use 12 percent.

As a people, we must continue in our determination to increase—unremittingly increase—these percentages. We can't afford this loss.

In the years ahead we must do even more. We must go to the sea itself and bring back from it fresh water to make life possible on the land.

Samuel Taylor Coleridge's Ancient Mariner saw plenty of water but not a drop to drink. Now scientists have long known how to make seawater drinkable. But the cost of the process has almost always prohibited its commercial application. As recently as 5 years ago, conversion cost $500 to $1,000 per acre-foot. But today, thanks largely to private research conducted under contract with the Department of the Interior, it is expected that this cost can be brought down to $200 an acre-foot, or 60 cents per thousand gallons, and even less in the near future.

In general, our expectation is this: In 5 to 15 years we shall have fresh water from the oceans at prices which some industries and municipalities can afford to pay.

Not all saline water is in the ocean, I remind you. There's lots of it under the soil of some of our Western States, brackish water which is now good for little or nothing. Sosemday farmers in these States will be pumping this water to the surface, running it through small household or cooperative conversion units, and then using it for at least limited agricultural purposes and for human consumption.

While we are looking ahead, let's consider another field, that of electric power. Great transformations are taking place here, too. And here again, teamwork—between the Federal Government, the States, local public interests, and private enterprise—is an absolute necessity if we are to win out.

We don't know, of course, how long our conventional sources of electricity will last. But they will certainly not be with us forever. New sites for hydroelectric power development are steadily decreasing in number and desirability. In the next 20 years falling water can provide only 8 percent of our new electric-generating capacity.

We have lots of coal. For many years it will be available for economical burning in electricity-producing steam plants. But the coal in our mines travels only one way, up. Every time we blast loose a ton, we reduce by that much a supply which is irreplaceable.

Yet our national need for power is steadily increasing; it will triple in 20 years.

What do these facts mean? Two things: First, if we are to keep on top of the rising demand, we are going to have to enlist every possible kind of cooperation. The Federal Government alone cannot, should not, and will not pay the nearly $100 billion for the new power-generating capacity we shall need within the next 20 years. Teamwork is the only answer.

Second, we must continue an unremitting search for new energy sources. Through teamwork with cooperatives, public power districts, and private industry, the Federal Government is doing just that in its nuclear power program.

On Labor Day of 1954 the President of the United States, out in Denver, closed a switch. Construction began on the United States first large-scale civilian atomic energy powerplant near Shippingport, Pa., outside Pittsburgh. By next Christmas the reactor in that plant should start to warm up. And early in 1958, commercial atomic electric power, from a generating capacity of 60,000 kilowatts, will go onto the transmission lines of the Duquesne Light Co., which will carry it to factories, homes, mines, and farms in and around Pittsburgh.

This is only the beginning. For example, right here in New York State, at Indian Point, just 60 miles north of Manhattan Island, a 275,000-kilowatt plant is being built. It is scheduled to be ready by 1960.

If these and 12 other projected plants are completed on time, by 1962 there should be about 1,300,000 kilowatts of nuclear generating capacity serving the cities and towns and rural areas of this country.

Now, I don't mean to exaggerate that figure: It represents less than 1 percent of our estimated 1962 generating capacity. It does, however, provide a crystal-clear reflection of what the future will bring.

The cost of hydroelectric power and conventional steam power are continuing to go up—and that of atomic power is coming down. Although Shippingport electricity may initially cost 52 mills or more per kilowatt-hour, the Atomic Energy Commission estimates that by 1964 nuclear power costs will be down to 10 to 13 mills; by 1967 down to 9 to 11 mills; and by 1980 down to 6 to 7 mills. This generating cost is therefore expected gradually to compare favorably with that of conventional steam power generally ranging today from 4½ to 9 mills per kilowatt-hour.

America's commercial nuclear power industry and a child born yesterday may well grow to maturity together.

Nuclear power is almost competitive now with conventional steam power in much of Western Europe where coal is expensive or even lacking, oil is costly and its supply precarious, and hydroelectric sites are for the most part developed or nonexistent. So 6 European countries are now in the process of banding together to boost the Continent's production of nuclear energy; they hope for a generating capacity of 15 million kilowatts by 1967.

Here in America we are fortunate to have the time, because of our abundant coal and liquid and solid petroleum resources, to bring the costs down before we find it necessary to go into nuclear power on a large scale.

When we do, we shall have a virtually inexhaustible source of electrical energy. One pound of fissionable uranium, once we

learn how to burn it completely, can produce as much heat as 2.7 million pounds of coal.

Every dollar that goes into our nuclear power program today is a dollar invested in a good life for our children tomorrow.

The good life is more than goods and services. It includes, of necessity, manifold opportunities for growth and fulfillment, in body, in mind, in heart, and in soul. Our children, and we ourselves, must know what it's like, again and again, to stand on a spot hallowed by history, to pass whole days on a lake or a stream, to set foot on wilderness trials, to view the world from a high mountain top.

Such experiences help set the spirit free.

The attainment of spiritual ends, however, often requires practical means. To assure the continuance of such opportunities we must act—now.

On our great scenic, wilderness, and historic areas, on our fish and wildlife resources, our immense national growth and way of life are having an unbelievable impact.

This state of affairs is not going to cure itself.

With more spare time and more and better highways, more and more people are coming to the national park areas. Thirty-three million came in 1950. In 1955 there were 51 million; in 1956, nearly 55 million. This year we may have 60 million visitors in the 181 areas of our national park system.

The meaning of this is unmistakable: Either we continue to be busy, now, to keep up with these demands, or we write off our national parks as we have known them. I'm happy to say the Eisenhower administration's response has been unhesitating and forceful; it bears the label of mission 66.

This is a $900 million, 10-year program scheduled for competion in 1966—the year of the golden anniversary of the National Park Service—when the number of national park visitors is expected to exceed 80 million.

There has been nothing like mission 66 in the 45 years since February of 1912, when President Taft sent a special message to the Congress earnestly recommending establishment of a Bureau of National Parks.

There is now before the Congress legislation, backed by the administration, to establish a National Outdoor Recreation Resources Review Commission. The establishment of such a commission will focus the thinking of many organizations—Federal, State, and local, public and private, on our recreational resources needs. It will enable us, all of us together, to plan ahead, to know clearly where we are going in the field of outdoor recreation.

Conservation decisions today have to be right. With every passing year, our growing population and our increasingly voracious technology shrink our time to plan and our room to err.

Yet the questions to be answered become more and more knotty.

Should we build a dam across a canyon and create a great artificial lake for flood control, water supply, irrigation, power, navigation, and fish and wildlife recreation, thereby perhaps impairing the natural beauties of the canyon?

Shall we provide for the permanent flow of water in the streams to preserve the fish and wildlife, at the possible expense of reducing water storage?

Should water once impounded be released for the manufacture of firm power or held back for the needs of irrigation?

What provision shall we make for public recreation around the reservoirs we build? Is that a Federal obligation, a State obligation, or a mixture of the two?

Should the reservoir be considered a national recreational area? Or is it a project which will be enjoyed mainly by residents of a relatively small area and which therefore should be paid for by the people who use it?

Each correct answer to such questions is a stone in the structure of America's future. If the structure is to endure, to stand strong and sure against the stresses and strains of the future, it can only rest on the bedrock of the enlightened cooperation and understanding and support of the entire American citizenry.

We have no choice but to so build it. Our hopes, and our children's hopes, for an everincreasing economic abundance depend on the degree of our success. And so, in a large measure, does human freedom.

In a very real sense the United States is the bastion of the free world. Much of the physical strength of this mighty fortress is in its mines, its forests, its croplands, and its rushing rivers.

We, all of us in teamwork together, will not fail. We will pass on to our children and grandchildren something which they have every right to expect from us, a heritage unimpaired, and if possible even improved. Given this legacy, on this land but in their time they will be able to search out wider horizons than we have yet found, to discover new ways to better their lives, and to bear well their part in enlarging the scope of freedom and civilization and happiness around the globe.

Foreign Aid and Constitutional Complications

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and thought-provoking article, by the Rev. Wilfrid Parsons, S. J., which appeared in the April 27, last, issue of America commenting upon the outlook of long-range foreign aid.

I think this succinct editorial provides a valuable contribution to the understanding of foreign-aid legislation and I recommend its reading.

The editorial follows:

WHAT PRICE FOREIGN AID?

When the Congress left for its 12-day Easter vacation, there began a tacit armistice between it and the President's program of $4.4 billion foreign military and economic aid. There continued, however, deep rumblings from this suddenly economy-minded Congress. Senator HARRY F. BYRD (Democrat, Virginia), "Mr. Economy" himself, was responsible for the uncontradicted statement that the Government already had a reserve of over $70 billion of appropriated but unspent funds, which, added to the $71.8-billion budget, made $140 billion plus that the administration was really asking for all purposes, but mostly military. Some of this money was appropriated 3 or 4 years ago.

On this a correspondent of mine, Attorney Frederick J. Gillen, of Lawrence, Mass., raises an interesting constitutional point. He writes:

"You are so right about the 'billions of appropriated funds that go into the pipeline, especially in foreign aid and defense, and do not come up again as spending for 2, 3, 4 years.' But what about the constitutional limitation contained in article I, section 8, clause 12?"

The clause quoted reads: "[The Congress shall have power] to raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years." This raises the question, of course: do appropriations allowed to lie around for longer than 2 years lapse automatically?

I do not know the answer to that, but Mr. Gillen himself supplies a couple of guesses. He quotes an obiter dictum by the United States Supreme Court in the case of *Woods v. Miller* (1948), which seems to imply that in time of war, or in a peacetime emergency, the powers of Congress may be swallowed up." He also quote Story (Commentaries, 11, sec. 1185): "It is vain to oppose constitutional barriers to the impulse of self-preservation."

However that may be, Congress does not like to bind succeeding Congresses, and recently Minority Leader WILLIAM F. KNOWLAND (Republican, California) demanded that all military appropriations be limited to 1 year, after which the administration must come back with an accounting of all funds spent and unspent, and ask Congress for new money.

This runs head on into State Secretary Dulles, who in a trial balloon before Congress proposed long-term loans, or even grants, for military aid and for economic purposes. However, the loans would probably be made by the Export-Import Bank, the Government's lending agency. This would avert the long-range constitutional objection, of course.

Moreover, as this review pointed out last week, Mr. Dulles agreed to separate the economic phases of aid from the military, the latter to be administered by the Defense Department and appear on its budget—under the direction of the State Department, of course, as part of foreign policy. The International Cooperation Administration would distribute economic aid, from past appropriations and new loans or grants. Thus the foreign-aid program is indeed given a better chance, though by a close margin.

Court of Law or Court of Policy?

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. OSTERTAG. Mr. Speaker, in its careful and perceptive analysis of recent Supreme Court decisions, the Buffalo Evening News stresses something which we in this House must never forget: Namely, that if the Court has gone too far in substituting sociology for law, Federal supremacy over the States and liberty to the point of license, we in Congress have both the authority and the responsibility to act. The remedy lies here under the Capitol dome. Macaulay called our Constitution "all sail and no anchor," and certainly the Court has given cause to recall that warning. But Congress can let go the anchor any time it sees fit. Let us bear that in mind.

Under leave to extend my remarks, I include in the RECORD the concluding editorials in the Buffalo Evening News' series:

REVOLUTION IN THE COURT, III—THE GOOD AND THE BAD

Thanks to the Supreme Court, the United States is in the midst of a constitutional

revolution. And as with every revolution, even where many of the objectives are indubitably good, this one is spreading some legal havoc in its wake. Whether the good will outweigh the bad in the end is always the question.

One aim of the Warren Court's bold use of its vast powers of judicial review, it is already clear, is to revitalize the Bill of Rights and strengthen the protection of citizens against abuse by their big government.

This is good, and we have applauded it, as in the Watkins decision which told Congress it could not force reluctant witnesses to testify if it was just engaged in exposure for exposure's sake. But the zeal of the Warren Court for the Bill of Rights in this and many other recent cases has nevertheless gone far toward destroying, in the name of individual liberty, the powers of the Government to fulfill some of its basic constitution functions—to "insure domestic transquillity * * * provide for the common defense * * * and secure the blessings of liberty"—against its sworn enemies.

As a result, both Congress and executive agencies have been thrown into a state of confusion as to how they can fulfill their investigative and law-enforcement responsibilities within the muddled framework of the Court's decrees. Already, for example, Congress, at the urgent request of the Justice Department, is busily trying to protect the FBI files against being thrown open to the browsing of defendants under the Jencks decision.

Another aim of the Warren Court's revolution is to assert the power and determination of the Federal judiciary to guarantee equal protection of the laws to citizens of every color, wherever they reside. This aim, we have also applauded—as in the antisegregations opinions of 1954 and 1955. But here, too, the Court, in revitalizing the 14th amendment, has given short shrift to the 10th (States rights) amendment—and, in its more recent opinions, it has kicked States rights all over the lot in cases for removed from civil rights.

Indeed, the 1956 Steve Nelson decision deliberately ignored a contrary mandate from Congress to find that the congressional intent, in enacting antisubversive legislation, was to preempt the entire field, thereby invalidating every State law on the subject. Now, in 1957, it has gone farther and made a shambles of the principal Federal antisubversive statute, the Smith Act.

What is both revolutionary and chaotic about this recent pattern, however, is not the case-by-case result, but rather the sweeping, history-making language with which so many of the decisions are rendered. Where the old rule had been to follow precedent where possible and avoid far-reaching constitutional conclusions when narrower grounds existed for reaching the same result, the Warren Court has rushed to go far beyond the case at hand.

Thus, in the Nelson case it did not merely reverse a conviction because it found the Pennsylvania law too vague, but went on to invalidate every other State antisedition law. Likewise, in the Jencks case, the Court startled even the defense by giving it far more than it had asked. And in the du Pont case, it found no monopolistic wrongdoing, but reached deep into the mystical recesses of the antitrust laws to declare that too big is too big, and du Pont and General Motors just had to "break it up." Even more conspicuously in the Watkins case, Chief Justice Warren wrote a whole new book of don'ts for congressional investigators before coming back down to the narrow issue on which Watkins' contempt conviction was reversed.

It is this seemingly deliberate use of narrow cases as an excuse for rewriting the law in bold and far-reaching language that has done more than any actual pattern of decisions to turn the Warren Court from a court of law to a court of policy. And it is this, coupled with its disregard of precedent, its apparent unconcern over the problem of guarding the internal security against treasonous conspiracies, and its readiness to read heretofore unsuspected meanings into the intent of Congress or the Constitution that is bringing the Court into a constitutional crisis in its relations with the executive and legislative branches, and perhaps with the States and the people.

REVOLUTION IN THE COURT, IV—WHAT TO DO ABOUT IT?

For the second time in a generation, the United States Supreme Court has made itself the storm center of a constitutional crisis. But this one is different.

In the New Deal thirties, the complaint against the "nine old men" came from a strong Executive whose sweeping reform plans were being thwarted by a Court that refused to budge from its conservative reading of the Constitution.

The complaint against today's "nine strong men" is the reverse. It is that the Court, not the Executive, is hell bent for reform, misusing its judicial powers to make law and policy, and otherwise boldly reshuffling our constitutional system of checks and balances.

The last time the Supreme Court came in for this particular kind of criticism was during the long, historic reign of Chief Justice John Marshall. And there is a certain parallel between Marshall's bold use of judicial power and that by the Warren Court today. Indeed, an irreverent tribute to Marshall, written by Yale Law Prof. Fred Rodell in 1955, could stand as an admirer's tribute to today's Chief Justice:

"He used the Court to achieve the goals he was after, however he had to bend and twist the law. * * * Scorning past legal precedents to fabricate his own, turning tiny technical points into ringing * * * political principles, making mockery of the nice-Nelly notion of judicial self-restraint * * * he ran his Court with a realistic gusto as refreshing in retrospect as it would be deemed * * * indecent today."

Whether refreshing or indecent, the trend under the Warren Court has caused an unholy amount of consternation and frustration in legal, congressional, and executive circles, and in the States as well. Already, we have heard demands for everything from outright impeachment to legislation regulating the Court of curbing its jurisdiction.

Much of this, in our opinion, can be dismissed as extremist claptrap. In fact, a point that some critics miss is that, on some cases for which the Court is most harshly criticized, the last thing in the world that public opinion would support is a reversal. The segregation cases, for example, have inflamed the South but have won the solid political endorsement of the rest of the country.

On any case turning on the interpretation of a statute, the remedy for a bad decision is obvious: If Congress feels its intent has been misread, it need only pass a law to clarify it. The most glaring example is the preemption doctrine laid down in the 1956 Nelson case, where the Court said that when Congress legislates broadly against an evil (subversion), parallel State legislation cannot stand. If Congress disagrees with this, it should certainly reverse that doctrine by declaring explicitly that its actions are not to be construed as preempting any State power except where that purpose is clearly written into the law.

The remedy for every other misreading of Congress' intent likewise rests with Congress. It is where the Court is interpreting the Constitution itself tha it has the final word—and if it does too much violence to public opinion on this kind of issue, it can provoke a true constitutional crisis.

There are only certain extreme ways, after all, to reverse the Court on such a question. One is by resort to arms, as the Dred Scott case was reversed by the Civil War, Another is by constitutional amendment, as the income tax was finally validated in 1913. Another is by packing the Court, as Roosevelt tried to do in 1937. A fourth is by evading or nullifying a decision, as the Deep South is desperately trying to do on segregation.

Generally, however, the Court has been wise enough not to let a constitutional crisis go to such extremes. In 1937, the Hughes Court modified its constitutional interpretations enough to defeat the Court-packing plan. Today's Warren Court has refrained from rushing too fast to enforce integration. And even on its most sweeping Bill of Rights decisions it has thus far left open plenty of avenues of retreat. In one area, it has already drawn back from the libertarian extreme some lawyers read into a recent Michigan censorship case, by upholding four State and Federal actions against obscenity.

So far, the worst effects of the Court's constitutional reinterpretations have been to spread confusion and invite future litigation. In that sense, the Court has stored up more trouble for itself than anyone else, and it may be a long time in clarifying the new rule of law it is trying to put in the place of the settled precedents it has so casually brushed aside.

If Congress reacts to the Watkins case by better respecting the rights of witnesses at future investigations, we suspect it will still be able to punish plenty of contemptuous witnesses. And if it passes a careful law to preserve the integrity of the FBI files, we will be surprised if the Court does not let it stand. The Warren Court, in short, has used its powers so boldly that a constitutional crisis may well be in the making—but so far it has not reached the point where the siuation is beyond the Court's control. Whether the "nine strong men" will be wise enough to keep it that way is the great unanswered question.

Pox on Suburbia

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. SHELLEY. Mr. Speaker, the April 1957, issue of the magazine Voice of St. Jude, a national Catholic monthly, carried a most interesting article entitled "A Pox on Suburbia," by the well-known Catholic author, Paul Brindel. Mr. Brindel's article discusses some of the effects he has noted on moral and religious values of family life resulting from the current widespread movement to the suburbs. It also speaks of the personal and community financial aspects of the mass relocation of city populations into the surrounding countryside. Whether or not one agrees with the conclusions reached by Mr. Brindel, his article is certainly thought provoking. To those of us who have accepted without serious analysis the belief that life in the new suburbs clustered around our cities is an unmitigated blessing, it would seem that the points brought out by Mr. Brindel merit taking a second look at this outstanding sociological development of our time.

Under unanimous consent, I include the article in the RECORD with these remarks so that we in Congress, who have much of the responsibility for the programs under which these developments have been built, will be aware of some of the less obvious factors involved. As a strong supporter of the various public housing programs instituted by Congress, I feel that the possible need for concentration on encouragement of religious and cultural outlets in these communities should be examined:

A POX ON SUBURBIA

(By Paul Brindel)

I was visiting a suburban rectory not long ago, when the door chime sounded. The pastor answered. In about 10 minutes he returned.

"Another one," he explained, shaking his head. "Another family moving into the parish * * * three youngsters, another on the way. Station wagon. They came to see about school."

"So, you have no school, Father" I interrupted. "What did they say?"

"Same old story," replied the pastor. "Why, in the city every parish has a school. Why don't we have a school? When are we going to have a school? Why doesn't somebody do something about it? Why didn't the real estate salesman tell them? Why? Why? Why?

"So, they are getting a 4-bedroom home, 2 baths, double garage, choice of 4 appliances, big yard for the kiddies. All for no downpayment. That's fine. But what of these youngsters 10 or 15 years from now? What kind of Catholics will they grow up to be? And where will they spend eternity?"

This episode, with minor variations, has been reenacted the past several years in hundreds of suburban parishes from coast to coast. It spotlights the No. 1 problem and headache of scores of chancery offices. The Official Catholic Directory for 1956 emphasizes the continued flight of United States Catholics from the cities which began after World War II. The diocese reporting the largest gains—San Diego, Los Angeles, New York, Detroit, Youngstown, San Francisco, Chicago, Philadelphia, Boston, Rochester, and Newark all have booming suburbs.

Actually, more Catholics moved last year to suburbia than arrived from Ireland in any decade of the 19th century. How the church faced and met the problems of that mass migration is history, much of it creditable. Last year the United States Census Bureau reported one-sixth of our Nation's population now reside in suburbs—6 million Catholics. This is more than the entire migration of European Catholics to the United States prior to 1890. How fare these 6 million suburban Catholics?

Any comprehensive answer would require an entire issue of this magazine, or even a book. For there are many facets of suburban Catholicism—apathy, intolerance, discriminatory zoning laws in respect to parish schools and even churches; social and neighborhood pressures for uniformity and conformity; more suburban parishes without schools today then 10 years ago and few producing vocations; teen-agers who never have read a Catholic book or periodical, never have heard an Angelus bell, or have attended a mission or inquiry class; who belong to no Catholic organizations, nor do their parents.

That is one side of the picture. Turn it over, and you can find almost the reverse. For there are two kinds of suburbs. One is the village or town in existence long before World War II or even World War I. Some of these older suburbs have parishes as strong as in many cities—half a dozen Sunday masses, excellent music, active Holy Name, CYO, Sodality of Our Lady, Knights of Columbus, Catholic Daughters, Legion of Mary, Confraternity of Christian Doctrine, and whatnot. Yet while most of these older suburban parishes have schools, nearly all have long waiting lists.

Unfortunately, it is to another kind of suburb that a million or more people have moved in the past decade—brandnew communities, hundreds and even thousands of houses thrown up since 1946. Into these have been siphoned families from a score of States with their hates, their loves, their passions, their prejudices—another melting pot. Ninety-five percent of these homes have 1 child; many of them 2; the average is pretty close to 3. They will be the America of the 21st century, and they are growing up in communities with no background or traditions and usually no leadership; overcrowded public schools, inadequate mass transportation, frequently defective streets and sewers, seldom a Catholic church, and almost never a Catholic school.

All suburbs, old and new, have one thing in common—soaring taxes now averaging $1 a day on many homes, plus huge community bond issues for public schools, sewers, streets, fire and police equipment, sidewalks, lights, playgrounds, and even swimming pools. Like their communities, most suburban dwellers are mortgaged to the hilt. The no downpayment ranchhouse with white picket fence has become for thousands an economic Frankenstein, especially for Joe Catholic, who, no matter how great his zeal, can build a parish church and school only in terms of family financial solvency.

Unfortunately, only in recent months has the spotlight of realism been turned upon our booming suburbs. The Saturday Evening Post of September 17 and 24, and October 1, 1955, was the first national magazine of mass circulation to publish a critical report—Trouble in the Surburbs. The author, Hal Burton, warned that many suburbs may well be the slums of the future. Similar articles suggesting that all is not well in Suburbia, appeared in April Cosmopolitan and July Redbook last year. The Voice of St. Jude is one of two Catholic magazines to look critically at Suburbia. The St. Louis Jesuits also have scheduled a Queen's Work pamphlet by this writer on the subject.

The first of what may well become a deluge of critical suburban books was published in January by conservative Houghton Mifflin of Boston. Authored by John Keats and titled "The Crack in the Picture Window," this book would seem to be required reading for anyone contemplating a suburban home. Typical of reviews from coast-to-coast, Bernardine Kielty in the February Ladies Home Journal commented:

"This is a documented disclosure of the evils of the new housing developments that are now growing up around our American cities. The author points out the slipshod building, the all-too-frequent swindling of the young men and their brides and coming families, the deadliness of living in such intimacy with people with whom one has nothing in common but income, and the matriarchal system that eventually prevails."

By contrast, most metropolitan newspapers which have collected millions of dollars in advertising revenue from suburban real estate promoters are strangely reticent. There is a shocking parallel between their Pollyanna attitude, including acceptance of misleading, if not fraudulent, advertising, and their all-is-well policy prior to the 1929 Wall Street crash. A typical example is San Francisco Examiner advertisements as recently as January 27. Listen to this:

"Recognized nationally. Featured in the New York Times, Harper's, House & Home magazines. California's most desirable climate. Prestige location, luxury living. Not a tract look. A planned community of 4,000 homes, shopping centers, schools, churches. A very few choice homes still available from $88.68 per month. Includes principal and interest."

Sounds wonderful. However, the official records of the department of real estate of the State of California tell a tragically different story—4 miles to the nearest shopping center—4 miles to the nearest high school (1 grammar school with $200,000 bonded indebtedness recently opened)—less than 500 homes actually occupied. And of course no churches—not even one under construction. Moreover, the plain speaking daily newspaper of this suburban county headlined October 30 last how some 70 buyers in this Utopia had been refunded their deposits.

If the suburban picture is so sour why have millions flocked there in the past decade? Probably the best answer is the old proverb: "Never look a gift horse in the face." Until a few months ago, any World War II or Korean veteran earning $100 a week could move into his dream home with absolutely no downpayment. Closing costs—meaning title charges, appraisal fees, water meter, sewer hookup, insurance, impounds for estimated taxes, and so forth—were absorbed in the GI loan. How could you miss? Well, even a $15,000 dream home adds up to over $30,000 with interest for 30 years, plus taxes, maintenance, and depreciation.

The Veterans' Administration a year ago conceded that GI defaults—a polite name for foreclosures—were over $100 million, despite the then booming realty market. What will happen when today's surplus of speculative suburban homes is liquidated—Newsweek of January 28 asked on its cover: "Have We Built Too Many Homes?" In some suburbs, foreclosed GI homes are renting for barely enough to cover monthly payments—principal, interest, soaring taxes, and expensive repairs resulting from shoddy construction. Thousands of GI home buyers attempting to sell their equities—payments over several years, landscaping, improvements, painting, and so forth—are finding few cash buyers. Some accept personal notes or second mortgages and hope for the best. Many for the first time become aware of the fine print in their mortgages—of caveat emptor, let the buyer beware. They learn with dismay that if the lender sustains a loss, he will go back to the Veterans' Administration which guarantees all GI loans, the VA in turn looking to the original buyer for any deficiency for the entire term of the mortgage—20, 25, or 30 years.

So much for a housing program supposedly designed to provide low-cost homes for World War II and Korean veterans, but which already has cost United States taxpayers approximately $1 billion just to underwrite the one-half of 1 percent charged for GI mortgage insurance. (On FHA loans, the buyer pays this loan-insurance fee.) Moreover you and every man, woman, and child in the United States are paying in terms of inflation for the suburban housing boom—75 percent of all new construction since 1945 has been in the suburbs or "urban fringe areas." Could all this have been avoided?

Three major "pressure groups"—organized labor, the veterans' lobby, and the National Association of Home Builders—have allied themselves for nearly a decade to make a political football out of GI and FHA home financing. Months ago, William Levitt, who has built and sold more homes than any American, bluntly charged that duplicating GI and FHA loan programs were wasting $500 million to $700 million a year which the public pays.

It will shock residents of 47 States that California, since 1922, has provided over $635 million worth of homes and farms for 100,000 veterans of that State at an interest rate of only 3 percent, instead of the 4½-percent GI rate, plus discounts up to 10

percent or more. (For a $10,000 GI mortgage, some suburban builders are receiving only $9,000 actual cash.) Furthermore, California's veterans home program has not cost the State's taxpayers 1 cent. Actually, there is a current surplus of over $15 million. No wonder that California voters last November enthusiastically voted another half billion dollars in bonds for this Cal-Vet home program, and that these bonds were snapped up by banks and investment houses.

This is one reason why a California veteran buying a State-financed home frequently gets for $10,000 a home comparable to a $15,000 GI home in the same suburb. There is also the factor that the Cal-Vet program since its inception has been operated by veterans and for veterans, rather than for the benefit of money lenders, land speculators, "fast buck" builders, and suburban "developers." Cal-Vet appraisals are tough and realistic and for good reason—the State actually purchases the home or farm submitted for approval by an eligible veteran (he must have enlisted or been drafted from California). The State retains title and enters into a contract of sale with the veteran. Monthly payments include life and disability insurance. Not 1 home in 20 meets Cal-Vet standards.

Last May while inflationary no downpayment, 30-year GI loan commitments were still being issued by the hundreds to marginal speculative builders, J. Marvin Russell, head of the Cal-Vet program warned: "There is a lot of trouble brewing in the building field, but we have been very thorough and careful in our appraisals and will be able to make some excellent buys." You, too, can find some excellent buys if—. Would you buy a used car without having a mechanic friend look it over or without a warranty from a reliable dealer? Use the same kind of foresight when seeking your suburban home. Remember the better business bureau warning: Investigate before you invest.

Where will your wife do her shopping and at what kind of prices? What about doctors, dentists, and hospitals? What will your monthly commuter's ticket cost in comparison with your present city subway, trolley, or bus? Will you need a second car? Your present city apartment probably includes gas, electricity, water, and heat. Your suburban home will not, and most suburban utility rates are higher than in cities.

Spend several weeks or several months in the suburb in which you plan to buy. Above all other factors, examine that suburb and your new home in terms of your faith—what shall it profit a man to gain the whole world and lose his soul? Attend mass in the nearest Catholic church—talk with the pastor and some of your new neighbors. Ask questions.

Should you move to Suburbia? Your decision may well determine whether your children and their children will be apostates. The odds are at least 3 to 1 against a suburban child receiving a Catholic elementary or high school education today or within the next decade.

Our fourth pastor in 12 months read our annual parish report at 6 masses on January 13 * * * 2,500 now in the parish, doubled in 4 years * * * contributions also doubled * * * no parish debt and $40,000 paid last year on pledges toward a school. However, that school, hoped for by 1960, will cost over $200,000, including housing for the Sisters—if any are available. In the meantime 450 of our parish youngsters will continue to attend our 4 public grammar schools built since 1948 and costing over a million dollars (50 cents out of every tax dollar in our State goes for public education.)

Our suburban county has one Catholic high school, for 25,000 Catholics, yet it is not operating at capacity. From our parish, less than a dozen attend that high school as compared with 50 Catholics in our just opened local million-dollar public high school with its 45-acre campus, free bus transportation, "snap courses," etc. Why?

Well, our county Catholic high is 13 miles away, involving either a car (minimum insurance premium now for any drivers under age 25 varies according to county from $240 to $370) or 81 cents a day roundtrip bus fare. Figure in monthly tuition, lunches, textbooks (they are free in our State to public school pupils) and you have at least $75 a month extra for a Catholic high school education—even if Junior is agreeable.

Remember, ours is a parish 65 years old—church, rectory, and $100,000 parish hall—paid for. What about new suburban communities with none of these things, where Sunday mass means driving 5, 10, or even 15 miles? Soon you fall into a typical suburban routine—you go one Sunday, mother the next—somebody has to stay home with the toddlers. If you are late, you stand as thousands do in overcrowded suburban churches. A year or two and you suddenly realize it has been months since you approached the communion rail. Deprived of the grace and strength of the sacraments, only an exceptional Catholic can avoid the daily erosion of the family's faith.

In many city parishes, Catholics usually are to be found in every block, frequently they are in the majority. Probably your missus, Agnes Burke and Ellen O'Leary now share morning coffee, a rosary, do a bit of sewing for the Order of Martha, exchange Catholic magazines and books. In most suburbs, Catholics are spread thinly indeed—the 2,500 in our parish are scattered over 75 square miles, almost twice the area of San Francisco. And our pastor has no help except 2 priests from out of town for Sunday masses. No wonder that in many suburbs, the faith is stripped down to bare essentials—daily mass, sufficient Sunday masses to keep standees within the fire laws; confessions, baptisms, an annual confirmation class; Saturday morning instruction for hundreds of children attending public schools; once-a-month sick calls, and funerals.

Parish organizations? Well, who will supervise them and when? Our 65-year-old parish had no Holy Name Society until 1953, no Knights of Columbus until 1954; our CYO is only 3 years old. A choir? How much music can you have with Sunday masses every hour from 7 a. m. to noon? A parish library? There are 3 in our entire suburban county. A magazine and pamphlet rack? The New Yorker, published 3,000 miles away, has more circulation in our county than any Catholic publication, including our archdiocesan newspaper. Our county public library has 14 branches, plus 2 bookmobiles, but its Catholic books total less than 60 titles, and these include best sellers such as The Nun's Story, The Cardinal, Fallen Away, etc.

Ninety percent of our county's 25,000 Catholics own automobiles, some 2 or even 3. Some of us have homes with a current market value of from $25,000 to $60,000. We are more affluent than any group of Catholics in history, but in terms of militancy, Catholic action and community influence we are almost bankrupt. Twenty-five percent of our public school enrollment is Catholic, but our parish never has had a school trustee. Our Rotary and Lions Clubs have less than a dozen Catholics, in both.

Most suburbs have only one movie. These, even when Catholic owned, ignore Legion of Decency ratings. What of your pledge "to stay away altogether from places of amusement which show them (indecent and immoral films) as a matter of policy?" Adults can drive 50 miles to the city for one of those rare, worthwhile films. But what will you say when the youngsters next door ask, "Why can't Patricia and Jerome go see Baby Doll with us?"

Your wife joins Suburbia's Book Study Club. Does she remain silent when Peyton Place or The Ninth Wave are discussed, and praised, but never a Catholic book? The county grand jury investigates a public high school library, and your PTA goes into the matter. How will your wife answer the alibi of "book burning" and "censorship"? Will she read an editorial from a Catholic magazine asking how those books got into the library when even excerpts from them have been banned from the United States mails as "obscene, lewd, lascivious, and filthy?"

The Under Thirty Club invites you to join—folk dancing, bridge, barbecues, etc. Then you discover that the club is an unofficial organization of the Presbyterian Church. Do you resign, or—? You are asked to serve on the annual Salvation Army fund raising committee. After all, "the Salvation Army does a lot of good" and a Catholic banker in an adjoining suburb is treasurer. What will be your decision? Neighbor Jones builds a cute "wishing well" in his yard. You order a wayside shrine from the Town & Country Apostolate of the Diocese of Worcester, affiliated with the National Catholic Rural Life Conference. Soon "the deep freeze" is on. "Why, we didn't know you were Catholics." Some of the oldtimers in the parish shake their heads. "It's all right to be a Catholic, but let's don't make an issue of it; hurts business, you know; look what happened to that writer who shot off his mouth; do you want to be hanged in effigy?"

There is nothing new in all this. From 1577 to 1829, English Catholics faced this same challenge. To them, as today in suburbs from Long Island to California, cooperation and conformity were made to sound very appealing, very plausible, very harmless. Many of them, too, went along with their neighbors, but hundreds suffered martyrdom and thousands were bankrupted by ruinous penal laws.

Do you still want to move to the suburbs?

States Rights, Security, and the Supreme Court

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address of President Louis C. Wyman, National Association of Attorneys General, 51st national conference, Sun Valley Lodge, Sun Valley, Idaho, June 24, 1957:

STATES RIGHTS, SECURITY, AND THE SUPREME COURT

Reverend Clergy, Lieutenant Governor Larsen, our genial host, Graydon Smith, members of the national association and their lovely ladies, distinguished guests, and friends, because of the very problem to which my remarks this noon are addressed, our good friend, Hon. Louis Nichols, Assistant to the Director of the Federal Bureau of Investigation, cannot be with us this noon. For this reason, instead of delivering the President's address at the morning session, Attorney General Smith has asked me to do so this noon. Because I think that the matter with which it is concerned is of national importance as well as a great deal of direct interest to everyone who is here, I

shall offer no apologies for being serious this noon. I hope you will bear with me for a few minutes, having in mind that while I am not adept at being a funny man myself, even it I were this is not a subject which at this stage of national affairs lends itself to jokes.

In earlier years I can well remember that the generation before me felt that youngsters of my time were becoming demoralized because they were staying out a little later, driving cars a little faster, and smoking cigarettes. Dire were the predictions of disaster for our generation, yet this was the generation that proved itself in World War II, and the situation did not turn out to be as bad as some people thought. At the same time today parents worry about the contempt of modern youth for parental control, cynicism toward principle and precept, and we are all concerned about some youngsters' lack of respect for law and justice generally.

Between certain types of television shows and parental preoccupation with the cocktail hour, as well as with other matters—mostly material—there is genuine cause for concern lest the generation coming along is going to succeed to control of the helm without familiarity with and belief in the basic principles upon which our forefathers rested the Constitution of the United States. It may be that these fears will prove as groundless as those of our parents before us. I hope so. But this time the problem is a little different. For now it is not sheer deviltry, it is an infection of amoral materialism, a sort of modern-day cynicism that is supposed to mark contemporary sophistication beyond the usual degree attendant to the age of 21.

No matter the precise phrase, there is little doubt but what that great instrument through which Americans have devised perhaps the most satisfactory method of community living under a government of law and not of men, is being tortured out of all rational historical proportion by decision after decision of the United States Supreme Court. These decisions in their cumulative aspect seek by fiat of five appointed Justices to substitute a philosophy of government patently contrary to that contemplated by George Washington and the great figures of our early constitutional period. Such fiat involves certain basic assumptions concerning what is best for the American way of life and through these decisions in effect amends the Constitution to the point of usurping what has always heretofore been considered as the proper function of the constitutional convention in our pattern of government. Such decisions must further confound and confuse our youth who seek and deserve real understanding of the true relationship between state and individual, between communism and capitalism.

In recent years, even months, this country has witnessed the curious phenomenon of a Supreme Court decision on one day and a bill in Congress to set it aside on the next. Were such measures and developments peculiarly local in isolated cases they would be readily understandable, but protests and outcry against these decisions have mounted from north to south and from east to west across the length and breadth of the United States. Most recent is that group of cases decided a week ago today, June 17, 1957, a day which David Lawrence has aptly characterized as a fateful one in American history.

What was originally drawn as a compact between the States to create a Federal Government with certain express powers which were delegated in the compact—called a Constitution—threatens by decision of the High Court to become a one-way ticket to a Federal bureaucracy in which the position and authority of the individual States becomes less and less with every passing year. No one questions that the powers expressly granted to the Federal Government in article I, section 8, are powers best exercised by Federal authority for the common good. But when those powers are extended by the exercise of some sort of civil liberties preoccupation or underdog complex into the kind of decision that resulted in *Griffin* v. *Illinois*, or *Pennsylvania* v. *Nelson; Schware* v. *New Mexico; Konigsberg* v. *California; Jencks* v. *United States; Watkins* v. *United States; Sweezy* v. *New Hampshire;* and *Yates* v. *United States*, we face a common problem of the highest magnitude. This problem is the State's interest in its own survival.

The public record of Communist subversion both in this country and in many other countries around the world is notorious. It is equally notorious that responsible agencies within and without Federal and State Governments have repeatedly confirmed that the Communist Party in this country is an arm of the Communist Party in the Soviet Union with the objective of alteration of the form of government of the United States to a Communist state—whether or not through an intermediate step of socialism—to be attained by force and violence if necessary.

If our United States is to have any semblance of realistic national security, not essentially by guns or even bombs but through awareness of possible subversion and nonforgetfulness of the absolute enmity to the principles of freedom which has always characterized world communism, the Highest Court of the United States should not even hint that membership in the Communist Party is a mere matter of political association, much less hold, as it has in *Yates* v. *United States* that a subjective test is to be applied to advocacy of force and violence to overthrow the Government of this country and that the Smith Act permits advocacy of forcible overthrow short of incitement of direct action to that end.

A majority of the Supreme Court of the United States has held that at least as far as good moral character is concerned, membership in the Communist Party is apparently considered a mere matter of political asscociation privileged under the first amendment. No matter protestations of words in the opinion to the contrary (as the dissent points out), one cannot read the Konigsberg decision without observing that this is exactly what the High Court has done by telling a State court that on such a record there can be no reasonable doubt of the good moral character of an applicant for admission to the bar who refuses to answer the question of whether or not he is at the time of his application a member of the Communist Party in this country.

If this were not enough, the High Court a week ago today denied the right of the legislature of New Hampshire to inquire into the actual content of a required-attendance lecture at a State university by a former professor with a substantial record of association with Communists and Communist-front organizations, who had written that violence to preserve the Soviet system was justified but that violence to preserve the capitalist system was doubly damned—once for itself and once for its purposes, as well as more. This latter decision was rested on the astonishing ground, in part, that there was no assurance that a legislature which had delegated the investigation to an Attorney General wanted answers to the questions put: That this lack of assurance evidenced an abuse of authority in the face of a legislative resolution stating, "The Attorney General is authorized to act upon his own motion and upon such information as in his judgment may be reasonable or reliable * * *." In this case the High Court, in discussing the perennial problem of balancing individual rights with national security, dismissed the interest of a State in its own survival in an incredible dictum: "We do not now conceive of any circumstance wherein a State interest would justify infringement of right in these fields."

No matter the phrasing of words nor the rationale of individual members of the majority, it is plain that the elements of partnership between State and Federal Governments in the investigation of subversive activities have been sharply limited, if not destroyed. Mere questioning in legislative fact-finding does not stigmatize. It is the answers to questions that count. If the questions are ptrtinent and relate to a vital concern of the State they should be sanctioned, not struck down. The mere asking of relevant questions in fact-finding into possible subversion cannot destroy legitimate free speech.

Without being disrespectful, I believe it is a fair comment to characterize the language of the majority in the Sweezy decision as pure sophistry. The individual citizen in America must feel frustrated and helpless in the face of such reasoning reaching a conclusion contrary to the literal right of the governed to self-preservation. Democracy has the right of self-preservation. Freedom does not, and cannot, mean freedom to destroy freedom in this country. Preservation of academic freedom and the American way of life does not require the judiciary to constitute the campus an insulated cloister wherein the relevant question may not tread in seeking to detect the presence or absence of a virus that would potentially destroy both academic freedom and the American way of life.

We are lawyers. That we happen to be Attorneys General for the moment is either our good or poor fortune, as the case may seem to each of us. As lawyers we must have respect for the law and confidence in the integrity, ability, and enlightenment of our judiciary. The situation of the law in the field of Federal-State relations, and particularly in the field of subversive activities has never in the history of the United States descended to as low a point in terms of lack of public confidence as it has reached today. While of course I cannot speak for the Department of Justice, it must be apparent to anyone with a balance wheel in his head that the recent decisions relating to communism and the Communist Party; the tragic delay in disposal of the Subversive Activities Control Board orders relating to the Communist Party registration under the Internal Security Act of 1950; the requirement that confidential files and reports to the Federal Bureau of Investigation—which may include classified material—shall be open carte blanche to cross-examination in all criminal cases including prosecution for subversion; the decision that the board of bar examiners in New Mexico were required against their judgment to have in their bar association a man who had a record of previous membership in the Communist Party and previous criminal activities; the decision that the California bar may not deny membership to an applicant who refuses to answer whether he is presently a member of the Communist Party; decisions relating to extension of Federal control in the water cases; the decision requiring compulsory transcripts to the indigent in a State court in Illinois; and decisions in derogation of State labor laws not touching interstate commerce; all these have brought about a dangerous instability in our law, a lack of confidence in Government, and in the judicial structure of this Nation.

That this has been accompanied by such spectacles as those recently presented by the abuse of the fifth amendment by Dave Beck and his son for purposes for which most assuredly it was never intended, does not help this unhappy situation. What are people to think of the law when they read about such conduct on advice of counsel? What kind of a law do we have that can permit defiance of commonsense to the extreme that it cannot sufficiently define a point in testimony at which the fifth amendment begins

to apply? Must a lawyer always tell a client, "You can't even admit to knowing your own father lest under the doctrine of the Rogers case you may be construed to have waived your right to claim the privilege?" This is nonsense. It is bad public relations for the law.

It is in the interest of improvement of the administration of justice as well as restoration of public confidence in government that at the earliest possible time there should be a decision clearly, rationally, and firmly spelling out that the fifth amendment means what it always should have been plainly held to have meant, namely, that a truthful answer if given is honestly believed by the witness to possibly furnish a link in a chain of evidence which might lead to his conviction for a crime not outlawed by the statute of limitations, and nothing less. The fifth amendment is not a shield against informing nor a barbiturate for twinges of personal conscience.

It is most essential that we chief law-enforcement officers of the States, together with the law-enforcement officers of the Federal Government, in matters of criminal law generally, and civil liberties and subversive activities particularly, should operate in partnership as a team, and without opposition and rancor. Decisions of the Highest Court in this country, which again and again insult State sovereignty and derogate from the plain language of the 10th amendment, do not contribute to such a partnership.

Cooperation between the States and the Federal Government is a two-way street. If the Federal Government wants cooperation from the States then the judiciary should permit extension of real cooperation to the States, for the proof of the pudding is in the eating. If the bar association of the State of New Mexico does not want a former Communist with a criminal arrest record as one of its members, the Supreme Court of the United States should not force it to do so. If the bar association of the State of California does not believe that an applicant for admission to the status of officer of the court, sworn to uphold the State and Federal Constitutions, who refuses to say that he is not a member of the Communist Party at the time of his application, is not of good moral character, the Supreme Court of the United States should not tell the State of California that on such a record there is no reasonable doubt of his good moral character simply because the witness contended that he did not advocate or believe in force and violence generally. Perhaps the bar examiners did not believe him.

If a legislative committee investigating subversion in New Hampshire questions a person who gave a required-attendance lecture at a State-supported university seeking to find out whether directly or indirectly he advocated force and violence to adolescents of impressionable age, the Supreme Court should not tell the State legislature that it may not so inquire. And, finally, under no circumstances in the delicate field of interpretation of the Smith Act should the Supreme Court permit exclusion from that act advocacy and teaching of forcible overthrow of the Government as an abstract principle short of incitement. Words may be combined like keys on a piano to play a tune according to the conception of the pianist. Although there is an old saying that "sticks and stones may break my bones but words can never hurt me" words from the highest court in the world are translated into action all over the United States and in those places under United States influence—which includes a goodly portion of the world. Such a play on words makes infinitely more difficult judicial establishment of an intelligible dividing line between free speech and advocacy of subversion and offers encouragement to those enemies of the American way of life, who, like termites in the foundation, are never seen and seldom heard, until the day the house falls in.

This Nation is composed of many languages, many races, many creeds, living together under a document which permits a good deal of give and take. The very flexibility of the Federal Constitution has insured its continued strength against stresses and strains which in other lands have seen as many as 17 governments fall in 2 years. This document must not continue to be interpreted in such a manner as to throw out of kilter the great divider between the powers of the States and the Federal Government, the 10th amendment. We State attorneys general are responsible through our national association for asserting our best efforts that the course of history in the United States shall be turned from a direction of paternal federalism to one of enlightened cooperation between sovereign States and the Federal Government, each working in its own sphere with recognized division of authority.

I believe that if the United States Supreme Court continues with the type of decision that has been handed down of late that the National Association of Attorneys General should support at least four specific courses of action:

First. The preparation of language clarifying the 10th amendment, to protect States reserved powers in more certain terms with its immediate recommendation to all 48 State legislatures.

Second. That a method be devised whereby the States shall have a greater voice in confirmation of appointments to the Supreme Court than now exists through the United States Senate. The more one observes the path of the growth of America, the more compelling becomes the conclusion that politics should be left out of judicial decisions, and persons without prior judicial experience should not be appointed to the Supreme Court. While 300 years ago it might have been appropriate for a scholar writing with quill pen to observe that "the law is a ass, a fool" we can no longer afford to have this considered to be the fact by people in a kinetic, dynamic society troubled with the awful awareness of the fact that society controls technologically the means to destroy itself without at the same time having devised the means to live together in peace and trust.

Third. Specific continued support of legislation of the general nature of S. 654 and H. R. 3, as amended, designed to insulate against judicial legislation in derogation of State sovereignty.

Fourth. The appointment at this conference of a special committee on internal security, instructed to immediately confer with the interested Federal agencies and with other national groups, including the American Bar Association, with a view to preparation of legislation for introduction at the current session of Congress designed to undo as great a portion of these recent decisions as is possible short of constitutional amendment. The chairman of this special committee should be further instructed to present the committee's recommendation to the permanent executive committee of this association and with its approval and authority to appear before the Congress of the United States in support thereof.

On any theory, a determined few of the Supreme Court of the United States have by these decisions mortgaged if not destroyed the reasonable attempts of hard-working, loyal Americans, including such as J. Edgar Hoover and the Federal Bureau of Investigation, FRANCIS E. WALTER and the congressional committees, and State legislative fact-finding committees—whose methods in the great majority of cases have in no sense or manner been either unfair nor overreaching, to keep check on the extent of Communist penetration and subversion in America. These decisions have set the United States back 25 years in its attempt to make certain that those loyal to a foreign power cannot create another Trojan Horse here.

Beyond even this incredible, compelled conclusion is the dismaying fact that the Supreme Court has sanctioned protection of the dark corners of individual association with persons disloyal to America and made infinitely more difficult, if not impossible, the taking of sworn testimony relating to subversive activity in the United States. By equating lawful politics with communism it has been suggested to America and to the world that Communists and communism may not in fact be subversive of our way of life at all, which is certainly contrary to the public record of communism which has proven to an overwhelming majority of Americans that communism is the mortal enemy of freedom everywhere.

There is no need to torture the memories of surviving loved ones to establish these facts.

On issues of loyalty to State and Nation, the life of every citizen by American law should and must be an open book.

Gentlemen, the situation is serious, even appalling. These decisions strike a mortal blow at the very foundations of the American way—at the very principles in which we believe; those same principles that when the chips are down find all loyal Americans ready to risk their very lives to defend and preserve. It is tragic to see such judicial undermining of national security and Federal-State relations, as well as of the very foundation of free America's right to protect itself.

Nixon's Popularity Rises With Voters

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. SPRINGER. Mr. Speaker, many of us have watched the rise of Vice President NIXON in the esteem of his fellow countrymen. It was very apparent in the recent election that his position was considerably improved over 1952. In the last few years he has had a chance to show his ability as the right arm of President Eisenhower.

In his trips abroad he has demonstrated the good will of the United States toward other countries of the world. Each one of these trips has been increasingly important as it became recognized that he was acting as the official representative of the President.

All of this has contributed to his increased esteem in the eyes of the people generally.

I append hereto an article by Elmo Roper and associates from the Washington Star of Sunday, July 7, titled "NIXON's Popularity Rises With Voters":

NIXON'S POPULARITY RISES WITH VOTERS

The once passionate opposition to Vice President RICHARD NIXON has cooled down considerably in the last couple of years. While 3 percent of a national sample says he has slipped in their esteem, 18 percent have revised upward their opinion of the controversial Vice President. The answers

to the following question show where Mr. NIXON stands at the present time:

In regard to Vice President NIXON, which of these statements comes closest to the way you feel about him at the present time, as compared to a couple of years ago?

I liked him then and I like him now, 49 percent.

I didn't like him then; I like him better now, 18 percent.

I like him then; I don't like him as well now, 3 percent.

I didn't like him then and I don't like him now, 22 percent.

Don't know, 8 percent.

This indicates Mr. NIXON has come a long way since the time when he was being criticized for sledgehammer, unscrupulous campaign tactics both before and after he arrived on the national scene. For fully 40 percent of the people we talked to confessed a past aversion to the Vice President, a remarkable high number for any public figure. But only 22 percent persist in their dislike. Apparently the more discreet tone of his recent campaign and foreign trips, and presumably his support of President Eisenhower's policies, are the reasons.

This softening in attitudes is strikingly bipartisan. Nineteen percent of the Republicans like him better now; so do 16 percent of the Democrats. He still wouldn't win any popularity contests with Democrats, but he would do a lot better than he did a year ago, when in a precampaign poll Democrats with a low opinion of Mr. NIXON outnumbered his Democratic admirers 3 to 2.

Mr. NIXON's popularity has always varied noticeably in different parts of the country, and it's still that way today. Sentiment has warmed toward him most in the regions already most friendly to him, the Northeast and the Midwest. Elsewhere, while feeling toward him has shifted some, there is a stronger hard-core anti-Nixon sentiment that stubbornly resists change. Here's a breakdown of regional differences:

	North-east	Mid-west	South	Far West
I liked him then and I like him now	57	53	40	50
I didn't like him then; I like him better now	18	21	16	14
I liked him then; I don't like him as well now	1	4	4	4
I didn't like him then and I don't like him now	19	16	27	24
Don't know	5	6	13	8

Now probably the No. 1 contender for the 1960 Republican presidential nomination, Mr. NIXON is far ahead of where he was a couple of years ago. But his popularity is still not of the sweeping sort usually commanded by successful presidential candidates.

A year ago, when asked to choose between Mr. NIXON and a hypothetical Democratic candidate for President, the faceless Democrat won by a margin of nine percentage points. The margin may have narrowed since. Only time will tell whether Mr. NIXON can carry his upward career in voter esteem onto a presidential level.

A Plea for Teen-Agers To Participate in Sports

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and informative article, appearing in the Worcester, Mass., Evening Gazette of May 9, last, by Eugene Gilbert, of Gilbert Youth Research, entreating our youngsters to relieve their boredom by wholesome participation in healthy sports activities. With all their supposed sophistication, let us hope our young people wisely appreciate the priceless value of good health as an essential foundation to a happy and useful life.

The article follows:

THE PROBLEMS OF OUR BORED TEEN-AGERS

(By Eugene Gilbert, of Gilbert Youth Research)

Most of the Nation's teen-agers are bored in spite of all the modern entertainment gadgets.

Perhaps they're not bored every minute—but a good part of the day.

Of the boys interviewed in our cross-country poll 78 percent say they are bored. The percentage of lasses suffering from lassitude is even higher: 85 percent.

LOOK OUT WINDOW

One girl sighs: "There are moments when I think I will go out of my mind with boredom."

An Arkansas small-town boy says: "My crowd and I often sit in one guy's house for hours looking out of the window."

But a 16-year-old lad from Chicago complains of the same ailment: "I take up new hobbies every couple of months to give me something to think about. But it doesn't work. I guess I'm just a blase individual."

DON'T ENVY DADS

Monotonous as they frequently find their existence, 84 percent of the youngsters we interviewed feel they get as much enjoyment out of life today as their parents did when they were children.

"I guess all kids are bored these days," notes Tommy, 15. "I bet dad did about the same things when he was young as I do now. He must have been plenty bored a lot of the time."

They agree they have many advantages today children of 100 years ago never dreamed of—television, radio, telephones, motion pictures, airplanes, tape recordings, electrical appliances.

LESS WORK

Since automation entered the home with pushbutton appliances to do just about every chore, youngsters have their work around the house cut to a minimum. Transportation is faster, too. Everything seems to give teen-agers more time and less activity.

"Machines do all the work," 15-year-old Sandy of Connecticut says. "There is nothing left for us to do. So we just have to sit around—bored to tears."

"Bored? Why, man, that's not too far from the truth," agrees a Boston lad, 17. "None of the teen-agers I know have enough to keep them busy for an hour a day. Certainly we're bored."

Television contributes to their general ennui. It's conceded that TV keeps children better informed on world affairs and in most fields of knowledge. But knowing more leads to sophistication which in turn can make young people blasé. Nothing is a surprise or a thrill any more.

Take the circus coming to town. This used to be one of the year's high spots for a child. Thirteen-year-old Maura says:

SPORTS WOULD HELP

"I'll never forget my disappointment when I went to the circus for the first time. Television was much better. You could see the animals closer and the awful smell wasn't there."

In a previous study we explored the fact that participation by young people in sports is steadily declining. There is an obvious connection between bored teen-agers and fewer young people on the playing fields.

Youngsters who like sports aren't sitting around twidding their thumbs for lack of something to do. And the physical exertion keeps them feeling alive, stimulated, and interested.

In fact, it has been medically proved that the formative years need strenuous physical activity. The teens generally are bursting with energy and require sufficient interests and activities to occupy their minds and bodies. Otherwise, they may lapse into lethargy.

America's Constitutional Crisis—The Problem of the High Court

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the American people are concerned about recent decisions of the Supreme Court.

In the current issue of Human Events, July 6, 1957, Mr. Frederic Nelson, who has been associate editor of the Saturday Evening Post in charge of its editorial page since 1942, has written an interesting article setting forth the problem of the High Court. As part of my remarks, I am including Mr. Nelson's statement:

AMERICA'S CONSTITUTIONAL CRISIS—THE PROBLEM OF THE HIGH COURT

(By Frederic Nelson)

If anyone wants to know what a constitutional crisis is like, it looks as if we were in the middle of one. The English put on constitutional crises when somebody in the royal family wants to marry an American or a gamesmaster. This American crisis is more important, to us, anyway, because it concerns the very nature of our political system and the continued ability of the Government to protect the country from destructive Communist attack. In a series of edicts the United States Supreme Court has rendered the Government powerless to check the organization of secret Communist cells; to expose the nature and ramifications of the Red conspiracy; to maintain the integrity of the FBI's sources of information; or to keep subversives out of sensitive Federal bureaus.

How on earth did nine eminent Supreme Court Justices, most of whom are no more radical than the average Joe at the country club on Saturday afternoon, manage to foul things up so that Americans in all walks of life fear for the security of the Nation, while the Communists openly boast that they never had it so good? There is no single answer, of course, but for one clue you might look into the tendency of middle-aged men to assume that young intellectuals just out of college know all the answers. Even a Supreme Court Justice is probably a good-hearted sucker for the idea that the top young man in the graduating class at an Ivy League law school has the latest word on the Constitution. Most of the Justices take on such young fellows as their clerks. Who are these brains and what are their backgrounds?

Even the most casual student of the Supreme Court's recent decisions in the so-called civil liberties cases wants to know, who makes up the reading lists for the eminent Justices? Their opinions bristle with citations from sociologists and political theorists whose works one would hardly expect a Supreme Court Justice to have

read. Some people suspect that those clerks—just out of law schools more or less on the left side of the fence—have been familiarizing their bosses with 4 Gunnar Myrdal 907 (instead of 17 U. S. 1165).

The suspicion that there may be some neo-Alger Hisses in the High Court's establishment doubtless accounts for the recent recommendation by the Commission on Government Security that employees of the judicial branch should be screened for basic loyalty because Federal judges, busy with overcrowded court calendars, must rely upon assistants to prepare briefing papers for them. False or biased information inadvertently reflected in court opinions in crucial security, constitutional, governmental or social issues, could cause severe effects to the Nation's security.

Anyway it will be no surprise if it turns out that the Court's homework has neglected the reports of the hearings which the Senate's Internal Security Subcommittee and the House Un-American Activities Committee have been holding on the general subject of Communist subversion in American life. A little more attention to these sensational but usually ignored reports ought to convince even the most liberal jurist that the cases which have been coming up to the Supreme Court of late are concerned only remotely with the rights of individuals to their political views, but have a great deal to do with a ramifying conspiracy, almost impossible to expose in its entirety, to subject America to Communist dictatorship.

Take Justice Black's opinion in the Konigsberg case, in which the Court upset the efforts of the California bar to exclude from the practice of law a young man who had refused to tell the bar's examining committee whether or not he was or had been a Communist. Konigsberg, when asked the simple question, "Are you a Communist?," went into the familiar song and dance about how he was faced with nameless accusers or informers; and that, if he did answer the question, you would get a dozen informers who would say the opposite; and that anyway the question invaded his rights of free opinion and free speech and that the legal profession should champion these rights.

As a matter of fact, one nonfaceless informer named Mrs. Bennett had testified in Konigsberg's presence that she knew him to be a Communist; but, when asked whether he cared to deny her testimony, Konigsberg said, "That is a question relating to opinions, beliefs, political affiliations."

All this might seem, as it did to Justice Harlan, to cast doubt on the desirability of this young man as a member of the California bar, or at any rate deter the Supreme Court from interfering in the matter. But not Justice Black. His assistant or clerk could have briefed him, but apparently didn't. In an encomium upon the honesty and uprightness of the applicant's life, Justice Black mentioned the fact that, after joining the Army, Konigsberg was selected for training as an orientation officer in the Army's information and education program and in that capacity served in north Africa, Italy, France, and Germany. As an orientation officer one of his principal functions was to explain to soldiers the advantages of democracy as compared with totalitarianism.

This must have split the sides of the Senate Internal Security Subcommittee which, in the summer of 1954, went pretty thoroughly into the activities and personnel of the Information and Education Division of the United States Army. That section was found to be loaded with Bolos and leftwingers whose activities, unearthed in testimony before the committee, included the publication of a series of Army talks, among them one on China which assured the wondering troops that "Communists" (end quote) were not really Communists at all.

But, to Justice Black and presumably the court majority, service with a group which was loaded with leftwingers is evidence of a "forceful showing of good moral character." Of course, this individual may have been clean as J. Edgar Hoover's tooth; the point is that, if you're making a case for innocence by association, don't pick this information and education outfit. Really, some alert assistant or research analyst ought to have pulled that one out of the justice's text.

If the Court is actually setting itself up as a third legislative chamber, it ought to go to great pains to understand what it is legislating about. Some research into the Internal Security Committee's investigation of the penetration of communism into the educational field might have headed off another howler, this one from the majority opinion in the case of New Hampshire's Professor Sweezy: "It is particularly important that the exercise of the power of compulsory process be carefully circumscribed when the legislative process tends to impinge upon highly sensitive areas of freedom of speech or press, freedom of political association and freedom of communication of ideas, particularly in the academic community."

Why particularly in the academic community? With almost every college and university faculty sheltering at least 1 or 2 veterans of the fifth amendment, the impartial observer might conclude that the academic community should receive especially careful attention from the investigating process. The testimony of Bella Dodd, for example, on the special vulnerability of educators to the wiles and sophistries of communism might have profitably been called to the attention of the Court by some law clerk who was not curled up with a good book on the evils of McCarthyism.

This gets us to the momentous Watkins case in which the Supreme Court undertakes to set new limits on the investigative powers of Congress. Of course, few would undertake to prove that every congressional investigation and every question posed by an investigating committee is above criticism. I myself, without knowing too much about it, doubt the wisdom of attempting to compel a witness to squeal on his old brothers in the bonds of communism. The question which the committee has to ask itself is whether the possible advantage of prosecuting Arthur Miller, for example, outweighs the disadvantage of a hostile popular reaction to all congressional investigations. The basic object is to persuade wavering Communists to leave the party and tell what they know. It is quite possible that some such people hesitate to emerge for fear of being compelled to give information concerning others.

The other side of the argument, and the one which prevailed in congressional circles, is that a repentant Communist casts serious doubts upon the genuineness of his change of heart if he refuses to name his associates in subversion. And of course it is unfair that prominent witnesses with popular followings and curvaceous wives should get a fairer deal than less fancy converts. Nevertheless, the Watkins and Sweezy decisions certainly suggest that committees of Congress would do well to pick their contempt victims with an eye to how they look on television.

However, this ought to be a matter for the discretion of the committee. If its members think it essential to punish recalcitrance by citing a witness for contempt, the Congress must retain the power to do so. As Justice Black remarked back in the days when he was a Senator from Alabama, "There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate, save the sovereign legislative power armed with the right of subpena and search", and with the power to compel reply to questions.

In those days the powerful and audacious and unscrupulous groups were mainly millionaires and entrepreneurs in the electric power industry. It was considered reasonable to push them around. I seem to recall that somebody even incited a midget to sit in J. Pierpont Morgan's lap while he was testifying and nobody blew the whistle. Now that the witnesses are Communist conspirators for the overthrow of the United States, the learned Justices are for limiting the sovereign legislative power.

In this same Sweezy opinion occurs the astonishing statement, which seems intended to apply to the Communist Party, that "any interference with the freedom of a party is simultaneously an interference with the freedom of its adherents * * *. We do not now conceive of any circumstances wherein a State interest would justify infringement of rights in these fields." Sweezy is a teacher in New Hampshire and the people of that State seem to have imagined that they had an interest in what was being taught in their educational institutions. Had they read the Court's dictum in the Steve Nelson case, they would have understood that the States are supposed to have no legitimate interest in subversion at all.

A competent law clerk would have suggested that a State interest in subversion of the United States is suggested in article IV, section 4 of the United States Constitution, which reads, "The United States shall guarantee to every State in this Union a republican form of government and shall protect each of them against invasion and, on application of the legislature, or of the executive when the legislature cannot be convened, against domestic violence."

It doesn't seem to me altogether a quibble—or at any rate no worse a quibble than a lot we have been getting lately—to suggest that the States have as much interest in the possible overthrow of the United States from the inside as from the outside; and that, inasmuch as the States are guaranteed a republican form of government by the United States, it would be suicidal for the States to remain indifferent to subversion which might easily make the Federal guaranty as useless as a $3 bill. The California Un-American Activities Committee for example, has turned up a lot of important leads which Federal authorities could follow up later.

It is a little difficult to see what Justice Harlan's law clerk could have done to steer him away from that dreary routine on the meaning of the word organize as used in the Smith Act. As a lay ignoramus got it, Justice Harlan meant that, unless a Communist was present when the Communist Party was organized in 1945, he could not be said to have organized Communist cells or apparatuses after that year. Perhaps, the Justice's clerk should have suggested that an equally good date for the organization of the United States Communist Party in 1919, a date which would have sheltered most Reds younger than William Z. Foster behind the statute of limitations. But for the lay ignoramus, who can't see anything confusing in the idea that a Communist might right now organize a cell in a labor union or college faculty, the Court had a hard time making sense.

Fundamental to the release of the California Communists, is the notion, which crops out throughout the Court's opinion, that freedom of speech and political belief is somehow involved. Another basic fallacy is that the Communist conspiracy is no longer dangerous. These delusions are not confined to Supreme Court Justices. The New York Times, hailing the Smith Act opinions as a new birth of freedom, declared that, "the time is passing when the existence of a small group of persons with warped minds and twisted judgments and calling themselves Communists is a menace requiring us to suppress our ancient freedoms."

Of course, we haven't suppressed any ancient freedoms, as the ability of the Communists to warp the minds and twist the judgment of a distressingly large portion of the non-Communist community is sufficient proof. More depressing are these decisions in which the Court revealed a bland indifference to the growing menace of internal subversion and appeared to accept the notion that a Communist conspirator could not be considered guilty of incitement unless he managed to incite somebody to blow up the United States Mint within the next half hour.

The idea that the Communist Party is harmless is, of course, being exploited to the limit by the party itself. In its brief asking the Supreme Court to outlaw the Smith Act, the party lawyers said: "Developments of the last few months indicate that these relationships (between Russia and the United States) are beginning to undergo a profound change. For this reason alone, the position of the court of appeals that it is legally bound to assume that the fears expressed by Congress in 1950 provide an adequate, competent, and conclusive picture of reality is unreasonable, if not wholly irrational."

Although the present Court has not overtly reversed its own opinion in the Eugene Dennis case, its latest ukase represents a substantial reversal of its earlier view that "the mere fact that, from the period 1945 to 1948, petitioners' activities did not result in an attempt to overthrow the Government by force and violence is, of course, no answer to the fact that there was a group that was ready to make the attempt." The California decision did not declare the Smith Act unconstitutional; it merely made it all but impossible to enforce.

And that may have been the smartest idea some bright law clerk has developed since he left law school.

In spite of the predictions by liberal columnists that the fuss will subside and that Congress will lie down and play dead, I have a hunch that Congress will do nothing of the kind. It can't, if only because failure to meet these repeated challenges will lead to judicial dictatorship, however amiably it may be disguised. If Congress may not question a witness without explaining in elaborate detail just what specific statute any isolated question is expected to produce; if Communists may not be laid by the heels until the Red putsch has succeeded; if a trust may be upset because the Supreme Court thinks the maker of the trust should have made it differently; if the FBI must expose its files to Communist lawyers whenever the files concern the testimony of a Government witness; and if even Dean Acheson is not privileged to fire an employee as a security risk, then we have something like judicial dictatorship already. Neither Congress nor the American people can settle for anything like that.

Twenty years ago, when the Supreme Court declared various acts of Congress unconstitutional, the liberals did not hesitate to propose drastic remedies. The late Represenative Maury Maverick declared that, unless the Court abandoned the practice of functioning as a super-legislature and a super-President, the people should require it. Senator George Norris complained that the people can change Congress but only God can change the Supreme Court. Nevertheless, he thought the people ought to try. Jackson, Jefferson, Lincoln, and Grant were quoted on the side of telling the Supreme Court to get back behind the balkline, or else. A case called *Ex Parte McCardle* was exhumed from obscurity since 1868 to show that in at least one instance the Supreme Court, under Chief Justice Chase, had refused to hear a case in which Congress specifically denied jurisdiction to the Supreme Court. Maybe that device could be made to serve again.

This time, of course, the liberals see no cause for alarm, and are raising their hands in holy horror at the mere suggestion that anyone should be so bold as to defy the Supreme Court. But Congress will hardly give up so easily. Its power to do something had the endorsement of a former semi-liberal member of the court itself.

Former Justice Roberts, commenting on the McCardle case, raised an interesting question: "What is there to prevent Congress taking away, bit by bit, all the appellate jurisdiction of the Supreme Court of the United States, not doing it by direct attack but by that sort of indirect attack? I see nothing. I do not see any reason why Congress cannot, if it so decides, take away entirely the appellate jurisdiction of the Supreme Court of the United States over State supreme court decisions. The jurisdiction is exercised now under the terms of the judiciary act. Suppose Congress should decide to let the decisions of State courts of appeal be final on constitutional questions. How could the Supreme Court assert a power to take those questions, notwithstanding the act of Congress, in view of the language of the third article of the Constitution (the article defining the judicial power)?"

Surely this is something those erudite law clerks might have looked into, if only to warn their bosses of what might happen if they pushed Congress too far. It would be regrettable if the Supreme Court's powers as umpire were destroyed, for, without some final body authorized to decide when constitutional limits have been exceeded by Congress or the Executive, it is difficult to see how a Federal system of balanced powers could be made to operate. But an umpire who legalizes the spitball on the field and seems unable to detect a wild pitch can hardly complain when the pop bottles fly. And a Supreme Court which so far misconceives its function as virtually to paralyze Congress and the Executive in their efforts to protect the country against internal subversion must be said to have asked for whatever reprisals follow.

Pregnancies Grow in Washington Schools

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, the entire country has been following with interest the results of public-school integration in the District of Columbia. Because President Eisenhower had suggested that Washington's public school system should serve as a model of integration for other communities to follow, developments here have been carefully noted by the public.

Last fall, a subcommittee of the Committee on the District of Columbia conducted a thorough study of conditions in the newly integrated Washington schools, and the evidence presented to that subcommittee startled the entire Nation. I am quite sure that no fair-minded person could close his eyes entirely to the disastrous effects that inevitably result from such wholesale integration if that person should take the time to read the transcript of hearings before that subcommittee.

In the current issue of U. S. News & World Report is to be found an enlightening article dealing with some of the problems brought about by integration of the District schools. The facts revealed in this article are shocking, to say the least, and should awaken even the most avid integrationists to the cold realties of life. Under leave to extend my remarks in the Appendix of the RECORD, I include the aforementioned article:

PREGNANCIES GROW IN WASHINGTON SCHOOLS

Pregnancy and vandalism are being pictured officially as twin problems in schools of the Capital of the Nation.

The number of pregnancies has multiplied. In one big section of the city, the health-clinic center has recorded a rise of 1,000 percent in pregnancies among junior-high-school girls, between 1948–49 and the present. The rate of rise is reported by officials as most rapid in the years since 1954, when separate schools for Negroes and whites were ended.

At the same time, vandalism in schools is described as a problem of serious proportions. Representative EARL WILSON, Republican, of Indiana, told Congress of an investigation of vandalism made by him at an elementary school newly constructed at a cost of $677,400. The story told by Representative WILSON is given in this article, as it was printed in the CONGRESSIONAL RECORD.

JUNIOR MOTHERS

It is the problem of pregnancy among school children that is attracting special attention at this time. The problem is described in detail by a report made to the Youth Council of the city's administrative body, the District of Columbia Commissioners. The report was prepared by Dr. John R. Pate from school records and is entitled "Junior Mothers." Dr. Pate is director of the District's Bureau of Disease Control.

What follows is from the text of the report on pregnancy among pupils in junior high schools of Washintgon:

"The members of the Commissioners' Youth Council, area M, have expressed concern over the increasing rise of illegitimacy among the early teenage group.

"A rise of over 1,000 percent in the number of such instances in comparison with 1948–49 school-year figures to that of 1956–57 has come to the attention of the Southwest Health Center clinic.

"In 1948–49, there were only seven illegitimate pregnancies in this age group (junior high school) that came to our attention. It is not expected that this large an increase would hold true throughout the city; but, because the statistics have risen so dramatically over a period of years, it was felt that a further study of this problem would be timely in order to bring to the attention of all concerned the seriousness of the situation, for the problem generally has increased.

"Further, many of these children being born out of wedlock are dependent solely on public-assistance funds for their support. This economic burden merely adds another complication to the emotional and moral one in the community.

"Alarming increase

"During the current school year there has been an alarming increase in the number of pregnant girls in the 7th, 8th, and 9th grades of the junior high schools of the city of Washington coming to the Southwest Health Center to have completed and properly signed physicians' certificates of pupils' inability to attend school. This problem has been increasing over the last 2 to 3 years, more than was noted in several years prior to 1954. The fact is that, during the current school year, our records show an increase of approximately 1,000 percent in the number of ille-

gitimate pregnancies as compared to the 1948–49 school year in this age group.

"The purpose of this report is not to cast reflection on any particular group, for this situation is not confined to any one segment of the population. But it might be said that it is most prevalent in the group coming from the lower socio-economic status.

"Of the 23 junior high schools in the city of Washington, we have records on children from 13 schools reporting to this health center for confirmation of pregnancy in order to be excused from school.

"The statistics of the public schools, included in this report, cover a period of 8 months. In practically every school the report is not completely accurate, falling short of the total number of pregnancies.

"Even the official certification of live birth kept by the Division of Vital Statistics does not always give the true picture as to illegitimacy, for the certification record, which is a legal record, does not necessarily indicate whether the child is legitimate or illegitimate. This is only found in the supplementary section which is recorded in confidential files.

"The overall figures for the District of Columbia in the year 1954, insofar as were obtainable, show 3 percent of the births to whites were illegitimate and 26.3 percent to nonwhites. This figure included births in the District of Columbia of nonresidents also, which further distorts the actual picture.

"Broken homes

"The statistics included in this report • • • are the actual numbers which the public schools have on record. In analyzing the case records (of pregnancies) available at the Southwest Health Center, we find of the 78 on hand that 61 come from broken homes. Two of this number of second pregnancies. Both of these girls, 14 years of age, had their first child at 13. Only one of the 78 is an only child. For the most part, they come from large families with a number of children, live in crowded conditions, with a history of separation of parents, common-law fathers or multicommon-law fathers in one family. Some of these junior mothers come from families where this pattern has existed from 2 to 3 generations.

"Example: One patient who was first seen at this clinic in 1948 as a frail, undernourished female early in her first pregnancy now is the mother of six living children, with several men involved. She is now living alone with these small children and is being given support with funds provided by the Department of Welfare. She readily admits the more children she has, the more income she expects to receive from this source and does not anticipate changing her pattern of living. (The present ceiling is $200 per month.)

"This pattern is repeated time and time again.

"Another example, whose child is now 9 months old, left junior high school in the ninth grade. The father of the child is a 17-year-old male who has continued in school. He does well in schoolwork and in school activities. In fact, so well that he was considered for a citizenship award which was to have been presented at graduation in June 1957. But the feeling of the principal is that we should not extend such a distinction to an individual who breaks the moral code of our way of life.

"PARENTAL COMPLACENCY

"It is tragic indeed to see these children present themselves as late as the second trimester of pregnancy or even the third trimester without ever having any prenatal care whatsoever. In the majority of instances, the mother of the patient is seen. In discussing the seriousness of the situation, the parents' reaction mostly is one of complacency. However, it has been our feeling that the parents have already experienced an emotional shock, and, while at the clinic, they seem to attempt to excuse the situation on the basis of the fact that it could not be helped and now it is too late.

"However, in a number of instances, these junior mothers have returned to the clinic within 3 or 4 months with no signs of pregnancy. It can only be concluded that an abortion has occurred. This, too, presents a very serious and alarming medical problem. This situation has been increasing in the last few months.

"According to the records of the Bureau of Vital Statistics for the calendar year 1955, [in the District] there were only 86 illegitimate live births to girls under 15 years of age. Certainly, from all indications, an alarming percentage of births in the District of Columbia are illegitimate.

"In the early part of the 1956–57 school year one school in southwest [Washington] reported over half of the 240 children enrolled were illegitimate. In the past few months, in the course of the redevelopment project, many of these families have moved. However, there still remain 40 illegitimate children out of an enrollment of 210.

"Boasts and bad examples

It has been observed that, when children in the seventh, eighth, and ninth grades become premature mothers and then are required to return to a school setting, there has been a psychological change, as well as an enforced degree of maturity, which greatly, affects their ability to adjust to normal school activities. For the most part, these junior mothers simply do not do well in the classroom setting, and boast of their progeny. This creates curiosity and develops disrupting attitudes among other teen-agers.

"It may well be pointed out in one instance where a young teen-ager who had a baby kept showing snapshots of her offspring to her close personal friend, an eighth-grade pupil, until she created such a strong desire in this young girl, who had never been pregnant, that she determined to duplicate the feat of her friend. After having intercourse with a number of young males and not getting pregnant, she has developed a definite psychosis. This situation is serious and, in spite of all counseling, when these premature mothers return to school they boast of their child or children to their school friends. This serious reaction and conflict of standards is demoralizing to all of the children who are aware of the situation.

"Other cities, less trouble

"Inquiries were made of several cities regarding their problem and, with the exception of Baltimore, none of the other several cities seem to be having such a dramatic increase in illegitimacy as Washington. The city of Baltimore replied on December 6, 1956, which is quoted in part:

" 'There is a catastrophic lack of knowledge on illegitimacy, probably one of the most important problems in maternal health and subsequently, in child health for cities like Washington and Baltimore.

" 'The number of illegitimate pregnancies cannot be established with finality. Of the total illegitimate babies, 50 percent occur among girls 18 years of age and lower.' In 1954 in the city of Baltimore, 36 percent of the total number of live births among the nonwhites were illegitimate. This was an increase of 6 percent over 1953 figures. There was no noticeable increase in illegitimacy among white teen-agers during this same period.

"In the city of New York there were 131 births to mothers under 15 years of age in 1955, and in 1956 there were 146 births to mothers in this age group. In 1956, 133 of these 146 were illegitimate or 91.1 percent. Of births occurring among young women between 16 and 19, there were a total of 12,074 live births. Of these, 2,687 could be identified as births out of wedlock or 22.3 percent. In New York City there has been a gradual increase in the overall proportion of illegitimate births since 1954. In that year it was 5.5 percent; 1955, 6.3 percent; 1956, 6.7 percent. These figures fall far short of those of the city of Washington, however.

"In the city of Philadelphia in 1955 there were only 98 illegitimate births to mothers under 15 years of age recorded; 7 white or 0.2 percent and 91 nonwhite or 0.7 percent.

"Special schools for mothers?

"It seems in a number of cases children have made an effort to become pregnant in order to stop school. This confession has been made by a number of pregnant girls. If the pregnancy occurs in the 13th or 14th year and they are forced to return to school against their desires, a number of these children have stated they have frankly made an effort to become pregnant again. It is felt that some form of training should be provided for these children regardless of their wishes, even if it requires the establishment of special schools for them. They should be taught how to care for their offspring and be given other forms of instruction which can be made of practical value.

"It seems that the problem of illegitimacy is more serious in Washington and Baltimore than in New York City, Philadelphia, or Richmond, Va. Since the increase in this city has been so noticeable during the 1956–57 school year as compared with several previous years, it seems that we are faced with an acute pattern that demands immediate and serious consideration.

"Within the last few days the junior-high-school nurses and counselors have again been contacted and the figures released from the Statistical Division of the Board of Education are lower than what now seems to be the facts. It can only be concluded that the problem is even more serious than our statistics reflect.

"Grade-school pregnancies

"Due to the regulation that children must attend school until they are 16 years of age, there are few figures for senior high-school students since, by and large, these pupils have reached their 16th birthday and may discontinue school without having to have an official excuse. Consequently, no accurate figures are obtainable. This report is directed primarily toward junior high-school students. However, there have been recorded in the elementary schools 8 pregnancies between September 10, 1956, and April 10, 1957. Seven of these girls were 11 years of age and 1 was 10 when she became pregnant.

"Further observation is that, in some schools the male teen-ager is responsible, while in others there seems to be a definite pattern of young adults, 20 to 30 years of age and even older, who are responsible. Some teen-age males have confessed to fathering 2 to 8 children.

"In several cases stepfathers and common-law husbands are responsible, and, in others, married men have been named as the responsible partner. Out of the total records of approximately 75 junior high-school children seen, in only 2 cases has the girl become legally married to the father of her unborn child.

"To prevent calamity

"From the statistics included in this report and the accompanying narrative, it can be readily concluded that we are now faced with a serious juvenile problem which affects both girls and boys. The result is such an enormous moral and economic catastrophe that we cannot afford to look askance at the needs of these young people.

"Sex education in the home, the church, the schools, and other social agencies must be put into effect, as the atomic weapon for the prevention of illegitimacy, and sufficient social services instituted, as well as pupil guidance and every other means at our disposal put into full force to correct and pre-

vent maladjustments which follow such experiences.

"Further, it is imperative that we join forces to circumvent this present calamity and that we instill in our teen-agers a proper code of conduct for school, church, home, and community.

"On the question of public assistance to these children, it might be assumed that it will be the responsibility of the taxpayer for many years.

"Currently, in New York State the aid for children is catching up to the aid for the aging. It would be interesting in this city to learn the cost proportionately for financial aid to illegitimate children to that of the sick and aged.

"The proposals that have been submitted to Congress to help in the field of juvenile delinquency may have a great bearing on solving this problem when this measure is put into effect."

VANDALS AND HOODLUMS

Representative WILSON, who called attention to the school-vandalism problem, is a member of the House Appropriations Committee, which handles funds for the District. Congress provides about $5 million a year for new schools in the District, and it was abuse of one of these new schools that aroused Mr. WILSON.

The Wilson speech, as reported in the CONGRESSIONAL RECORD of June 27, 1957:

"Two years ago—May 13, 1955, to be exact—the District of Columbia, with financial aid of the taxpayers all over the United States, completed construction of a $677,400 elementary school building at East Capitol and 55th Streets NE. The property, including a well-equipped playground, covers an entire block.

"Known as the Marion P. Shadd School, it has 26 classrooms, auditoriums, cafeterias, and all modern facilities. There are 32 teachers in addition to clerical and maintenance workers. Students total about 1,300, ranging from kindergarten through the sixth grade. It is an all-colored school in an all-colored community of modern, spacious apartments and homes.

"This is one of the finest school plants in Washington or anywhere else. It is an architectural and cultural landmark, an institution of which the residents of that Negro community should be very proud.

"A school ripped to bits

"However, this beautiful edifice is being destroyed—literally ripped to bits by vandals and hoodlums—while people of the neighborhood stand by in apparent disinterest. The Marion P. Shadd School is rapidly becoming a landmark of shame to the very people it is intended to serve.

"I inspected this school a few days ago, Mr. Chairman. I found hundreds of windowpanes broken. Mud and filth have been hurled against the building. Empty beer cans are scattered about the premises, piles of filth lie in the doorways, outdoor electrical equipment and entrance lights broken and destroyed. Three or four windows at the cafeteria end of the building have been boarded up by the school authorities because vandals break windowglass as fast as it is replaced. Obscene words and crude drawings cover portions of the neat little frame annex used for kindergarten pupils.

"This has been going on since the school was opened. I was informed by the distressed principal, Mrs. Lillian S. Glascoe, who has been a teacher in the District of Columbia schools for 34 years. The cost of replacing broken windows and repairing other damage to the building already has run into thousands of dollars, she told me. She says she has vainly sought cooperation of adults in the area.

"Lack of adult interest

"I am bringing this matter to the attention of this chamber, Mr. Chairman, because Washington, as the seat of Government, is a congressional responsibility. Perhaps some of my colleagues may have suggestions as to how this shameful situation might be corrected.

"My own background as a teacher and a school administrator convinces me that this is a shocking example of the lack of adult interest in the schools established for their children. The Negro people who live in this area are allowing their magnificent institution to be turned into a landmark of shame to them.

"If we look more penetratingly into the problems of juvenile delinquency, we can see that parental delinquency and disinterest are prime factors."

A PROBLEM IN WASHINGTON'S PUBLIC SCHOOLS

Pregnancies among schoolgirls under 16, based on physicians' certificates received during the period September 10, 1956, to April 10, 1957:

Total pregnancies reported	190
Among Negro girls	178
Among white girls	12
In high schools	53
In junior high schools	129
In elementary school (including 1 girl 10 years old)	8

Supreme Court Should Be Balanced

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. JACKSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial by George Todt in the San Fernando Valley, Calif., Valley Times of July 1, 1957:

SUPREME COURT SHOULD BE BALANCED

"God give us men. A time like this demands
Strong minds, great hearts, true faith, and ready hands!
Men whom the lust of office does not kill,
Men whom the spoils of office cannot buy,
Men who possess opinions and a will
Men who love honor, men who cannot lie."
—*J. G. Holland.*

I have already said in a previous article that the trouble with the Supreme Court today is, quite simply, that the present 9 Justices do not correctly represent the American political or philosophical makeup in their ideological composition.

The truth of the matter is that we have a completely stacked Court.

I do not say this out of any lack of respect for the authority of the High Court. I do not say this from the standpoint of numerical superiority of either the Democratic or Republican Parties; each is well enough represented as to numbers. But still the Court is stacked—and it is stacked with superliberal thinkers who are running the Court and making its decisions. There are no real conservatives to be found on the High Bench, and only 2 or 3 who might even qualify for the term "middle of the road."

This is why the Supreme Court seems to have gone awry to so many of us. It is simply not balanced. Its composition is so far out of kilter that it is out of step with the thinking of the Nation. What else can we expect of a stacked superliberal body?

These men are human and they make their decisions in the light of their thinking processes. Now I would be the last writer to suggest that the Court ought to be composed of merely conservative members—or just Democrats—or just Republicans. On the contrary, I would be quite willing to settle for 2 liberal Republicans, 2 liberal Democrats, 2 conservative Republicans, 2 conservative Democrats—and maybe we might even let the ninth Justice hail from the newly organized Constitution Party to act as the balance of power.

Frankly, we cannot expect to get more balanced decisions from the Supreme Court until the composition of its members also becomes better balanced. But a continuing and predominantly superliberal composition of the Court is unfair to Joe Doakes. He's no superliberal. Ask him.

It is only too obvious, from the makeup of our freely elected Congress, that the Nation cannot be overwhelmingly superliberal in composition or flavor. The public might be more nearly described correctly by calling it middle-of-the-road with strong conservative overtones. Certainly we are not all extreme liberal Democrats and Republicans.

How otherwise explain that conservative coalition of conservative Democrats and Republicans which has had so much influence in our House of Representatives and in the Senate for many years extending back into the past? Who sent such legislators to Washington except the American people themselves? Who, indeed, but Joe Doakes, American?

So you see, the composition of the citizenry of the Republic of the United States is far from being overwhelmingly superliberal. So why should the physical composition of the Supreme Court reflect other than a correct proportionate amount of both conservatives and liberals in its makeup?

The correct answer is that it shouldn't—and that is something which calls for honest study and forthcoming debate by Congress and the President. For this is what is really wrong with what is coming out of the Supreme Court today in its controversial decisions. It is not the Supreme Court itself. The concept of the fundamental solidarity of that institution is as good today as it was yesterday.

But we have come up to a new situation which must be dealt with successfully in the future. What this new experience should teach us is that the High Court must reflect more nearly correctly the intellectual and philosophical balance of the American people.

Liberty in Mourning

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DONOHUE. Mr. Speaker, I should like to include an editorial which appeared in the April 27, 1957, issue of America commenting upon our unhappy lack of bolstering action during the Hungarian revolution, and which also emphasizes the urgent need of congressional enactment of measures currently pending to equitably liberalize our antiquated immigration laws.

The editorial follows:

LIBERTY IN MOURNING

The effort to salvage some prestige from our poor performance during Hungary's October revolution is petering out ingloriously. A State Department declaration of April 13 informs us that the United States will receive "a limited number" of Hungarian refugees in the next few months and that we

will help other countries to absorb more. It is estimated that about 3,000 more of those who fled Hungary after October 23 will be received under the new slowed-down policy. From then on, immigration reverts to the cumbersome procedures of the McCarran-Walter immigration law.

To those Hungarians still in the Austrian refugee camps, our decision came as a bitter disappointment. Unfortunately, in this case we Americans cannot explain away our attitude by pleading the risk of war or the exigencies of international politics. Our own legislation, ostensibly designed as an anti-Communist measure, has worked to the opposite effect. The McCarran-Walter law has operated to undermine the confidence of the lovers of freedom behind the Iron Curtain. By our free choice we have given the Kremlin the opportunity it much needed to argue that we have betrayed the Freedom Fighters.

It is true, as we were glad to note last week, that disunited families will be among those who will enjoy the last phase of our momentary liberality. Our performance as a whole, however, sets a poor example to other nations and leaves Australia in an awkward situation. The whole story is a lamentable one. We have yet to feel its ultimate consequences.

Huge Disparity Between Number of Needy Americans on Public Welfare and Number of Persons Receiving Surplus Food Under Present Distribution Program—Testimony by Congresswoman Sullivan Before Senate Committee on Agriculture

---

EXTENSION OF REMARKS
OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 8, 1957

Mrs. SULLIVAN. Mr. Speaker, last month, when the House was considering extension of the Agricultural Trade Development and Assistance Act—Public Law 480—I attempted to amend the bill to provide for the establishment of a food-stamp plan for the orderly and regular distribution of some of this surplus food to our own needy in this country—to all of the more than 6 million on some form of public welfare, and to other deserving groups of needy. The amendment, unfortunately, was defeated on a teller vote, 89 to 128.

Some of those who opposed my amendment claimed it was introduced for the purpose of delaying or killing the Public Law 480 program for gifts and giveaway sales of surplus food abroad. Of course, that was not my purpose at all, but that charge was repeatedly leveled against my amendment and perhaps caused some Members to vote against it in that form.

Other opponents said the proposal should be considered separately, on its own merits, and not as part of Public Law 480 extension. And still others said the present program of distribution to our needy is adequate and should not be changed or replaced with a food-stamp plan such as I proposed.

I should like to urge all those who voted against my amendment on these particular grounds last month to read the statement which I delivered on June 28 before the Senate Committee on Agriculture in connection with hearings which Senator HUMPHREY has been conducting on possible changes or improvements in Public Law 480 in the future.

In this testimony, I went into some of the points of criticism which had been voiced on the House floor, including the claim that my food-stamp plan is unnecessary because the present program of distribution of surplus food is adequate and goes far in helping to feed our hungry.

Under unanimous consent, I am inserting my full statement in the RECORD and I really believe the facts it contains will surprise many of the Members—particularly the information which I found on the huge disparity between the number of really needy persons in this country—those on public welfare—as compared with the number now receiving some of the surplus food under the present hit-and-miss distribution system.

The statement referred to is as follows:

TESTIMONY BY CONGRESSWOMAN LEONOR K. SULLIVAN, OF MISSOURI, BEFORE SENATE COMMITTEE ON AGRICULTURE CONSIDERING FUTURE CHANGES IN THE AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954 (PUBLIC LAW 480), URGING ADDITION OF A FOOD STAMP PLAN FOR DISTRIBUTION OF SURPLUS FOOD TO NEEDY AMERICANS, PARTICULARLY THOSE ON PUBLIC WELFARE, FRIDAY, JUNE 28, 1957

I appreciate very much this opportunity to testify before you as part of your hearings on future changes in the Agricultural Trade Development and Assistance Act of 1954, but frankly, I wish things had gone just a bit differently in the House last week so that you would have to consider my food stamp plan not as some future issue but as an immediate one to be settled in the next days or weeks.

While H. R. 6974 was before us in the House last week, I attempted to amend it to provide for the establishment of a food stamp plan as provided for in my own bill, H. R. 949. Unfortunately, I lost the attempt 89 to 128 on a teller vote under parliamentary circumstances which made it impossible for me to obtain a rollcall vote on the issue. I am sure—I am positive—that if it had gone to a rollcall under the recommit motion I later attempted to make, that it would have been approved and adopted.

ONLY SMALL PERCENTAGE OF NEEDY RECEIVES SURPLUS FOOD

I don't see how anyone could oppose a clear-cut plan for getting some of this surplus to those who need it most—to those on various forms of public assistance. Yet we know that under the present hit-and-miss system of the Department of Agriculture for distributing surpluses to our own needy, that only a small percentage of those who need this food is getting any of it at all.

Let me give you just a few figures which I think will come as a surprise and perhaps a shock to some of you. They came as a surprise and shock to me when I totaled them up from a variety of sources and then looked at the result.

Let's look at this first from the vantage point of the States represented on this committee of the United States Senate. Let's take some sample totals:

In Minnesota, which has 2 Senators on this committee, you have, according to the latest figures I have seen, something like 15,352 needy persons in your State receiving surplus food under the present hit-and-miss program operated by the Department of Agriculture. I don't know how much it costs your State or the localities which participate to store this food, transship it, package it, set up distribution points, investigate the degree of need of those who apply for it, and then get them an occasional pound of butter or sack of flour or some dried beans or powdered milk, or whatever, but I am sure the expense, the redtape, the delays, the mixups, and the aggravation and disillusion are all sizable. I am sure it is a headache in Minnesota, as it is in most States which participate in the present plan.

But, in any event, you do all these things and spend this money and go to all of this trouble to get some surplus commodities to 15,352 Minnesotans in need.

DISPARITY BETWEEN NUMBER HELPED AND NUMBER OF NEEDY

But let's look at some other figures: In Minnesota, there are three times as many people on old-age assistance—not social security old-age and survivors insurance but on old-age assistance—public welfare—3 times more than the 15,352 people getting surplus food. There are about 50,000 on old-age assistance; nearly 30,000 more on aid to dependent children; more than 1,000 receiving aid to the blind; more than 1,500 receiving aid for disability; and an estimated 22,000 on general assistance. In other words, you have a total of 102,876 persons in Minnesota who should—if anyone should—be getting some of this surplus food, because I am sure these 102,000 are not getting enough to eat of good nourishing food—I am sure they are going to bed hungry.

In contrast, only 15,000 Minnesotans got any of this free food, and there is no guarantee that all of these 15,000 are in as much need of it as the 102,000 on public welfare. There is no way I have of knowing how many many of the 15,000 are themselves on welfare. They could be getting this food because they are on unemployment compensation, in a distress area or because of drought or disaster or one thing or another not related to long-range, day-in-and-day-out need—desperate need for more food to give them a basic, minimum diet.

In fairness to Senators HUMPHREY and THYE, I did not just single out Minnesota in this respect. South Carolina has 82,367 on various forms of public assistance, but only 200 people in the whole State have been getting surplus food, if Senator JOHNSTON would like to check my figures.

MANY STATES REFLECT HUGE GAP

Or Senator HOLLAND could check Florida's figures—170,175 persons on various forms of public assistance, and not a single one getting any surplus food.

In North Carolina, as Senator SCOTT knows, there are 160,308 persons on various forms of public assistance, but not a single one gets any of this surplus food as now distributed.

In my own and Senator SYMINGTON'S State of Missouri, we have 232,909 persons on public assistance—on relief—and only 10,366 persons in the whole State have gotten surplus food—and they are not, I believe, relief cases as such but drought emergency cases in one section of the State.

In Georgia, Senator TALMADGE will find 176,553 persons on various forms of assistance, but none getting any surplus food. In Senator AIKEN'S Vermont, 14,191 are on relief; but only 3,886 persons get surplus food—and, as I said in connection with other States, in this same situation, there is no way to be sure those who do get the food are necessarily in the relief categories. I do not mean to say that chiselers get it. I mean that, depending upon the basis of the State's own form of participation in the program, the food might go only to a particular county

or area where there is drought or flood or emergency or a temporary dislocation, whereas throughout the State there are hungry people in every town, but they do not come in under this present program.

I don't want to bore you with a lot of statistics but I do think it is important to get this point across. Mr. Benson speaks of the millions of needy Americans now getting free food. He counts in all those getting it as inmates of institutions and he counts in the school-lunch program, and for a while over 1 million in Pennsylvania who got this food regularly. It is now down to about 600,000 in that one State. But there is no systematic national distribution of this food which seeks to make sure it goes to those who need it most.

For instance, as Senator WILLIAMS knows, Delaware has 9,498 on public assistance, but no surplus food goes to the needy in Delaware.

PENNSYLVANIA PARTICIPATES ON LARGE SCALE

Some States do better than others on this, I must concede that. I mentioned Pennsylvania. Pennsylvania has been getting this food to 3 and 4 times as many people as it has on relief. Many were in mining areas hard hit by falling production orders. Others were unemployed elsewhere during periods of recession. The whole State got into this and spent, I know, a huge amount of money to get some of this food to the needy. But the expense was such that most States felt the cost was not worth the value of food distributed. That would be true in Missouri.

But in Chairman ELLENDER's State of Louisiana, 177,654 have been getting surplus food, which is almost as high a number as the total of those on various forms of assistance; in Senator EASTLAND's State of Mississippi, which had 139,606 persons listed on the relief rolls, more than a quarter of a million persons are getting free food—257,869, in fact; in Senator HICKENLOOPER's State of Iowa, with a total of about 73,000 persons on relief, a total of 83,730 gets free food at last count; in Senator MUNDT's State of South Dakota, a similar situation—24,162 on relief, 31,912 getting free food. So comparatively they do much better in feeding the hungry, but I know the cost to their States is very high. I think that covers all the States represented on this committee.

There are several other States which distribute this food on a rather large scale—Alabama, Arkansas, Kentucky, Oklahoma, New Mexico, Puerto Rico—all of these give out food to more persons than the total on relief. I guess or assume that most of those on relief get some of it, since the distribution apparently is on a statewide basis in those States.

NO FOOD DISTRIBUTION IN 10 STATES

But Arizona, Delaware, Florida, Georgia, Hawaii, Idaho, Montana, Oregon, North Carolina, the Virgin Islands, the State of Washington, and up to now, the District of Columbia, all with rather large lists of relief cases, have not distributed any food; and other States with large relief caseloads have given out very little of it. For instance, Connecticut with 46,000 on relief gave out free food to 612 persons; California, with more than half a million persons on public assistance, got free food to 33,500 persons.

It is therefore a haphazard, crazy-quilt pattern of food distribution, yet we know we have all of these hungry people. I mean hungry; I don't mean going without sirloin steak and fresh oranges; I mean hungry. Just try to feed even 1 person, and pay rent, and keep body and soul together on $55 a month. The cost of living has reached its ninth straight peak and food costs are up, and we have misery and poverty and hunger, and mountains of spoiling food. Why can't we get this food to those we know need it most?

I have thrown a lot of figures and statistics at you. Let me give you just one more: Nationally, we have about 3½ million people getting bits of this food, dribbles of it, an occasional package of flour or dried beans or whatever. But we have more than 6 million on relief; and millions more living on the thin edge of malnutrition. And the 3½ million are not necessarily all in the larger group.

REMOVING HIT-AND-MISS STANDARDS

Now is it possible that we can be complacent about such a situation, when the Commodity Credit Corporation groans with the burden of storing these vast hordes of food surpluses, and the farmer groans for lack of markets and loses his shirt because food sales do not expand to meet population expansion?

Perhaps I should not be emotional about this. But I just cannot help being heartsick over the contrast as between the food we have and can grow and the hunger we have in our midst.

But let's look at the practical aspects of this issue. I am asking that you consider favorably in your overall revision of Public Law 480 my plan, as proposed in H. R. 949 for a food stamp plan.

If you will look at H. R. 949, you will see that the eligibility requirements would remove the present hit-and-miss standards and replace them with clear-cut, direct, simple standards. Every person on any form of public assistance would automatically be eligible.

In addition, those who are considered by local welfare authorities to be in need of welfare assistance, but ineligible because of residence requirements or other State or local law—for instance, in Missouri, no matter how desperate your situation might be, you are not eligible for public assistance if you are employable—and that is no consolation in a recession or a factory shutdown or other situation where you just can't find work—but under my bill proven need cases would be included and would receive stamps.

HOW FOOD STAMPS WOULD BE ISSUED

The food stamps would be issued by the Secretary of Agriculture to the persons certified by the local authorities—the stamps could go out in the same envelope with the relief check. The stamps would be issued for specified varieties and quantities of surplus foods—one stamp for a pound of butter, a different stamp for cheese, or whatever was on the list. The Secretary of Agriculture would decide each month what was available for distribution and would issue the appropriate stamps.

What then? My bill permits the widest kind of flexibility on how the program shall actually operate. The Secretary can distribute through central depots, or through regular stores. He could redeem the stamps directly for a fee or through a store's supplier, replacing items from regular stocks if he so chooses. He could determine that for every pound of butter a store distributed to food stamp recipients, the store could get from its wholesaler or supplier a pound and a half or a pound and a third of butter—that is for the Secretary to work out. He can even set it up so that the stamps are redeemable through the Federal Reserve banks. I will do my best to get him whatever legislative authority he might need through the Banking and Currency Committee if he wants to do it that way.

WIDE DISCRETION PERMITTED SECRETARY

What I am trying to say to you is this: the actual mechanics of the plan cannot be written in a law. It must be worked out by the experts. It can be done and it should be done. It must be done. I don't want to see them tied up in knots by details written into the law.

That is why my bill says he shall put into operation a plan for distributing this food to the needy through a food stamp plan in which all those who are on public assistance can participate. I spell out a definition of needy people.

Then, from there, it is up to the Secretary of Agriculture, with help and advice from the Secretary of Labor and the Secretary of Health, Education, and Welfare, to work out details. He is to confer with the other Cabinet members I named not only on standards under the program, but on the problem of determining whether this should be expanded to cover additional groups—such as those on unemployment compensation, those on old age and survivor's insurance, those on other types of pensions, and so on.

INCLUDING ADDITIONAL GROUPS

But such people are not automatically needy people just by reason of low current income. That is my point in dividing these groups. Those on relief—on public welfare—are provably needy. They need more food to keep body and soul together. They are nearly all hungry people. They should come first in this program. After that—after we make sure we have a workable plan for getting extra food—and I emphasize that this is to be extra food and not in place of any present relief grants—but after we make sure all those on relief are getting some extra food out of this program, through a workable plan, then we can decide whether to expand it to other groups.

You will note that the Department of Agriculture itself acknowledges that there are perhaps 25 million people in this country who do not now receive an adequate diet because of low income, and that to put into operation a full-scale supplementary food stamp plan to get enough nutritious food to all of them in a way which would also have the effect of reducing or eliminating future surpluses would cost perhaps $2½ billion a year. Perhaps we can one day do that. Perhaps we should.

MAKING A PRACTICAL BEGINNING

But let's make a start—a dent—in this enormous need by taking a practical first step. The Department says a plan such as mine might cost as much as half a billion a year, perhaps $600 million. I doubt that. That figure is a guess, based on the assumption that we ought to provide an additional $100 worth of food per year per person for those at the lowest income level—in other words, this is what they say it would cost to provide that additional $100 per person in foodstuffs to the approximate 6 million persons on public welfare to assure them an adequate diet—that is, a minimum diet.

But I would like to point out that this is food we already own or food the Government will be purchasing in any event. So it is by no means a case of $600 million a year in new expenditures caused by this program. I think the total value of all of the food given out by the Department of Agriculture last year to needy persons in this country was only around $91 million, and yet this involved gifts of food to about 3½ million people.

Let me point out to you furthermore that we have donated three times as much of this food to needy persons abroad as to needy persons in this country. And in addition to the food we have donated abroad, to needy persons, through the charitable organizations and directly as an outright gift, we have also sold to foreign governments in return for their own currencies about $3 billion worth of food and frequently have paid the ocean transport costs. In return, we accepted foreign currencies to be spent in those countries, and the majority of it is to be spent and is being spent for economic development in those countries.

VAST SUMS SPENT IN OVERSEAS FOOD GIFTS

I think in the last 10 months or so, we have spent about $1 billion in disposing of this food overseas. I do not oppose the for-

eign giveaway sales and gifts, but I think we can afford to use some of this food to feed our own hungry as well. I think it is a fine thing—a fine and decent and noble thing—to get this food to needy children and needy families in other lands and we have a right to be proud of our charitable actions and also of the good we do at the same time in fighting communism by giving the poor of other lands a better share of life.

But how can we sit by and wring our hands over the supposedly or allegedly impossible financial burden of feeding our own hungry? Yet that is exactly what Mr. Benson has been doing in his opposition to this plan—saying we can't afford it.

I submit instead that we cannot afford to have hungry Americans when the food is coming out of our ears—causing a storage headache and a depressing effect upon agriculture.

Truly Alice in Wonderland would find this situation no less mystifying than those she discovered in the classic story by Lewis Carroll. Our Government seems to be saying we can't afford to feed our hungry because we have too much food.

Federal Judiciary Will Provide Fair Administration of Civil Rights Laws

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mr. VANIK. Mr. Speaker, in connection with the civil rights debate in the House of Representatives I took the occasion several times to oppose the jury trial amendment on the basis that the right of law-abiding citizens to vote without restraint is without doubt as important as the right of a wrongdoer to a jury trial. I also argued that since in most States the jury panels are selected from among the electors, the right to vote, therefore, is fundamental and essential to the conduct of fair jury trials. It is in the nature of things that some people who seek to interfere or restrain others in their right to vote must give up their right to jury trial under these circumstances so that others—equal Americans—may have the right to vote, from which all authority in our Government develops.

During the course of the argument on the floor, the opponents of the contempt provisions of the civil rights legislation argued that the legislation constituted a mass indictment of the integrity of the entire southern populace of the country and that it would be irresponsible to charge that a whole people would be faithless to a solemn juror's oath.

I want to point out that the conduct of the contempt proceedings under the civil rights bill as it passed the House of Representatives will in every case be conducted before distinguished jurists of the Federal bench who have lived and developed in their home communities. In every respect they are the products of the South and are familiar with its traditions and its culture.

Can those who oppose this legislation logically contend that these gentlemen, the judges of the Federal district courts in the southern districts, will ignore their obligation to comply with all corners of the law in passing upon the contempt charges which may be brought against their fellow men? Can it be contended that these are men who may be swayed by passion or prejudice or who will render arbitrary or indiscretionary judgments? I do not believe so.

Mr. Speaker, I am submitting a list of the Federal judges who sit in the United States Federal district courts of the Southern States. By and large they are gentlemen who were born and raised in the communities in which they now act and pass judgment as judges of the Federal district court. They are products of the schools of the South. Some were members of Congress and have served with distinction throughout their entire careers. There is no reason for anyone to suspect that the civil rights legislation will not be administered in keeping with the highest traditions of American jurisprudence.

ALABAMA

Daniel H. Thomas, judge; born, Prattville, Ala.; bachelor of laws, University of Alabama, 1928; admitted to Alabama bar, 1929; law practice, Mobile, 1929–51; assistant solicitor, 13th Judicial Circuit, Alabama, 1932–39; partner, Lyons, Thomas & Pipes, 1943–51; appointed United States district judge, southern district of Alabama, 1951. Statement of Hon. Robert C. Byrd to the Subcommittee on Civil Service Retirement, House Committee on Post Office and Civil Service

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BYRD. Mr. Speaker, permit me to call to the attention of our colleagues the statement which I presented to the Subcommittee on Civil Service Retirement, House Committee on Post Office and Civil Service, in connection with the hearings on the proposed legislation to increase the annuities of civil-service employees who retired prior to October 1, 1956. The statement follows:

STATEMENT OF HON. ROBERT C. BYRD PRESENTED TO THE SUBCOMMITTEE ON CIVIL SERVICE RETIREMENT OF THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, JULY 3, 1957

Mr. Chairman and honorable members of the Subcommittee on Civil Service Retirement, I am grateful for this opportunity to present my views in support of H. R. 4 and related bills, which would increase the annuities of civil-service employees who retired prior to October 1, 1956. The bill which I introduced on January 10, 1957, is similar to H. R. 4.

The proposed legislation will benefit some 240,000 retirees and about 80,000 surviving widows and dependent children. These employees did not share in the increased benefits which the 84th Congress granted under Public Law 854 to persons retiring on or after its effective date, October 1, 1956. General revisions increasing benefits under the civil-service retirement system were enacted in 1926, 1930, 1942, and 1948, and in each of those enactments benefits were also provided for persons already retired. These increases were paid from the civil-service retirement fund and did not call for special appropriations.

It is true that in the first session of the 84th Congress a token increase was provided for civil-service annuitants, but it is also true that that token increase was far below the proportionate increase in the cost of living. And, of course, that token increase was prior to the legislation of 1956, enacted for the benefit of future retirees. This fact, as well as the further fact that the cost of living has increased each month since the enactment of 1956 legislation, plainly points up the unfortunate economic situation in which retirees now find themselves.

Prior to the adjournment of the 84th Congress, the Senate passed the bill, S. 3725, to provide the necessary increases for annuitants; however, due to the approaching adjournment, the House was not able to act on the subject.

It is my understanding that about 70 percent of the beneficiaries are men and the balance women. Some 50,000 of these former Federal employees are today receiving approximately $50 a month. Another 50,000 receive between $50 and $100 a month, and still another 50,000 receive between $100 and $150 a month. In other words, 75 percent of our civil-service retirees receive less than $150 a month The plight of their survivors is even more distressing. The average survivorship annuity is $50 a month. Do not these stark facts, then, amply demonstrate that Congress has the duty and the obligation to provide equitable and necessary improvement in its program of retirement and survivor benefits for former Government employees and their survivors?

No one denies the gross inadequacy of retirement benefits in meeting the present high cost of living. The urgency for remedial action, however, was graphically revealed in a special report published in the August 3, 1956, issue of the U. S. News & World Report. That report showed that civil service retirees were down 13 percent from the 1939 standard of living. On the other hand, the report showed that 35 major groups, representing 95 percent of our population of workers, enjoyed increases above that 1939 standard, ranging from 4 to 107 percent.

Many of the individuals who will be benefited by the increases proposed in the legislation here under consideration are wholly dependent upon their annuities. The inflationary spiral has hit hard. The shrinkage in the purchasing power of the "retirement dollar" cannot be ignored either.

The average age of the annuitants to be benefited by this legislation is 67.7 years. This fact, too, points up the necessity for immediate and favorable consideration of the proposed legislation. We recognize that retirees are at a great disadvantage because the dollars which they paid into the retirement fund have greatly decreased in value. The purpose of the proposed legislation is to compensate for this loss in purchasing power and to provide some equity to these former Government workers.

The Congress has a direct responsibility to these former employees to see to it that their benefits have a sound relationship to the cost of living. Let us not overlook the real problems with which these retirees are faced. They are confronted with reduced income, reduced health, reduced living standards, and in many cases with increased medical expenses. Legislative action to assist these senior citizens is overdue.

In view of the above, I hope it will be possible for the subcommittee to give favorable consideration to the legislation here under consideration.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The "Open Curtain" Policy—Editorial Comment

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD two very excellent editorials on the "open curtain" policy. The editorials were published in the Mankato (Minn.) Press and the Worcester (Mass.) Telegram.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Mankato (Minn.) Press of June 11, 1957]

AN OPPORTUNITY TO BE PURSUED

Senator LYNDON JOHNSON'S proposal that the United States and Russia present their ideas every week on each other's television and radio stations probably won't get a very enthusiastic welcome from the Soviet leaders.

But an interchange of ideas—broadcast so the people of both nations can hear it—unquestionably would do more to bring about understanding than any other approach to the problem.

Tensions that exist between nations are usually the result of a failure to understand and know each other. If there could be a general trading of thoughts, and frequent discussions involving the issues that arise, the barriers to understanding can be broken down.

Senator JOHNSON said the United States shouldn't allow a day to pass without raising the suggestion that the people of each nation should be permitted to hear the other side's views. That is a good idea, and the filmed interview of Soviet Leader Nikita Khrushchev provides an opening that hasn't previously existed.

It is obvious that the United States has much to gain from such an approach and, if Russia is sincere in its desire for peace, the Soviet can gain a great deal, too. The greatest deterrent to peace is the Iron Curtain that has been set up to prevent the Russian people from getting to know more about the United States and its citizens.

If there is to be lasting peace, every avenue must be explored in its quest. And Senator JOHNSON is correct when he says we ought not to pass up the opportunity provided by Khrushchev's television appearance. If Russian opposition to such a plan can be broken down to permit even one televised interview, it will be greatly worth while.

[From the Worcester (Mass.) Telegram of June 10, 1957]

LYNDON JOHNSON'S NEW PROPOSAL

Senate Democratic Leader LYNDON JOHNSON thinks that now is the time to batter down the Iron Curtain hindering the free flow of ideas and information. He wants this country to grant free radio and television time weekly to Soviet spokesmen in return for equal time for us on the Soviet radio and TV. He thinks that such a direct appeal to the citizens of Russia would be a new world policy of open eyes, ears, and minds, for all the peoples of the world.

Senator JOHNSON'S plan has a great deal of appeal. The idea of going over the heads of the Kremlin and talking directly to the Soviet people seems to hold out great possibilities. It is a good idea—even though there is little to indicate that the Soviet leaders are ready for such a radical proposal. With rebellion simmering just below the surface in Eastern Europe, and with considerable discontent inside the Soviet Union itself, the Soviet oligarchs might well consider such a move dangerous.

Party Boss Khrushchev gave the thing away on his recent radio and television interview. Asked by an American reporter why the Voice of America is still jammed by the Soviet Union, he muttered, "that 'voice' gives you a pain."

The plan proposed by Senator JOHNSON might give Khrushchev a worse pain. Weekly broadcasts by American spokesmen would be bound to raise sharp questions in the minds of the Soviet citizenry. They would learn things about their own government that they never heard before. The prestige of the government might be weakened.

Another indication of the Kremlin's reluctance to encourage the free exchange of ideas is the experience of the State Department with its magazine, America. By an agreement signed by the Governments of the United States and the U. S. S. R. last year, 50,000 copies of America were to be circulated inside the Soviet Union and 50,000 copies of the official Soviet magazine, U. S. S. R., were to be circulated inside this country. The Soviets have recently begun to return thousands of unsold copies of America to the United States Embassy in Moscow. Experts on the Soviet Union are certain that America would sell hundreds of thousands of copies if it were honestly distributed.

Despite these points, Senator JOHNSON has done well to make his suggestion at this time. Basically, it is an excellent idea. We have everything to gain and nothing to lose from an honest and free exchange of ideas.

This fact is sometimes lost sight of. There have been times in recent years when our Government has acted so fussily nervous about Soviet propaganda proposals for cultural exchanges that our friends all over the world have been disappointed in us.

This country has little to fear from Soviet propaganda. We have every reason to want the Iron Curtain lowered, so that the pervasive power of democratic ideas can percolate through the Communist empire.

After all, in the long run, it is ideas rather than bombs that are going to bring us out of our present dilemma.

Address by Hon. Homer E. Capehart, of Indiana, at Launching of the "Philip Sporn"

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks I made on July 5 at the launching of the *Philip Sporn*, a new Ohio River boat produced by the Jeffersonville Boat & Machine Co. under the direction of Mr. Pat Calhoun, president of the Jeffersonville company and of the American Barge Lines.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CAPEHART

The rise of inland water transportation has been one of the most astonishing and encouraging stories of the past two decades.

A little less than 100 years ago inland water transportation was a dead letter. The very mode of transportation which helped build cities like Jeffersonville and Louisville no longer was a factor in our transportation picture. But today, I am happy to say, that picture has changed. Funds voted by Congress have made possible the long-range program of the Corps of Engineers for the modernization of the Ohio River—its locks, dams, and levees.

I have always been a stanch supporter of this program and not long ago, on May 10, in a statement before the Senate Appropriations Committee, I strongly urged the support of various navigation projects on the river. I told the committee that:

"The Ohio River is a primary source of materials basic to the national security. I believe it is important rapidly to complete this program designed for modern conditions and volume of traffic which would be required for our national defense."

These navigation projects, for which Congress has appropriated funds, are to my mind examples of what Congress can do to enable private enterprise to serve the public better and cheaper.

A great deal of the credit for the growth of river transportation and the resultant solid industrial growth of cities and towns on the river is due to two gentlemen who are here today. I would like to pay tribute to them individually.

Mr. Pat Calhoun, president of the Jeffersonville Boat & Machine Co. and of the American Barge Lines, has been active in efforts to rebuild our river transportation system since World War I. Jeffboat has been building river steamers and ferryboats for over a hundred years. But what a far cry is this fine, modern new boat—the *Philip Sporn*—from the wooden paddlewheelers of the old days. To see this modern towboat,

one might think it was always so in the industry. But this is not the case.

Mr. Calhoun and I have been around for quite a few years now and I think both of us remember the twenties when Pat started in the industry. It needed a lot of courage and foresight to enter the river transportation industry then, when few people had faith in its success and fewer yet enough vision to see its growth potential. But he persevered in his efforts to reestablish this once great form of transportation and I think when we look around us today we can see the measure of his courage and foresight. And I think he can also be proud of the role these yards played in serving our Nation during the war—when the need for inland water transportation was so great.

Just a few weeks ago I learned that Mr. Calhoun and his company made another contribution to our economy and the promotion of trade with our great neighbors to the south. This was the launching of the first piggyback barges to be sent to Venezuela. Here is another example of what Indiana has done to link the United States with South America in the network of inter-American trade relations.

Mr. Philip Sporn, for whom this fine boat is named, is also a citizen of whom the people of the Ohio River can be proud. Ever since 1920 when he joined the American Gas & Electric Co., of which he is now president, he has worked toward the improvement of the electric utility industry. He has led his company's pioneering efforts in several fields of electric power generation, transmission, and distribution. These efforts have not only improved the general efficiency and economy of operation of the producers of electricity but have also served to keep down the cost of electricity to the 5 million people in this great area of ours.

I am not going to take the time to record the many achievements in Mr. Sporn's career, though I would gladly like to, but I would like to point out two things which I feel are of major importance.

Mr. Sporn has devoted a great deal of time and effort to the study of nuclear energy and particularly to the possibilities of its application in the field of power generation. I understand he is at present a member of the Edison Electric Institute's technical task force in nuclear power. This group is now evaluating various reactor types for recommendation to institute members.

The second service of Mr. Sporn and his associates to which I would also like to call attention is the creation of the Ohio Valley Electric Corp., of which he is also president. This $400 million enterprise was organized by 15 private electric utility companies of the Ohio Valley region to supply the electric power requirements of the Atomic Energy Commission's new $1½ billion diffusion plant in Pike County, Ohio.

To my mind these are two fine examples of what our utility industry is doing to insure that the utilities of our Nation rank second to none in service to national security and consumer benefit.

I would like also to point out that Mr. Calhoun, Mr. Sporn, and their associates have been successful in providing to the public, through their companies, efficiencies and economies of operation which have kept down costs during a period of constantly rising costs of virtually every phase of modern-day living. This is no mean achievement.

The value of inland water transportation is so far reaching that I imagine there are few people who can envision the tremendous contributions made by this mode of transportation to our country. Before I came down here, I refreshed my memory by looking at some of the statistics concerning this industry. I was again impressed—although I served for some time as ranking minority member of the Interstate Commerce Committee and was well acquainted with the subject—by the rapid strides made by this industry in so short a time. I think you might be interested in a few facts as to what the river—and its servant, the barge lines—is doing to serve the people of Indiana, Kentucky, and the 18 other States in our inland water empire.

Taking the valley as a whole, since 1950 more than $11 billion has been invested in new and expanded industrial and atomic plants along the main stream of the Ohio River and its navigable tributaries. The communities along the banks of the Ohio have a population of 3.2 percent of the Nation's total—but during the period from 1950 through 1955 they have been the site of 6.7 percent of the Nation's new investment in manufacturing and public utility plants.

In a recent tax and investment study made by the tax foundation, Mr. Ben Fairless, of the steel corporation, is quoted as saying that the average capital investment required to provide a job for one man in our present economy is $12,000. On this basis the industrial expansion of the Ohio valley has provided almost 800,000 jobs. This is more employment than the combined number of jobs of Pittsburgh and Cincinnati.

This booming economy has also contributed a great tax flow into the Federal Treasury. Taking only the 6 States of Pennsylvania, West Virginia, Ohio, Kentucky, Indiana, and Illinois—which actually lie within the Ohio valley—corporation taxes paid in 1954 amounted to $2½ billion. Social security and personal income taxes added another 4½ billion. This is more than $7 billion.

And how much money has been spent for navigation development of the Ohio River during the past years? From 1824 to 1954, inclusive, the total expenditures amounted to only $150 million—spread over 130 years. No investment of the Federal Government has ever benefited more people or provided a bigger return than this stake in the Ohio River navigation facilities.

Of particular note is the massive growth of electric utilities in the Ohio Valley. The increase in number and capacity of power stations and the increase in volume of electricity generated are looked upon as key measures of industrial progress. Along the main stream of the Ohio River the capacity of electric generating plants has grown more than twice as fast as in the United States as a whole. In 1941, it was 3 percent of the United States total and now is over 7 percent. Electricity generated along the main stream of the Ohio has shown an even more impressive growth. Plants along the Ohio generated 9 percent of the Nation's power in 1955 compared to 3.7 percent in 1939. When the navigable tributaries, other than the Tennessee and Cumberland, are included, the Ohio Valley now produces about 11 percent of the Nation's power.

The rollcall answered by new industries which have come to the Ohio Valley is much too long to list here. Along with the growth of heavy industry such as steel, oil, chemicals, and nonferrous metals have come a host of others such as rolling mills, fabricating plants, integrated chemical plants and many others.

It may be said of the Ohio—it is a river come alive.

What accounts for the rebirth of industry in the Ohio Valley, which for so long has been dormant? Certainly there are many factors which have contributed to this tremendous industrial growth. When we ask the companies who have been lured to the valley what factors attracted them, we get the same answer from them all. Directly or indirectly, most of them come back to the waterway itself. The most important of these are low-cost water transportation, a vast and growing concentration of electrical energy, an adequate supply of water, limitless coal deposits, and a sufficient and efficient supply of labor.

All of these companies and Ohio Valley industry in general are increasingly dependent on low-cost water transport. The vital relationship between the traffic on the river and the economic development of the region is demonstrated by the fact that while Ohio River traffic in ton-miles was increasing 582 percent from 1929 to 1950, per capita income in the Ohio Valley increased 221.8 percent as compared with an increase of 211.8 percent during the same period for the Nation as a whole.

The annual volume of barge traffic on the Ohio has grown phenomenally from 26 million tons in 1929 to a record of 72 million tons in 1955.

In ton-miles, traffic on the river increased more than 300 percent from 1946 through 1955; from 5 billion to 15 billion ton-miles. I have just received the latest figures in a report of July 1, which records still additional gains. These show that 76,376,633 tons of commercial traffic moved along the Ohio in 1956—nearly 5 million tons more than the previous year. Ton mileage increased to 15,999,404,994, a gain of over 5 billion from 1955.

The 1956 annual report of the TVA indicated that over 1½ billion ton-miles of commercial traffic moved on the Tennessee River during 1955, an increase of 24 percent over 1953, and almost 6 times as much as in 1945. The traffic for the first 6 months of 1956 was in tons, a 19-percent increase over the same period in 1955. The TVA report finally indicated that about three-quarters of the interchange river tonnage in 1954 was accounted for by the Ohio Valley region.

When these factors are added up, there is no predicting what peaks of development this valley may reach, or what needs for river-related uses it may require. About 4 years ago a trade journal raised the question of whether we might not some day see a 100 million tons of freight a year moving on the Ohio. Now I think it not unreasonable to look forward to 150 million tons as early as 1965.

Of course, I know that one of the chief concerns of all of you is to see that this phenomenal growth continues. I know that many of you are concerned that the practical limits of the capacity of many of the present locks will be reached in a few years. It is your feeling and I know it is shared by many others in this area, that a vigorous prosecution of the long-range program on the Ohio River is necessary for the continued economic development of the valley. There are many organizations in the area who are doing splendid work toward this goal, including, I understand, a newly formed group called the Inland Waterways Common Carriers Association of which American Barge Line is a charter member.

These are times for economy; but, as I have stated previously, I believe that the benefits to be obtained from new locks and dams should not be measured merely in the conventional manner of savings in transportation costs. The true measure of benefit lies rather in the expanded productivity, the improved standard of living for millions of people living in the Ohio Valley, the protection against disastrous floods, vastly increased revenues to local State and Federal treasuries—far in excess of the governmental costs involved—and the strengthening of national security which will stem from providing an efficient modern water highway in the industrial heart of our Nation.

You gentlemen here today have dedicated many years of your lives to the cause of water-resources development in the valley. I know that you will continue to bring to the people of the valley and the Nation a deeper understanding of the vast potential of economic growth inherent in this great

river and of the problems and programs involved in the development of that potential.

I think it fitting that, in closing, I quote the words of President Hoover on the occasion of the dedication of the Ohio River canalization in 1929:

"A nation makes no loss by devotion of some of its current income to the improvement of its estate. This is an obligation we owe to our children and our grandchildren. I do not measure the future of America in terms of our lifetime. God has truly blessed us with great resources. It is our duty to make them available to the people."

Interview of Hon. Richard B. Russell, of Georgia, on CBS News and Public Affairs Hour

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of the interview over the CBS News and Public Affairs Hour on Monday, July 8, the so-called Capital Cloakroom broadcast, wherein I was interviewed by three of the news correspondents of the Columbia Broadcasting System.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

CAPITOL CLOAKROOM

(Broadcast over the CBS Radio Network, July 8, 1957, 9:30 to 10 p. m.—guest: The Honorable RICHARD B. RUSSELL, United States Senate, Democrat, of Georgia—CBS news correspondents: Griffing Bancroft, Bill Downs, Paul Niven—producer: Michael Marlow)

Mr. BANCROFT. Senator RUSSELL, will there be a real showdown on civil rights?

Mr. DOWNS. Senator, would this bill really punish the South?

Mr. NIVEN. Senator, would the South accept a compromise on civil rights?

Mr. BANCROFT. Senator RUSSELL, welcome to Capital Cloakroom. One of the real veterans here, you have been in the United States Senate now for more than 24 years.

And right now you are the leader of the southern Senators in this current battle over civil rights. So let's start with that.

Do you think this time there will be a real showdown on civil rights?

Senator RUSSELL. Well, there is, of course, a very decided disposition to press this bill which is titled a civil-rights bill to a conclusion in this session of the Congress. Now we have a very attractive habit here of labeling bills, sometimes, when they don't always live up to their label.

But if you are referring to the bill that is now being discussed on the floor of the Senate, it is apparent that a very determined effort will be made to force a legislative conclusion on that measure.

Mr. BANCROFT. Well, we want to ask you what might happen on that, but first, you say whether this should properly be called a civil-rights bill.

If it is not a civil-rights bill, what is it?

Senator RUSSELL. Well, in some of its aspects it is more of a force bill aimed at the customs and laws of the South that were upheld for a hundred years than it is a civil-rights bill.

It has been presented to the public generally as being a bill to assure the right to vote. But as a matter of fact that is the mildest of all the provisions of the bill.

Mr. DOWNS. Well, Senator, there was a coalition of so-called liberal Republicans and liberal northern Democrats that got this bill to the floor in the first place.

What happens to the conservative coalition among southerners and conservative Republicans under these circumstances?

Senator RUSSELL. Well, I don't know just exactly what that term "coalition" implies. At times it seems to be used as a term of condemnation or derision.

In times past when some of the southern Democrats have voted with the Republicans not to move quite as fast in some areas as some of our Democratic Presidents would have had us to move, that's been called a coalition between southern Democrats—Mr. Reuther and his crowd always said Dixiecrats without regard to how loyal we had been to the Democratic Party—and the reactionary Republicans.

We do have a most unusual coalition this time in that the Republican leadership has joined hands with some of our very liberal friends, such as Senator DOUGLAS and Senator HUMPHREY and others to force this bill to a conclusion.

But, then, politics makes strange bedfellows. In this case we undoubtedly have a game where the South is a mere pawn on the political checkerboard. The minority groups have apparently convinced the leadership of both parties that the party that is willing to wage the furthest punitive expedition into the South will win the presidency in 1960.

Mr. NIVEN. Senator, some Republicans have charged and northern Democrats have denied that there was a deal in the voting over the procedure of the civil-rights bill and the Hells Canyon bill.

Senator RUSSELL. Yes; I saw that in the press. If there is anything to that, I have no knowledge of it. I saw the article.

I happen to be 1 of the 5 Democrats who changed his vote on Hells Canyon. I did it because of the tax amortization feature which made it very apparent that the Federal Government was going to pay for the dam in any event. If we were going to pay for it, I thought we ought to have title to it.

Mr. NIVEN. But you did not offer and were not offered any kind of deal?

Senator RUSSELL. No; there was no deal in any sense I know of. I hope, however, such a thing as appreciation still exists even in the Senate of the United States where any Senator finds that he can out of his heart do so to vote to make this bill a tolerable bill or a reasonable bill and not a force bill, that they will vote for amendments.

I hope that the purpose of this charge was not to frighten the true liberals in the Senate who will support, for example, a jury-trial amendment.

We have a very anomalous situation when so-called liberals are trying to abolish the right of trial by jury, as is being done in this bill.

Mr. BANCROFT. Well, Senator RUSSELL, if there was a deal made, you apparently lost it anyway, because the bill went on the calendar over your objections.

Senator RUSSELL. Yes; and very frankly, when I saw the coalition that was there—that I called the Knowland-Douglas-Humphrey axis—I had very little hopes of getting a majority vote. I did make a fight because I believe in orderly procedure in the Senate, and I did not think that the procedure that was followed was orderly, and we are paying the penalty for it right now.

We put the bill on the calendar and it comes out later that there's been an error in the print of the bill that was sent over that they are undertaking to correct today.

When you get away from established precedents in the Senate, when you try to take shortcuts for temporary advantage, it nearly always brings a great deal of trouble.

Mr. BANCROFT. Well, now, coming back for just one moment to this bill, President Eisenhower, who claims that this is a moderate bill and who says at least his principle desire is to protect voting rights has expressed some surprise at your statement, I believe, about how far you think this bill could go.

And there was some talk that you might have a conference with the President to talk about this. Is there any conference now set for you at the White House?

Senator RUSSELL. Well, now you ought to go back to what you were talking about——

Mr. BANCROFT. All right.

Senator RUSSELL. Before you get down to that.

President Eisenhower also stated that he had gotten out the bill and tried to read it and had found some of its provisions very confusing.

Mr. BANCROFT. That is right.

Senator RUSSELL. And I may say that he has a great deal of company, because it is a very adroitly and cunningly drafted bill.

I have no comment to make on the other because I am of the old school, came up here at a time when Senators didn't go out and make an announcement they were trying to get down to the White House or were invited to the White House.

I would only say that I earnestly hope that I may have an opportunity to discuss this bill with President Eisenhower, either personally or with any legal adviser that he wants there, to show him that the right-to-vote provision in this bill is the least momentous of all its provisions.

Mr. DOWNS. Well, Senator, you said that in the case of jury trial, in demanding a jury trial in voting rights cases, for example, that this bill should contain that provision.

Senator RUSSELL. Yes.

Mr. DOWNS. Isn't it true, sir, that in the South, and hasn't it been proved in the South, that when you have an all-white jury voting on the rights of a Negro voter, that he doesn't have much of a chance of winning?

Senator RUSSELL. Well, that's one of the common slanders that's been repeated against the South without a word of evidence to substantiate it. You have got any number of criminal statutes on your books now where it is made a violation of criminal law, punishable by imprisonment and fine, to interfere with the voting rights of any citizen.

Now the South is entitled to have at least some proof brought forward of this charge that is repeatedly bandied that every southern white man is so irresponsible that he would forswear himself or perjure himself in a case involving a Negro citizen.

I practiced law for many years before I came into the Senate, and I did not find that to be true. And we were at least entitled, before a whole great section of this country was indicted as everyone of us being perjurers, we were at least entitled to have the Attorney General come out and say, "Here, I tried to get an indictment in this case before a grand jury for a violation of a right to vote, and I didn't get an indictment," or if "I did get an indictment," that the jury "didn't do justice."

They haven't done that; they have just gone on this wave of public sentiment, this antisouthern feeling that has been built up by just such charges as that, that the whole white South would just forswear themselves.

As a matter of fact, there is no great problem about the Negro voting in the South today. In my own State, and that's the only one I have personal knowledge of, there's no limitation or prohibition on the right of

qualified Negroes to vote. Why in the city of Atlanta they elected a Negro over one white man to one of the most responsible of all the city positions, a member of the board of trustees for the schools. He was reelected within the past few months by white votes. And the Negroes vote there, they vote generally over the State. And this is just part of this campaign to make it appear that throughout the entire South that Negroes are denied the right to vote. It is certainly not the truth.

Mr. NIVEN. Senator, isn't there a good deal of social and economic pressure against Negroes to restrain them from voting?

Senator RUSSELL. I have heard that that was true in some areas. I was giving you what I know of my own knowledge in my own State. And there may be, I don't say there aren't, isolated instances where Negroes are denied the right to vote—in every State of this Union you've got wards and communities and counties where you have got so-called courthouse gangs, and they deny some white people as well as some Negroes the right to vote if they don't belong to that gang.

But we have got criminal statutes to punish that, and why doesn't the Attorney General invoke them before coming in here and making a blanket indictment of the South, "The white man in the South is so venomous against the Negro that he won't do justice." For that is not true.

The relations between the races in the South have been gravely disturbed in the last 2 or 3 years; but until that time there had never been any place in all the history of human civilization where two races so equal in number had started out with the disparity that there was between them—one coming out of slavery—and had made the progress over the period of 80 years that has been made in the South.

The white South should be commended for what they have done. They have taxed themselves even in the desolation of destruction following the Civil War to create schools. And for a hundred years, under the protection of the law, they have paid taxes and bonded themselves to build separate but equal schools for the white and colored people.

And that's the purpose of this bill, to forcibly commingle the white and Negro children of the South in the schools. This voting business is all a smoke screen for that vicious provision of the bill—and not only in the schools, but in all our places of public entertainment.

Mr. NIVEN. Well, Senator, you and other southern Democratic Senators are now emphasizing the segregation—this integration threat in the bill.

The bill was debated for about a week in the House and the southerners there did not place great emphasis on this, they seemed to debate the bill on its open merits.

Senator RUSSELL. Well, I of course don't know what took place over there. They perhaps were taken in by this campaign that it was just a voting bill. I haven't read the debate in the House. I did read the bill here. I spent the better part of 3 days with about 40 law books running down this cunningly contrived bill. And I leave it up to you and your personal attorneys, right now, to take the remarks that I made in the Senate last Tuesday on this bill and take this bill and if he doesn't come up and tell you that it can be used as a force bill to bring the whole might of the United States Government to bear to integrate the schools of the South, why you'd better get you another lawyer.

It's very clear, when you run it down.

Mr. BANCROFT. Senator Russell, it seems to me you go a little farther than that. You say that not only can it do that, but that that was the intention of those who sponsored this bill.

Senator RUSSELL. Undoubtedly. This section, this part——

Mr. BANCROFT. Well then, whom do you——

Senator RUSSELL. I don't know who drafted this bill.

Mr. BANCROFT. Accuse of doing this? Do you think Attorney General Brownell——

Senator RUSSELL. I don't know whether——

Mr. BANCROFT. Deliberately brought in a bill that goes——

Senator RUSSELL. Mr. Brownell knew what was in this bill or not. I am confident he didn't draft it. But I would certainly like to meet the man who did draft it because it is a masterpiece of obscuring the purpose.

Mr. BANCROFT. If this is a deliberate plot, who do you think was——

Senator RUSSELL. I don't know who is responsible for it. But I assert unhesitatingly that this part 3 of this bill was drawn for the express purpose of obscuring a vast grant of power to destroy any system of separation of the races in the South.

And I will say that after the people of the South have known no other way of life, no other social order for a hundred years, this is a monstrous proposal to come in and to ask for any such grant of power as that over night.

This condition wasn't changed by an act of Congress, where it was debated, people had an opportunity to see what was said and discuss it themselves—it came through a decision of the Supreme Court, based on a book by the Swedish Socialist who said that our Constitution is a plot against the common people of the United States. And it came overnight—like that—with no preparation.

Mr. BANCROFT. This is the Supreme Court school segregation decision you are talking about?

Senator RUSSELL. Yes, this bill proposes to enforce judicial law, a law that has been written by the courts rather than legislative law, a law that's been written by the Congress, that's what it does.

Mr. DOWNS. Senator, you also expressed I think last week the fear or prediction that American troops could be used.

Senator RUSSELL. Why this bill is tied in with one of your old reconstruction statutes that was passed by Sumner and Stephens when they set out, as they said themselves, to put black heels on white necks in the South. The criminal counterpart of this civil statute was stricken down by the Supreme Court declaring that it was passed by an impassioned Congress at a time when the Southern States were being treated as conquered provinces.

And yet that is the law that it skillfully ties into without being apparent on its face. Why didn't they write out in this bill what they propose to do where we could read it, instead of saying "section 1895," and then having that section refer to section 1993, where it requires a lawyer who is a jigsaw puzzle expert to put it all together to see exactly what it does?

But you will see that the real lawyers of this Senate will not refute one iota of what I said when they have studied this bill, and I care not which side of it there're on. They may say "We don't intend to do it," but they won't say it can't be done.

Mr. NIVEN. Senator, can you imagine Federal troops actually being sent into the South?

Senator RUSSELL. I certainly can. I certainly can. When they can make such a political pawn out of the South, as has been done now, and where they can—when men are seeking political preferment, they make all kinds of commitments, and I can very readily see that Federal troops could be sent into the South to enforce—why we have had troops and tanks at two schoolhouses in the South already, without this law.

Mr. DOWNS. That was National Guard troops.

Senator RUSSELL. Yes, that's true. But you're just as dead if you're shot by a tank bullet from a National Guard man as if you were shot by a regular or a marine.

Mr. DOWNS. Senator RUSSELL, in answer to my question you said that you do believe, then, that this bill is really designed to punish the South?

Senator RUSSELL. I have no question about it. Now I don't know why they take such an admonitory attitude toward the South, as if we were a group of wild and uncivilized people. Some of them feel that they are doing a very meritorious thing, to resort to any means to force the South to conform to what the rest of the Nation thinks is the proper social order for the South.

Well, this is a great Nation of ours——

Mr. NIVEN. Senator, I want——

Senator RUSSELL. If a man wants to move from one State to another, if the southern people want their children in integrated schools, it's might easy to move to a State where they have them; they are not more than 300 miles away from anywhere in the South. If any other person preferred for his child to go to school with children of his own race, why, he might move to the South. Then he'd be safe for the time being, until this bill passes and is enforced.

Mr. DOWNS. Don't you believe, sir, that the social order in the South has changed and is changing?

Senator RUSSELL. Oh, of course, it has, and is. But it has happened through a process of evolution, and this proposes to enforce a revolution on the South and to drive men. There's a great deal of difference between leading and in driving or letting people themselves lead and drive.

We have made great progress in the South. Why, in the voting, not in my time have there been any restrictions on Negroes in general elections in the South, but we did have a law for a long time that they couldn't vote in the Democratic primaries. Now that's all been done away with, and they do vote; there's no longer a white primary. We have moved forward very rapidly when you consider the full impact of it.

It's all well and good for a man that lives in a State where it is 98 percent white and 2 percent Negro to say, "Why, where is this problem? There's nothing to it." Let him go to a State where they are nearly equal in numbers, where the races in communities are about equal in numbers, and then undertake to enforce overnight such a bill as this.

Mr. NIVEN. Senator, the colored leaders reply that, despite this evolution and this progress, large numbers of them are still denied a right which they have been guaranteed by the Constitution for 90 years.

Senator RUSSELL. You mean the right to be in integrated schools?

Mr. NIVEN. The right to vote.

Senator RUSSELL. Well, the Supreme Court said that for 90 years they had been denied the right that they were entitled to be in integrated schools. The Constitution hadn't changed; the complexion of the Court has changed.

And I deny that statement as to voting. At least, as far as the greater portion of the South is concerned, there is no real limitation or restriction on the right of qualified Negroes to vote.

Mr. DOWNS. Well, the qualifications, sir——

Senator RUSSELL. You can come to my State when they are having an election and see them; they are lined up there for blocks to go and vote, and their votes are counted just like anyone else.

Mr. NIVEN. Well, Senator, would you concede that qualification has been interpreted differently for white and colored persons?

Senator RUSSELL. I have heard that, but I don't concede it—no; I don't concede it, generally, in my State; no. There may be areas where it has been, small communities, it is probably true.

Mr. NIVEN. Well, why don't Negroes vote in larger numbers, then?

Senator RUSSELL. Well, they vote in—we have practically 225,000 registered in Georgia, and they vote. Perhaps in some of the elections they have a higher percentage voting than white people.

Oh, you pillory the South by giving the figures voting in a general election and saying only 45 percent of the people voted. But as a matter of fact we have had the one-party system in the South, and our people vote in the primaries. And you compare the vote in the primaries, when we really settle our election, and it's not too much behind the rest of the country. But we don't vote in the general election because everything has been settled in the primary.

But that's the figures they always give you, just 45 percent here in the general election.

Mr. NIVEN. But the percentage of Negro voting is not anywhere near as high as the percentage of whites voting; is it?

Senator RUSSELL. No; because there are a great many more white people in my State than there are Negroes. We have about 2,300,000 white people and about 1,200,000 Negroes.

Mr. NIVEN. Isn't that a proportionate basis?

Senator RUSSELL. Well, that may be slightly true. I concede that, because they haven't been voting long. They haven't been voting too long. We only abolished the poll tax in Georgia about 10, 11 years ago.

But where can the Attorney General come in and say, "In Georgia they violated the criminal law by denying this man, Bill Jones, the right to vote"? And he should do it and prove, "I tried to indict and I tried to convict before a jury," before you come in and indict the whole State of Georgia and say we have deprived the Negro of his right to vote illegally.

Mr. NIVEN. Sir, is it your case that until recently there were impediments in the way of the Negro voting?

Senator RUSSELL. Of course there were in voting in the primary. I explained that a while ago. They could vote in the general election, but it didn't mean anything because the man who was nominated in the primary was going to win the general election. That may be a mistake, we may have—should have been a two-party State. I sometimes think that we would have fared much better if we had been.

Mr. BANCROFT. Senator Russell, I wonder if I could explore a moment what's apt to happen here on the floor of the Senate.

You are leading this strategy. And the motion made today, of course, is a motion to take up the bill.

Senator RUSSELL. Yes.

Mr. BANCROFT. Which, if it prevails, would of course be followed by the discussion and the motion to pass or to act on the bill and amendments. There has been some talk that you might not filibuster or unduly prolong and defeat a vote on the motion to take up. How about that?

Senator RUSSELL. Well, Mr. Bancroft, I intend to act as each circumstance presents itself and as this matter unfolds in such a way that I think will cause us to be able to get our maximum strength for the amendments to this bill that will see that it is a right-to-vote bill instead of a punitive bill against the South.

Mr. BANCROFT. Well, now, on that, Senator RUSSELL, an amendment cannot be offered or acted upon——

Senator RUSSELL. Oh, no.

Mr. BANCROFT. Until after this motion to take up the bill acted on,

Senator RUSSELL. We are now debating this bill strictly on its merits. There is no part of this discussion that consists of reading long papers, the ordinary earmark of a filibuster.

Mr. BANCROFT. Well, I'm trying to find out if and when——

Senator RUSSELL. I'm not prepared to say just when we'll let the bill be made to unfinished business. We want to discuss it. We have found that there are a number of Senators who have been busy with other matters and didn't really understand the full impact of this bill.

I want the situation in the Senate to jell a little where we can see just where we are going with these different amendments.

Mr. BANCROFT. Well, then, after it has jelled a little, then presumably you will allow a vote to take place on the motion to take up?

Senator RUSSELL. Oh, I think the Senate will vote on amendments to this bill.

Mr. BANCROFT. On the motion to take up, first? And——

Senator RUSSELL. I think the Senate will vote on amendments to this bill.

Mr. BANCROFT. Then to vote on amendments?

Senator RUSSELL. Well, I'm not prepared to say just when, but I'm very confident that it will.

Mr. DOWNS. Senator, you indicated strongly that this is a political measure——

Senator RUSSELL. Yes; I feel that strongly.

Mr. DOWNS. Being presented by a coalition of Democrats and Republicans, and then——

Senator RUSSELL. I feel this——

Mr. DOWNS. Also you said perhaps it would be a good thing if the South did have a two-party system.

Do you think that your opposition to the bill, Democratic opposition to the bill might strengthen the Republican Party in the South?

Senator RUSSELL. No; not when the Republican Party is furnishing more votes for this particular bill than the Democratic Party is in the Senate. I don't think that it would. I was talking about we would have been in a better bargaining position if we had not all been tied up in what's called the Southern Democratic Group.

As it is now, the minority groups outside the South, though they are relatively small in numbers compared to the voting strength of the white South, they can go to the political leaders there and convince them that these elections depend on their action in these doubtful States.

And by having had strictly a one-party political system in the South, I think we have denied ourselves a similar bargaining power.

But the Republicans, of course, are going at it in a very poor way to improve their position by putting more votes behind this force bill than the Democratic side of the aisle, here in the Senate.

Mr. DOWNS. Well, what do you think the general outcome, say, in next year's elections will be as a result of this debate?

Senator RUSSELL. Well, I couldn't say—my crystal ball is not that good. I can't pass on what it will do.

I don't believe that the great mass of the American people favor extreme measures—we are all in favor of civil rights, everybody is in favor of civil rights.

The question is, Where does my rights end and where does yours intervene? That's the question that's involved here, wholly aside from this voting proposition and this separation of the races. And they put a tag on it and call it civil rights.

But if this bill were explained to the American people, there is no doubt in my mind that an appeal from the politicians to the people would be sustained and that the American people would vote down this bill in a referendum, because it is a very unfair piece of legislation.

Mr. NIVEN. Senator, can you project any kind of compromise on this bill that would be acceptable to you?

Senator RUSSELL. Well, I would have to see it. I would have to see it. I am perfectly willing to entertain any ideas that any responsible leader of those that are pressing this bill might care to discuss. I do resent this whole theory of the bill that the South needs a guardian in the person of the Attorney General.

Now if there is any one State where the Negro is denied the right to vote, you have got clauses in the Constitution guaranteeing a republican form of government. Apply that without coming in here and abolishing the right of jury trial and tying it into the force bills of reconstruction so you will have the power to bring the Armed Forces of the United States to bear on the southern people.

We—the country as a whole doesn't realize what we have gone through with in this whole period. We have been a very poor people. It was from 1940, 80 years after 1860, until the tax values of my State got back to where they were, prior to the great fratricidal war.

And we have taxed ourselves, taxed our poverty heavier proportionately than any other section of the country to try to carry on this separate but equal system of education. And you can get your statistics and you will see that the tax according to wealth has been heavier in the Southern States than anywhere else for education.

We don't like to be threatened with this kind of force legislation.

Mr. NIVEN. You may recall that a national poll a couple of years ago found that 55 percent of Southern whites expected that integration in public schools would eventually take place. Would you agree with that?

Senator RUSSELL. I didn't see it, but I am not in a position to challenge your statement because I don't know. I didn't understand your question.

Mr. NIVEN. Apart from your preferences in the matter, do you feel that school integration is inevitable in the long run?

Senator RUSSELL. Well, forever is a long time. In the foreseeable future I don't see any integration of the schools in my State, particularly with this force legislation, because you can badger and arrest and bait people until they get in a frame of mind to close down the schools before they will do it.

Mr. BANCROFT. Senator RUSSELL, you said that amendments, in your opinion amendments to this bill would be voted on, and I——

Senator RUSSELL. Yes.

Mr. BANCROFT. Presume you think some would be accepted?

Senator RUSSELL. Well, I would certainly devoutly hope so. If it is not amended it will be the worst piece of legislation ever considered.

Mr. BANCROFT. Now I presume one would be the jury trial amendment, for example, the one that was defeated in the House?

Senator RUSSELL. Yes, and the one to strike part 3 of this bill, the force provision. It is not related to the right to vote.

Mr. BANCROFT. In other words, Senator, that would leave in it simply the provision for a civil-rights commission and a new division in the Department of Justice?

Senator RUSSELL. Yes. Of course, that's a rather unusual provision.

Mr. BANCROFT. Would you accept that much of the bill?

Senator RUSSELL. No; I wouldn't be prepared to vote for a bill that was such a reflection on the people of Georgia as I deem this one.

Mr. BANCROFT. In other words, no matter how many amendments are adopted you still won't vote for this bill?

Senator RUSSELL. Oh, I didn't say that, now. You just narrowed it down. You just narrowed it down to—in the first place, this bill is wrong in policy. Here you have got a proposal that you are going to establish an entirely new division in the Department of Justice to take up all these cases, whether a man wants it done or not, and do it at Government expense.

Now the National Colored People Association and their kindred organizations have had no difficulty at all in getting up money to bring all these lawsuits.

You are starting a new system there, and the next thing you are going to do is to have some system where labor will be able to have a division in the Department of Justice to enforce their rights on employers at the expense of the Government, or vice versa, and in other fields. I don't approve of that.

I could not support such a measure. I think it is wrong in policy where a man is able to hire a lawyer, to say because it is a certain kind of case that the Attorney General can proceed at the taxpayers' expense whether the man involved wants him to or not. I don't approve of that general philosophy.

Mr. BANCROFT. Well, I'm afraid that's all the time we have, and Senator RUSSELL, we want to thank you very, very much for being with us on Capitol Cloakroom, and we will watch with interest to see what happens down there on the floor of the Senate.

Thank you, sir.

Proceedings at Celebration in Honor of Birthday of General de Rochambeau

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, July 10, 1957

Mr. BEALL. Mr. President, on July 1, 1957, at the third annual commemoration held in Washington of the birthday anniversary of General Rochambeau, at Lafayette Square, representatives of various patriotic organizations met at the Rochambeau Memorial to participate with the French Ambassador to the United States in tribute to this great Frenchman, who, in the early days of our Republic, contributed so much to cementing relations between his nation and our own.

As is well known, our two Republics have enjoyed continued good relations into our present days. I think it most fitting that the American people be apprised of the remarks of the Ambassador from France, the Honorable H. E. Herve Alphand, on that occasion.

Mr. President, I ask unanimous consent that the address delivered by Mr. Alphand on that occasion be printed in the Appendix of the RECORD, together with a list of those organization representatives in attendance for the commemoration, and the introductory remarks of Mr. Charles Parmer, president of the Rochambeau Commission of the United States.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

REMARKS OF MR. CHARLES PARMER

The French Ambassador, Hon. Hervé Alphand, reaffirmed the alliance between America and France that has lasted since 1778–81, when he was ranking guest at the third annual Rochambeau birthday commemoration in Lafayette Park, Washington, July 1.

Fleet Adm. William D. Leahy, United States Navy, Chief of Staff for 2 wartime Presidents, represented the United States; Miss Constance Allen Tyler, the Mount Vernon Ladies Association of the Union; Mrs. James D. Skinner, vice president general, and Miss Lillian Chenoweth, honorary vice president general, Daughters of the American Revolution; Mrs. L. E. Tull, Gold Star Mothers of America; Mrs. Richard C. Marshall, chairman, Alexandria committee, Colonial Dames.

When the United States Marine Band under the leadership of Lt. J. B. King, Jr., played the march of old French airs for the flowers of friendship strewing, Mrs. William Granat, wife of Admiral Granat, led the congressional ladies, Mrs. William A. Purtell, of Connecticut; Mrs. James C. Auchincloss, of New Jersey; Mrs. Carroll D. Kearns, of Pennsylvania; Mrs. DeWitt S. Hyde, of Maryland; Mrs. Joel T. Broyhill, of Virginia; and others; also Master Robert Billingsley, representing New York.

The Mount Vernon Guards served as guards of honor under direction of John Charles Harris, their founder; and Maj. Gen. Charles R. Landon, United States Air Force, retired, military chairman of the Rochambeau Commission, read Washington's Yorktown victory orders.

Charles Parmer, president of the Rochambeau Commission of the United States, presided and introduced Ambassador Alphand, saying:

"From the days of the first French Minister, the Chevalier Anne-Cesare Luzerne, who was General Washington's confidante, America has been fortunate in the caliber of representatives from France. They have been scholars, statesmen, and fighters. None has stood higher than our distinguished guest today. Not only as an intellectual of the first rank, but as a fighting diplomat who served well the Allied cause at the danger of his own life."

ADDRESS DELIVERED BY H. E. HERVE ALPHAND, AMBASSADOR OF FRANCE TO THE UNITED STATES, AT THE COMMEMORATION OF THE 232D ANNIVERSARY OF ROCHAMBEAU'S BIRTH, WASHINGTON, D. C., JULY 1, 1957

It is my privilege as French Ambassador to the United States to express my gratitude to all our American friends who have dedicated themselves to maintain alive the great historical souvenirs which constitute the foundation of the friendship which has linked since its very inception, the United States to France.

In this year 1957, which marks the 200th anniversary of the birth of La Fayette, celebrations have been organized all over this great land to commemorate the assistance France brought to the American colonists in their struggle for independence.

In this struggle, General de Rochambeau played a decisive part and it is highly gratifying that we should be assembled here today to commemorate the anniversary of his birth and I wish to express my special appreciation to the Rochambeau Commission of the United States under whose auspices this commemoration has been organized and to its devoted president, my friend, Mr. Charles Parmer .

For a year and a half, Mr. Parmer has worked tirelessly to have the new East 14th Street Highway Bridge designated as "Rochambeau Bridge. He enlisted, on behalf of this cause, a great legislator, Senator HARRY BYRD, of Virginia, who sponsored a bill to that effect. This bill has been approved recently by Congress and is now awaiting the signature of the President of the United States. [Note: President Eisenhower signed the bill late that day—July 1.]

Last but not least, I wish to thank Fleet Adm. William D. Leahy who has consented to come out of a well-deserved retirement to represent the Government of the United States at this ceremony, thus giving to the French people another evidence of this continued interest in them.

The friendship between France and the United States of which today's ceremony is such a moving manifestation was cemented on the battlefields of Brandywine and Yorktown; this friendship has resisted revolutions, wars and day-to-day vicissitudes; this friendship is indeed unique in the history of international relations and one of the reasons is that the men who initiated it, the French negotiators of the historic treaties of amity and alliance of 1778 did not seek nor expect any rewards.

To this day, there are some who think that the primary motive for France's intervention on the side of the American colonists was a desire for revenge against Great Britain after the reverse suffered during the 7 years war. Indeed, the Treaty of Paris had been most damaging to our interests. The conquest of Canada by Great Britain had been a tremendous blow.

Yet, and this point deserves emphasis, in the treaties of 1778, France renounced forever any parts of the continent, of North America which, before the Treaty of Paris, or in virtue of that treaty, we acknowledged to belong to the throne of Great Britain. In so doing, our negotiators made it clear that they were not concerned with the pursuit of narrow national aims, but that they were fully conscious that they were laying a solid and lasting foundation for the friendship between France and the United States.

The basis for this friendship is to be found in the great ideal of freedom which the Americans and the French share with the same passion. Without this common ideal, it is unlikely that the two nations would have remained so closely linked in peace and in war for nearly 2 centuries.

It is for the triumph of this ideal, that, twice in this century, the French and the Americans have again fought side by side on the battlefields of Saint-Mihiel and the Argonne, on the beaches of Provence and on the Rhine.

It is for the triumph of this ideal that the French and the Americans are more closely allied than ever, within the framework of the North Atlantic Treaty Organization, which is the bulwark of our western civilization against the danger of Soviet imperialism.

It is this common ideal of freedom which explains why, beyond momentary difficulties and obvious differences in our ways of life, there is a profound affinity between the French and the American peoples, who are just as dedicated today to the triumph of the freedom of man as they were nearly 200 years ago, in the glorious times of the American and of the French Revolutions.

Jamestown, Va., 350 Years

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 10, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have published

in the Appendix of the RECORD the excellent and timely poem of the Poet Laureate of the State of Colorado, Mr. Milford E. Shields, commemorating the 350th anniversary of the founding, at Jamestown, Va., of the first permanent English settlement on this continent. The poem is entitled: "Jamestown, Va., 350 Years."

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

JAMESTOWN, VA., 350 YEARS

(By Milford E. Shields)

Three hundred fifty flaming years ago
Those virile sons of freedom landed here;
With feet set firmly on this earth below
And eyes uplifted to the heavens clear,
They forged an outpost for the world to see,
A bastion for the rampart of the free.

Full time and tide and sea have proved them just:
Our country growing great confirms the trust.

Let us stand here as those strong, stalwart men
And look into the higher, clearer sky,
Here reinforce this outpost once again
And reaffirm the truth free men live by—
Then shall the wider world be blest to see
The one unconquerable fortress of the free.

Return of Seized Alien Property

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It Is Not Ours To Keep," which appeared in the Easley Progress of Tuesday, July 2, 1957, in Easley, S. C., and a statement by the Senator from South Carolina [Mr. JOHNSTON], concerning the Trading With the Enemy Act and proposals for the return of vested assets.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Easley (S. C.) Progress of July 2, 1957]

IT IS NOT OURS TO KEEP

From time to time we have noted in the press veiled suggestions of improper motive in legislation introduced by Senator OLIN D. JOHNSTON to restore the property of German nationals seized during the war. The criticism has all along seemed unfair. In the first place Senator JOHNSTON risked his life as an active participant in the first war against Germany as an enlisted man. In the second place, being upon the Judiciary Committee of the Senate, he would not be so foolish as to introduce improper legislation in his official capacity. He would have no cause to do it in a private capacity. Because of the continued charges of persons unfriendly to him the Senator has released a full statement on the question of the return of enemy aliens' property, which we have found most interesting and clarifying. A little thought on the part of the citizen would bring him to the same conclusion that the long report leads to. The seized property held so long by the United States is not German Government property but that of citizens of Germany who happened to have it in the United States when the war began. We are of course entitled to keep spoils of war taken from the enemy government; but it is not our character and viewpoint to keep the property of individuals longer than our own safety requires. Many of these aliens were friendly to the United States. One who died in a Hitler concentration camp by his will left a large sum of money to our Rockefeller Foundation. But even though the alien was hostile, a peace treaty removes that barrier and if we keep his private property we are doing wrong. Some self-styled superpatriots can't see through that conclusion of commonsense, justice, and decency. They are the only ones who have been unfair to Senator JOHNSTON in introducing his Judiciary Committee bill to complete the adjustment of seized alien properties.

STATEMENT OF OLIN D. JOHNSTON, UNITED STATES SENATOR FROM SOUTH CAROLINA, CONCERNING THE TRADING WITH THE ENEMY ACT AND PROPOSALS FOR THE RETURN OF VESTED ASSETS

Because of a widespread misunderstanding of the responsibilities and functions of the subcommittee on the Trading With the Enemy Act of the Senate Committee on the Judiciary and pending bills affecting alien property, a statement may help to dissipate much of the confusion in the public mind with respect to such bills which provide for the return of the privately owned properties of our former German and Japanese enemies seized under the provisions of the Trading With the Enemy Act.

The Trading With the Enemy Act was enacted on October 6, 1917. Its principal purpose was (a) to immobilize the properties of enemy nationals in World War I; (b) to prevent commercial transactions between the merchants of the United States and Germany and her allies; and (c) to hold the properties in trusteeship for the ultimate disposition of such assets by the Congress. Confiscation of such properties was never in the mind of the Congress when the original statute was enacted.

In 1923, the Congress authorized by the Winslow Act the returning up to $10,000 in value of the vested properties seized during World War I. In the War Claims Settlement Act of 1928, Congress returned 80 percent in value of the seized properties; the remaining 20 percent was retained as security for the payment of American war-damage claims, costs of administration, etc. In 1934, because of the worldwide depression and the defaults of the Hitler Government, further returns of the balance of 20 percent were prohibited by the Harrison Act.

Shortly after the commencement of World War II, the provisions of the Trading With the Enemy Act were reactivated, enlarged by executive orders under the War Powers Act. Provision for the appointment of a Custodian of Alien Property was made.

In 1948 the War Claims Act was passed to provide payment of claims for the detention and ill-treatment of prisoners of war and on behalf of certain religious groups for property losses sustained by them as the result of the military action of the Japanese and German forces. As a ready and available source of funds necessitating no direct congressional appropriations, the Congress provided that no returns of the private properties be made and that the proceeds thereof be applied to the payment of those minor war claims. Two hundred and twenty-five million dollars of the estimated $612 millions in value of the seized properties have thus far been expended in the payments of that category of war claims. Since 1942 Congress has appropriated from the liquid assets about $52 million to the Custodian's office for his administrative expenses. That office has had an average of over 300 persons employed annually since 1942 with an annual payroll for them in excess of $3 million. That expense does not include the costs of administering the going concerns operated by the Office of Alien Property.

The properties of Japanese nationals were seized and vested up to the time of the Japanese Treaty on April 28, 1952. The President, by informal order on April 17, 1953, directed that no further seizures be made of the privately owned German properties. Thus it is apparent that much of the property was seized long after hostilities ceased and the necessity for seizures no longer existed.

The estimated values of the properties at the time of their seizures amounted to $390,808,000. The appreciation in values of the vested properties, the net income from them and other properties received through agreements with foreign governments have swelled the original total to a present estimated total of $629,701,000 as of June 30, 1956. As of that date the net value of all assets then being administered by the Department of Justice amounted to $271,879,000.

The estimated percentages of the values by countries of the vested assets are German—76.2 percent, Japanese 16.7 percent; the balance consists of properties of Italian, Hungarian, Rumanian, Bulgarian, and others.

As a result of the peace treaties with Italy, Hungary, and the others, provisions have been made for a return of the values of the properties of the nationals of those countries.

Only the properties of German and Japanese individuals and concerns controlled by them require the attention of the Congress. No governmental property of the former governments of Hitler or Tojo is included in any proposal now pending before the Congress. No return of any property will be made to any war criminal of either country.

Congress by several amendments to the Trading With the Enemy Act provided relief for American creditors against their German and Japanese debtors. Complaints arose with respect to the conduct of the business affairs of many of the properties, involving political favoritism, etc., inefficient procedures for the payment of and adjudication of conflicting title and debt claims, and also regarding the failure to make available to everyone the advances and discoveries in scientific and technical uses of a considerable part of the seized properties. As a result of these and other complaints, the Senate by resolution in 1952 created the Subcommittee on Trading With the Enemy Act to examine and review for it the administration of the Trading With the Enemy Act by the Office of Alien Property of the Department of Justice. Each succeeding Congress has extended the subcommittee.

The late Senator Willis Smith, of North Carolina, became the first chairman of this Judiciary Subcommittee. In the Republican-controlled 83d Congress, Senator EVERETT M. DIRKSEN was designated chairman. Since March 18, 1955, after the Democrats succeeded to the control of the Senate, I have served as chairman along with Senators McClellan, of Arkansas; Price Daniel, of Texas; O'Mahoney, of Wyoming; Dirksen, of Illinois; and Langer, of North Dakota, as subcommittee members.

Continuing studies, investigations, and reports have been issued as required by the Senate resolution creating and continuing the subcommittee. Extensive public hearings have been held on many bills which have been introduced affecting the provisions of the Trading With the Enemy Act. Recently, the subcommittee concluded its 25th day of public hearings. Over the years, over 3,300 pages—much in fine print—of evidence was presented to the subcommittee. Briefs, arguments, and written testimony were submitted, a preponderance of which contended that the private properties of our former enemies should not be confiscated, but should

be returned either in kind or their reasonable value to their former owners. There was a considerable number who for varying reasons contended that no return should be made but that the private properties of some 40,000, more or less, German and Japanese owners should be held in lieu of reparations, due as from the Governments of Germany and Japan.

After most exhaustive and painstaking hearings and thorough consideration of the many factors involved, Senator DIRKSEN introduced S. 3423 on May 7, 1954. In breif, this bill provided for a full return, with certain exceptions, of all the privately owner properties of the former owners who were German and Japanese. The justification for such a return met with the approval of the Senate Judiciary Committee and the bill was favorably reported to the Senate. Congress adjourned in 1954 before S. 3423 had been considered.

The administration did not liik with favor upon Senator DIRKSEN's bill. Among other reasons it was urged that no provision was made in it for the payment of American war damage claims.

As a result of the continued study and further public hearings, the subcommittee recommended and the full committee unanimously reported out favorably to the Senate my bill in the 84th Congress, known as S. 4205. This measure provided for a full return in kind or value of all privately owned properties which had been seized under the Trading With the Enemy Act and a full payment of all American war damage claims. These returns and payments were to be made progressively. Procedures and methods were adopted which permitted such a result without the necessity of any additional direct appropriations. Like S. 3423, S. 4205 failed of passage in 1956 by reason of the adjournment of Congress.

A modified version of S. 4205 was introduced by me on January 14, 1957, and is known as S. 600. This bill likewise directs a full return of all vested assets or their values and a full payment in installments of all American war damage claims not otherwise provided for by law. The bill contains provisions preventing a return of properties to war criminals of Germany or Japan, governmental properties, and properties to those residing in the Soviet-dominated countries.

There has been considerable criticism of these return bills and of me personally for authoring two of them. Much of that criticism may be traced to a lack of understanding of the reasons which prompted my action. I have long felt that a wider knowledge of the complex problems, the traditional American concepts of the human and property rights involved, and a fuller appreciation of our own national interests would dispel most, if not all, of the objections which reasonable persons could possibly entertain.

What are the reasons back of these full return bills? Why has OLIN D. JOHNSTON supported one and been the author of two others? What are some of the problems involved and the questions presented? How can it be in the interest of the people of the United States to divest themselves of title to over $629 million worth of property?

So far as I am concerned, the answers are clear. My duty is plain. My responsibility with respect to the problems is not difficult to assume. What has been the American way of handling such problems?

Before our Constitution was adopted, John Adams said:

"The moment the idea is admitted into society, that property is not as sacred as the laws of God, and that there is not a force of law and public justice to protect it, anarchy and tyranny commence. If 'thou shalt not covet' and 'thou shalt not steal' were not commandments of Heaven, they must be made inviolable precepts in every society before it can be civilized or made free." (In Works of John Adams, by Charles Francis Adams, Boston, 1951, vol. 6, p. 9.)

There would have been no United States Constitution had the Bill of Rights (first 10 amendments) not been forthcoming as an integral part of it. While the fifth amendment provides protection for one against testifying against himself, it also contains very salient provisions which protect our property rights. Those provisions are:

"No person shall be * * * deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."

The foundation of property rights originating in Holy Writ is inscribed as part of our basic constitutional rights. Our history and tradition as a free people are built upon them. The concept of our free society is founded upon them. The principle is clearly stated by a United States Senator in his testimony before the subcommittee recently when he said:

"The unpaid American war-damage claims should be paid. Private property or its reasonable value should be returned. Now, of all times, we who set the moral standards for the peoples and governments of the world must of all things adhere to them or be willing to pay in lives and our material fortune the unthinkable price involved in the savage doctrine of confiscation.

"Confiscation is the attribute of communism. Private ownership, the integrity of property rights, and contractual obligations, on the other hand, are the distinguishing characteristics and handmaidens of the free world. The issues involved are just that simple."

It is an historical fact that the United States has never practiced confiscation of its former enemies' properties. During the Revolutionary War several of the Colonies confiscated the property of the English Tories. This was compensated for in our first treaty—the Jay Treaty—with England in 1794. The formula set out in that treaty has been the uniform pattern for all of our subsequent treaties of commerce, friendship, and navigation with other foreign governments.

The language of the present Speaker of our House of Representatives which he used in 1923 in support of a full return of German properties after World War I has vital force today. He said in one of his official reports:

"From the days of Hamilton and Jefferson and Marshall down to now every man who had a reputation that extended beyond the community in which he lived * * * has looked upon the question of confiscating private property for the satisfaction of a public obligation with obloquy. That has been our policy. * * * the most savage doctrine ever announced by any people anywhere was that private property should be taken for the satisfaction of a public obligation."

Every Secretary of State of the United States without exception from Thomas Jefferson—our first Secretary—through Mr. Dulles, has opposed confiscation. Each has sought to maintain the doctrine of the inviolability of contractual rights and the sanctity of private property in time of war or national emergency.

World conditions have changed greatly since the Jay Treaty of 1794. In fact there exist today many more reasons than existed following World War I, why it is in our own national self-interest to return private property seized in time of war. A consideration of a few of those facts constitutes a compelling reason why privately owned properties should be returned and why as a Nation we should avoid the stigma of confiscation.

A most important fact to remember is that the United States today is the leading creditor Nation in the world. While no exact figures are available, we do know that Americans have private investments abroad in excess of $55 billion. As taxpayers, every American citizen has a direct interest and an investment at an initial cost of over $4 billion in over 900 of our defense installations scattered throughout the free world. As taxpayers, every American citizen has a direct interest and an investment now exceeding $4 billion in the loans made through our Export-Import Bank to private concerns and their governments abroad. These latter interests concern you and me directly because our money paid in the form of Federal taxes supports and maintains them.

Almost half of our high Federal tax burden is necessary each year for the support of our national-defense programs. We have spent over $35 billion annually for national defense since 1945. Our national-defense program is large because we seek by it to maintain our free way of life. The cornerstone of our free way of life is our right of ownership of private property. When property rights are destroyed, freedom and free government are lost. This truth is undeniable.

In addition to the direct interest so many Americans have in private investments abroad and the very large investments all Americans have in foreign countries, we have engaged in other programs since 1947 which have resulted in our people having to continue to pay heavy taxes. I refer to our foreign-aid programs. Every justification for any foreign-aid expenditure falls of its own weight when stripped of the reason that we spend this money abroad to support our free way of life and to preserve and extend American principles. Thus, it is argued that foreign-aid expenditures aggregating now almost $60 billion have been in our national self-interest. While I have not agreed with such contentions, others have agreed and they have prevailed. I do know I am taxed heavily for the support of that program.

Add these figures up and you can see a stupendous investment: $55 billion in private investments, $8 billion directly invested by all of us together with the $60 billion spent in foreign aid and the more than $35 billion each year for national defense. As the leader among the free nations of the world setting, as we must, the tone of morals in business and private conduct, for the world, can we afford the penalty of inflicting upon others any principle involving confiscation? Look at what is happening in the Middle East today. The Congress has just passed a $200 million special foreign-aid program (Eisenhower doctrine) for the ostensible purpose of keeping some of the countries in the Middle East as our allies in the struggle against communism. If, as a permanent policy, we are to confiscate these alien properties, as Egypt is confiscating the properties of the English, French, Israeli, and others, it requires little imagination to conclude that we stand to lose far more than all the rest of the world combined. Why? Because we have more at stake. It is a sad commentary on our laws that Egypt boasts in her press that she is following the provisions of the American Trading With the Enemy Act in what Nasser is now doing. Those news articles assert that if it is proper for the United States to confiscate the private property of its former enemies—the German and Japanese—then Egypt has every right to nationalize or confiscate British and other alien property in that country.

Not all of the properties whose original value at the time of vesting amounting to $390,808,000 belonged to our former enemies. Over 20 percent of that amount, namely $87,801,000 was American property. It originated in the United States. It helped our war effort through the taxes paid on it and by its owners. It is known as "estate and trust properties." Let me illustrate—an American citizen dies leaving an estate of $25,000 to his five relatives in Germany or Japan.

These relatives have been denied their legacies because the Attorney General has vested these estates. Another illustration will help. An American veteran of German or Japanese origin, honorably discharged from service in the American Army dies. His social security and death benefits are seized and confiscated by the Department of Justice. His relatives are denied the right to inherit these benefits earned under American laws by American nationals. Another illustration proves how unseemly our vesting program has been constructed and administered. A young German student studying at Harvard University under the Fulbright scholarship program at your and my expense testified before the subcommittee. He was the legatee under a will of an American and entitled under that will to $2,500. This legacy has been confiscated. Think of one Department of the American Government educating this boy at the expense of all of us on one hand and another branch of our Government seizing and confiscating his private property earned and produced here on the other hand. Or, consider the case of a lady who testified before us. She married an American officer overseas. She is now an American citizen living here and rearing a family of three children. The Russians seized and confiscated her estate in East Germany. The United States seized and confiscated a substantial inheritance here in America which was left to her by an American relative. Our existing law needs to be changed to prevent these obvious injustices. These illustrations could be multiplied by the hundreds. They all go to show how wholly unnecessary and wrong it has been to so administer the Trading With the Enemy Act—a necessary war measure—but not needed in time of peace. They all go to show how essential it is for the Congress to pass corrective legislation as it did following World War I.

There is another consideration which has influenced my views respecting the necessity for the return of these private properties. It did not take us long after the close of the war to learn the bitter lesson that our real enemy is Russia and Russian communism. That country has no respect for the right of private property. We learned soon that if we could enlist the Germans in West Germany and the Japanese in the cause for free democratic representative governments, they would eventually become our stanchest and strongest allies. That effort of ours is an accomplished fact today. Thoughtful Americans realize that both Germany and Japan are our most reliable and trustworthy friends among the free nations of the world. It cost us many billions of dollars to achieve this result. We loaned and gave West Germany, consisting of about 60 million persons, over $3¾ billions. We did the same for 80 million Japanese at a cost of well over $2 billions. We made an outright gift of $2¾ billions in our settlement of post-war loans to these 60 million Germans. We are prepared to scale down the Japanese debts to its 80 million inhabitants in the same percentage of reductions. Who is there to say that it is fair to make a gift of about $4 billions to a 140 million Germans and Japanese and retain and penalize from some 30 or 40 thousand of the same persons for the private property they either invested here or to which they are entitled by their inheritance? Such properties amounted to less than a half-billion dollars when it was first seized. If Germany and Japan owe the United States anything by way of war reparations that obligation should rest equally upon all Germans and Japanese alike. That burden should fall on all the millions of people in these countries, not on the few thousands who may benefit from small amount of properties in America.

Those Japanese and Germans who invested their properties here did so because they felt those properties were safe and secure under our constitutional protections. They felt their properties would be protected under our laws. Is it the right to deny to them the equal protection of our laws? Certainly, there can be little justification in law or morals to deny our German and Japanese friends the benefits of trust, estate, and guardianship properties originating here in the United States.

Now with respect to the payment of American war-damage claims, every sense of moral justice dictates an early payment of them. Every nation, except the United States, which engaged in World War II, has already made some provision to indemnify its nationals. We have done much, sometimes too much, for others and nothing for our own. Many civilian lives were lost, many suffered personal injuries, and there have been millions of dollars in losses in property damage. Except for the small prisoner-of-war claims and a few religious organizations operating chiefly in the Pacific area, no comprehensive war-damage claims act has been passed by the American Congress. I agree with many that this is a shameful neglect of our own. S. 600, which I introduced, makes ample provision for the payment of all proper American war-damage claims.

Notwithstanding the use of over $275 million of the vested assets by our own Government, the State Department opened an avenue for the payment of American war-damage claims and the return in value of all the vested assets. The payments may be financed through the remittances made to us by Germany and Japan in the settlement of our postwar loans and grants to those countries. This is advantageous to us for two reasons, namely, (a) it makes additional appropriations with a resulting increase in our tax burden unnecessary; and, (b) it will fix the exact amount of our total war damages so that when a peace treaty settlement is made with Germany, our negotiators will then know precisely how much in war damages is chargeable against Germany.

Such a method of payment of war claims and return of vested assets was initiated by the State and Justice Departments in presenting draft bill S. 2227, though payments in that bill were in each instance limited to $10,000. The concept employed by S. 2227 was extended in the provisions of S. 600 to provide for full return and to make full payments so that no fresh appropriations will be required.

To summarize a few of the important reasons why the United States should make a full return in kind or its reasonable value of all assets vested in wartime and subsequent vestings and also make full payment of American war-damage claims, I believe:

1. That our foreign-aid programs since the close of World War II will have been useless should we adopt a policy of confiscation which becomes a negation of the principles of the free world;

2. That our enormous national defense spending which bids fair to continue indefinitely at such an enormous rate with its crushing tax burden upon us all will have been useless unless basic and fundamental concepts of the free nations are continued unimpaired;

3. That our tremendous private and governmental investments abroad should not be subjected to or imperiled by our adoption of a policy of confiscation; hence it is essential in our own national self-interest to effectuate returns without delay;

4. That no reason in morals or justice exists why we should not finance the payments now of all legitimate American war-damage claims. No reason exists why the United States should provide funds for others and other nations so they may provide for their own, and we continue to neglect the rightful demands of our own nationals.

In conclusion the question can be asked, Why we have done all these things since the close of World War II? We have done them in the interest of a free way of life. We have done them in an effort to extend the principles of freedom, representative democracy, and the blessings of liberty to other nations and peoples. Confiscation is a barbaric relic of the Dark Ages. If we would have others do right by us, we must do right by them. Why, then, should we turn back the pages of history and embark now, at such peril to our own interests, upon a vicious program of confiscation? To me, enduring and fundamental principles are at stake.

My actions shall be charted to the only course I know to preserve those principles which have made us the greatest Nation on earth today. To do otherwise, I would betray the past, endanger the present, and imperil the future of my country. To do otherwise, I would "covet my neighbor's property," and history would convict me of violating the cherished commandment of "thou shalt not steal."

No Threat to the Press

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by Mr. Frank R. Ahlgren, who is editor of the Memphis Commercial Appeal, the title of the editorial being "No Threat to the Press."

The editorial by Mr. Ahlgren concerns the recent report of the Commission on Government Security. Mr. Ahlgren has written a very fine, illuminating, and helpful editorial on the subject, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Memphis Commercial Appeal of July 6, 1957]

NO THREAT TO THE PRESS

It was for the very purpose of increasing the flow of legitimate information while, paradoxically, increasing necessary security that the Commission on Government Security recommended changes in document classification.

That being so, some of the agonized howls going up from very few areas of the American press are empty in sound and meaning.

A great deal of news is kept out of communications channels by the same factor retarding scientific and technological progress. That factor is overclassification, and the Commission pointed out in its report that this could actually create a danger to security.

To simplify matters, it recommended abolishment of the classification of confidential both as to documents and materials and the retention of secret and top secret classifications. Documents previously classified as confidential would be declassified gradually.

Because only Government employees can be prosecuted at present for willful disclosure to unauthorized persons of classified information, the Commission has recommended enactment of a criminal statute penalizing anyone, in or out of Government, who makes public the content of secret or top secret documents.

No genuine threat to press freedom will be created if the classification recommendations of the Security Commission are carried out as intended.

American publishers, editors and others of the working press do not have to defer to anyone in quality of their patriotism, and we cannot conceive of any deliberately betraying a secret which would endanger the country. This is still the same press which so conscientiously complied with rules for voluntary press censorship—still the same press which kept the world's greatest secret—the fact that there was an atomic bomb in the making.

The only demand that the bulk of the American press will make is that there be no abuse of the recommended secret and top secret procedures.

Such abuses can and should be prevented, but even the possible danger of occasional abuse does not provide valid reason for objecting to a punitive act applying to all persons making willful disclosure of secrets to unauthorized persons. The Nation must have that protection.

Senator JOHN STENNIS (Democrat of Mississippi), a Commission member, has said emphatically that the Commission's recommendation as to document classification was aimed at reducing the number of papers classified and thus kept from the press and public.

"It was the Commission's feeling that classified items should be limited only to those of the utmost importance," he declares.

The Commercial Appeal does not take kindly to news restrictions, but at the same time recognizes the soundness of the Commission's reasoning and the need for the procedures recommended. It does not believe that freedom of the press carries with it any right or privilege of endangering the Nation's safety.

Dr. Lyman V. Ginger, President of NEA

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. MORTON. Mr. President, on Friday last the National Education Association installed as its president, Dr. Lyman V. Ginger, dean of the College of Education at the University of Kentucky. The association is fortunate in prevailing upon Dean Ginger to accept the presidency. We in Kentucky are proud of the honor that has been bestowed upon him.

I ask unanimous consent that an editorial on this subject published in the Lexington Leader may appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEA PRESIDENCY DESERVED HONOR FOR UNIVERSITY OF KENTUCKY'S DEAN OF EDUCATION

Our heartiest congratulations go to Dr. Lyman V. Ginger, dean of the College of Education at the University of Kentucky, upon his election to the presidency of the National Education Association.

Dr. Ginger has been active in education-association work throughout his career as teacher and administrator, and was one of the leaders in the campaign in Kentucky for adoption of the minimum foundation for education program and passage of the constitutional amendment to implement it.

A native of Ballard County and a graduate of Henderson High School, Dr. Ginger obtained his bachelor of arts degree at Kentucky Wesleyan College and his master of arts and doctor of philosophy degrees at the University of Kentucky. Prior to becoming director of the University School here in 1943, he was teacher at Winchester High and principal of Owingsville High for several years.

In 1954 Dr. Ginger was promoted to the deanship of the newly created College of Adult and Extension Education and last September became dean of the College of Education, succeeding Dr. Frank Dickey, who was elected president of the university.

Interested throughout his administrative career in the elevation of teaching standards, Dr. Ginger took a keen interest in the affairs of the Kentucky Education Association and was its president in 1953–54. Last year he was unanimously chosen first vice president of the national association, and on Friday night was installed as president.

Kentuckians, and especially Lexingtonians, should be proud that such high recognition has come to one of their own educators.

The Plight of Hells Canyon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. NEUBERGER. Mr. President, few newspaper editorials express so tersely and effectively the outrage of abandoning North America's finest waterpower site to piecemeal and partial development as that which appeared in the July 5, 1957, issue of the Northern Virginia Sun. The Sun is published at Arlington, Va.

I ask unanimous consent that this fine editorial, entitled "The Plight of Hells Canyon," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PLIGHT OF HELLS CANYON

Chances are the bill providing for a Federal high dam at Hells Canyon in the Pacific Northwest is dead for this Congress, unless there is some fast maneuvering. In a surprise move last week, a House Interior Subcommittee in effect killed the bill by a three-vote margin.

This seems to us a pity, because it means incomplete development of the resources of the great Snake River. The Federal Power Commission, which granted a license to the Idaho Power Co. to develop the Snake, has said that company's dams will only produce about half as much power as would a Federal high dam. Incomplete development of this last great natural dam site means a wasting of a resource—the energy of falling water—that belongs to everyone in northern Virginia, as it does to everyone in the United States.

The entire Hells Canyon controversy has taken on an unpleasant flavor in recent months, with the Government's granting of special tax privileges to the Idaho Power Co. despite a Federal Power Commission assumption that there would be no cost to the taxpayers in the private company plan.

That plan has not been made any more palatable by the conduct either of the administration or of the Idaho Power Co. The administration has withheld vital information about the case from Senate investigators. In the last few days it was revealed that the Idaho Power Co. was privy to information about its tax benefits that the Senators could not get out of the administration. This is strange procedure indeed.

And last week, the Idaho Power Co. called the Senate inquiry "an outrageous smear campaign." In our opinion, the use of the epithet "smear" helps no one, including the user. It does not answer the merits of the charges made; it doesn't even address itself to the merits.

There are those who still cling to a hope that the Hells Canyon bill can be revived, among them the sponsor of the Hells Canyon measure, Representative GRACIE PFOST of Idaho (who is known in her State as "Hells Belle"). There were a couple of absentees when the House committee voted, and perhaps 1 or 2 on the committee can be persuaded to change their minds. We hope so, and we wish more power to those who are fighting the public's cause in this matter.

Foreign Aid Is Good Business

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the July 23, 1957, issue of Look magazine, entitled "Foreign Aid Is Good Business," written by Benjamin F. Fairless.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AID IS GOOD BUSINESS—THE FORMER CHAIRMAN OF UNITED STATES STEEL PRESENTS A BUSINESSMAN'S CASE FOR CONTINUED AID TO OUR FRIENDS AND ALLIES ABROAD

(By Benjamin F. Fairless)

Recently, at President Eisenhower's behest, I spent 6 months as the coordinator of a Committee of Citizen Advisers which took a hard look at what is called—in somewhat oversimplified terminology—our foreign-aid program. Our job was to measure the effectiveness of contributions to collective security through the flow of American dollars, know-how, and moral encouragement to the free, non-Communist world.

In addition to taking exhaustive testimony in Washington, part of the Committee went around the world in 50 days, flying 25,000 miles to visit 18 countries. On our journey, we received special reports from our representatives in eight additional nations and also sent a separate task force traveling 10,500 miles to gather further facts on 4 representative countries in the vital Latin American area. Our seven-man Committee was unanimous in its various conclusions and recommendations to President Eisenhower. Among them, there are two points which, to me, are of overwhelming importance:

First was the heartening fact that there is a partial way out of the necessary but tortuous labyrinth of foreign-assistance spending. To me, as a businessman, it is an exciting, commonsense, profitable, and effective possibility. It is simply this: Private enterprise, given the proper opportunity, can move in and do a great part of the job.

In so doing, the helping hand-up system will replace what foreign-aid critics refer to, often unjustly, as the handout system. That way, the load on United States taxpayers will be lightened; private capital will earn a fair profit; the goal of strengthening underdeveloped but freedom-loving countries against communism will be accomplished, and the countries themselves will have something solid on which to build.

The second important conclusion was the distasteful but inescapable fact that the United States is going to have to keep on spending billions abroad for a long time to come.

We should not increase our expenditures over the 1956 fiscal year level (estimated at $7.9 billion). With a combination of luck, local improvements, and careful administration—particularly if we encourage private enterprise to do more of the job—we will be able over a period of years to reduce spending considerably. But the United States still is the source of strength and determination in the deadly struggle for the free world.

Four members of our committee, including myself, took off from Washington last December 27, with Madrid our first official stop. On our journey, we talked with our own ambassadors, with military, economic, and business leaders and with statesmen. We also talked on every possible occasion with men and women in various walks of life—on streets and in fields and factories—from Ankara to Saigon.

We returned with two firm and encouraging convictions:

In general, our vast outlays to strengthen the military-defense programs of our allies abroad have been justified and American taxpayers are getting their money's worth.

In regard to the overall foreign-assistance program, we have not been "Uncle Sap." The world is at peace; economic progress is being made, and people abroad generally both respect and like us for what we have done. I can heartily second what the President said at a recent news conference—that assistance to our friends abroad should be called mutual rather than foreign aid because "we are working also for ourselves."

I realize there are some critics who will not admit there is any good in any form of foreign assistance. To such critics, anything spent for military or economic assistance to our potential allies is written off as just another dose of "Operation Rathole."

No one ever has accused me of being a hot-eyed advocate of lavish Government spending, and the same is true of my colleagues on the President's committee. Speaking for myself, I found that the evidence which we saw and heard corrected some of the erroneous impressions which I had held about the foreign-assistance program. I was convinced, as we unanimously reported to the President, that "the program is one of collective security, and not just a program of aid," and that its administration is more good than bad. Yet some of our stay-at-home critics have pilloried the committee for delivering a "superficial" report and for being off-base in finding anything good about the foreign-assistance program.

MONEY GETS RESULTS

I wish some of these critics could have accompanied us as we traveled around the world, seeing and hearing evidence that not all United States expenditures are wasted or mismanaged.

In Iran, they would have heard of a tribesman who lived in a squalid village, almost as primitive as it had been in the time of Cyrus the Great. Animals were stabled in the living quarters of the villagers' houses. What few latrines there were drained into the central water ditch, and the people and livestock alike drank from this same polluted ditch.

Some years ago, the tribesman had reported to visiting Americans that he had had nine sons. "All," he added, "die from sickness." Then came the point 4 technical-assistance program to teach the ways of sanitation. Another son was born, and this one lived. When the infant was several months old and strong and healthy, the father made a journey of several days to tell the nearest American health-mission director: "You be godfather this boy." The name of the child—Point Four Mohammedi.

In Greece, in the village square at Anthele, which was a barren salt waste even when the invading Xerxes camped there in 480 B. C., the critics of the United States aid program would have seen a marble bust of an American soil expert named Walter Eugene Packard. Working in friendly, persuasive fashion, Packard showed the Greek peasants, suspicious and resistant to new methods, how to wash and irrigate the blighted plains. He followed that up by initiating flood-control and irrigation projects that set additional hundreds of thousands of acres producing food for a hungry land. Before leaving Greece, the mild-mannered "Papou" (Grandfather) Packard, as the Greeks called him, was a public hero who, wherever he appeared throughout the area, evoked wild cheers for the name of America.

In Vietnam, where agriculture was a backward art a few years ago, foreign aid critics could have seen the thriving new National Agricultural College at Blao, established largely with funds from the United States.

In the Philippines, they could have seen the magnificent progress Filipinos themselves have made under our initial guidance, but with a minimum expenditure of our taxpayers' dollars, in community development; places that once were clusters of wretched huts set in quagmires now are tidy, paved, sanitary villages where humans can live in self respect.

INDIA IS ON THE MARCH

In India, a land of dramatic, dynamic struggle to push industrialization and development faster than the ever-climbing birthrate, doubters could have inspected a certain 8-mile stretch of new road. Ten thousand Indians had turned out and done the job, virtually by hand, in 3 days.

Prime Minister Nehru has expressed his pride over progress in community and rural improvements as "the most significant development in India." We may share this sense of satisfaction, for, while the Indian people themselves did the work and deserve great credit, the program was stimulated and materially aided by United States Government technicians and by assistance given by such private organizations as the Ford Foundation.

In India, incidentally, I remember how the difference between East and West was pointed up by the story of a fierce tribesman who had been invited to attend a point 4 movie on child care. He consented to go, but refused to allow his wife to attend because she was a lowly female. When he returned home, he thrashed his wife soundly because she did not raise their children in accordance with the methods taught in the film that he hadn't let her see.

We also saw evidence of the effectiveness of American funds used to build up our allies' military strength. In Korea, for example, inspection of Republic of Korea troops at the armistice line impressed us that our money for military aid is being well spent. In Paris, briefings from top NATO officials again reassured us that our military-aid expenditures abroad are sound investments.

As a businessman and advocate of private-enterprise methods, I would be the last man in the world to argue that everything about the administration of our collective-security foreign-assistance program is perfect, or that the International Cooperation Administration (ICA), our governmental agency primarily responsible for handling the multi-billion-dollar expenditures, has never made any mistakes.

But after seeing for myself what American financial and technical assistance had done around the world, I acquired a sharper appreciation of the viewpoint of our top officials in this field. The viewpoint is this:

You cannot weigh foreign-aid expenditures in the same manner that I, for instance, might consider an investment by United States Steel. Uncle Sam is not out simply to turn a profit. He is trying to preserve the peace, strengthen our allies, hold the line against communism, and help maintain conditions in which other nations of the free world can remain independent. To accomplish these objectives, we must consider political and military, as well as economic and enginering, factors.

Incidentally, one of the myths about our collective-security and foreign-assistance program is that Uncle Sam is footing the whole bill. The ICA refutes this by pointing out that, while we spent approximately $12 billion under the Marshall plan in 3 years, western European nations now are contributing more than $12 billion each year for defense, including NATO support.

The cornerstone of our report to the President is contained in one short sentence: "The United States—with only 6 percent of the world's population—needs the aid of other countries just as they need ours."

Our seven members also unanimously agreed that "* * * the best security for Americans is collective security, and the best hope for diminishing the burden is economic development."

PRIVATE INVESTMENTS CAN BE VITAL

As I see it, private-capital investment abroad can be the key to strengthening the economic position of the free world. It may be the solution to the cost of collective security.

This is not theory but fact. American private investment abroad already is doing a great part of the collective-security job. In the fiscal year of 1956, United States expenditures (nongovernmental) for foreign goods and services, exclusive of new investments, amounted to $15.5 billion. These expenditures gave the foreign countries dollars to pay an adequate return on private investments; enabled them to buy materials which the countries themselves did not produce, and, at the same time, created markets abroad for American producers. As we reported to the President, "This was good business—not aid."

There ought to be a lot more of it. Both the United States and the foreign governments with which we do trade should be working to knock down the artificial barriers to international commerce. That can be done by a number of measures, including a gradual series of reciprocal tariff reductions, liberalization of customs procedures, and reduction of restrictions placed on our trade by some governments.

You don't have to beat United States industry on the head to make it move into a foreign country—if the conditions are inviting. Already, the cash contributions of American business in the economic field through overseas investments are greater than Government grants. Our committee economists concluded that approximately $5 billion of new, private American capital—including investments from income earned abroad—was invested in other countries in 1956. This increased the total of private long-term American foreign investments to nearly $33 billion.

I am not contending that every foreign investment automatically is bound to be a source from which all blessings flow. Certainly, there are black marks—instances of expropriation of American and other foreign

assets in countries which were going through the growing pains of nationalistic aspirations.

There are hundreds of examples, however, of how dollars spent abroad are multiplied many times into many more dollars for both United States investors and the foreign countries.

THERE IS OPPORTUNITY FOR ALL

Yet, with all the spread of United States trade, there is much more that private enterprise can do. And, incidentally, I'm not talking only about American private capital undertaking investments and developments abroad. It should be done by other nations as well. In this connection, we should remember that the young United States invited foreign capital to invest in its industry and agriculture and that our laws set up no barriers to such investments. The British, Germans, French, Swiss, and others invested not only their money but their talents in America, and they made a profit—but our country also profited.

It is a long, hard, often risky venture for private industry to put large amounts of capital into an underdeveloped country. Sometimes these risks, political and otherwise, are so great that private investors cannot go in. Yet, in such cases, where our Government feels it is in the interest of the United States and of the country involved, industry can serve as an effective instrument of United States foreign policy. It also can ease the burden of government spending While I prefer to see government stay out of private business operations, I think that in some circumstances an ideal opportunity exists for appropriate joint action, a working partnership, by business and government.

I also favor Government cooperation, not only with American concerns, but also with sound foreign companies capable of undertaking developments in their own countries. Some foreign governments might argue that our assistance should be given on a direct government-to-government basis. Our report suggested an effective reply: "Foreign areas can get the most from economic cooperation with us if they accept us for what we are * * * a nation in which the reservoir of industrial ability, skills, and capital resides, not in Government, but in private hands."

At the same time, countries desiring United States capital should create an atmosphere that will encourage private investment. The countries involved should ease legal restrictions that frighten away private capital. And the whole field of taxes, both United States and foreign, on overseas investments needs a good shaking up, if business is to be allowed to do the job of helping American foreign policy by helping developments abroad.

To sum up, our committee unanimously agreed that the foreign-assistance program must be continued, but that it need not exceed the 1956 level. We urged increasing emphasis on long-range economic development abroad that will make our allies more self-sufficient and thus gradually reduce the need for American aid. Our report noted that the struggle against the worldwide and long-range machinations of the Soviet bloc will continue for a long time.

"The United States * * * must abandon the false hope that collective-security costs are temporary," we said. I feel that even to act as if we thought otherwise would undermine our allies' determination to stay in the fight against the forces of communism.

Since returning from my inspection trip, I have been specifically questioned many times on the value of United States assistance to the forces of our European and Asiatic allies. American taxpayers rightly want to know if the aid will do any good in the event of a showdown with Russia. I hope the point never will be put to a test. But from what our military leaders abroad told us, I think that our allies, if they have to, can—and will—fight.

New Vessel Construction

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. MAGNUSON. Mr. President, the most critical problem facing the American Merchant Marine today is the replacement of the war-built vessels that constitute the great bulk of our foreign tonnage. Constructed during World War II, these vessels are all approaching the end of their normal useful life. Their age and lack of speed and of modern cargo handling equipment place them at a marked disadvantage, competitively, with the many more recently built vessels of foreign registry.

While these war-built vessels will all become obsolescent within a 4-year period, they cannot all be replaced within such a short period. Nor should they be, even if our shipyards could accomplish such a herculean task. To do so would only assure another mass obsolescence problem in the future, such as we faced after World War I, and are facing now.

The Maritime Administration has developed a program of orderly vessel replacement, which would be initiated before the age problem becomes acute, and would extend over a period that would not overtax available shipyard capacities. Funds had been programed in the fiscal 1958 budget for Government's part in this replacement program.

However, Congress saw fit to cut these funds from the budget, and thus threw a monkey wrench into the first phase of the replacement program. How serious this is, an article in the June 25 issue of the Journal of Commerce points out clearly. I ask unanimous consent that the article in question be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGET CUT'S TOLL—MA FUNDS FOR NEW VESSEL CONSTRUCTION DWINDLING

(By Jacques Ozanne)

WASHINGTON.—Failure of Congress to vote more than $3 million for new merchant ship construction is already threatening to cause delays in the plans of some companies to build new vessels.

In refusing to appropriate more than a token amount for new ship construction, Congress pointed to some $92 million of unexpended balances left over from previous years' appropriations.

MOST FUNDS EARMARKED

With the new fiscal year still a week away, it now appears that the Maritime Administration's available shipbuilding funds have already been pretty well earmarked and that there will not be enough money to go around unless a supplemental appropriations bill is sent to Congress before the close of the session.

This is particularly true so far as funds needed for the Government to buy old tonnage from companies planning to build new vessels.

A Maritime Administration spokesman said that $20 million of available ship construction funds has been earmarked to buy ships from lines whose new construction plans involved trading in old vessels. This fund has been completely earmarked with the indication that three prospective builders cannot be accommodated.

At present, the Maritime Administration is counting on using the $20 million to buy 5 ships from Lykes Bros. Steamship Co., 4 from the American Export Lines, 5 from the Moore-McCormack Lines, and from 1 to 3 from Ore Transport Lines.

SUBSTITUTIONS POSSIBLE

There may be substitutions but if present plans hold firm it would appear that there will be no funds to accommodate three other companies with ship construction plans who had been counting on trading in some of their old tonnage. These would be Grace Line, American Mail Line, and the Isbrandtsen Co.

Maritime Administrator Clarence G. Morse is understood to have discussed with these companies the possibility of their transferring some of their old tonnage to foreign registry instead of trading them into the Government, but this would still leave the problem of funds to finance the Government's share of their new vessels, including both construction subsidies and national-defense features.

Furthermore, it is pointed out that in the case of subsidized lines the old vessels would have to be sold outright to a foreign purchaser and the American company would be short of tonnage until the new vessel has been delivered by the builder.

ONE BIG DIFFERENCE

One big difference between trade-in and trade-out, it has been noted, is that when an old vessel is sold to the Government, the owner can continue to enjoy the use of it until such time as the replacement is ready.

On the other hand, if the vessel is sold to a foreign buyer it is delivered to the new owner as soon as the new vessel is contracted for and is no longer available for operation under the American flag.

The earmarking of the $20 million in trade-in funds was done on the basis of the restricted world-market value of the vessels. This is the same amount that could be realized by the companies if they sold them to foreign owners.

Report of Congressman John E. Fogarty, a Congressional Adviser of the United States Delegation, at the 10th World Health Assembly, Held May 7 to May 24, 1957, at Geneva, Switzerland

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. FOGARTY. Mr. Speaker, the 10th World Health Assembly met at the headquarters of the World Health Organization in Geneva last May, and I

had the privilege of attending part of the sessions as a member of the United States delegation. What I saw at the assembly confirms my belief that WHO is an important international agency, and that we have a real stake in it. It is fitting that Congress has authorized the appropriation of funds to hold the 11th World Health Assembly next year in the United States. In 1958 the World Health Organization will have been in existence for 10 years. The constitution of WHO was drawn up and signed in New York City. These considerations led to the action of Congress which made it possible for the United States to invite WHO to hold its next annual meeting in our country.

I was happy to have the opportunity to extend to WHO the invitation on behalf of the United States delegation, and to tell the Assembly that the United States Congress has shown by its actions its realization that improving world health conditions is a basic part of building a more peaceful and stable world. The World Health Assembly accepted the United States invitation. The 11th World Health Assembly will therefore be held in the United States next May, along with a 2-day 10th anniversary commemorative session to mark the special occasion.

The overwhelming vote—71 out of 75—by which the Assembly elected the United States to appoint a member of the WHO Executive Board dramatically indicates the general recognition of the contributions which the United States has made to WHO. These are contributions not only in financial terms, but also in leadership and technical knowledge. These contributions have repaid us several times over in good will and in better health for hundreds of millions of people.

There was considerable recognition at the Assembly also of the assistance which the International Cooperation Administration gives to health programs in many countries. Several delegations acknowledged in their Assembly speeches the great value of United States assistance. There was no feeling that ICA and WHO are in competition, but rather that they are working side by side constructively to help countries raise health levels.

This common objective of WHO and ICA was made even more clear by the United States delegation statements during the Assembly consideration of malaria eradication. These statements reviewed the contributions of ICA to malaria eradication and affirmed our confidence that with the leadership demonstrated by WHO a coordinated worldwide campaign against malaria will be successful. They referred also to the possibility of increased United States aid to eradicate malaria as proposed by the President. Malaria indirectly costs the American people hundreds of millions of dollars each year, and this campaign, therefore, has great significance for us in economic as well as other terms.

The United States delegation, in conversations with other delegations to the Assembly, found considerable mention of the value of medical research, especially in the United States. There is appreciation of the research work being done at the National Institutes of Health of the Public Health Service and at other centers. This applies both to research in tropical diseases, which still ravage many countries as well as indirectly burden the United States, and to research in chronic diseases, like heart diseases, poliomyelitis, and cancer.

The kind of massive scientific attack on disease which our NIH research represents is basic to our efforts in our own country, and abroad through WHO and ICA, to help free man from disease.

The World Health Organization as an international agency with limited resources does not attempt large-scale research itself, but rightly limits its part to stimulating and promoting research, and correlating work and exchanging information between laboratories in various countries. The Director General of WHO reported to the Assembly that during 1956 the Organization maintained close collaboration with nearly 1,800 scientific institutions, particularly medical research laboratories all over the world. In line with this function of stimulating worldwide research attacks on major diseases, the Assembly unanimously adopted a resolution authorizing WHO and member countries to cooperate in a comparative study of the variations between cancer types in different countries and environments. This is expected to yield valuable clues to the origins of the disease.

In addition to reviewing and adopting a program and budget for WHO for the next year, the delegates to the World Health Assembly take the opportunity to engage in a specialized discussion of some important public health topic. This year the theme was The Role of the Hospital in the Public Health Program. The United States delegation was fortunate in having as a member the director of the American Hospital Association, who made a major contribution to the technical discussions and was one of the rapporteurs.

The delegation, in fact, was constituted so that it could capably represent American concepts of public health and medicine. In addition to a very able chairman, Dr. Leroy E. Burney, Surgeon General of the Public Health Service, and officials of the Department of Health, Education, and Welfare, the Public Health Service, and the Department of State, some of whom have been closely associated with WHO matters for many years, the delegation included a trustee of the AMA, deans of schools of public health and of dentistry, a member from the Department of Defense, a public member who has distinguished herself in work in voluntary health agencies, and public health workers from State and Territorial health departments. From the Congress, Mr. Wolverton and I served as advisers to the delegation. It was a pleasure to be associated with this delegation which represented the United States in a businesslike and effective way.

Attendance at the 10th World Health Assembly confirmed my belief, which I find that Mr. Wolverton shares, about the importance of the work of the World Health Organization. Its budget is small in comparison to the massive disease problems still facing the world, and the United States, yet who is spearheading strong international attacks on such problems. It has already helped to push back the ravages of diseases like malaria, yaws, and tuberculosis, and to lessen the appallingly high number of deaths among children in many areas, through whom, we and other nations are pooling resources so that they can be used most effectively to protect all of us against disease. I am proud of the part which the United States plays in the work of the World Health Organization, and of the support which we give to this agency for health.

Report of Congressman Charles A. Wolverton, a Congressional Adviser of the United States Delegation, at the 10th World Health Assembly, Held May 7 to May 24, 1957, at Geneva, Switzerland

---

EXTENSION OF REMARKS
OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. WOLVERTON. Mr. Speaker, recently I had a most rewarding and revealing experience—that of serving as a member of the United States delegation to the 10th World Health Assembly, which met in Geneva May 7 to 24, 1957. Attending the Assembly gave me an unparalleled opportunity to appraise the character and work of the World Health Organization.

I wish that every Member of Congress—indeed every citizen of the United States—could have the close view of this great organization that I have had. No one could come away from such an experience without a sense of deep satisfaction in what we Americans are doing through this organization to relieve misery and suffering among hundreds of millions of our fellow men. And one could not help being astounded at how much is being accomplished with so little money. Hundreds and hundreds of important health projects are being carried out even in the remotest corners of the world under the stimulus and technical guidance of this organization. I know of no money that is being spent with greater effect than the small resources of the WHO. Truly, it is changing the world for the better, building a strong and more resourceful human race.

I was delighted with the refreshing atmosphere of warm goodwill and friendship that I found among the delegates, many of whom were old and true friends of long standing. Many, indeed, are loyal alumni of our own schools of public health. Dr. Ernest Stebbins, the dean of the Johns Hopkins School of Public Health and Hygiene, who was a member of our delegation, held an impromptu Hopkins reunion that was at-

tended by a goodly number of delegates from all over the world. He was busy the whole 3 weeks talking with his former students.

It was clear at the assembly that health is a common denominator which brings all people together. Seventy-nine of the eighty-eight member countries sent delegations, consisting chiefly of physicians. Despite highly varied national and political backgrounds, these delegates spoke the same language on health matters. They all shared a determination to work through WHO to help all countries improve the health of their people, as human beings regardless of race, creed, color, or political belief.

The reason for this understanding became evident to me. Physicians and other health workers are traditionally dedicated to improving the lot of us all. They know instinctively that health is truly international, that disease knows no frontiers, and that for over half of all mankind poor health—sickness and suffering—is still the normal condition of everyday life. They know, too, that so long as major diseases exist anywhere they are a threat to people everywhere.

I am convinced after seeing the WHO at close range that it is of the greatest importance that the United States give vigorous and increasing support to WHO as it continues to grow in strength and influence. The organization provides a means through which the governments and people of nearly all countries work together on a constructive and friendly basis with the common aim of better health. The character of WHO is not nearly as well known as it should be, and in particular the fact that in this organization there is a degree of international understanding that, I believe, is unique. Over the years I am convinced that this aspect of WHO alone will make a major contribution to the building in all fields of the constructive and cooperative relations between countries which are essential for peace and even for survival.

The health programs of the World Health Organization also deserve to be much better known. They include worldwide services, such as rapid international reporting of disease outbreaks, promotion of uniform quarantine measures and of standards for drugs. Newsworthy of late has been the work of WHO in encouraging and coordinating international reporting and research into influenza epidemics, the viruses which cause them, and vaccines which may be effective against them. Its worldwide network of cooperating laboratories has been the world's watchdog as influenza has broken out in Asia and threatens to spread over the world.

WHO also provides a wide range of expert assistance and training to help countries build strong health programs of their own. It was brought out at the Assembly that in 1956 WHO assisted 700 projects in 120 countries and territories, and granted fellowships to 900 health workers for advanced training in the United States and other countries.

The Tenth World Health Assembly looked into and discussed every aspect of the WHO programs, as carried out in 1956 and as projected for 1958. The examination of the work of WHO was not merely a formality, but gave real insight into the programs. This was due to the able reporting on the programs by the WHO Secretariat, and to the high caliber of the delegations from many of the countries.

The United States can be proud of the character and performance of our delegation at the World Health Assembly. The delegation was headed by Dr. Leroy E. Burney, Surgeon General of the Public Health Service, and was broadly representative of public health and medicine in the United States, including such leaders as Dr. James Reuling, one of the trustees of the American Medical Association, Mr. Edward Crosby, director of the American Hospital Association, Dr. Lester Burket, dean of the Dental School of the University of Pennsylvania, and, representing the public, a charming lady from Brookline, Mass., Mrs. Viola Pinanski, who has played a prominent part in many voluntary health activities in her own community and across the Nation. The States and Territories were represented by Dr. Franklin Yoder, the health officer of Wyoming who is the president of the Association of State and Territorial Health Officers, Dr. Richard K. C. Lee, the president of the Board of Health of Hawaii, and by Mr. Blucher Poole, chief sanitary engineer of Indiana. The delegation included as well, experienced health officials of the Department of Health, Education, and Welfare and the Public Health Service, the Department of State, the International Cooperation Administration, and the Department of Defense. Mr. FOGARTY and I had the honor to serve on the delegation as congressional advisors, and I felt proud, as I am sure Mr. FOGARTY did too, to be associated with such a group.

This delegation worked. It worked hard and effectively and was a credit to the United States in every way. Following a delegation meeting at 8:15 each morning, the delegation members participated actively not only in the formal sessions, but even more important, informally in establishing warm and friendly relationships with other delegates, and acquainting them with the United States positions on the various matters before the Assembly.

The esteem in which the United States is held in the World Health Assembly was shown when the 10th Assembly elected 6 States, each of which is entitled to designate 1 expert to fill a vacancy on the 18-man WHO Executive Board. The United States headed the list, with 71 votes out of 75 voting. I believe this vote of confidence in the United States is a tribute to the able farsighted men which the United States has placed on the annual Assembly delegations and on the Executive Board. As a result the United States has had a leading role in the sessions of the Assembly and Board.

Next year, 1958, marks the 10th anniversary of the coming into force of the constitution of the World Health Organization, which was originally drawn up and signed in New York City. The 10th World Health Assembly considered plans for the 10th anniversary, and approved the holding of a special commemorative session in conjunction with the 11th World Health Assembly, 1958. Last July the Congress declared by joint resolution—Senate Joint Resolution 183—that 1958 would be particularly appropriate for holding the World Health Assembly in the United States, and authorized an appropriation to pay the additional expenses of holding the 11th Assembly in our country. Speaking for the United States delegation, our colleague Representative FOGARTY informed the Assembly of the action of Congress and the invitation that had been sent to the Director General to hold the 1958 assembly in the United States. He affirmed the wish of our country to make the occasion an auspicious and successful one. The Assembly decided, without dissent, to accept the United States invitation. We have therefore secured a unique opportunity to demonstrate the continuing support of the United States for WHO and international cooperation in health. This will also provide the people of the United States a splendid opportunity to see the World Health Organization at close range.

At the recent Assembly the U. S. S. R. and three other Soviet States—Albania, Bulgaria, and Poland—sent delegations for the first time in 8 years, during which period they declined to support or share in the work of WHO. While delegates welcomed the return of these states, the Assembly did not give the U. S. S. R. sufficient votes to enable that country to designate a member of the executive board at this time. The statements of these states in the Assembly were in general moderate and unexceptional. Eight countries, including the United States and the U. S. S. R., joined in cosponsoring a resolution to promote worldwide cooperation through WHO in investigating the causes of cancer—an illustration of how common health interests may cut across ideological differences.

The World Health Assembly discussions made clear that malaria is still a major world problem. Each year malaria attacks over 200 million people—more than the population of the United States—and kills 2 million. Characteristic of the farsighted leadership which WHO exercises on health programs is its present drive to eradicate malaria from the world. Since mosquitoes and airplanes cross frontiers, malaria must be attacked on an international scale. WHO is able to provide technical guidance and the needed coordination of plans. In 2 years the voluntary special malaria eradication fund established in 1955 has received only $70,000, and the Assembly therefore urged countries to make voluntary contributions to this fund. The discussion on malaria came on the day following President Eisenhower's message to Congress on foreign aid, and the delegation was able to read to the Assembly the passage in the President's message in which he proposed that the United States increase our contributions to the attack against the world's No. 1 health problem. I hope that this program will receive the support it deserves. Malaria eradication

will redound to the benefit of the United States through the improvement it will bring about in the economy of the underdeveloped countries. And further, there is no better way for us to show our friendship for that huge segment of the world's population that is heavily burdened by preventable disease.

The contributions which American scientists have made over the years in advancing the fight against malaria were signalized in the Assembly by the award to Dr. Paul F. Russell, the distinguished malariologist of the Rockefeller Foundation, of the Darling prize for outstanding achievements in malaria control. In accepting the prize, Dr. Russell described WHO as the "motivating mainspring in the global assault on malaria." Dr. Russell has been one of the architects of the President's malaria eradication proposals.

Of direct interest for all of us is the development of the peaceful uses of atomic energy. WHO has embarked on a constructive program to help countries develop the health and medical uses of radioisotopes and to promote protection against radiation hazards connected with the peaceful uses of atomic energy. The program includes exchange of information, training and seminars, and technical assistance. The Assembly with the strong support of the United States delegation endorsed the continuation and expansion of this program, in cooperation with the International Atomic Energy Agency when established. The United States delegation expressed gratification that WHO is recognizing its responsibilities in this field. A proposal by the delegation of India that the Assembly appeal for a ban on nuclear bomb tests was ruled out of order in committee, and the ruling upheld by committee vote. This was evidence of the determination of the WHO to proceed with its work without becoming involved in international political problems.

After considerable discussion, the Assembly adopted by vote of 50 to 10 a budget for 1958 of $13,500,000. This is a very small amount in relation to the job to be done. In my judgment, no international organization is accomplishing more for the welfare of mankind in relation to the funds which it expends. Every dollar we contribute to WHO, whether to the regular budget or to the Special Malaria Fund, is a gilt-edged investment.

The activities of the World Health Organization are almost universal in scope and respond to a universal human need. In the constitution of WHO, we have joined with other nations to declare that all peoples have the right to the highest possible level of health. WHO is helping them to achieve this rightful condition, and in so doing is bringing mankind closer together. Thus, it is directly serving the interests of the United States and of peace. It was a great personal pleasure for me to find, at first hand, what a great contribution we as Americans are making to build a better world through our participation in this splendid organization.

The United States of America was fortunate in having as delegates a very representative group of individuals, each of whom are actively engaged in promoting health, both in the United States and throughout the world.

The following is a list of members of the United States delegation who attended and actively participated in the proceedings of the 10th World Health Assembly:

Chief delegate: Dr. L. E. Burney, Surgeon General, United States Public Health Service, Department of Health, Education, and Welfare.

Delegates: Dr. H. van Zile Hyde, chief, Division of International Health, Bureau of State Services, United States Public Health Service, Department of Health, Education, and Welfare; Dr. J. R. Reuling, American Medical Association.

Alternates: Mr. H. B. Calderwood, Office of International Economic and Social Affairs, Department of State; Dr. A. C. McGuinness, Special Assistant for Health and Medical Affairs, Department of Health, Education, and Welfare.

Congressional advisers: Mr. J. E. FOGARTY, House of Representatives, United States Congress; Mr. C. A. WOLVERTON, House of Representatives, United States Congress.

Advisers: Dr. L. W. Burket, dean, Dental School, University of Pennsylvania; Col. R. L. Callison, Office of Surgeon General, Department of the Army; Dr. E. P. Campbell, Deputy Chief, Public Health Division, International Cooperation Administration; Dr. E. L. Crosby, director, American Hospital Association; Dr. R. K. C. Lee, President, Board of Health, Honolulu, T. H.; Mrs. V. R. Pinanski, consultant to the National Advisory Neurological Diseases and Blindness Council, National Institutes of Health, United States Public Health Service; Mr. B. A. Poole, chief, Bureau of Environmental Sanitation, State Board of Health, Indianapolis, Ind.; Mr. D. H. Popper, Acting United States Representative to International Organizations, United States Resident Delegation and Consulate General, Geneva; Dr. E. L. Stebbins, director, School of Hygiene and Public Health, the Johns Hopkins University; Mr. R. Olaf Waring, Office of International Administration, Department of State; Mr. L. Wyatt, Division of International Health, Bureau of State Services, United States Public Health Service, Department of Health, Education, and Welfare; Dr. F. D. Yoder, president, Association of State and Territorial Health Officers, Cheyenne, Wyo.

Address of Hon. William E. Borah, of Idaho, on January 7, 1938

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DORN of South Carolina. Mr. Speaker, the late Senator William E. Borah, a great Republican from Idaho, made one of the greatest speeches ever delivered against the antilynching and related civil-rights bills on the floor of the Senate January 7, 1938. Senator Borah pleaded with the Senate not to pass the antilynching bill but to leave the solution of that problem to the States and the local communities. Senator Borah said that the people best acquainted with the problem, if left alone, would solve it. The bill, the so-called Federal antilynching bill, was defeated and in less than 20 years, as Borah predicted, the States and local communities solved the problem of lynching. Lynching today is unknown in the South and we never hear the subject mentioned, a tribute to the Southern States and local agencies of government.

The same argument advanced by Senator Borah in 1938 is the solution to the civil-rights problem of today. It cannot and will not be solved by Federal legislation. This would only agitate and aggravate local conditions and place it beyond solution. I hope the other body will heed Senator Borah's advice today and let the States and local communities quietly handle the problem of civil rights. These States in a few years will find a solution to this problem just as they did to the lynching problem and the poll tax.

Mr. Speaker, I know of no more appropriate time to insert in the RECORD the following speech of the late William E. Borah:

ADDRESS OF HON. WILLIAM E. BORAH, OF IDAHO, ON JANUARY 7, 1938

Mr. BORAH. Mr. President, this measure, in a slightly different form but embodying the same principles, came to this body about 25 years ago. At that time I was a member of the Judiciary Committee of the Senate and was appointed by the late Senator Nelson, chairman of a subcommittee to pass upon the measure, particularly its constitutional features. I shall not at this time go into the history of the action of the committee at that time. It may be necessary to do so later in order to throw light upon some features of this matter. It is sufficient now to say that I reached a conclusion as to the merits of the bill, which conclusion I still entertain.

Heretofore I have confined my remarks upon this bill largely to the question of its constitutionality. Those questions still interest me, and probably I shall discuss them later. Today, however, I desire to address my attention for a time to the policy involved in this measure. Assuming for the purpose of the argument that we have the constitutional power to pass such a measure as this, I desire to invite the attention of the Senate to the wisdom of doing so. I think it only a little less important, perhaps no less important, than the constitutional question itself.

Notwithstanding anything that has been said or that may be said to the contrary, this is a sectional measure. It is an attempt upon the part of States practically free from the race problem to sit in harsh judgment upon their sister States where the problem is always heavy and sometimes acute. It is proposed to condemn these States and the people in them because it is claimed that they have failed properly to meet and adjust the most difficult of all problems. No more drastic condemnation could be offered by a measure than that which is offered by the measure now before the Senate.

It proposes to authorize the National Government to enter into the States, and to take charge of and prosecute as criminals the duly elected officials of the States, from the governor down. It proposes that the Federal

Government shall be the sole judge of the guilt or innocence of State officials.

In my opinion that requires a review of some unfortunate history, and the recalling of some unpleasant facts. These States are not to be pilloried and condemned without a full presentation of the nature of the task which fate and circumstances imposed upon them, and not without a complete record as to the weight and difficulty of the task, what has been done, and with what good faith it has been met. I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history, dealing with a problem of similar nature. Let us inquire what it is that the South has had to do, how it has done it, and what reason there is now, after 70 years of great effort, to pass censure or condemnation of those great States and that great people.

Paraphrasing the language of one of the most eloquent of men, when the Confederate soldier pulled his gray cap over his brow, and lifted his pallid and tear-stained face for the last time to the graves which dotted the hills of old Virginia, and started on his slow and painful journey home, what was he to find? What were the problems, what was the task, what were the conditions which confronted him? His home was destroyed, his plantation devastated, his help gone, his money worthless, his civilization imperiled. This was the condition in addition to the other problem with which we are more particularly concerned today, and which confronted the South as it entered upon its great task of rebuilding.

I shall not go into details as to the reconstruction period. I recall it sufficiently and only that we may understand something of the antecedents of this problem and something as to the good faith and the ability with which it has been met. I recall a single instance in the way of illustration. When Congress met in December 1865, the then leader of the House—perhaps the most complete master of the House of Representatives that history records—Thaddeus Stevens, outlined the program with reference to the then pending situation. Among other things, he said:

"The future condition of the conquered power depends upon the will of the conqueror."

He said further that the conquered provinces were to be admitted as States—

"Only when the Constitution has been amended so as to secure the perpetual ascendancy of the party of the Union"—

The Republican Party—

"Every government is a despotism. * * * The Constitution has nothing to do with it [the program]. * * * I propose to deal with you [the South] entirely by the laws of war. * * * The conquered people have no right to appeal to the courts to test the constitutionality of the law. The Constitution has nothing to do with them or they with it."

Thus they were to take up the work of rebuilding and of carrying the race problem with the threat of having all constitutional guaranties withdrawn.

Mr. President, I have always felt that in many respects the reconstruction period is the most regrettable page of American history. Had Abraham Lincoln lived through his second term, it probably would have been the most readable page, one of the noblest pages in all history. It would have been characterized by wide sympathy, by breadth of understanding, and by that wisdom which flows from the heart as well as the brain, which passeth all understanding. It would have been free from that blind partisanship which disregards constitutions and constitutional limitation as well as national honor and national unity.

A short time before the Great Emancipator was removed from the scene he had outlined his views on reconstruction. What a different story would have been written had those views prevailed. What a different national life would have been lived had those views obtained. But before his body had reached Springfield the committee had met and had determined upon the complete rejection of the entire policy theretofore announced by the dead President. Ben Butler's views superseded those of Abraham Lincoln; and a more tragic thing could not happen in a crisis confronting a nation. These measures with reference to reconstruction therefore were written from the standpoint of partisanship not unmingled with a desire to punish.

The measure now before the body embodies the same principle upon which those measures were founded. The same arguments are made in support of the pending measure, to wit, that the southern people are to be distrusted and are incapable of local self-government.

We know now what those measures in those days did. They retarded and frustrated the coming together of the people of the different States. They gave us the solid South. They separated us politically, which separation continues until this day. They implanted a sense of bitterness in the minds of those people, not because of what had happened upon the field but because of what happened in Congress.

It is not in the interest of national unity to stir old embers, to arouse old fears, to lacerate old wounds, to again, after all these years, brand the southern people as incapable or unwilling to deal with the question of human life. This bill is not in the interests of that good feeling between the two races so essential to the welfare of the colored people.

Nations are not held together merely by constitutions and laws. They are held together by mutual respect, by mutual confidence, by toleration for conditions in different parts of the country, by confidence that the people of the different parts of the country will solve their problems; and that is just as essential today as it was in 1865 and 1870.

In the beginning, Mr. President, I reject the pending measure as fundamentally not in the interest of the white people of the South, not in the interest of the black people of the South, not in the interest of national unity nor of national solidarity, not in the interest of eliminating crime. History has proven that it will be a failure, and those who suffer most will be the weaker race.

Mr. President, the race problem is the most difficult of all problems, and, in addition to the conditions which I have outlined briefly, the southern people had placed upon them the race problem under circumstances and conditions never before experienced by any people, so far as I know, in recorded history. In addition to and on top of all other problems the South had to grapple with the race problem. How well has it dealt with it?

At the close of the Civil War there were a little over 5 million white people in the South; there were 3,500,000 Negroes. In Mississippi there were 100,000 more colored people than white people. In South Carolina there were something like 150,000 more colored people than white people. There were the two races, living upon the same soil, now equally free under the Constitution, one of them untrained and unschooled in the affairs of state, and untrained in citizenship. The problem had to be met. Was it easy of solution? Can one conceive of a more difficult problem placed before a people? I wish we could place ourselves in their position. It will help us to be sympathetic, sane, and just.

I call attention to some facts which lead up to the question of lynching. History shows that in the North in 1889, 1 Negro in every 185 was in jail; in the South, 1 in every 446. In the North the percentage of Negro prisoners was 6 times as great as that of the native whites, in the South 4 times as great.

Monroe S. Work, of Tuskegee College, has said:

"There is a much higher rate of crime among the Negroes in the North than in the South."

That speaks volumes for the southern Negro and no less for the whites.

Professor Johnson, of Fisk University, has said:

"The rate for Negroes is much higher in the Northern States than in the Southern States as to crime. Judging by the figures alone, for a 10,000-Negro population, the commitments were 88 in the South, 283 in the North."

In a volume entitled "Negro Housing" published in 1932, I find the following:

"The extent of property ownership by Negroes has in the past been greater in the South than in the North."

It will be disclosed that in some of the southern cities the percentage of Negro ownership of homes runs as high as 45 percent of the Negro population; in other places as high as 30 to 39 percent of the Negroes own their own homes.

In a bulletin issued by the Department of Agriculture in 1930 we find the statement that the value of land and buildings of farm property owned by Negroes increased from 1910 to 1930 as follows, giving the round figures:

	Percent
Virginia	58
North Carolina	140
Georgia	11
Florida	29
Louisiana	142
Texas	97
Mississippi	68
Alabama	41
Oklahoma	54
West Virginia	37

I mention these figures to show the progress of the Negro throughout the South in an economic way, for, after all, only in proportion as he acquires property and economic power can he hope to be secure in his political rights. That is just as true of the white man as of the colored man. And in proportion that he advances in education, in the acquisition of property, and in the acquisition of economic rights, in that proportion he will come to be regarded as an essential factor of the southern civilization, and treated as such; and to accomplish that has been the aim of the southern Negro, encouraged and assisted by the white people of the South.

I shall now read from a little volume to which I called attention a few days ago during the debate on the farm bill, a volume written by Gerald W. Johnson, who, I have been informed, is one of the editors of the Baltimore Evening Sun. He has written a remarkable volume upon the questions which pertain to the southern portion of the country. On page 8 of the volume he says, referring always to the South:

"The problem of public education, for example, has not been solved. It is further from solution in the South than in any other region. But when one considers that the South has to teach more Negro children than there are children of all kinds in New England; and when one notes that it is spending far more of its total income on schools than is spent by any other region, its effort, even though but half successful, must command respect and admiration."

They must educate more Negro children in carrying this load than all the children of

New England, and they are doing so; and by educating them they are fitting them for citizenship, schooling them against crime, and they are laying the only sure foundation there is for the extinguishment of crime among the Negroes. They are laying at tremendous cost the foundation for the good citizenship of the Negro, and while lynching can never be justified, nevertheless there is no more successful approach to the ending of lynching than through education, through bringing both races to understand their responsibility to society. I know of no finer sense of duty than that displayed by the South in the help it gives the Negro in bettering his condition as to property, as to economical strength, and as to education.

I read again from this able writer:

It has been the fashion in some quarters to assume that the Southeast has remained almost completely inert in the presence of its social problems. This is far from the truth. A mere glance at the educational statistics of the region is enough to dissipate the impression that the Southeast has been indifferent or lethargic in this respect. The State of Florida, for example, spends 5.76 percent of its total income for school purposes, and North Carolina 4.38 percent; this is the largest percentage that is spent for similar purposes by any other States save the Dakotas. * * * The Southeast spends 3 percent of its total income for higher education, the highest percentage in the Nation. It enrolled more high-school students in 1930 than the whole country did in 1900, and there are more accredited high schools in this region than there were in the United States at the end of the century. Its present army of 60,000 high-school graduates annually represents an increase of 500 percent within the last 2 decades.

I pause to say that if we knew as much about the South and what they have done and are doing as we pretend to know, we would not be so free to criticize. It is a horrible thing to see the body of a Negro burned to a crisp, swinging from the limb of a tree; it is a horrible thing to have a daughter or son, perhaps a mere child, snatched from your homes, carried into hiding, perhaps murdered. These are our problems, pressing for consideration, and they are making as determined an effort to clear the stain from the honor of the South as are we to rescue our honor in the North. "Why beholdest thou the mote that is in thy brother's eye and considered not the beam that is in thine own eye."

During the last session of Congress we had under consideration in the Committee on Education and Labor what is known as the educational bill, and, of course, it vitally affected the Negro people of the South, and they appeared in great numbers before the committee. At that time Senator Black, now Justice Black, was chairman of the committee. The most difficult problem was to work out obsolute protection for the colored children in the enjoyment of the fund proposed to be set up. I must say that I never knew a person more meticulous, more determined, more vigilant to protect the colored students in the enjoyment of that fund than was Justice Black. I was impressed with the fact that there was a determination upon his part to reach the Negro at that point in his life where he could best serve him not only with reference to general citizenship but as to the reduction of crime. Mr. Johnson states further in this volume:

"The most conspicuous characteristic of the southern population, however, is its biracial character. A group of 8 million people of a different color from the other 17 million is a feature so startling that it may be expected to attract more attention than perhaps it deserves.

* * * * *

"The inevitable result has been enormous waste of the Negro's potential value to the social structure. Not all of this is the fault of the white South by any means. The hasty and ill-advised effort made in the sixties to project the newly emancipated slaves into a political and social position they were not prepared to occupy has made any realistic treatment of their position extremely difficult. Not only did it create appalling prejudices but it erected very substantial legal barriers against any direct and forthright approach and forced southern political and social polity into a sinuousness that has been productive of a thousand evils.

"This is, however, water over the dam. What confronts the Southeast today is the problem of making the best possible use of 8 million blacks.

* * * * *

"Only comparatively recently has any considerable effort been made to treat the disease, rather than to alleviate its symptoms—or, rather, only recently has the idea begun to spread that perhaps there isn't any organic disease, but only a series of functional disturbances. Since the turn of the century the Southeast has been making real, if not always adequate, efforts in the field of Negro education. With the rise of the Negro in the cultural and economic scale there has come also an appreciable reduction of the rigor of civil and social disabilities. And with both there is a strengthening belief that perhaps the traditional approach to this situation has been faulty."

Everywhere we find a determination to find the right way. The Negro is there. He is there to stay. The South knows that he is there to stay, that he is a part of the wealth of the South. We in the North may be interested in the Negro politically. We care little about him economically. But he is an indispensable factor in the economic development of the South. They can and will do for him far better without our interference or advice than with it.

Mr. President, the Negro has had a hard road to travel ever since he was given his freedom. A hundred-and-odd years of slavery afforded poor training for citizenship in the most advanced of nations. Almost overnight he went from slavery to take up the obligations of a freeman in a free country; but, everything considered, he has done well; his advancement has been marked. Restricted, not by the Constitution of his country or the decisions of its highest courts, but restricted, almost cabined and confined, by the iron laws of society, nevertheless he has made progress. And where has that progress been greatest? In the South. In spite of prejudice, and statements to the contrary, facts and figures show it has been greatest in the South. In the acquisition of property and economic advancement generally the Negro has fared better in the South than elsewhere.

It is true, as is contended here, that at times he has suffered from mob violence in the South, but it is equally true that he has suffered from race riots in the North. But in all things which make for the advancement of the race as a race, the North has no advantage over the South in the story of the advancement of the Negro. We have shown no greater patience, no greater tolerances, no greater ability to deal with this race than have our brothers of the South. And now, because there is the power, because there are the votes, because it is possible to do so, it is proposed to call these great States and these people before the bar of public opinion and, after 70 years of arduous effort on their part, condemn them as unfit and unwilling to deal with this great problem, condemn them for having failed in the essential principle of home government, of home rule. After these 70 years, and after 150 years, taking the Government's history as a whole, we now come to the time when we are asked to say that home rule or local government has broken down in a number of the States of the Union. We call these States and these proud people to judgment before the whole world and spread upon the records of the Congress our condemnation, our judgment that in the most vital things of free government they have failed.

Broken down. Why? Because eight Negroes were lynched last year. There were 20 kidnaping cases in the United States last year. After all the efforts of the States and all the efforts of the Federal Government, taking charge of those who crossed State lines, we still had 20 kidnaping cases as against the 8 lynching cases in the South. Is that an indication that the South is not in good faith and with honorable effort trying to protect the colored race and to give it the same protection that it gives the white race?

Lynching is the one crime, Mr. President, that is distinctly and markedly on the decrease in the United States.

I shall take time to read briefly some facts and give some figures.

Prof. Charles S. Johnson, of Fisk University, says:

"Taking the period of 1889 to 1893 as 100 percent, it is of interest to note that every 5-year period has shown a decrease in the total number of individuals lynched."

He then gives the figures showing that from 1924 to 1928 there was a decrease of Negro lynching amounting to 84.8 percent. He concludes by saying:

"It will be discovered from the accompanying graphs and tables that at the present rate of decrease lynching will apparently cease to be a problem in race relations due to its disappearance."

Further, he says:

"In the 30-year period from 1889 to 1918, inclusive, there were 2,522 Negroes lynched."

That is about 84 a year.

He then calls attention to the fact that in 1924 the number had dropped to 16. Last year the number was 8. In many of the Southern States lynching has practically disappeared. Virginia had only 1 case in 10 years. West Virginia had none during the past 5 years. South Carolina had none during the past 3 years. Oklahoma had 1 in 10 years. North Carolina had 2 in 7 years. Arkansas had 3 in 9 years. Maryland had 2 in 10 years, and none for the past 3 years.

I call your attention to a statement from the great Tuskegee Institute located in the State of Alabama. It reads:

"There are a number of interesting features to be noted. From 1882 to 1885 there were more whites lynched than Negroes. Concerning the decline of lynchings in the United States, I call attention to sheet No. 2, 'Lynchings, white and Negroes, by periods, 1882–1936.' You will note that there has been a steady decline in the number of lynchings for each of the 10-year periods, 1887–96 to 1927–36. Judging from the trends shown in this table, there is every reason to believe that there will be a further decline in lynchings.

"There are probably three major factors that have contributed to this decline. The first of these is the tendency for frontier characteristics in the South to disappear (lynching was a special characteristic of the frontier in America, both in the West and in the South). Second, the breaking down of isolation in the South by increased facilities: (1) Rural free delivery; (2) more telegraph offices (3) more telephones in small towns and rural areas, and (4) recently the radio and paved roads. Third, increasing agitation within the South during the past 40 years against lynchings. This has resulted in an increasing sentiment against the evil. This sentiment has expressed itself in the increasing efforts to prevent lynchings.

"From 1914 to 1919 the number of persons lynched was much greater than the number of persons prevented from being lynched. From 1920 to the present the number each year prevented being lynched has greatly exceeded the number lynched.

"These facts and trends seem to indicate unquestionably that there will continue to be a decline in lynchings in the United States. Not only in these statistics but in many other ways is there employed a growth in the humanitarian attitude of the American people. This growth, I believe, has paralleled the development of educational and social agencies, all of which bid fair to rid this Nation of the barbaric practice of lynching."

In other words, the problem is being met, the problem is being solved, and it is being solved in the way that America solves her problems when they are local and of a local nature; and that is through the activity and the cooperation and the determination of the people themselves.

Mr. President, suppose Congress passes this bill; suppose it becomes a law; where must we go for its enforcement? The bill may be passed by votes from other States, but for its enforcement we must go to the juries in those communities which we condemn. The bill may be passed in the theoretical atmosphere of Washington, but it must be enforced down among the people in the realistic atmosphere of the Southern States. There will be the southern district attorney, the southern judges, the southern juries, and they must be depended upon for the enforcement of the law. Do Senators think they will more likely enforce the law when they have been condemned in the sight of all the world, and in face of such condemnation, than when they are appealed to from the standpoint of the sense of duty of their State and their sense of duty of citizenry?

We get back, after all, to the people themselves for the enforcement of the law. We have had an experience in this country showing that we cannot enforce a law when public opinion is not behind the law. The only way in which we can hope to have the law enforced is by the method that is now pursued by the southern people—that is, to educate the people up to an understanding that it is to their interest and to their honor to maintain law and order in their communities—and that they are doing.

Some years ago a great southerner discussed this question, and I cannot refrain from calling attention to some of his language. It seems to me fair, just, and so in accordance with the sentiments of the true patriot that it is worth while for us to stop and hear the voices of those who are wrestling with the problem at home.

Mr. Henry W. Grady said:

"Nothing, sir, but this problem and the suspicions it breeds, hinders a clear understanding and a perfect union. Nothing else stands between us and such love as bound Georgia and Massachusetts at Valley Forge and Yorktown. * * *

"I thank God as heartily as you do that human slavery is gone forever from American soil. But the free man remains. With him a problem without precedent or parallel. Note its appalling conditions. Two utterly dissimilar races on the same soil—with equal political and civil rights—almost equal in numbers, but terribly unequal in intelligence and responsibility. * * * Under these, adverse at every point, we are required to carry these two races in peace and honor to the end.

"Never has such a task been given to mortal stewardship."

Is that not true? Can we find anywhere in history a task such as was assigned to the southern people at the close of the Civil War, with slaves for 100 years released, free as they should have been, but given the power to participate in politics without any training and without any experience? It was beyond their capacity, as it would have been beyond the capacity of any race immediately to assume in full, and properly discharge, the duties of citizenship. But those were the conditions which confronted the South, and with which they have been dealing.

"The resolute, clearheaded, broadminded men of the South * * * wear this problem in their hearts and brains, by day and by night. They realize, as you cannot, what this problem means—what they owe to this kindly and dependent race—the measure of their debt to the world in whose despite they defended and maintained slavery.

"If you insist that they are ruffians, blindly driving with bludgeon and shotgun to plunder and oppress a race, then I shall sacrifice my self-respect and tax your patience in vain. But admit that they are men of common sense and common honesty, wisely modifying an environment they cannot wholly disregard—guiding and controlling as best they can the vicious and irresponsible of either race * * * admit this, and we may reach an understanding without delay."

Let us admit that the South is dealing with this question as best it can, admit that the men and women of the South are just as patriotic as we are, just as devoted to the principles of the Constitution as we are, just as willing to sacrifice for the success of their communities as we are. Let us give them credit as American citizens, and cooperate with them, sympathize with them, and help them in the solution of their problem, instead of condemning them. We are one people, one Nation, and they are entitled to be treated upon that basis.

Mr. President, I now turn briefly to another feature of this measure. I shall discuss it later in more detail, referring to court opinions. But I call attention to this feature now which must be of concern to every Member of this body, to everyone who believes in our dual system of government. This bill as it is drawn—observe my language—this bill as it is drawn strikes at the very heart, at the very life of local self-government. I ask Senators to reread the bill in the light of that assertion. It would place a construction upon the 14th amendment never contemplated by the men who wrote it—in fact, specifically rejected by them—and which, in my opinion, a fair construction in no sense sustains.

The bill openly and professedly declares in effect—and that is the theory upon which it rests—that the people in these States are either unwilling or unfit to maintain the most ordinary principles of organized society, and that in the face of the facts which I have shown, that they are really solving the problem.

Permit me to say here before I go further that I make no contention but that the 14th amendment has forever placed it beyond the power of any State to deny any person the equal protection of the laws, or to deprive any person of life, liberty, or property without due process. I recognize also that the State acts and speaks through its officers, legislative, judicial, and executive. I am not going to take refuge in technicalities, but I contend for what I believe to be a fundamental principle, and that is that while you may call a State thus acting and thus speaking to account, you cannot take jurisdiction over or deal with acts and deeds not done by the authority and by the direction of the State. It must at all times be State action. You cannot deal with acts under the 14th amendment not done by and under the authority and direction of the State. The dereliction of an officer in violation of the laws of the State, in disregard of the sworn duty exacted of him by the State, and subject to punishment by the laws of the State, cannot by any possible construction, either in law or in conscience, be the act of the State. To establish any such principle would be to undermine and break down the integrity of every State in the Union. If a State may not be entrusted exclusively with the authority and relied upon to exercise the authority to punish those who violate its own laws, public or private persons, then there is no such thing as local government, because the State is deprived of the very instrumentality by which it maintains State integrity.

Since this proposition first came before Congress the Senators from the Southern States have borne the brunt of the debate. They have been made to feel the criticism of those who look upon opposition as mere local prejudice. We are all prone to consider the race question as peculiarly a southern problem, and we leave our southern friends to deal with it without very much sympathy or interest. But assuming that we are going to continue this narrow and selfish course, when we come to read this bill it is found that it goes an arrow's flight beyond any race question. The way it is drawn and its legal terms lift the bill out of the region of the race question into the region of governmental principles.

I do not contend, of course, that the authors of the bill or its supporters are taking advantage of the horror which we all feel toward the crime of lynching to strike a blow at our dual system of government, but that is precisely what is happening; that is precisely what will happen in view of the manner in which the bill is drawn. The constitutional feature of this bill under its terms is just as vital to Idaho as to Alabama; it is of just as much concern to Massachusetts as to Georgia. If the Federal Government can send a United States marshal into the State of Tennessee to arrest a sheriff because he has failed to protect a colored man from violence, it can, under the same principle, send a United States marshal into the State of New York to arrest a sheriff, or other officer on whom the duty is imposed, because he neglected to protect the life of a citizen against the violence of thugs. It is just as much the duty of the State to protect the citizen from violence not under arrest or not assailed by 3 but by 2 or 1. The Constitution does not classify crimes. It does not say that lynching is subject to the terms of the Constitution and that death by the act of thugs is not.

What does this bill provide? There is not a word in it which indicates that the failure to protect in any instance was due to the fact that the prisoner was a Negro. There is no provision indicating that the States of the South or their officers maintain one rule of conduct for the Negro and another for the whites. There is nothing to the effect that the laws of the States favor the whites and do not favor the Negro. There is no indication or intimation in the bill that the failure of the officer to act was due to the fact that his prisoner was a Negro. This bill is not based in its terms upon discrimination against the Negro, because of unequal treatment of the Negro, but upon the theory the States have broken down in maintaining order and protecting life. That is not a local question but a national question. If the States no longer protect life and property not because of discrimination but because of failure to execute laws regardless of race then we have a great national problem to be met by constitutional amendment. The 14th amendment does not cover any such question.

In all the cases which are cited in the briefs sustaining this measure there will be found a specific provision in the statutes concerning the failure of the officer to act being due to the fact that the party in interest was a Negro. There is no such provision in this bill. This is a general proposition, dealing as much with one race as with the other. Let me read from the bill:

"SEC. 3. Whenever a lynching of any person or persons shall occur, any officer or employee of a State or any governmental subdivision thereof who shall have been charged

with the duty or shall have possessed the authority as such officer or employee"—

That would include the Governor and all his subordinates in the executive department—

"to protect such person or persons from lynching and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching and any officer or employee of a State or governmental subdivision thereof who shall have had custody of the person or persons lynched and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching, and any officer or employee of a State or governmental subdivision thereof who, having the duty as such officer or employee, shall willfully neglect, refuse, or fail to make all diligent efforts to apprehend, keep in custody, or prosecute the members or any member of the lynching mob, shall be guilty of a felony and upon conviction thereof shall be punished by a fine not exceeding $5,000 or by imprisonment not exceeding 5 years, or by both such fine and imprisonment."

Where is the provision there that deals with the lack of equality between the races or discrimination as to the races? There are no provisions in the bill requiring a showing that the failure of communities to protect a person was due to the fact that he was a Negro. In all the cases cited, there will be found a statute specifically requiring a showing that the officer refused to act or failed to or did not act because of the fact that race was involved and that a Negro was the person involved.

Let us carry this a little further. It is the first duty of a State, is it not, to enact laws to provide officers to protect life, liberty, and property? That is the first duty of every State. Suppose that a man is killed by thugs, we will say, in one of the great cities, without mentioning any particular one—and while the South lost eight Negroes by lynching last year the North lost hundreds because of acts of violence committed by thugs—and suppose that the State failed to take proper action under its laws and by its officers to protect the citizen on the highway or in his home against the acts of thugs; may we not, under the principle of law invoked in this bill, send an officer into that State to take charge of those police officers? What is the distinction in this bill between violence committed by a combination of thugs and violence committed by those who are combined into a mob? We are somewhat at a disadvantage in discussing the bill, because its authors have been entirely silent in presenting those features, and I am having to present it upon the briefs which I have read.

I think it might not be out of place here to call attention to another matter. The proponents of the bill are undoubtedly maintaining that the Federal Government will protect men in the South better than will the local communities. They are undoubtedly basing the entire measure upon the proposition that the Federal Government will execute the law. Well, we have the Federal Government in control of the city of Washington, which now, if not the first, is at least the second capital city of the world which is most plagued with crime. Seventy-five people here have been robbed of their property in one night. How close the police were I do not know. I understand the police escaped being robbed.

We can all recall instance after instance published in the papers of young women disappearing and their bodies being found outraged and the criminals never being intercepted. Why is there any reason to believe that the Federal Government can enforce criminal laws better than can the State governments? The enforcemnt of law and the punishment of crime depends upon the will and purpose of the community where the crime is committed. Those advocating this bill are on a venture. They are going to take the responsibility away from the people in the South; they are going to say to them, "You are not qualified or willing to do the work; we are going to do it." Where is the record which shows that they will do it? What is the record?

We have now at the head of the crime department, if I may call it that, in the Department of Justice, perhaps the greatest specialist in the world in the running down of crime and criminals; we have a Federal kidnaping law by reason of the fact that kidnaping crimes generally pass State lines; but last year, 1937, there were 20 kidnaping cases in the United States, with the State and Federal Governments both working, and Mr. J. Edgar Hoover says that there never will come a time when there will not, in all probability, be kidnaping in the United States; that it is impossible to wipe out the crime; that so long as greed and the appetite for money are found in the human system, there will be kidnaping. Mr. Hoover very frankly states that it is impossible to wholly wipe out such crimes. They can be reduced to a minimum and lynching has been reduced to a minimum in the South.

Coming back to our Capital as an example of Federal enforcement, I read from a local paper:

"The criminals of Washington are taking $30 million a year from the citizens of this city."

They are being deprived of life, liberty, and property, certainly without due process of law as that term is applied here. And the men in charge of the District seem to have thrown up their hands; they do not know how to deal with the situation. Yet, the Federal Government is in control here; the Federal Government is back of them. They are not by any means doing as well as are the people of the southern States in meeting the crime problem.

Mr. President, we are dealing with the race problem. We need not blind our eyes to that fact. And the race problem is a problem which does not readily yield to legislative solution, to the rigid demands of the law. Take, for instance, the colored girl who, under great handicaps, has earned the right to be employed by her Government upon an equality with everyone else. She goes with a certificate of competency from the Civil Service Commission to one of the departments here in Washington—here in Washington, under the aegis of the Federal Government—and when she enters the door and her color is discovered, she is told that the place is filled, which is probably false. That happens not once but many times. She suffers injustice at the hands of her Federal Government. But that is a race question, and no law was ever made tight enough or strong enough to remove all its harshness and to eliminate all its injustices. Only the patient process of education, the uplifting power of religion, the tolerant, noble-minded men and women who give their thoughts to the cause, can remove or mollify such injustices or such harshness. And that is being done; it is being done in the South; that result the South is achieving; the record so shows; and the people of the South are entitled to our commendation and not our condemnation. They are entitled to our cooperation and support.

This, Mr. President, is another compromise with a vital principle of our dual system of government. It is bartering the future for the supposed and transient demands of the present, and at a time when the present is taking care of the problem. It is another instance in which our confidence in our scheme of government is not strong enough to say to all races, all creeds, all groups, and all factions: "Your problems, however serious, are subordinate to the principles of this Government; and you must work them out within the compass of the long-tested and well-accepted principles of democracy."

Every American must feel a slight sense of guilt, if not a sting of remorse, when he reads the Premier of Italy's reference to the bellowing herds of democracy, to free institutions as the decadent breeding grounds of insincerity and confusion. The fundamental principles and precepts of popular government are not in doubt. There is no confusion there. The confusion arises when we depart from those principles. It was the embodiment of the precepts and principles of popular government in the Constitution of the United States which put confusion to rout in this country, gave ordered liberty to the people, and strength and direction to government. For centuries prior to the declaration that the powers of government are derived from the consent of the governed, and the dedication of a new continent to that sublime conception, there had been nothing but confusion, nothing but turmoil and misery, nothing but brute force and enslaved masses. And all that will happen again if the advocates of arbitrary power, now inveighing against free institutions in the presence of their assembled slaves, have their way and the world again comes under their sway. Contrast the conditions of those periods with the period since the adoption of the Federal Constitution, with its establishment of law and order, the spread of contentment and happiness among the masses, with its unprecedented progress in the arts and the sciences, and you not only have your answer to those whose sole right to rule rests upon the law of force, but you have the most powerful appeal that can be made by mortal man to those who would compromise or weaken the safeguards of popular power.

I am perfectly aware, as we all are, of the tide which seems to be running against popular government everywhere, of the base betrayal of the people in many countries where they once had at least some authority and hoped for more, of that profound egotism which regards as of no significance the bitter experience of men and women in their long quest for liberty. But against all these things, if we have the confidence in our form of government which we profess, we can place, not theory, not hopes, not ideals merely, but 150 years of achievement, of demonstrated popular rule, with its wealth of human happiness and human progress. How puny and hollow and fleeting in comparison are the achievements of usurped power, every hour of whose existence depends upon the continued suppression of human liberty.

And, Mr. President, in conclusion, the progress, the development, and the advancement of the South, including the last 70 arduous years, her history from Washington and Jefferson down, rich with the names of leaders, orators, and statesmen; her soil, her sunshine, her brave and hospitable people, her patient and successful wrestling with the most difficult of all problems, are all a part of the achievements of our common country and constitute no ignoble portion of the strength and glory of the American democracy. I will cast no vote in this Chamber which reflects upon her fidelity to our institutions or upon her ability and purpose to maintain the principles upon which they rest.

Word Sketches of Mrs. Lydia Lawrence and Mr. LeRoy Breithaupt, of Oregon, Representatives of Oregon Horticulture

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 10, 1957

Mr. NEUBERGER. Mr. President, some of us still hope fervently that the Senate will have an opportunity at this session to vote on S. 963, which seeks to safeguard roadside beauty in the United States by limiting signboards along the interstate highway system.

For this reason, some of us are particularly appreciative today of leaders in the field of horticulture, who are striving to grow and propagate the plants and flowers which contribute so greatly to the idyllic and pastoral loveliness of the American countryside.

Two such persons recently were honored by the Oregon Federation of Garden Clubs, holding its annual meeting at Coos Bay, Oreg., along Highway U. S. 101, beside the magnificent Oregon seacoast. They were Mrs. Lydia Lawrence, of Ocean Lake, Oreg., and Mr. LeRoy Breithaupt, of Corvallis, Oreg. These two distinguished representatives of Oregon horticulture are models for the Nation in this realm.

I ask unanimous consent that there be printed in the Appendix of the RECORD two fine word sketches of Mrs. Lawrence and Mr. Breithaupt which appeared originally in the garden pages of the Oregon Journal of Portland, Oreg., for Sunday, June 30, 1957.

Mrs. Neuberger and I, who share a pride in our own garden in Portland when we are fortunate enough to be there, are especially interested in the outstanding horticultural achievements of these two noted Oregon residents.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MANY FLOWER SHOWS, IDEAS AIDED BY WOMAN

Lydia Lawrence was born in Elgin, Ill., December 12, 1886, of a Welsh-Irish mother and a Pennsylvania Dutch watchmaker father, on both sides from early American Colonial stock.

She was graduated in 1906 from Denison, Iowa, High School. She was married in Orenco, Oreg., January 6, 1910, to Maurice A. "Mike" Lawrence. They made their home in Portland until January 1951, when they retired to their beach home at Ocean Lake.

Portland residences were in the peninsula district for 10 years, Powell Valley 5 years, and Westwood 26 years. Their daughter and her family now reside in the family home at Westwood.

Mrs. Lawrence's garden club work started when she joined the Multnomah Garden Club shortly after moving to Westwood in 1926. During her first year, she helped put on the club's annual show, a major event with clubs in those years. She became imbued with a love of shows as important garden club efforts, studying constantly how to improve show quality and through educational features to make them more attractive to the general public.

One of the things she did during her first presidency of Multnomah was to engage Carl Starker to give a series of lessons in flower arrangement. Those studies gave purpose to her knack of creative art and started her on a course which has embraced lectures, visits, horticultural study, and continuous development.

Not a little of her success must be attributed to the many opportunities for judging flower shows in company with other able judges, especially arrangement divisions at scores of major and minor shows in Oregon and Washington. Flower shows she has managed include several for the Multnomah Garden Club, three successive national shows for the American Primrose Society in 1948, 1949, and 1950, the last one being the high point of her years of show management. She also put one for the Little Gardens Club in 1950. Lydia worked in many other shows. She was welcomed and depended upon at the Portland Men's Garden Clubs shows and the shows of the Oregon Fuchsia Society.

Her federation work began with an emergency assignment as subscription chairman when Mrs. Daniel Heffner was president of the Oregon Federation of Garden Clubs. The way this was handled led to her federation vice presidency. With that office came the editorship of the federation newsletter, a 4-year stint. Again, during the 2-year term of Miss Claire Hanley, she enjoyed serving the Oregon federation as newsletter editor.

Other things she has done during her club years included a second term as president of Multnomah Garden Club; organizational help and assistance to the Oregon Fuchsia Society (to which she was elected honorary life member in 1955). She gave assistance to the Norwood Garden Club, Dosch Diggers, Friendly Metzger Neighbors and numerous other clubs in the metropolitan area in their formative years.

She served with Mrs. Walter Wilhelm as alternate director of radio gardening broadcasts over KWJJ which were sponsored by the Oregon federation. She gave broadcasts on a wide variety of topics on the federation's home garden hour. In addition to lecturing to garden clubs, on horticultural subjects, she gave talks and demonstrations related to fuchsias, roses, hellebores, camellias, bulbs, berried and flowered shrubs, and trees.

She has written scores of articles on a wide variety of horticultural subjects, such as flower arrangement, show practices, and kindred topics. Related activities have included series of classes in flower arrangement for various clubs in the Portland area.

Out of State calls have included lectures, flower arrangement demonstrations at Vancouver, Longview, and Seattle, with judgings of important shows in Washington cities. Similar work in Oregon has been too numerous to list.

Love of growing plants, garden design, and creative arrangements have been dominant interests in her life during and following her years of active club and federation work. Of these, flower arrangement is the most important and she continues to study and practice both for her own pleasure and as a service to others.

Her philosophy as to creative art in the floral or horticultural field is that to use plant material one should grow it; that design restraint and rhythm are the keys to good arrangement. If she has any dictum about arrangements, it is that a good arrangement is one you can live with without feeling a wish to change it.

Mrs. Lawrence and her husband have developed a charming and beautiful garden at their home at Oceanside.

ASTER DEVELOPMENT WORK OF CORVALLIS MAN

LeRoy Breithaupt was born November 3, 1885, in Portland.

He attended grade and high school in Portland, and graduated from Oregon State College.

After graduation from college he served as county extension agent, then served as head of the experiment station at Burns. From there he came back to Oregon State, and for many years was extension agricultural economist. In this capacity he served for 26 years. He was retired from the extension service in 1951.

He has been working with perennial hardy asters for the last 25 years. He started growing and collecting them as a hobby, and soon found that he had about 100 different varieties, which he had gotten from nurseries in this country and also from England.

After growing them for a time, he found that the flowers were beautiful, but that most of them grew too tall for ordinary garden use, and needed too much staking so he set about to develop a hardy aster that would be useful in landscape gardening, lower growing, and for a longer blooming period.

He searched for wild varieties to find a parent that would produce the desired qualities, from the mountains to the seashore, and found the one he was looking for along the coast. From this one he got the dwarfness he desired and long-blooming qualities, and this has been the parent of all later crosses.

His asters are known as the new Oregon-Pacific dwarf hybrids. Of these Pacific Amaranth is considered by Breithaupt to be his best introduction during the first 10 years of his work with them. Twinkle is the most dwarf, and Persian Rose has created the most interest, both in this country and England. Canterberry Carpet makes a good specimen plant and is well liked by Breithaupt. Snow Ball, a dwarf white, and Bonny Blue, a true blue, were his 1956 introductions. Romany is the latest variety to be introduced and will be on the market this year.

Since he first started introducing his dwarf hardy asters, he has worked for plants that will meet his rigid requirements, and if they don't measure up they are discarded. The last five are sterile, so they don't have the bad habit of producing seedlings that soon take over the garden.

Breithaupt has not confined his gardening interest to asters alone, but he and his wife grow Early English and American hardy chrysanthemums and use them with the asters in beautiful landscape effects.

Their garden is a show place and has been pictured in many magazines illustrating the use of the asters and hardy mums in landscape design. In fact, they were the first to grow the early mums, and to realize that they were so usable for fall color in this part of the country.

Breithaupt was the first president of the Men's Garden club of Corvallis, and has been very active in all its activities. In 1954 he received the bronze award of the men's garden clubs, for service to the club and his community. In 1956 he received Pacific regional award for horticultural achievement, and also received the national award of the Men's Garden Clubs of America for outstanding achievement in the development of the hardy aster.

He's a charter member of the Corvallis Rose society and of the Corvallis Chrysanthemum society, which he served as president and publicity chairman for the early chrysanthemum show, for which Corvallis gained national recognition through his articles in garden magazines throughout the United States.

He has written many articles for gardening magazines, such as Flower Grower, Popular Gardening, Botanical Magazine, Plants and

Gardens, Household and Horticulture, besides countless articles for newspapers and garden club news letters.

He has given generously of his time and talents to convey his interest, knowledge and enthusiasm for his plant specialties to others.

America's Constitutional Crisis—The Problem of the High Court

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Frederick Nelson, a former associate editor of the Saturday Evening Post, appearing in the Newsletter Human Events, goes at some length into one of the most disturbing problems of our time. The problem seems to be the limits of the powers of the Supreme Court.

Most of us believed those powers were well and clearly defined by the Constitution, in that the High Court was to be the final arbiter of the law; that, and only that, was to be its function.

Today we see the Court taking over more and more the legislative powers that we believed were the sole prerogative of the Congress. This may be in part the fault of the Congress, in that it has allowed its powers to be gently but firmly whittled away. If this be true, it behooves the Congress to examine its plight today and gently but firmly take back those powers specifically granted to it by the Constitution.

At the end of Mr. Nelson's article, under the heading "This Is What They Said," Mr. Nelson gives two interesting quotes from Justices Felix Frankfurter and Hugo Black. It would seem that time has changed their thinking and it may well be that time will change it again:

AMERICA'S CONSTITUTIONAL CRISIS—THE PROBLEM OF THE HIGH COURT

(By Frederic Nelson)

If anyone wants to know what a constitutional crisis is like, it looks as if we were in the middle of one. The English put on constitutional crises when somebody in the royal family wants to marry an American or a gamesmaster. This American crisis is more important, to us anyway, because it concerns the very nature of our political system and the continued ability of the Government to protect the country from destructive Communist attack. In a series of edicts the United States Supreme Court has rendered the Government powerless to check the organization of secret Communist cells; to expose the nature and ramifications of the Red conspiracy; to maintain the integrity of the FBI's sources of information; or to keep subversives out of sensitive Federal bureaus.

How on earth did nine eminent Supreme Court Justices, most of whom are no more radical than the average Joe at the country club on Saturday afternoon, manage to foul things up so that Americans in all walks of life fear for the security of the Nation, while the Communists openly boast that they never had it so good? There is no single answer, of course, but for one clue you might look into the tendency of middle-aged men to assume that young intellectuals just out of college know all the answers. Even a Supreme Court Justice is probably a good-hearted sucker for the idea that the top young man in the graduating class at an Ivy League law school has the latest word on the Constitution. Most of the Justices take on such young fellows as their clerks. Who are these "brains" and what are their backgrounds?

Even the most casual student of the Supreme Court's recent decisions in the so-called "civil liberties" cases wants to know, "Who makes up the reading lists for the eminent justices?" Their opinions bristle with citations from sociologists and political theorists whose works one would hardly expect a Supreme Court Justice to have read. Some people suspect that those "clerks"—just out of law schools more or less on the left side of the fence—have been familiarizing their bosses with 4 Gunnar Myrdal 907 (instead of 17 U. S. 1165).

The suspicion that there may be some neo-Alger Hisses in the High Court's establishment doubtless accounts for the recent recommendation by the Commission on Government Security that employees of the judicial branch should be screened for basic loyalty because "Federal judges, busy with overcrowded court calendars, must rely upon assistants to prepare briefing papers for them. False or biased information inadvertently reflected in court opinions in crucial security, constitutional, governmental, or social issues, could cause severe effects to the Nation's security."

Anyway it will be no surprise if it turns out that the Court's homework has neglected the reports of the hearings which the Senate's Internal Security Subcommittee and the House Un-American Activities Committee have been holding on the general subject of Communist subversion in American life. A little more attention to these sensational but usually ignored reports ought to convince even the most liberal jurist that the cases which have been coming up to the Supreme Court of late are concerned only remotely with the rights of individuals to their political views, but have a great deal to do with a ramifying conspiracy, almost impossible to expose in its entirety, to subject America to Communist dictatorship.

Take Justice Black's opinion in the Konigsberg case, in which the Court upset the efforts of the California bar to exclude from the practice of law a young man who had refused to tell the bar's examining committee whether or not he was or had been a Communist. Konigsberg—when asked the simple question, "Are you a Communist?"—went into the familiar song and dance about how he was faced with "nameless accusers or informers"; and that, if he did answer the question, "you would get a dozen informers who would say the opposite"; and that anyway the question invaded his rights of "free opinion and free speech" and that the legal profession should champion these rights.

As a matter of fact, one nonfaceless informer named Mrs. Bennett had testified in Konigsberg's presence that she knew him to be a Communist; but, when asked whether he cared to deny her testimony, Konigsberg said, "That is a question relating to opinions, beliefs, political affiliations."

All this might seem, as it did to Justice Harlan, to cast doubt on the desirability of this young man as a member of the California bar, or at any rate deter the Supreme Court from interfering in the matter. But not Justice Black. His assistant or clerk could have briefed him, but apparently didn't. In an encomium upon the honesty and uprightness of the applicant's life, Justice Black mentioned the fact that, after joining the Army, Konigsberg was selected for training as an orientation officer in the Army's information and education program and in that capacity served in north Africa, Italy, France, and Germany. As an orientation officer one of his principal functions was to explain to soldiers the advantages of democracy as compared with totalitarianism.

This must have split the sides of the Senate Internal Security Subcommittee which, in the summer of 1954, went pretty thoroughly into the activities and personnel of the Information and Education Division of the United States Army. That section was found to be loaded with Bolos and leftwingers whose activities, unearthed in testimony before the committee, included the publication of a series of Army talks, among them one on China which assured the wondering troops that "Communists" were not really Communists at all.

But, to Justice Black and presumably the Court majority, service with a group which was loaded with leftwingers is evidence of a forceful showing of good moral character. Of course this individual may have been clean as J. Edgar Hoover's tooth; the point is that, if you're making a case for innocence by association, don't pick this information and education outfit. Really, some alert assistant or research analyst ought to have pulled that one out of the Justice's text.

If the Court is actually setting itself up as a third legislative chamber, it ought to go to great pains to understand what it is legislating about. Some research into the Internal Security Committee's investigation of the penetration of communism into the educational field might have headed off another howler, this one from the majority opinion in the case of New Hampshire's Professor Sweezy: "It is particularly important that the exercise of the power of compulsory process be carefully circumscribed when the legislative process tends to impinge upon highly sensitive areas of freedom of speech or press, freedom of political association, and freedom of communication of ideas, particularly in the academic community."

Why "particularly in the academic community?" With almost every college and university faculty sheltering at least 1 or 2 veterans of the fifth amendment, the impartial observer might conclude that the academic community should receive especially careful attention from the investigating process. The testimony of Bella Dodd, for example, on the special vulnerability of educators to the wiles and sophistries of communism might have profitably been called to the attention of the court by some law clerk who was not curled up with a good book on the evils of McCarthyism.

This gets us to the momentous Watkins case in which the Supreme Court undertakes to set new limits on the investigative powers of Congress. Of course, few would undertake to prove that every congressional investigation and every question posed by an investigating committee is above criticism. I myself, without knowing too much about it, doubt the wisdom of attempting to compel a witness to squeal on his old brothers in the bonds of communism. The question which the committee has to ask itself is whether the possible advantage of prosecuting Arthur Miller, for example, outweighs the disadvantage of a hostile popular reaction to all congressional investigations. The basic object is to persuade wavering Communists to leave the party and tell what they know. It is quite possible that some such people hesitate to emerge for fear of being compelled to give information concerning others.

The other side of the argument, and the one which prevailed in congressional circles, is that a repentant Communist casts serious doubts upon the genuineness of his change of heart if he refuses to name his associates in subversion. And of course it is unfair

that prominent witnesses with popular followings and curvaceous wives should get a fairer deal than less fancy converts. Nevertheless, the Watkins and Sweezy decisions certainly suggest that committees of Congress would do well to pick their contempt victims with an eye to how they look on television.

However, this ought to be a matter for the discretion of the committee. If its members think it essential to punish recalcitrance by citing a witness for contempt, the Congress must retain the power to do so. As Justice Black remarked back in the days when he was a Senator from Alabama, "There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate, save the sovereign legislative power armed wtih the right of subpena and search"—and with the power to compel reply to questions.

In those days the powerful and audacious and unscrupulous groups were mainly millionaires and entrepreneurs in the electric power industry. It was considered reasonable to push them around. I seem to recall that somebody even incited a midget to sit in J. Pierpont Morgan's lap while he was testifying and nobody blew the whistle. Now that the witnesses are Communist conspirators for the overthrow of the United States, the learned Justices are for limiting the sovereign legislative power.

In this same Sweezy opinion occurs the astonishing statement, which seems intended to apply to the Communist Party, that "any interference with the freedom of a party is simultaneously an interference with the freedom of its adherents * * *. We do not now conceive of any circumstances wherein a State interest would justify infringement of rights in these fields." Sweezy is a teacher in New Hampshire and the people of that State seem to have imagined that they had an interest in what was being taught in their educational institutions. Had they read the Court's dictum in the Steve Nelson case, they would have understood that the States are supposed to have no legitimate interest in subversion at all.

A competent law clerk would have suggested that a State interest in subversion of the United States is suggested in article 4, section 4, of the United States Constitution, which reads: "The United States shall guarantee to every State in this Union a republican form of government and shall protect each of them against invasion and, on application of the legislature, or of the executive when the legislature cannot be convened, against domestic violence."

It doesn't seem to me altogether a quibble—or at any rate no worse a quibble than a lot we have been getting lately—to suggest that the States have as much interest in the possible overthrow of the United States from the inside as from the outside; and that, inasmuch as the States are guaranteed a republican form of government by the United States, it would be suicidal for the States to remain indifferent to subversion which might easily make the Federal guaranty as useless as a $3 bill. The California Un-American Activities Committee for, example, has turned up a lot of important leads which Federal authorities could follow up later.

It is a little difficult to see what Justice Harlan's law clerk could have done to steer him away from that dreary routine on the meaning of the word "organize" as used in the Smith Act. As a lay ignoramus got it, Justice Harlan meant that, unless a Communist was present when the Communist Party was organized in 1945, he could not be said to have organized Communist cells or apparatuses after that year. Perhaps the Justice's clerk should have suggested that an equally good date for the organization of the United States Communist Party is 1919, a date which would have sheltered most Reds younger than William Z. Foster behind the statute of limitations. But for the lay ignoramus, who can't see anything confusing in the idea that a Communist might right now organize a cell in a labor union or college faculty, the Court had a hard time making sense.

Fundamental to the release of the California Communists, is the notion, which crops out throughout the Court's opinion, that freedom of speech and political belief is some how involved. Another basic fallacy is that the Communist conspiracy is no longer dangerous. These delusions are not confined to Supreme Court Justices. The New York Times, hailing the Smith Act opinions as a new birth of freedom, declared that the time is passing when the existence of a small group of persons with warped minds and twisted judgments and calling themselves Communists is a menace requiring us to suppress our ancient freedoms.

Of course we haven't suppressed any ancient freedoms, as the ability of the Communists to warp the minds and twist the judgment of a distressingly large portion of the non-Communist community is sufficient proof. More depressing are these decisions in which the Court revealed a bland indifference to the growing menace of internal subversion and appeared to accept the notion that a Communist conspirator could not be considered guilty of incitement unless he managed to incide somebody to blow up the United States Mint within the next half hour.

The idea that the Communist Party is harmless is, of course, being exploited to the limit by the party itself. In its brief asking the Supreme Court to outlaw the Smith Act, the party lawyers said: "Developments of the last few months indicate that these relationships [between Russia and the United States] are beginning to undergo a profound change. For this reason alone, the position of the Court of Appeals that it is legally bound to assume that the fears expressed by Congress in 1950 provide an adequate, competent, and conclusive picture of reality, is unreasonable, if not wholly irrational."

Although the present Court has not overtly reversed its own opinion in the Eugene Dennis case, its latest ukase represents a substantial reversal of its earlier view that "the mere fact that, from the period 1945 to 1948, petitioners' activities did not result in an attempt to overthrow the Government by force and violence is, of course, no answer to the fact that there was a group that was ready to make the attempt." The California decision did not declare the Smith Act unconstitutional; it merely made it all but impossible to enforce.

And that may have been the smartest idea some bright law clerk has developed since he left law school.

In spite of the predictions by "liberal" columnists that the fuss will subside and that Congress will lie down and play dead, I have a hunch that Congress will do nothing of the kind. It can't, if only because failure to meet these repeated challenges will lead to judicial dictatorship, however amiably it may be disguised. If Congress may not question a witness without explaining in elaborate detail just what specific statute any isolated question is expected to produce; if Communists may not be laid by the heels until the Red putsch has succeeded; if a trust may be upset because the Supreme Court thinks the maker of the trust should have made it differently; if the FBI must expose its files to Communist lawyers whenever the files concern the testimony of a Government witness; and if even Dean Acheson is not privileged to fire an employee as a security risk, then we have something like judicial dictatorship already. Neither Congress nor the American people can settle for anything like that.

Twenty years ago, when the Supreme Court declared various acts of Congress unconstitutional, the "liberals" did not hesitate to propose drastic remedies. The late Representative Maury Maverick declared that, unless the Court abandoned "the practice of functioning as a superlegislature and a super-President," the people should require it. Senator George Norris complained that "the people can change Congress but only God can change the Supreme Court." Nevertheless, he thought the people ought to try. Jackson, Jefferson, Lincoln, and Grant were quoted on the side of telling the Supreme Court to get back behind the balk line or else. A case called *Ex parte McCardle* was exhumed from obscurity since 1868 to show that in at least one instance the Supreme Court, under Chief Justice Chase, had refused to hear a case in which Congress specifically denied jurisdiction to the Supreme Court. Maybe that device could be made to serve again.

This time, of course, the "liberals" see no cause for alarm and are raising their hands in holy horror at the mere suggestion that anyone should be so bold as to "defy the Supreme Court." But Congress will hardly give up so easily. Its power to "do something" had the endorsement of a former semi-liberal member of the Court itself.

Former Justice Roberts, commenting on the McCardle case, raised an interesting question: "What is there to prevent Congress taking away, bit by bit, all the appellate jurisdiction of the Supreme Court of the United States, not doing it by direct attack but by that sort of indirect attack? I see nothing. I do not see any reason why Congress cannot, if it so decides, take away entirely the appellate jurisdiction of the Supreme Court of the United States over State supreme court decisions. The jurisdiction is exercised now under the terms of the judiciary act. Suppose Congress should decide to let the decisions of State courts of appeal be final on constitutional questions. How could the Supreme Court assert a power to take those questions, notwithstanding the act of Congress, in view of the language of the third article of the Constitution (the article defining the judicial power)?"

Surely this is something those erudite law clerks might have looked into, if only to warn their bosses of what might happen if they pushed Congress too far. It would be regrettable if the Supreme Court's powers as umpire were destroyed, for, without some final body authorized to decide when constitutional limits have been exceeded by Congress or the Executive, it is difficult to see how a Federal system of balanced powers could be made to operate. But an umpire who legalizes the spitball on the field and seems unable to detect a wild pitch can hardly complain when the pop bottles fly. And a Supreme Court which so far misconceives its function as virtually to paralyze Congress and the Executive in their efforts to protect the country against internal subversion must be said to have asked for whatever reprisals follow.

THIS IS WHAT THEY SAID

"Undoubtedly, the names of people who have done nothing criminal or wrong, or nothing even offending taste perhaps, have been mentioned in connection with these investigations. * * * But where so much that the Department of Justice was doing under Daugherty was not innocent, it is highly important that even innocent transactions in the general field of fraud and suspicion be explained in order to separate the sheep from the goats. The question is not whether people's feelings here and there may be hurt, or names dragged through the mud, as it is called. The real issue is whether the danger of abuses and the actual harm done are so clear and substantial that the grave risks of fettering free congressional

inquiry are to be incurred by artificial and technical limitations. * * *

"The procedure of congressional investigations should remain as it is. No limitations should be imposed by congressional legislation or standing rules. The power of investigation should be left untrammeled, and the methods and forms of each investigation should be left for determination of Congress and its committees as each situation arises. The safeguards against abuse and folly are to be looked for in the forces of responsibility which are operating from within Congress, and are generated from without." (Felix Frankfurter in the New Republic, May 21, 1924.)

"An investigation is precisely what it purports to be—an investigation. Sometimes attempts are made to discredit it by calling it a fishing expedition. It is not a trial based upon an indictment where the facts are already known and merely need presentation to a jury. It is a study by the Government of circumstances which seem to call for study in the public interest. And the public hearing is usually, certainly in important investigations, preceded by a long period of extensive research.

"There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate save the sovereign legislative power armed with the right of subpena and search * * * Witnesses have declined to answer questions from time to time. The chief reason advanced has been that the testimony related to purely private affairs. In each instance with which I am familiar, the House and Senate have steadfastly adhered to their right to compel reply, and the witness has either answered or been imprisoned * * *

"Public investigating committees, formed from the people themselves or from their public representatives * * * have always been opposed by groups that seek or have special privileges. The spokesmen of these greedy groups never rest in their opposition to exposure and publicity. That is because special privilege thrives in secrecy and darkness and is destroyed by the rays of pitiless publicity." (Hugo Black in Harper's, February 1936.)

All Holidays on Monday

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an editorial which appeared in the Des Moines Tribune of July 4, 1957.

The editorial follows:

ALL HOLIDAYS ON MONDAY

Both houses of the Illinois Legislature have approved doing away with almost all midweek holidays. If the Governor approves the measure, most holidays in Illinois will be observed on Monday as part of 3-day weekends.

The holidays affected by the bill are Lincoln's Birthday (February 12), Washington's Birthday (February 22), Decoration Day (May 30), Independence Day (July 4), Columbus Day (October 12), and Veterans' Day (November 11). All will be observed on the nearest Monday, even when they fall on Saturday or Sunday.

The holiday reform had the backing of the Illinois Manufacturers Association and the State federation of labor. Manufacturers favor it to cut down absenteeism when holidays fall in midweek. Labor likes it for the extra time it provides for travel.

Several States, including New Jersey, have adopted similar holiday laws. Iowa should give it serious consideration.

There could be a good deal of confusion with neighboring States on different holiday schedules. In the Tri-Cities area, for example, members of the same family working in different States could find it impossible to spend their holidays together. There could be mixups and inconvenience in travel, arranging gatherings, and in businesses where it's important that customers and suppliers operate on the same schedule of workdays and holidays.

It may be argued that holidays like Decoration Day or Independence Day were intended as time for reflection on the meaning of the days, and they shouldn't be shifted merely to cut absenteeism or to make for longer time off from work. That is a sentiment worth considering. It's important that the significance of national holidays be preserved.

But reverence hasn't been increased by having holidays fall haphazardly in midweek. There's nothing necessarily incompatible between proper holiday spirit and a shift to Monday observance.

A National Cowboy Hall of Fame

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. McGOVERN. Mr. Speaker, for millions of Americans, the cowboy is a symbol of the development of the West. Certainly there was no figure on the American frontier any more colorful than the cowboy. Little wonder that every American boy has at one time or another played cowboy. Likewise, the cowboy is a prominent figure in our radio, television, and movie dramas. It is impossible to think about the frontier without recalling the dramatic role he has played.

The life of the cowboy was not always one of color and drama, however. His life consisted also of long hours of toil, drudgery, and hardship. He was called upon to serve in many ways that made possible the opening and development of the West.

It is entirely fitting that the rich heritage of the American cowboy should be preserved. That is why I add my support to the movement to establish a National Cowboy Hall of Fame and Museum.

Some time ago individuals from 17 Western States, particularly interested in preserving the literary and cultural heritage of the cowboy, joined together to launch at Oklahoma City, Okla., just such a hall of fame and museum. Construction of this project is underway. I am happy to say that South Dakota, which figured prominently in the cowboy era, has furnished two trustees who are giving of their excellent abilities to make this project a great national shrine to the cowboy. Mr. Bert Hall, of Kennebec, South Dakota, a distinguished author and rancher, and Mr. Ernest B. Ham, of Viewfield, S. Dak., who comes from a long line of western cattlemen, are both active in this splendid cause.

I want to urge the Members of Congress, Mr. Speaker, to give whatever support is possible to the successful completion of this worthwhile venture. I think it deserves our attention and our encouragement.

Real Issue in Civil Rights Fight

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following strong and forceful article by Mr. David Lawrence, from the Washington Evening Star of July 8, 1957, against the so-called civil rights bill:

REAL ISSUE IN CIVIL-RIGHTS FIGHT—THREATENED USE OF FORCE TO OBTAIN CONFORMITY ON PROBLEM IS DECRIED

(By David Lawrence)

What is the real point at issue in the battle over civil rights now being waged in the Senate? It is the possible enactment of a law threatening the use of military force in order to obtain a conformity of viewpoint on social problems. It is the substitution of a program of compulsion and coercion for faith in the voluntary processes of reason.

It involves not solely a means of assuring voting rights—for many Negroes do vote in the South and several have been elected to city councils there—but a question of reaching into the whole social order in the South with laws authorizing the use of military power to secure obedience to the Supreme Court's decision on school integration. Yet the Court itself admitted in the same decision that it was influenced primarily by sociological doctrines rather than constitutional precedents.

For the school question and the voting problem are interwoven in the civil-rights controversy and, curiously enough, the remedy proposed would take away the civil right of a citizen to a jury trial, the principle of which is imbedded in the Constitution.

Just because there have been a few instances of racial prejudice in some jury trials in the South, it now is argued by various Members of Congress and executive officials in their speeches that none of the tens of millions of people in the South can be trusted to give an impartial trial by jury.

This is a blanket indictment more severe than ever has been leveled in America against a substantial number of fellow citizens by the representatives of another segment of the Nation.

For the proposal implies that because the processes of reason are beset with difficulties there must be resort to the theory that "the end justifies the means."

This same thing happened once before in perhaps the most shameful chapter in American history when, after the War Between the States had ended and a general amnesty had been proclaimed, military units from the North were sent into the legislative

chambers of the Southern States. At the point of a bayonet, ratification of the 14th amendment to the Constitution was compelled in 10 States after each had rejected it. Southern Members of Congress, thereupon, were arbitrarily disqualified from voting in either the House or the Senate, notwithstanding the fact that previously the southern Members and their legislatures had in due form approved the 13th amendment abolishing slavery, and this action had been accepted as legal ratification. No historian of standing in either the North or the South disputes these facts.

For 90 years there has been a virtual truce in the northern and southern conflict as to the scope of the 14th amendment, and the racial problems it presumably covered. Meanwhile, there has been nevertheless a gradual evolution with tremendous progress toward a better understanding between the races. The doctrine of "separate but equal" facilities in public schools which was upheld as the "supreme law of the land" until 1954 was a kind of modus vivendi—a compromise between apparently irreconcilable viewpoints yet one that actually encouraged more and more flexibility through the years.

Now the truce has been broken and, instead of trying to adjust conflicting viewpoints by letting each State or each community within a State decide for itself how it shall move toward the solution of its own social problems—a basic American concept of self-government—the confusing court decisions and the threat of coercive civil rights legislation are retarding progress. Impatiently the doors are opened to bitter resentments which will grow in intensity because compulsion is the wrong way to deal with social problems in a democracy. Inevitably also there will be revived the whole controversy over the unmoral and illegal way by which the 14th amendment itself was forced into the Constitution in the first place.

"I speak in a spirit of great sadness," said Senator RUSSELL, Democrat, of Georgia, the other day in the Senate. "If Congress is driven to pass this bill in its present form, it will cause unspeakable confusion, bitterness, and bloodshed in a great section of our common country. If it is proposed to move into the South in this fashion, the concentration camps may as well be prepared now because there will not be enough jails to hold the people of the South who will oppose the use of raw Federal power forcibly to commingle white and Negro children in the same schools and places of public entertainment."

Thus after nearly a century of debate, America is again hearing speeches in Congress about the use of military forces to back up social viewpoints. This comes, ironically enough, at a time when spokesmen for the United States in the world at large are appealing constantly for the renunciation of the use of force as a means of dealing with human friction.

Repealing a Misnamed Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PORTER. Mr. Speaker, I have today filed a bill to repeal the Sustained Yield Act of 1944, but I should like to point out that this is not only a misnomer but the act itself suffers considerable abuse and appears to favor a few major timber companies.

The Subcommittee of Public Works and Resources, in cooperation with a subcommittee of the Senate Interior and Insular Affairs Committee, held extensive field hearings in the fall of 1955 on Federal timber sales policies. These hearings revealed that there was considerable difference of opinion among the people in the lumber industry and in the Government agencies as to the effectiveness of a 1944 act of Congress which allowed the Secretaries of Agriculture and Interior to award timber to particular companies without the use of competitive bidding or with limitations on who could compete for the timber.

The committee found that in Oregon the Bureau of Land Management had created marketing areas under another act rather than through the use of this 1944 act. Communities were petitioning that these marketing restrictions either be eliminated or that they be changed so that certain areas that could not now bid for O & C timber would be permitted to do so. The committee also found that, in this same area where there is twice as much National Forest timber as there is O & C timber, the Forest Service had not set up any restrictions on who could bid for their timber.

Sustained yield, as such, is not only excellent planning but necessary. For 300 years, the people of America have gained an abundance of wood products, game, sports, and enjoyment from the vast forests growing on this continent. Today, many of these forests still remain, carrying on their role as man's most versatile natural resource. It is important that they continue to serve the needs of present and future generations.

The principles of sustained yield forest management are well imbedded in the basic statutes which govern the operation of the various Federal forests.

Repeal of the act of March 29, 1944, will in no way jeopardize, influence, or affect the management of the National Forests or any other of the forest lands operated by the Government for sustained yield forestry purposes. The repeal of this act will remove the discretionary authority to grant Federal timber to individual companies or to companies in certain selected areas.

How They Worked To Live

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. SAYLOR. Mr. Speaker, unless an individual reaches the very top of the ladder in his chosen profession, there is little chance of his being the subject of a success story. An exception is Frank Madarsz, a resident of West Leechburg, Pa., and an employee of the Allegheny-Ludlum Steel Corp. A brief record of this man's accomplishments, which he realized despite what might have been considered unsurmountable obstacles, appears in Steelways for August 1957. I feel that it merits publication in the CONGRESSIONAL RECORD as a further tribute to a deserving American and as an incentive to young men who are willing to accept hard work as the medium of a successful career.

Now 34 years of age, Frank Medarsz was a lad of 9 when his father died. The youngster willingly gave up many of the pleasures that normally are a part of school days in order to help his mother provide for the family. After serving in the Navy during World War II, he took as his bride a young lady who, like Frank, was willing to make the sacrifices necessary in order that they might ultimately enjoy the economic advantages that would appear unattainable to a less courageous and determined couple.

By collating dreams with blueprints and manúal labor, this steelworker designed and built his own home. At the same time his devotion and application to his job at the mill has enabled him to advance rapidly and prepare for the further promotions that the future is certain to hold for him.

Mr. Speaker, there is a lesson to be learned from the story of Frank Madarsz. And from other industrious Pennsylvanians who are accustomed to hard work and sacrifice. Over the years Congress has been beset with progressively more proposals for Federal aid to almost everything. We are asked to provide for help to the so-called backward States, to construct series of dams that will bring cheap electric power to various areas of the country, and to continue an international program that is deluging scores of nations with American dollars that come from the pockets of the men and women who are devoted to work instead of mendicancy.

I submit that it is time to reverse the trend from Government paternalism in order that our working people may regain a freedom of which they have long been deprived—the freedom to spend a greater part of the money which they earn instead of being forced to contribute so much of it to an extravagant bureaucracy.

Next time a letter comes from a pressure group demanding that the United States Treasury donate the necessary wherewithal for a new school building in Louisiana, Texas, or in some of the other States that would reap the benefits of Pennsylvania's revenue contributions, I suggest that you answer it with the story of how taxpayer Frank Medarsz built his own home and is going ahead with the job of building a greater America through the use of labor, ingenuity, fortitude, and other qualities which God did not intend to be available exclusively to the people of Pennsylvania.

I include the article from Steelways, "How They Worked To Live," in the Appendix of the CONGRESSIONAL RECORD:

HOW THEY WORKED TO LIVE

(By Merrick Jackson, executive editor)

If Stefina Adamchuk had not chosen to walk through the mill on her way from office

to gate, she might never have met Frank Madarasz.

Had she decided to skirt the buildings, as some of the other secretaries did, she and Frank might not now be living in a new home they have built above the Kiskiminetas River Valley, 32 miles northeast of Pittsburgh.

From the skein of such coincidences are the webs of life often woven.

Frank Madarasz (the accent is on the first syllable and the "z" is silent) had returned to the steel mill in 1946 after combat duty in the Navy, principally aboard an LST off North Africa and then Sicily and Italy.

Back in civilian life, he had been assigned to the job of flattener on a cold rolling mill that had been installed just before the war at a cost of $2¼ million.

From his vantage point at the lower end of the machine where he put the coil of steel in position to be rolled, he could see Stefina—her friends called her Steffie—making her way down the white-lined aisle at the end of the day.

At first when he tried to date her, Steffie would have no part of him, murmuring something about "those Navy wolves." But Frank persisted and at the company's next picnic, where the two could talk more freely, he persuaded her to go out with him. They were married 4 years later, in 1950, and have a chubby 16-month-old named Marcia.

It was almost inevitable that Frank Madarasz would become a third generation steelworker. His grandfather and father, both born in the old country of Hungary, had made steel there at the bend of the Kiskiminetas.

As a youngster, Frank would accompany his mother along the railroad tracks bordering the plant area and wait in front of a low fence near the hot rolling mill. Soon Frank's grandfather, the second man hired when the plant opened in 1898, would emerge for the "lunch bucket" they had brought him.

As part of the skein of coincidence, Frank is now working on the very site of his grandfather's work location so many years ago.

Frank's father, who had followed in granddad's footsteps leading into this mill, died in 1932, leaving three children. Frank, the oldest, was then 9.

His mother went out to work, getting a day's cleaning to do here and there, taking in washing, and picking up whatever she could, so that her two boys and their sister could stay in school. Frank found no time for athletics. He had to fill the hours after school with paying jobs. One of these was cutting the grass around the mill superintendent's home.

"Frank," the steelman had once said, "if you're looking for a job after you get out of high school, come down and see me."

Two weeks after his graduation, in 1941, Frank did just that. He might have tried another steel plant about 6 miles from his mother's home, a nearby distillery, or an aluminum mill. All were competing for the labor market in the valley. But for him the road led to the company his forebears had found a good place in which to work.

He started off as a laborer.

"I pushed a broom, did a little painting, ran some errands," he recalled, smilingly. "In fact, I did just about everything an unskilled kid gets to do when he first goes to work. There's no better way of finding out what's doing.

"I remember my pay most of all, because that money helped keep the home together. It was $6.28 a day."

Frank's fortunes took on rosier aspects the year of his return from the war, in 1946. Back in the mill he found the company embarking upon a record expansion and modernization program.

Vast sums of money were being invested in the plant. Modernized equipment supplanted old hand methods. New processes replaced brawn with fingertip controls. Capacity and production increased. Wages climbed.

Frank went from 97 cents an hour in 1946 to $1.29 the following year. By 1950, as third helper on the rolling mill, he had climbed to $1.56 an hour, an increase of 61 percent in 4 years.

By then Steffie and Frank felt they could afford to get married. Their first home was an upstairs apartment in town, where they saved every penny they could. Theirs was an austere economy, for Frank was still helping his mother and aiding his sister to win the college education he had been denied.

While the two were sacrificing—"there wasn't much left over for parties, dances, and clothes," Steffie admitted—they never stopped planning for a home of their own. For 3 years they clipped the home design every Sunday from the Pittsburgh Press, studied it carefully and added it to their collection.

Finally in 1953, when Frank was making $2.13 an hour at the mill and had some cash in the bank, the young people were ready to launch the largest do-it-yourself project they had ever undertaken. They selected a house design from the newspaper clippings they had saved and sent in $5 for two sets of plans and a small model. They secured a lot 150 by 170 feet looking across the valley to the lavender-crested hills of western Pennsylvania beyond. Frank found a man who would dig a cellar for him in his spare time, another who would lay bricks for his ranch-type house, a carpenter who would help with the heavier woodworking and friends who would join him in laying the floor and putting up the roof.

"I owe a lot, too," he added, "to some fellows in our engineering department. They taught me to read prints."

For a number of years Frank had been helping indoctrinate some of the youngsters around him in mill practices. He had taught them to mind their safety P's and Q's, given them a few practical tips and talked over some of their initiation problems. They returned the compliment in full measure by helping him build his house.

"This year I'll put in a walk up to the front door," he explained, as he leaned against his 1951 Plymouth and proudly surveyed the property. "And Steffie wants a patio behind her white fence with borders of double petunias."

But the interior, five spacious rooms and bath designed for comfort and convenience, is finished. The Madaraszs chose only the best fixtures, appliances, and materials they could find, sending away for aids to better living from advertisers in such well-known periodicals as Better Homes and Gardens, House and Garden, and the American Home. Studying the wealth of information, they selected their favorites and installed them over the 2-year span of building.

Contractors have estimated that a duplicate of this hand-tailored home at today's prices would cost $20,000, nearly twice the amount the Madaraszs actually spent on it.

The home has taken most of Frank's spare time. Even his hobbies have been cut to one: taking motion-picture film of Marcia and the family. But there was a time, and probably will be again, when he was especially prominent in the local Boosters Club, "a ram-rodding organization," he explained, "to get people interested in improving community conditions for our teenagers."

Today Frank is what steelworkers call a "desk man" on the 4-high mill. The designation sounds like a white collar job. It isn't at all. His mill, one might say, was ahead of its time when it went to work, as Frank first did, 16 years ago. It could take care of steels that hadn't yet appeared. Since installation it has rolled silicon steel, wide (38-inch) stainless steel, and high-finish, wide stainless steel. Now more than 30 percent of its effort is directed toward titanium for jet aircraft.

Frank's value as an operator has increased in direct proportion to the mounting value of the product he rolls, and he is now drawing down an hourly wage of $2.45, exclusive of incentive earnings and other cash benefits. One of these days this 34-year-old 6-footer, the second youngest in his job classification, feels he can qualify as a roller, top dog among the hourly rated men in that mill area.

Now that the house is finished, what next, he was asked.

"We're saving for a new car," Frank replied. "But we want more than half its cost in the bank before we buy it."

The Madaraszs have also established a savings account in their daughter's name to assure her of an education.

Frank never grows tired of telling how he first met Steffie, of the early rebuffs and the ensuing romance. He will even single out a picture of the mill area hanging on the office wall and chart the mill path she chose, as he did for Steelways.

Getting to know the man and glimpsing his accomplishments, one never grows tired of hearing him tell it, either.

More Yankee Trade—Less Foreign Aid

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert an address by Mr. Eugene W. Castle before the Export Managers Club of New York, Inc.

The address follows:

MORE YANKEE TRADE—LESS FOREIGN AID

(Address by Eugene W. Castle)

Early in the century when the then President Theodore Roosevelt urged that our Nation speak softly but carry a big stick, the United States established a policy which came to be known as dollar diplomacy. It meant the use of American diplomatic power to promote our financial interests abroad so that Americans could invest in overseas enterprises with a minimum of risk.

However, dollar diplomacy did not set well with the liberals of that day. They decried the use of diplomatic and military pressure to insure investments, and dollar diplomacy was roundly denounced as a wicked form of meddling in the affairs of foreign countries.

Today, we are confronted—and often confounded—with a new kind of dollar diplomacy. It, too, involves the use of American money abroad, but today we are dealing in billions instead of millions. And, since the billions are public funds provided solely by the American taxpayers, there is an amazing and ever-growing nonchalance in the way our bureaucrats in Washington ladle out the money overseas. When mistakes, waste, and unwarranted extravagance result from our giveaways, no apologies for the errors in public spending are ever made. Instead, the demands for foreign spending are increased, as year after year, particularly at appropriation time, new crisis and dangers are brought forth until the aid budgets are rammed through the Congress. As soon as this is accomplished the crisis and urgency to spend promptly disappears until the next year rolls around.

Of course, profit is no longer our motive. Instead the requesters yell to Congress and to high heaven that if they can't obtain all of the money they demand—every billion of it, the world will come to an end. But the world does not come to an end.

The Marshall plan was originally offered to a skeptical Congress as a means of rehabilitating the war-ravaged countries of Europe. We were told that $17 billion and 4 years would do the job.

But it did not stop there. Since the world began, the Marshall plan has had no parallel in the resultant spending of the resources of one nation for foreign aid.

We sent our dollars marching 60 billion strong over the far reaches of the earth in quest of mutual security. The prize, like a will o' the wisp, eluded us. The world is still in turmoil and danger. There is no security, mutual or otherwise.

Before I express my views further, let me make it perfectly clear that even if Congress did not appropriate one single dollar of new money for foreign aid, there will be spent not less than $3.3 billion during the fiscal year that begins next July 1. Additionally, there are $7½ billion already appropriated and in the Washington pipeline to continue foreign aid for more than 2 years.

What I am going to discuss briefly is the matter of getting a better and more honest deal for the American taxpayer and, at the same time, continue to support those countries whose friendship we can rely on—countries who are determined to help themselves and are therefore worthy of our support.

In the light of recent events, surely the time has arrived for all Americans, both in and out of government, to reappraise critically our foreign-aid spending as a matter of our own self-interest.

From the year 1792 to 1950 our Government collected $406 billion in taxes.

From 1950 through 1956, our Government collected $433 billion in taxes.

For $406 billion in 158 years, we fought and won 6 wars.

For $433 billion in 7 years we fought 1 war in Korea without victory; we fought and are still fighting a cold war that we seem to be losing even in Formosa and, more recently, with our allies in Great Britain.

We cannot continue to support those who, if the chips were down, would not support us. We cannot buy allies and friends, but we could spend ourselves into bankruptcy and war.

President Eisenhower once realized this when he publicly stated: "The United States cannot be an Atlas; it cannot, by its financial sacrifices, carry all other nations of the world on its shoulders and we should stop giveaway programs."

Our foreign-aid careerists are gripped in the spirit of a crusade—emotional, intolerant of criticism or investigation. Those who dare question their activities are looked upon as isolationists, shortsighted penny-pinchers who are lacking in vision.

Neither individuals or nations are made friendly or even grateful by handouts. Those who are given money soon think it is owed to them. The assumption that the more money we give away the more good we accomplish is wrong—very wrong. For the emotions which really influence people—pride, custom, race, religion, and national enthusiasms are completely ignored. It is also wrong because it leads to frantic efforts on the part of our foreign aid representatives to stir up projects in other countries which have not been requested and, in many cases, not wanted.

Let us consider a few of these projects:

It was recently announced that the United States has given $1 million to Pakistan to bolster that country's fishing industry.

In Formosa, we have set up a pension program for overaged Chinese soldiers.

In the Philippines we have provided costly electronic microscopes and technical equipment for a section of that country where no power is available.

In Afghanistan we have provided expensive airfields in a country where most travel is still done on the backs of camels.

In Thailand we started to build a highway for $6.5 million that has already cost us $18 million for half of the originally planned stretch and in a country which has fewer than 9,000 automobiles.

In India we provided $1,500,000 to build hundreds of prefabricated grain silos. The material, still uncrated, rests in warehouses in Calcutta and we are probably paying the storage bill.

In India, too, we have 400 people to administer our giveaway program. They can't spend the money as fast as it is piped to them. They have a backlog of $135 million and the International Cooperation Administration is trying desperately to obtain $80 million or more a year on top of what we are already giving India.

To Tito we are still exporting military jets and treasure despite the fact that the Yugoslav dictator repeatedly reminds us that his relations with Moscow are improving. His Defense Minister is now en route to the Kremlin. Tito is now playing coy about receiving our free airplanes while he again makes goo-goo eyes at the Soviets.

Every year, at appropriation time, the giveaway mania has become a nonpartisan path to the headlines for our legislators in Washington. For instance:

Senator KENNEDY, a Democrat is anxious to give away $100 million to the Government of Communist Poland. This will not help the people of Poland. It will only help to relieve Moscow of some of its satellite overhead that it is so anxious to get rid of. Half of this gift is already on the way. The other half will soon be sent. We should have sent it all direct to Moscow. This would have saved the carrying and transfer charges. Gomulka, the Polish Communist Party chief, has already complained that this $100 million handout is "very small considering our needs" and the Moscow errand boy adds that President Eisenhower's statement last October offering aid to Poland "proved to be a sheer illusion."

Under Secretary of State Dillon, a Republican, has become an eager-beaver sponsor for the new $2 billion handout, without strings, to the underdeveloped nations of the world. Dillon, very properly and politely calls it a loan. I hope you will never have to conduct an export transaction on a similar basis. If you do, the sheriff may be looking for you.

Congressman ROOSEVELT, a Democrat, seriously suggests that we should internationalize our Panama Canal to please Egypt's Nasser who has shown no desire to please us. We built the Panama Canal. We paid for it. We own it. If we should ever internationalize it, Heaven forbid, some Russian commissar could decree that ships flying the Stars and Stripes could not enter the canal. In time of war our fleet would be bottled up. The memories of most of us are short. Too many of us forget that our Armed Forces fought, bled and died by the tens of thousands to win the war in Europe. After victory was accomplished and the enemy lands were reduced to piles of rubble, our politicians and the Military Commander of that day forgot to get a road out of Berlin for Americans. The costly Berlin airlift in half free, half slave Germany resulted. This fatal error is largely responsible for the precarious position we find ourselves in today. This tragic mistake became immediately apparent to Stalin. He detected our weakness and determined that we could be pushed around. The cold war that has cost us tens of billions of dollars resulted. We are still being shoved around and humiliated before friends and foe alike by Stalin's successors.

Senator KNOWLAND, Republican minority leader, recently propelled himself into the headlines when he suggested on a TV program that we barter Norway for Communist-dominated Hungary. The Senator, in all seriousness, offered the idea that we trade the membership of Norway in the North Atlantic Alliance in return for Soviet withdrawal from Hungary. Norway, unlike Hungary, is not a satellite. It is our firm friend and an independent nation, which determines its own destiny. Those of us with long memories will recall that the German war lords invaded Norway first, in their attempt to bottle up all Scandinavia.

These are but a few examples of why perhaps we fail to hold the respect and support of allies or neutrals. Our foreign-aid extravagances will never prove a substitute for firm foreign policies and sound pronouncements.

One month ago, Senator LYNDON JOHNSON, majority leader of the United States Senate and a respected legislator, stated publicly that Congress would not write any blank checks for foreign aid and "will not surrender the right to annual checkup on the program." That's what the Senate majority leader said a month ago.

But only a few days ago the powerful Senate Foreign Relations Committee after reducing the White House multi-billion-dollar aid request by less than 6 percent, endorsed, by an almost overwhelming majority, an aid program for the new fiscal year which Senator JOHNSON now both supports and sponsors.

If the four items contained in this overall aid authorization, which I am about to detail briefly to you, were adopted by the responsible officials of any publicly held United States corporation, these officials would very likely face Federal prosecution:

Here are the items:

1. The budget of the Department of Agriculture includes $750 million of foreign aid for the next 3 years, which certainly should be added to the total foreign-aid bill. This item should not be concealed from the American people as at present.

Moreover, foreign currency received from these food sales spells trouble for us because it means interference in the internal banking affairs of other countries through lending and relending large sums of money within their country. Only 10 percent of the soft currencies received from food aid sales is used for the maintenance of our own overly populated Government establishments within a given country. The balance of 90 percent puts us in the foreign banking business with foreign currency, obviously a threat to the normal conduct of the fiscal affairs of any country.

Furthermore, it dumps a large volume of Government-held food supplies, at less than cost, on foreign countries receiving them, thereby restricting the normal procedures of foreign trade. This has led to an ever-growing number of complaints from United States exporters and others affected.

2. Nearly a billion dollars of defense support largely duplicates economic aid. The sum of $900 million now demanded for defense support is another scheme to attempt to justify the expenditure of this vast sum in countries where we already have military aid programs. This, to a large degree, constitutes a duplication of aid funds, regardless of any reason given for it.

Year after year, the President, the State Department, and the highest officials and lobbyists for the executive departments plead for larger foreign aid appropriations.

Year after year, the principal argument is that we are spending three-quarters of all aid funds for military purposes and only one-quarter for economic aid. However, in the case of this latest plan, the defense support funds are to be reallocated to the International Cooperation Administration, so that it ends up as before in the economic aid

pipeline and not in the percentages that are given to stimulate the superspending.

3. Now it is planned to hide foreign military aid from the Congress by incorporating it in our defense budget where it will forever repose in the spending stream that runs through the catacombs of the Pentagon.

If Congress allows this to happen it means that the so-called military aid funds will be separated from the economic aid funds in the overall budget. Actually, $2 billion will be hidden from congressional supervision, so that it will be almost impossible for our legally constituted legislators to know how much is being spent for military aid and whether or not it is being used exclusively for military hardware and training.

The purpose of this is, of course, to reduce the overall foreign-aid budget in the eyes of the public—to conceal $2 billion annually from both the Congress and from the American people. In the end, it will cost the American taxpayers more billions, because the visible part of the aid budget will go up and the defense budget, already plagued by inflation, will become a military secret and a more costly one. This is a dishonest technique. It should be condemned and rejected.

4. A new $2 billion blank check with no strings. The new blank check proposal calls for an outright authorization of $2 billion to be spent at the rate of $500 million for the first year and $750 million for each of 2 succeeding years. No strings are to be attached to the spending. This vast sum will be given away at the discretion of the Department of State and the International Cooperation Administration, and no geographical spread has been defined. It is important to recognize the inescapable fact that the first year's half-billion dollars will become the incentive, the urge, and the itch to get rid of the additional $1,500,000,000 over the 2 succeeding years. The only problem will be to see that the money is fully spent and never mind how.

It should be recalled that the last Congress flatly refused to give the President a blank check for $100 million per year for 10 years. Now, under a new authorization, the same President boldly demands another blank check for his oppointed, not elected, global spenders to ladle out $2 billion over a 3-year interval. And to toss out these billions where they please, when they please, and as they please. If Congress permits this new foreign-aid folly, the American taxpayers are stuck not only for 3 years and $2 billion but very possibly forever and for many times $2 billion. Secretary of State Dulles, pleading for bigger foreign spending and as little congressional supervision of the spending as is possible, told a committee of Congress that foreign aid must go on for at least 10 years more. This means $50 billion to $60 billion more.

Our aim should be to reduce the annual appropriation for all foreign aid, both economic and military, to $1 billion. This would stop the present waste and extravagance in our global-giving ventures. It would end the bureaucratic superstructure that the American people must now support to keep the giving in high gear. It would stop our policymaking politicians from creating their annual cry of "crisis," which immediately disappears as soon as the appropriation is made. And most important of all, it would stop the threat to our overall economy and the further spread of creeping inflation.

There are many more effective and less costly ways of assisting other countries in their economic development than direct handouts from the Federal Treasury.

We need more Yankee traders and less foreign aiders to stimulate the flow of American capital into needy and underdeveloped nations through the incentive of fast tax writeoffs, such as are now granted to industries engaged in defense production.

Another way would be to expand the capacity of the World Bank to make long-term, low-interest loans to worthy nations upon the security of such collateral as natural resources or industrial potential.

In so doing, the United States would be able to achieve its goal without insulting the beneficiaries of its assistance—and without bankrupting the American people. One thing is certain—we cannot save the world by destroying ourselves.

We are told repeatedly that it is folly if we do not continue and expand our giveaway program. I can assure you it is the height of folly if we do continue such spending.

The present policy of weakening this Nation's economy and defenses by giving ourselves away makes it inevitable that we will be forced again to send our sons to fight and die in a third World War.

To me, one of the most alarming aspects of our foreign-aid program is that so many well-meaning people have been persuaded that this vast array of money we are spending will buy us future security.

The record shows and will continue to show that we have not bought one iota of protection in case of necessity in spite of the great sacrifices we have been called upon to make. Recent news dispatches from Japan, Formosa, and other countries report numerous manifestations of anti-American sentiment. Even Western Europe, according to the United Press, is extending a cool reception to American tourists. This has been shown in country after country that have been the recipients of our bounty.

Not being satisfied with giving aid to our friends and allies, we have given billions to the so-called neutralist nations, together with vast quantities of military supplies. No thought has been given to the stark peril that in some future time these very arms might be hurled against our own sons.

We have already seen Tito, Nehru, Nasser, and others visit and play host to the Communists in wild orgies of friendship and antiwestern demonstration.

Now it is solemnly proposed that we begin a program of aid to the Communist satellite countries of Eastern Europe.

What is the reason for our policy of panic?

Why must our policies be governed by crude Russian propaganda rather than the application of our own reasoning and logic?

One wonders why this country, with its reputation for ingenuity, organization, and production, cannot secure favorable agreements in carrying out its foreign policy and programs of foreign aid.

Perhaps the answer lies in the fact that Congress has abdicated much of its constitutional responsibility over appropriations. When larger amounts than can possibly be spent in a single year are appropriated for economic aid, Congress loses control of the purse strings.

Congress has been handing to the ICA, and its predecessor agencies, billions of dollars of the people's money without any previous determination of how the money is to be spent, and without audit or accurate check to determine whether the money was spent for the purposes intended.

Lack of specific information, general vagueness and absence of coordination is a true index to the nature and character of the foreign-aid program that the Congress is being asked to continue.

With the world's problems so difficult and varied and the solution so hard to find, it is wonderful to be able to hit upon so simple and easy a way out—give away more money. But is it good, or is it harmful?

Foreign aid has become more than a continuous drain upon the American taxpayer. It has become an opiate which blinds us to the appalling fact that we are doing little more than drift in our foreign policy course. It has given us a comfortable and deceptive belief that money is a substitute for strength and firmness in a cold war. Behind our Maginot line of foreign-aid billions, we have hoaxed ourselves with the conviction that we have purchased security.

And these are added reasons why we need more Yankee traders. The ability to trade commands respect, wins friends, and prevents wars. The foreign-aid program is today supplanting the private investor and in a large measure competing with the sound expansion of foreign trade. The dead hand of the Government bureaucrat cannot take the place of American initiative—it can only dry it up.

The sterile hand of state is now interposed between human wants and demands and the private initiative which can supply them.

This is happening more and more in both our domestic and our foreign dealings.

Never before, at a time when the guns are not booming, have the American people been subjected to more brainwashing from Washington than at present. Never before has the will of the Executive been more forcefully imposed upon both the Congress and the American people. Never before have we been confronted with a more bloated Federal budget—$71,800,000,000—the greatest danger to inflation that has ever been forced upon the American people.

These are factors that compel reappraisal. Several months ago our Congressmen got the surprise of their lives. The people rebelled against the excesses of the superspenders in Washington and their protests descended upon the legislators in an avalanche, the like of which they had never seen before. For a time, Congress took notice and took out the economy knife. Then the people stopped protesting and the spending went into high gear again, spurred by the powerful propaganda from the President, his assistants, and lobbyists. Unless the people reassert their concern and maintain their protests we may soon be confronted with an inflation that not only will curl our hair but may result in the tragedy of our losing it, as well as our shirts. If that happens we will be unable to aid ourselves or anyone else in the world. Then Moscow would win without firing a shot and our own politicians would blame us for their fiscal madness.

Americans both at home and abroad can surmount any problem when, as a Nation, we put our minds and hearts to the problem at hand.

One problem now before us is to get politicians and their appointed global givers out of foreign aid and substitute the safer, surer, and sounder methods of our own Yankee traders.

Showdown With High Court

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. GATHINGS. Mr. Speaker, George Todt's article of June 29, Showdown With High Court, is highly desirable reading. I commend it to the membership wholeheartedly.

The article follows:

SHOWDOWN WITH HIGH COURT

(By George Todt)

"Unlimited power corrupts the possessor; and this I know, that, where law ends, there tyranny begins" (Lord Chatham).

Is the Republic of the United States doomed to be ruled by nine old men—none

of them elected by the sovereign people—in the Supreme Court? Or will the executive and legislative branches of our Government exercise their powers under the checks and balances system the Founding Fathers devised so that none of the three branches could usurp rights belonging to the other two? In short, will the President and Congress counterattack?

This is the question of the hour. I have heard it asked by citizens in all walks of life—and in both major political parties. Joe Doakes is clearly disappointed—even alarmed—at the soft-on-communism trend of the High Court in recent years. And we might even go so far as to say that he feels outraged at the well-nigh incredible judicial events of the past few weeks which have caused no rejoicing in the land except in the ranks of Communists and superliberals.

What will happen next? That is anybody's guess, of course. Mine is that Congress will take the lead in placing curbs on the Supreme Court in the very near future, aided and abetted by the President—whom I suspect is also fed up. We might note at this point that there has been no refutation by the White House of a female INS reporter's recent statement attributed to Ike that the Chief Justice was "too liberal" to suit him. And it is also something less than an open secret that Mr. Eisenhower was infuriated at the fantastic ruling which could cause FBI files to be placed in jeopardy in the future.

Now if the President and the Congress combine to limit the undue social "legislative" powers which the Supreme Court justices have assumed for themselves since 1954—commencing with the integration decision of *Brown* v. *Education*—I predict the job can be accomplished in short order. Between the executive power over patronage and the legislative power over the purse-strings, the judiciary simply cannot count enough horses to stay their thrust.

Should the executive branch hold back at this time, for whatever reason, the chances are still strong that Congress can accomplish its task alone. This remains to be seen, however. But the legislators on Capitol Hill seem definitely in the mood as of now. Will they win out in the end? Shall our Government be accomplished by elected—or appointed—officials? What will the American people have to say about all this?

In any showdown of power between the three branches, most American citizens are bound to side with their elected officials—the President and the Congress—who are responsive to the people's will at election time and at the polling places. Not so the members of the Supreme Court, all political appointees of the present and past incumbents of the White House.

The Justices have lifetime tenure during good behavior. But none of them are elected by the people. Do they have any right to legislate on social questions?

Most Americans do not think so today. I venture to suggest that the august body of high court jurists may find that they have bitten off more than they can comfortably chew in the near future when-and-if a real showdown comes. They will not find the public in their corner.

Lets go quickly to the heart of the problem here. The real trouble with the Supreme Court at this period in our history is this: the nine Justices do not themselves represent a true cross section of the American political or philosophical makeup in the Court's own ideological composition. The High Court is now predominantly superliberal. The public is not. It is as simple as that. But what can be done about it? Will anything constructive come out of the present session of Congress? Who knows the answer to that one?

Costs Absorb Mail Sorter's Pay

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. SHELLEY. Mr. Speaker, I have spoken out from time to time on the need for early action by Congress to provide pay raises for postal workers and other employees of the Government. Now that the Committee on Post Office and Civil Service has at last reported H. R. 2474, the post office pay bill, to the House I believe it is timely to again call attention to the distressing situation in which so many of our public servants are existing. I certainly hope that the committee will not delay as long in requesting a rule to bring H. R. 2474 to the floor as was done in reporting the bill after its approval in committee. To illustrate why quick action is needed from the employees point of view I ask that an article which appeared in the San Francisco Call-Bulletin recently be printed in the RECORD at this point. Nothing that I can say will add to the picture this article paints. We have only to multiply the individual case cited in the story by thousands to realize how many people are being hurt by every minute of delay in action on Government employee pay legislation.

The article follows:

[From the San Francisco Call-Bulletin of May 25, 1957]

COSTS ABSORB MAIL SORTER'S PAY—FROM HAND TO MOUTH ON $68

(By Arthur Bloomfield)

As Edward Ungaretti got home from his job as a post-office clerk he lit up an ancient gas heater in the corner of his small living room at 250 Collins Street.

Then he put an undecorative pan of water on top of the heater so no fumes would escape.

Sitting nearby were his wife Angelina and their 11-month-old child, Cheryl Ann.

"This is all the heat there is in the flat except for the fireplace," said Ungaretti, "and it's in another room, and it isn't very big.

"There are five rooms to heat, altogether."

Ungaretti, who sorts mail among other chores, has been with the post office for 8 years.

TAKE-HOME PAY

His take-home pay, however, has been somewhat like a bird with an injured wing which can't get much altitude.

It's $4,285 a year, so weekly take-home pay adds up, or subtracts down to the grand total of $68.

Seventeen years from now, if wages remain unchanged, Ungaretti's pay would be an annual $4,710, with a weekly take-home of about $74.

"I like my job and the people I work with," smiled the 33-year-old, but graying, clerk.

"But we live from payday to payday. If we missed a check, it would kill us. We'd have to borrow. And I can't even get a $200 loan from the bank because I have no collateral."

OTHER WORRIES

Ungaretti had other worries than how to keep his family warm.

He was wondering just how he'd have spare time to study for the test the Post Office gives every 9 months on mail sorting.

"I can get dismissed if I don't pass the test, said Ungaretti, explaining that postal districts change from time to time as new streets are added, and new pigeonholing techniques must be mastered—on off-duty time.

"You see, I have to take extra jobs to help pay the back bills, so there's little spare time. I get up at 4:30 a. m. to get to my 3-hour job with a private mail pickup firm.

WORK NIGHTS

"After that's through at 8:30, I go to my regular job at Rincon Annex at 9.

"Sometimes I work nights, too, for my wife's uncle—doing janitorial work.

"Naturally, when my vacation time comes, I take a job—and that's no vacation."

Ungaretti said he's considered leaving the Post Office for his original trade, as a sheet-metal worker, but as he puts it:

"I've got too much time in with the Post Office, and if I went back to sheet metal, I'd be the first to be laid off in a slump."

A visitor to the Ungaretti home was Emmet C. Andrews, a vice president of the National Federation of Post Office Clerks, who said that a pay raise for postal employees would actually save the Nation approximately $2,500 million annually.

The national annual turnover in post office workers could be reduced from 500,000 to 200,000, he said, quoting an official estimate of the cost of training a postal employee at $3,000.

As Andrews was speaking, the heat went out, and Ungaretti had to get up from his chair and light the stove again.

The Need for Protecting FBI Files

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. COLLIER. Mr. Speaker, I take this occasion to discuss H. R. 8341, a measure of utmost importance to the preservation of our Government.

This measure deals with the FBI files, which were in effect declared sitting ducks in an open hunting season by the Supreme Court of the United States in the now-famous Jencks case. The Court in that ruling has created and compounded confusion, not only among the law enforcement officers of the executive branch, but among the jurists of the lower courts as well. The Court, I submit, was not clear in its definitions or terminology and left much of what it intended to convey in doubt. But one fact remains inescapable through this ruling. The Court, in effect, told every criminal and his lawyer that they have the right to examine the files of the Federal Bureau of Investigation if they think that through such examination they can find documentary support for whatever nefarious position they choose to take. This, of course, to be accomplished before a presiding judge has a

chance to examine the files to determine if the material is or is not pertinent to the case.

The Judiciary Committees of both the House and the other body have considered this bill and one like it with favor. In an appearance before one committee, the Attorney General, Mr. Herbert Brownell, Jr., pointed out some dangers inherent in the Court's decision. He noted that already persons accused in narcotics cases had been freed in Pennsylvania and Georgia and that convictions already won in the courts might be reversed in a kidnaping case in Rhode Island. In numerous other cases the criminals or their attorneys are now preparing to base appeals on this ruling.

I recognize, as every other Member of this House does, the need to protect the innocent and to provide the accused with every possible means of preparing his defense. This is the basic function of our legal system and one of the main differences between our own and totalitarian justice where the only defense is to throw yourself on the mercy of the court.

At the same time I recognize, as does every Member of this House, that one of the prime functions of Government is to protect itself and the citizens who depend on it for protection—protection not only against aggression from abroad and subversion from within, but also from those elements within our own society who prey on their fellow humans and who stalk the jungles of our underworld. To accomplish this protection, Government has at its disposal the Armed Forces to guard against aggression from without, and the FBI to guard society against those who would corrupt or communize it. The FBI, under the direction of that eminent public servant, J. Edgar Hoover, has done a remarkable job in this important field. Now the Court would have us destroy the efficiency of this organization and its ability to function not only as the discoverer of wrong-doing, but the protector of the innocent.

What are these mysterious FBI files? They are simply the accumulation of a generation of evidence ferreted out by the agents themselves or brought to the attention of the FBI by private citizens. Much of the material is in the so-called raw files, that is, files which up to now have been open only to expert and experienced men to evaluate the evidence and to determine if it warranted further inquiry.

Much of the material in the files is unsubstantiated stuff which is better left locked up—material containing half true or completely false allegations. It would never, under the old procedure, have gone further. But under the new Court edict, this mass of material is open to the praying eyes of lawyers and outright criminals—men who could and would use it to their own advantage and without regard for those whom it might needlessly hurt.

Equally important, the files contain names of men, who through loyal service have uncovered the criminal plots against the Government, some of them paid counterintelligence agents. To open these files would be to expose these names and thus make them useless or, indeed, in some cases to make their very existence a hazard.

Also, the files contain clues as to which direction investigations may take, and to open them would be to announce to the world—and particularly to the shrewd and evil conspirators, where they should more carefully cover their tracks, where to go underground and what incriminating evidence to destroy.

In sum, the FBI files, if open to the wrong man or men, could do this Nation untold damage.

The purpose of H. R. 8341 and its companion bill in the other body, is to protect these files, while at the same time protecting the right of defendants to fair trial. It accomplishes this purpose by directing that such files or parts of files pertinent to the defense shall be open to the defendant—but only after examination by the trial judge. We are in this measure placing the responsibility on the shoulders of experienced and trained jurists and not at the discretion of possible Communists—or men who make their living at the beck and call of the criminal element.

The bill, I feel, accomplished the purpose of protecting the life of our Nation while at the same time guaranteeing every right to those accused of crimes, whatever those crimes may be.

America's 181st Independence Day

EXTENSION OF REMARKS
OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. GATHINGS. Mr. Speaker, on July 4 on the editorial pages of the Valley Times, of California, the thoughtful opinion of Mr. George Todt appeared, giving his reflections and comments on the 181st anniversary of American independence.

Mr. Todt is a judicious, learned, and prudent writer. His article follows:

AMERICA'S 181ST INDEPENDENCE DAY

(By George Todt)

"The penalty good men pay for indifference to public affairs, is to be ruled by evil men."—Plato.

America's Declaration of Independence from European tyranny was adopted in Congress on July 2, but signed on July 4, 1776. That was 181 years ago today, perhaps 6 or 7 generations of men and women extending back into our past. In this time we have grown from a weak Nation of 3 million of hardy souls to the foremost world power of our time with a population 57 times the original number.

During this period, 50 million of European peoples have come here to America to join with us in citizenship—the greatest voluntary mass migration of humanity in all of history.

Why did they come? The answer, when reduced to the smallest common denominator, is bound up in the word "incentive." There was more here of precious liberty, freedom, and human dignity than the civilized world had ever before known—and it was the magnet which drew these hordes irresistibly to our shores from the far corners of the earth. But most of them came from Europe. They were tired of Europeanism—which meant collectivism, socialism, tyranny, and eventual dictatorship in most cases—and were eager to try that which we called Americanism instead.

Now just what is Americanism, anyway? Many of us will have different interpretations of this meaningful term, but let me quote some of the most beautiful words which play upon this item to give it strength and dignity—and universal appeal to the hearts of men of good will everywhere. It is a part of the Declaration of Independence, itself. Read this excerpt and ask yourself how closely it fits your own definition of Americanism in 1957:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among those are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evidence a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security."

That very first sentence tells why America is the most unique political entity on the face of the globe: We are the only Nation, even today, which has declared that its citizens are spiritual children of God—a God who has given us certain unalienable rights, not the centralized power of the state—and that we, ourselves, have set up our own form of government which derives its just power "from the consent of the governed." Therefore, we, as free American citizens, are not expected to be subservient to government; but we have a right to expect our Government to secure "life, liberty, and the pursuit of happiness" to all of us who are members in good standing of the Republic of the United States. We rule ourselves.

In going over the list of 27 stated grievances of the signers of the Declaration of Independence against the British tyrant, King George III, I found at least two of them which would not be inapplicable today with reference to the "civil-rights legislation" holocaust which is now besstirring the Congress. Allow me to quote:

"4. He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

"18. For depriving us, in many cases, of the benefits of trial by jury."

There are two dangerous provisions of the so-called "civil-rights bill" which would have the same effect upon accused individuals or witnesses called arbitrarily before the courts, if the controversial legislation is passed by Congress.

To most Americans, two wrongs never add up to one right. If these things were wrong in the time of King George III, many of us are bound to wonder what has occured to make them right all of a sudden in our generation? Do such fundamentals ever

really change? Can we safely afford to be indifferent to any possible loss—no matter how small—of our traditional right of trial by jury? Isn't it worth our thinking about on this, our Independence Day?

Resolutions Passed by the South Dakota American Legion

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. McGOVERN. Mr. Speaker, under permission to extend my remarks I wish to insert in the CONGRESSIONAL RECORD a copy of several resolutions passed by the South Dakota American Legion during its recent convention. The Legion continues to champion the rights of veterans and the cause of a free democratic society. These are thoughtful resolutions dealing with Federal legislative proposals. I submit them for the consideration of the Members of Congress.

The resolutions follow:

Whereas Public Law 675, 83d Congress, as amended by Public Law 651, 84th Congress, provides for the erection of memorial markers in national cemeteries to honor the members of the Armed Forces missing in action or who died or were killed while so serving, whose remains have not been identified, and have been buried at sea or have been determined to be nonrecoverable; and

Whereas said law provides for the erection of said memorial markets in the national cemeteries to be done at private expense and at no cost to the Government; and

Whereas our Federal law provides that the cost of Government grave markers, including transportation and erection in the cemeteries, which honor deceased veterans who do not fall in the above classifications, are borne by the Federal Government: Be it

Resolved by the South Dakota Department of the American Legion in regular convention assembled this 16th, 17th, and 18th days of June 1957, That the Congress of the United States be asked to amend the aforesaid law so that all expenses of the erection of Government grave markers, including transportation costs, to honor the members of the Armed Forces missing in action, or who died or were killed while serving and whose remains have not been identified, or who have been buried at sea, or who have been determined to be nonrecoverable, be borne by the Federal Government in the same manner as afforded regularly buried deceased veterans.

Whereas it has been the American Legion's long-established policy to promote a maximum-employment program for all veterans; and

Whereas the Servicemen's Readjustment Act of 1944, as amended, provides for the establishment of facilities for adequate counseling and placement service for all veterans, and the Bureau of Employment Security, the Veterans' Employment Service and the State Employment agencies, have been mandated to carry out these policies as provided in the GI bill, as amended: Now, therefore, be it

Resolved, That the American Legion, Department of South Dakota, in State convention assembled in Rapid City, S. Dak., June 17–19, 1957, does hereby give full support to those Federal and State agencies in their efforts to better serve the employment needs of veterans; and be it further

Resolved, That the national organization of the American Legion, its national legislative commission, and the national economic commission be urged to use their utmost efforts to the end that sufficient funds continue to be provided by congressional appropriation to insure adequate service to the veterans of the Nation in the field of gainful employment.

Whereas the United States Army Troop Transport *Dorchester* was sunk by an enemy torpedo off the coast of Greenland on the early morning of February 3, 1943, while wallowing through icy seas; and

Whereas four Army chaplains of different religious faiths, namely, 1st Lt. George L. FOX, of Gilman, Vt. (Methodist); 1st Lt. Alexander D. Goode, of York, Pa. (Jewish); 1st Lt. Clark V. Poling, of Schenectady, N. Y. (Reformed Church in America); and 1st Lt. John P. Washington, of Newark, N. J. (Roman Catholic), lost their own lives in the sinking of the *Dorchester*, when they took off their own life preservers and put them on four young GI's and told them to jump; and

Whereas these four heroic chaplains helped to save over 200 persons before the *Dorchester* went down in a rumble of steam, 25 minutes after it was hit; and

Whereas the last anyone saw of them, the four chaplains were standing on the slanting deck, their arms linked in prayer; and

Whereas the conduct of these four brave men will forever be an inspiring example of courageous and unselfish devotion to God and country; and

Whereas the American Legion has dedicated its Back to God Movement as a living memorial to these four chaplains who gave their lives that others might live: Now, therefore, be it

Resolved by the American Legion, Department of South Dakota, That it does hereby urge the Congress of the United States to enact the necessary legislation for the purpose of authorizing the award, posthumously, to the four Army chaplains, of the Congressional Medal of Honor, as a suitable observance in commemoration of the deaths and heroic actions of these dedicated and courageous officers, who acted above and beyond the call of duty and in accordance with the highest traditions of consecrated men of God; be it further

Resolved, That the national convention mandate the national commander and the national legislative director to seek the prompt intrdouction and passage of congressional legislation to this end.

Whereas the international situation has not been improved by actual agreements; and

Whereas experience in the past leaves some doubt whether workable agreements can be reached; and

Whereas the American Legion has always supported the position of an adequate national defense; and

Whereas the requirements of the Armed Forces Reserve Act of 1955 have not been met: Now, therefore, be it

Resolved by the 39th Annual Convention, Department of South Dakota, duly convened this 16th through 19th day of June, 1957, That the South Dakota Department, American Legion, go on record as urging implementation of the Armed Forces Reserve Act of 1955; and be it further

Resolved, That this resolution be forwarded to the National American Legion Convention for its consideration and passage, and that copies of this resolution be sent to our congressional delegation in Washington, D. C.

Statement Made by David J. McDonald on the Increased Price of Steel

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. HOLLAND. Mr. Speaker, David J. McDonald, president of the United Steelworkers of America, AFL–CIO, made a statement regarding the United States Steel Corp.'s increase in price which, I believe should be given widespread publicity.

The large steel corporations are propagandizing the American public that increased wages are forcing them to increase prices. However, they do not tell the public that increased productivity and increased profits have reached an all-time high.

The statement made by Mr. McDonald, I feel, shall throw considerable light on the relationship between wages and profits.

His remarks follow:

United States Steel Corp. has done it again. It has imposed higher prices on steel consumers for the 2d time in the last 6 months, the 3d time in the past year, and for the 22d time since World War II ended.

And once again the corporation refuses to accept responsibility for its own act. Instead, it seeks to hide its fabulous growth of profits by minimizing them, exaggerates the wage increase received by its employees and thereby seeks to pin the blame for higher prices on steelworkers and their union.

United States Steel's employees will receive a wage increase averaging 9 cents an hour. Benefits, other than wages, which went into effect on July 1 will cost the corporation an additional 2.5 cents an hour. Because the cost of living has risen in the past 6 months and reduced the buying power of steelworkers' wages, they will receive in July a cost-of-living adjustment of 4 cents an hour. The total cost of these wage and fringe changes will be 15.5 cents an hour.

The greatest profit ever made in a single year by the corporation was $370.1 million. This year, in 1957, the corporation's net profits after taxes are running at an annual rate of $461.9 million.

Based on the corporation's own figures of total employment and hours worked, and of shipments of finished steel found in the most recent financial report issued, United States Steel could absorb the cost of the wage increase for the remainder of 1957, reduce steel prices by $6 a ton instead of raising them by that amount, and end 1957 with the greatest net profits after taxes in the history of the corporation.

If the corporation was as sincere in its concern about higher prices as it proclaims, it would absorb the equitable wage increase which, in real terms, is an increase of approximately 3½ percent, it would keep steel prices stable, and, based on its current rate of profit, still be able to enjoy record profits of $437 million after taxes in 1957, as compared with its previous alltime record of $370.1 million.

If we have come to the point where workers cannot look forward to real increase in purchasing power of about 3½ percent when their efforts result in increasing productivity by an even greater amount each year

and when their employers reap an annual profit increase many times this amount, then we are all in trouble.

I do not believe that we are in that situation. Corporations like United States Steel may seek to make us believe that price increases must be levied to pay for wage increases. But the history of our Nation proves the opposite. The standard of living of the American people has risen through the years. This could not have happened if price increases had wiped out every gain made by wage and salary earners.

Fortunately, either because of greater vision or because of an inability to control prices like the steel companies, employers in many industries find it possible to share with their employees and the public the gains made possible by steadily rising productivity.

The record clearly shows that this path is open to United States Steel. I recommend that the corporation take a long, hard look at its pricing policies which can only have damaging effects on the entire economy.

Wage-price-profit relationships concern us all. The President of the United States has indicated his concern. I suggested a fortnight ago that the President establish a committee composed of top union and management officers who have collective bargaining responsibilities. Such a committee could serve to keep the President informed, on a regular basis, concerning this wage-price-profit problem. Through this method we can, perhaps, insure that facts, rather than arguments, are made available. I hope that the leaders of the steel industry will join with me in urging the President to establish a committee of this nature.

Texas a Wasteland in 43 Years

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. KILGORE. Mr. Speaker, many times I have heard Senator LYNDON JOHNSON express his views eloquently on the immediate and urgent need for greater flood-control and conservation projects throughout this Nation. Senator JOHNSON has not only spoken for these measures, but he has fought for them effectively in the Senate and while he was a Member of the House of Representatives.

My good friend, Steve Elam, the editor and publisher of the San Benito News, of San Benito, Tex., has quoted Senator JOHNSON, in the accompanying editorial, very effectively, precisely, and powerfully on the importance of such projects for the future of our State.

The editorial follows:

[From the San Benito News of June 27, 1957]

WE MUST BUILD MORE DAMS—TEXAS A WASTELAND IN 43 YEARS?

Texas will not have any water by the year 2000 unless a far-reaching development and conservation project is pushed forward aggressively, Senator LYNDON B. JOHNSON declared this week.

"We must build more dams—many more dams—in Texas," Senator JOHNSON said. "We must hold onto our rainfall instead of allowing the water to run off into the gulf. If we don't develop our water supply and conserve our water resources, the Texas economy will wither on the vine and our State will become a wasteland."

The Senator said he is urging the Senate Appropriation Committee to take action this week on many flood-control and water-conservation projects in Texas.

"I am pressing for favorable action on projects on the Colorado River," he said, "on the Brazos and Trinity Rivers, on Red River, on the Neches, the Guadalupe, and the Sabine. These are projects that will pay for themselves and will return healthy dividends."

Senator JOHNSON said the 1958 Federal budget proposes a total of only 30 new and resumed water projects of all kinds in the entire country.

"We've got to do better than that," he asserted. "The problem is a giant and we are fighting it with a knitting needle."

A Congressional Charter

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a timely article which appeared in the National News, official newspaper of the Veterans of World War I of the U. S. A., Inc., in the issue for July 1957:

A CONGRESSIONAL CHARTER

It has been determined by the national legislative committee of the Veterans of World War I of the U. S. A., that the major legislative effort at this session of Congress should be the attempt to secure passage of a bill to provide a congressional charter for the organization.

Our legislative counsel reports considerable progress in his efforts to secure hearings before the appropriate subcommittees of both Houses. He, together with members of the legislative committee, have pointed out to the legislators the many sound reasons for congressional approval of the measures that have been introduced to serve this purpose.

We think it pertinent at this time to list some of the cogent reasons why Congress should grant a charter to the Veterans of World War I.

1. The Veterans of World War I is the only organization that exclusively represents the veterans of 1917–18. Even 39 years after the close of hostilities, it has a larger potential membership than any previous veterans' organization in history.

2. Accreditation of the Veterans Administration goes only to those veteran groups that have been chartered by Congress. Within the ranks of the World War I veterans are thousands of men who have had years of experience as service officers. These men continue in their desire to represent all veterans and particularly their own comrades of World War I. These veterans need the aid and assistance that trained men can give them. A Congressional charter would facilitate recognition by the VA and its counterparts in many States of the Union.

3. Numerous boards and commissions that are administering veterans' affairs in many States are made up exclusively of men who are not veterans of World War I. As an illustration, the appointments of members of the Michigan Soldiers' Home Board of Managers are made upon the recommendation of the American Legion, the Veterans of Foreign Wars, Disabled American Veterans and the United Spanish War Veterans. Over 82 percent of the veterans at this facility are veterans of 1917–18. Certainly the veterans of World War I should have some voice in the choice of personnel that will administer to the needs of their own.

4. Several States have set up agencies to handle the affairs of veterans within those States. Some of the functions of these boards have to do with the allocation of funds for those groups that have secured congressional recognition. These veteran organizations then make recommendations to local welfare agencies and administer other programs conducted for the benefit of veterans. In the present situation, the veterans of World War I have no voice because they have not yet been granted a congressional charter.

5. Recognition by the Veterans Administration, which hinges on the charter grant, would enable representatives of our organization to be recognized by county courts in the preparation of matters before probate courts on behalf of veterans and their dependents.

Every member of the organization could render a distinct service to his comrades if he would write his Senator and Congressman urging immediate action on S. 1407, S. 1440, and H. R. 5531.

Six Five-eighths- by Five-Inch Bolts Require 10 Dozen Eggs

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. KNUTSON. Mr. Speaker, one of my constituents from Pinewood, Minn., has written some pertinent observations regarding egg prices. Mr. Clarence Wentzel, of Fisher, Minn., would like to add, "at least make a profit." Under leave to extend my remarks I request permission to insert these two letters into the CONGRESSIONAL RECORD:

PINEWOOD, MINN., *July 5, 1957.*

Mrs. COYA KNUTSON,
Congresswoman, House Office Building, Washington, D. C.

DEAR MRS. KNUTSON: Up until about 2 or 3 weeks ago we received 20 cents a dozen for grade 1A large eggs. I wish to make an illustration of what happened one day while I was in town. I was in a hardware store and wanted six ⅝ x 5-inch bolts. When the storekeeper had wrapped them and I asked the price he told me that they would cost $2.08 which would have taken better than 10 dozen eggs to have paid for these bolts.

The cost of raising chicks until they start laying and feeding them after, cost me approximately 31 cents per dozen to produce, so you can readily see that selling eggs at their price, the sooner I get rid of my chickens the better off I will be.

I hope that our friends will have the gumption to write you.

Sincerely,

ANDREW WHITE.

FISHER, MINN., *July 5, 1957.*

DEAR COYA KNUTSON: As Minnesota is the third largest State in egg production, I thought you would like a clipping I clipped out of our Crookston Daily Times on July 4, of all the local markets. Our egg price has

been about the same all winter and spring between 18 to 23 cents as of this day.

If you can do something about raising the price of eggs the farmer sells in our large egg-producing State, so as to at least make a profit, so we have some cash income for our time spent, which we are so much entitled to.

I remain, as ever, a farmer of Fisher township.

CLARENCE WENTZEL.

The Girard Case

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. LONG. Mr. Speaker, during the recent discussions of the William S. Girard case, here on the floor of the House of Representatives, I consistently objected to our Government allowing the Japanese court to try an American soldier.

My objection has been rewarding, in that I have received commendatory letters from citizens of all walks of life.

Today, I have received a letter from Miss Carolyn L. DeVille, of Marksville, La., a young lady residing in my Eighth Congressional District. With the thought that my colleagues would appreciate the thinking and views of a young American, I ask unanimous consent to have her letter printed in the Appendix of the RECORD.

The letter follows:

MARKSVILLE, LA., *July 3, 1957.*

Hon. GEORGE S. LONG,
Member of Congress,
Washington, D. C.

DEAR MR. LONG: I am only 16 years old, but I fully understand the great injustice that is being done to Sp3c. William S. Girard. I feel that it is my duty as a citizen of the United States to defend to the best of my ability the ones who have so faithfully and bravely defended us in past wars. William Girard is now waiting to see if the country that he has helped to protect will help him in his hour of need.

I would like to have my voice heard, and if it carries any weight our Government will not turn this man over to a foreign government with the expectation of his getting a fair trial. It should not be the policy of our modern Government to sacrifice a human life just to appease a foreign government as if it were a god. The Constitution of the United States says that any person, regardless of the crime they have been accused of or of their race, color, or creed, is entitled by law to a fair trial.

Please use all your influence as a Representative to help this man. I assure you that I and all my family will pray and ask God to be with you as you fight for this man's life.

Respectfully yours,

Miss CAROLYN L. DEVILLE.

Postal Pay and Propaganda

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, one of the biggest problems confronting us is the matter of pay increases for our loyal Federal workers. I am certain that all of us are keenly receptive to the pleas sent to us daily from harassed postal people in our districts.

One of the greatest injustices associated with the current situation is the position of the administration in threatening a veto of a salary bill and the scare tactics used by the Postmaster General. It is hard to equate the Postmaster General's declaration of genuine concern for the welfare of Federal employees with his further declaration that increased productivity in the postal service is due not only to the efforts of rank and file employees but also to management improvements of many kinds.

The only rise in productivity I can see which is properly to be attributed to postal management is the growing talent shown by the Post Office Department for multiplying the number of regional jobs. On page 97 of the Postmaster General's Annual Report for fiscal 1956, it is shown that the number of regional full-time employees in 1954 was 1,104. In 1955 that number had risen to 2,599; and in 1956 the number had grown to 4,418.

Perhaps the postal administration is confused between productivity and procreation.

The unkindest cut of all is the testimony by the Postmaster General that the postal pay bill is a cruel instrument against the postal employees themselves because its adoption would cause our currency to be debased, our economic vitality sapped, and the purchasing power of all our citizens diminished bit by bit.

At this point I wish to insert in the RECORD an editorial from the New Era, official publication of the Conference of Eastern Pennsylvania Central Labor Unions. I believe that the article's comments on the state of the postal service are extremely valid. The editorial follows:

Postmaster General Sir Arthur Summerfield took a below-the-belt punch at underpaid Federal postal workers when he tried to scare the public into believing that postage rates on letters would have to jump from 3 to 7 cents to pay the higher wage bill.

This kind of scare publicity, which is probably the most ridiculous piece of propaganda ever to emanate from the Republican boss' mouth, is certainly not going to raise morale in the badly deflated postal system.

Everybody knows that the postal service never was intended to pay its own way. No other department of the Government is required to operate on independent income. Yet this is the way Summerfield wants to run his show.

In the process, however, postal workers are put behind the eight ball. Their salaries never have been and should not now be geared to the Department's income from the sale of postage. After all, we have no right to expect employees to subsidize the Nation's postal system through inadequate pay.

What is needed most in the Post Office Department is a good housecleaning, starting with Summerfield and going right down the line to regional and district levels where a system of political patronage jobs was created for purposes of circumventing the civil-service system. The excuse for establishing the setup was to provide "better service."

It is quite obvious that service today is worse than it has been in decades. On occasions the pony express looks good by comparison.

Raises for postal workers are long overdue. Congress can safely compensate its employees properly without succumbing to Summerfield's 7-cent-mail bogeyman.

Mrs. Grace Goodhue Coolidge

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD editorials from the Springfield, Mass., Daily News on July 8 and the Washington Post and Times Herald on July 10 paying tribute to Mrs. Grace Goodhue Coolidge, widow of the 30th President of the United States, Calvin Coolidge.

The editorials follow:

[From the Springfield (Mass.) Daily News of July 8, 1957]

MRS. CALVIN COOLIDGE

When Mrs. Calvin Coolidge was introduced to a New York gathering in 1934 as the most lovely first lady of our land, the mother of President Franklin D. Roosevelt led the applause.

That reputation began for Grace Goodhue long before she married Mr. Coolidge in 1905. Her graciousness, tact, and charm were recognized by her friends in Vermont, at the university there, and at Clarke School for the Deaf long before they were discovered by Northampton's politics-conscious young lawyer.

Although the Nation hailed her as the loveliest first lady, and compared her graciousness as the White House hostess to that of Dolly Madison, Northampton had a special fondness for this woman who taught at one of its famous schools, and then married the man who became the city's mayor, the State's governor, and the Nation's President.

Northampton saw a Mrs. Coolidge which the rest of the world never saw. They saw her trudging through snow at 7 a. m. to get to the railroad station to say goodby and give some little gifts to a few Northampton

boys who were going off to basic training during World War II.

Northampton saw her as the woman who set the mode for gasoline-rationing days by walking down Elm Street pulling a little wheeled cart on her way to the shopping and market section. It saw her graciousness as she neatly drew attention from a Smith College maid who dropped an amply filled tea tray at a formal function. "It's so humid today, I find it difficult to hold even a spoon," she said gently.

She was a good neighbor in such quite ways, but she also realized that she couldn't always be a good neighbor by being a "Silent Grace." At one of her very infrequent visits to a political party gathering, she sat in silence for as long as she could and then stood to give a crisp challenge to the young Republicans there to raise their sights and to open their doors wider to attract the counsel and services of all young people in the community, and not to tolerate restrictions which might rob them of some of the finest available leadership.

She was similarly reluctant to speak out recently against a proposal to erect a statue of Mr. Coolidge in this State. She was relieved when the measure was sidetracked at the statehouse, but she had told Northampton friends that she feared she might have to break her silence to oppose any such action.

On the other hand, Mrs. Coolidge was greatly pleased that fellow townsmen and other friends in the State planned and completed the Coolidge memorial room at Forbes Library in the Northampton, and her last public appearance was at the dedication exercises for that memorial prepared by city and State.

All over the country and the world, many will today be saddened by the news that "the most lovely First Lady of our land" has died, but Northampton will feel her loss more keenly. There she was a good neighbor. The city afforded her the privacy which she sought, but nevertheless looked to her to do her full share of work for the community, for church, and for education. She never failed the city which she dearly loved. No one bothered her in the grocery as she stopped to compare labels on canned goods she was buying, but when her special qualities and prestige were needed in some community effort, she was asked to help, and always did.

Millions will be saddened by her death. Some knew her as teacher who reached their soundless world; others knew her only as the baseball-loving First Lady. Some knew her as a kind neighbor; others recall her days as the gracious hostess at the White House.

Where she was best known, she was best loved, and therefore her son, John Coolidge, his wife and their two daughters must sustain the greatest loss, and they have the sympathy of the country.

The Nation knows that it lost a great lady today; Northampton knows it lost a good neighbor.

[From the Washington Post and Times Herald of July 10, 1957]

GRACE GOODHUE COOLIDGE

Few roles demand such a fund of tact, ready wit, and common sense as the office of First Lady of the United States—an office carefully prescribed by tradition if not by the Constitution. By universal accord, Mrs. Calvin Coolidge filled this demanding role with dignity, warmth, and winning simplicity during her husband's two administrations. The complex social duties of the White House—ranging from baseball (she was an avid fan) to royal receptions—invite Potomac fever but Mrs. Coolidge remained immune. With poise and charm she held fast to her inflexible command, "Thou shalt not talk politics"—a command doubly difficult but nonetheless sometimes refreshing in this city festering with political feuds. Following Mr. Coolidge's retirement, she resided in Northampton, Mass., where her Yankee simplicity brought affectionate regard. She was deserving of the moving compliment paid by her husband, who in a rare moment of quotable articulation, said of Grace Goodhue Coolidge, "For almost a quarter of a century, she has borne with my infirmities and I have rejoiced in her graces."

Address by Mr. Dale Soriano

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. DORN of New York. Mr. Speaker, under permission granted to extend my remarks, I should like to include an address by Dale Soriano, past judge advocate of the Veterans of Foreign Wars of the United States, before the Disabled American Veterans, and Friends of the DAV on Thursday noon, July 4, 1957, at the State Armory, Brooklyn, N. Y.

The address follows:

Veterans and friends, July the Fourth, as we all know, commemorates the signing of the Declaration of Independence, our Nation's first formal bid for independence from foreign rule. Even as the ink was drying on this bold document, our Patriot Fathers who signed it knew that the declaration alone would not accomplish the fact, and that our independence would have to be won by fighting for it against what must have seemed overwhelming military odds.

When our freedom as a Nation separate and self-governing was finally won, the new Nation's leaders must have believed, or at least hoped, that it would remain unchallenged in the years to come. We know only too well that on the contrary, the United States of America has had to defend her independence and security a number of times since then. We have done so successfully, thank God, but at a terrible cost in lives and well-being of millions of millions of our young men.

No shadow of a doubt has ever existed that our independence is well worth fighting for. Indeed we are so constituted as a Nation that it would be unthinkable for us to live otherwise than as a free people. The important point is that America's fighting men have willingly shouldered arms to maintain that independence, prepared to make any sacrifice for it. For millions this has meant the supreme sacrifice, and to those who did pledge and give their very lives, all honor and glory on this most significant of our national holidays.

And to those others, who fought and survived, but whose bodies and minds still bear the wounds and scars of the conflict, may we today give a moment's thought and attention?

If you were to ask the war-disabled veteran of any of America's struggles against aggression, "What did you fight for?" he might phrase his answer in a variety of ways—but essentially any reply would have the same basic meaning. In the broader sense, he was fighting for the independence and freedom of his country. Most people, however, translate such broad and noble ideas into more personal terms, so that the independence of his country comes naturally to mean, to those who defended it, the independence of those who make up his immediate world—his wife, his children, his parents, his friends, and himself.

Let's go one step further and ask the disabled veteran what he means by "independence." To him, as to all of us, our country's independence means freedom from domination by any other nation, but personal independence as a citizen of that country means physical and mental health, a decent place to live, the necessities of life for his family, a job that he can hold down successfully, and a respected place in the community where he lives.

My organization, the Disabled American Veterans, has as its single purpose the fulfillment of this independence for all of America's wartime disabled veterans. In fact, it was for that purpose that we were organized at the end of World War II. Since the DAV is composed entirely of veterans who were wounded, injured or disabled in wartime service, we know perhaps better than anyone what is necessary to achieve independence for the disabled veteran.

First of all, the disabled veteran's natural desire for independence from physical pain and mental incapacity must in many cases be modified. Often he knows that he can never achieve anything like real health and physical well-being because of his war incurred handicaps.

Let us say, then, that the disabled veteran hopes to be as nearly physically and mentally rehabilitated as is possible with good medical and hospital care. This, then, is the first necessity for making independence a reality for the disabled veteran. The Veterans' Administration is responsible for seeing that he gets the best care possible, with enough well-staffed VA hospitals to take care of the increasing numbers of veterans whose disabilities recur from time to time, or in some cases do not become apparent until some years after the war has ended. This is often a long-term problem.

Especially is this true in the case of the mentally ill veteran. His illness has been coming on for a long time, and the chances are that he has no funds to take care of the lengthy hospitalization necessary to bring him back to mental health. But he must be cared for, and the American public has a responsibility for his care which is going to exist whether the patient is cared for in an already overcrowded State mental institution or in a VA hospital, where he rightfully belongs.

Our National Commander, Joseph F. Burke, of Bayonne, N. J., recently issued a statement protesting the demands in some quarters for curtailment of the Veterans' Administration program for building additional VA hospitals to take care of this increasing veteran load. He said, "Don't let anybody tell you that we've reached a point where we have enough VA hospitals. In one State I visited this year a VA hospital had a waiting list of 1,000. The average throughout the country is one psychiatrist for every 60 VA mental patients and the VA would like it to be one for every 30 patients. We must encourage an expansion of this program."

Next, then, the disabled veteran must be assured of just and fair compensation for the handicaps which he has suffered in the service of his country, so that he can achieve independence from want for his family and himself. With today's rising costs of living, he badly needs some increase in this compensation so that he can provide the basic necessities of life for his family. And especially he must have some stability in his compensation rating, so that he can know what he has to depend on from month to month. In the case of the totally disabled veteran this may be all he has to live on, because his war-sustained handicaps make it impossible for him to earn any kind of living. In many other instances the veteran is able to work and does so, but his disability may become aggravated from time to time, requiring medical care or hospitalization, and interrupting his earning power

while he is unable to work. His modest compensation check then becomes the only source of income he has, and he must be able to depend on it. In recent years, certain off-again, on-again policies in VA determination of his compensation have created an almost impossible situation for many disabled veterans.

To achieve true independence, the veteran who has any remaining ability must have a job he can handle successfully. This is the end product of all successful physical and mental rehabilitation, and is the dearest wish of every disabled veteran's heart, because it gives him not only a measure of financial independence, but an independence of spirit which cannot be measured in dollars and cents. To make this possible, two things are necessary, after his health has been brought to the most satisfactory level possible. First, he must have the right kind of vocational training to enable him to develop new skills to replace those which were lost because of his disability. Second, the public must be encouraged to realize that the disabled veteran is an conscientious and skillful a worker as his able-bodied brother when he is placed in a job for which he is fitted. As far as being conscientious and dependable is concerned, he is often more so, because he knows that he must prove his worth. Also it has been proved conclusively that his safety record in industry is many times better than the able-bodied worker's.

Just as every American wants to see his country, as an independent power, respected by all other nations, so his personal desire is for a place of respect in his community. The disabled veteran, no less than other men, has this same desire, and he does not expect it to be handed him on a silver platter accompanied by maudlin sympathy. He is willing to work for that respect, and the community activities of our fine DAV chapters throughout the Nation bear that out. He deserves, however, the gratitude of his Nation and his community for his part in keeping America free and independent at the cost of his own physical well-being, and he deserves the sympathetic understanding of his neighbors in his struggle for a normal life and personal independence.

I have mentioned some of the basic ways in which we can achieve independence for the disabled veteran. Perhaps you feel that this has not been a typically patriotic speech, on the occasion of this Fourth of July, but I believe that if you will consider what I have said in its fullest sense you will see that it is indeed appropriate—for the independence achieved by any nation is only as great as the personal independence of her citizens. Surely there are none who deserve that independence more than those who valued it so highly that they sacrificed their health and well-being and, in many cases, parts of their bodies to preserve it.

The DAV—the Disabled American Veteran—on this Fourth of July rededicates itself to the task of making independence a reality for our fellow disabled veterans, but we can only succeed with all America's help. Thank you.

Seventy-fifth Anniversary of Dan River Mills, Inc.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. TUCK. Mr. Speaker, on July 2, 3, and 4, 1957, the Dan River Mills, Inc., of Danville, Va., observed its 75th anniversary. On Thursday, July 4, a celebration and party was held at the Danville fairgrounds which was attended by more than 30,000 people and was sponsored by Dan River Mills, of which Mr. W. J. Erwin is president.

The Dan River Mills is one of the largest textile organizations in the world and is the second largest employer in the Commonwealth of Virginia. Mr. Erwin and other officials of the mills are men of outstanding character and ability and they have surrounded themselves with employees of solid and dependable character. The relationship between officers and employees is wholesome and has stimulated a spirit of cooperation and fellowship in southside Virginia.

I do not believe we have any business organization which has contributed more to the enhancement of the cultural, educational, and economic development of southside Virginia than has Dan River Mills. We are all proud of their accomplishments and of what that organization has done to improve living conditions in our section.

At the celebration referred to above on July 4, Mr. W. J. Erwin, the able president of Dan River Mills, extended greetings to those attending the party, and the distinguished senior United States Senator from Virginia, the Honorable HARRY FLOOD BYRD, delivered a very timely and able and worthwhile address. Under leave heretofore granted me to extend my remarks in the RECORD, I am glad to include the addresses of President W. J. Erwin, of the Dan River Mills, and Senator HARRY FLOOD BYRD, of Virginia. They are as follows:

REMARKS BY W. J. ERWIN AT JULY 4 EMPLOYEES' PARTY

Senator BYRD, Congressman TUCK, fellow employees, and distinguished guests, we extend to you and your families a very warm and sincere welcome to this birthday party, which commemorates the 75th anniversary of the founding of Dan River Mills.

In planning for this anniversary year, it has always been our intention that this party for you and the members of your family would be a climax of the activities undertaken to commemorate the 75th anniversary. This party is an expression of appreciation to you for what you have done to make this company a success. We are proud of your performance and proud of what you have done for Dan River over the years.

At the same time we want to pay tribute to the many men and women who have preceded us and who contributed so much to the growth and welfare of our company.

On behalf of our entire management, I extend to all of you our thanks, our best wishes, and our hope that this will be a day you will remember pleasantly for a long, long time.

SPEECH BY SENATOR HARRY F. BYRD, DAN RIVER MILLS, INC., DANVILLE, VA., JULY 4, 1957

The Fourth of July is an anniversary of deep significance to all Americans, and it is an especial pleasure for me to observe it with the fine people of the Danville area in this year of 1957.

Here, in Virginia, we are now observing the 350th anniversary of the founding of the first permanent English settlement in Virginia, at Jamestown; the 181st anniversary of the signing of the Declaration of Independence, written by a Virginian, the great Thomas Jefferson, of Monticello; and the 75th anniversary of your great industrial institution, the Dan River Mills, which may properly be regarded as one of the finer fruits of the freedom for which the country was settled, our independence was won, and the sound progress for which Virginia has always stood.

It has been my privilege over the last few months to participate in several observances of the founding of Virginia at Jamestown, and on this day in Danville, I think it is fitting to recall that occasion, for when that small band of founders came ashore from their three little ships 350 years ago they set in motion a chain of events without comparison in human history.

With their faith in the future they marked one of the great moments in history. It was a moment of greatness because those men and their stanch followers began to build with such soundness and vision that a new world slowly but surely began to form. It was indeed a case of the infinitely small being infinitely great. These first settlers were great men in whom God and nature succeeded.

There at Jamestown respect for individual rights and responsibilities was established.

There the dignity of man was acknowledged.

There the rights of free enterprise and initiative were encouraged.

There, truth to God, and truth to self were practiced.

On this foundation was built the first representative government in the New World—the Virginia House of Burgesses, the predecessor of our State legislatures and the National Congress.

Material results are but the tardy sign of invisible activity. The courage to hope, and live, and build for a better world was the great legacy the founders bequeathed their descendants.

And from this later came the fortitude to fight for liberty when it was threatened, and to win the independence of a great nation.

Who among us does not have indelibly stamped in his heart and soul the great words of Jefferson as he penned them in the Declaration of Independence—the unanimous declaration of the Thirteen United States of America in the Congress, July 4, 1776, 181 years ago today.

And you remember the closing words—immortal and will live as long as the language exists:

"We, therefore, the Representatives of the United States of America, in general congress, assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do in the name and by authority of the good people of these colonies, solemnly publish and declare, that these United Colonies are, and of right ought to be free and independent States; that they are absolved from all allegiance to the British Crown, and that all political connection between them and the state of Great Britain, is and ought to be totally dissolved; and that as free and independent States they have full power to levy war, conclude peace, contract alliances, establish commerce, and to all other acts and things which independent States may of right do.

"And for the support of this declaration, with a firm reliance on the protection of divine providence we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Mark those last words, "We mutually pledge to each other our lives, our fortunes, and our sacred honor", and remember that our immortal Declaration of Independence was not written in a moment of victory. It was, itself, a record of uncertainty and peril—an oath taken in the most dangerous hour this country has ever known. George, the Third, regarded it as an act of treason, and the hangman's noose cast its shadow over those responsible.

Yet, Thomas Jefferson penned it, and John Hancock wrote his signature at twice its normal size so, he said, "John Bull could see it without his spectacles and double the price to be put on my head."

That great document, adopted by Congress 181 years ago today, is carefully preserved in Washington now for all to see. If you haven't seen it, please do not miss an opportunity. It is a source of great inspiration. It is the living evidence of men's hopes and courage. It expresses the fervent hope that the future may draw faith from its deep meaning.

This and the other American achievements leading to our revolution and independence were the immediate inspiration for the spread of democratic freedom in an ever-widening sphere. Today the United States stands as the beacon of hope in the world.

It is well for us today to recall these great historical developments, because they were wrought by great men with great minds, and great vision for sound progressive future. They made possible the greatness of our Nation today. They were building a great nation for us thought by thought, and deed by deed. Our institutions are the lengthened shadows of the men who conceived them and that applies to Dan River Mills.

It is on the firm foundation built by our forebears that Virginia has made its own environment; it is from them that we inherited our abiding belief in States rights, and sound principles. And it is upon these that we have built our State and local governments, and institutions.

Development comes with use, and use of our principles in Virginia has brought us out of the dark days of reconstruction into the light of sound progress.

Virginia today stands as a symbol for States rights, for the democratic principle of separate coordinate branches of government, and for unmortgaged future.

The people of our commonwealth have been generous to me, and to them I shall always be grateful. It has been my unswerving purpose to serve them to the utmost of my ability in each of the positions of honor they have entrusted with me. I believe in the people of Virginia, and I trust in their judgment, and I stand firmly on Virginia traditions and Virginia principles.

In Virginia we regard experience as a guidepost—not a hitching post. Perhaps in these days of spiraling inflation it is still possible to get a few things for nothing—but experience is not one of them.

Our progress in Virginia is based on 350 years of experience. It is our purpose to be guided by that experience. Like the Dan River Mills long experience has served Virginia well. And as one citizen of Virginia I am proud of our record.

Virginia has its critics and I well know that no government is perfect, but governments are comparative and I want now to give you just a few instances of our modern day progress.

First of all, Virginia is 1 of the 3 States completely free of State debt. And this is of significance when the Federal Government and nearly all the States have recklessly plunged themselves into indebtedness, the interest on which I predict will exceed many times the principals of the loans.

Virginia escapes this terrible burden of the annual and perhaps permanent interest charges.

Here are a few figures showing how Virginia is going ahead of other States.

In the past 25 years in population of 49 percent as compared to an increase of 33 percent in the country as a whole. Per capita income payments increased in Virginia by 253 percent as compared to the general increase of 163 percent.

Value of products manufactured in Virginia increased 328 percent as compared to general average of 282 percent.

Payroll in Virginia manufacturing increased 416 percent as compared to general average of 341 percent.

Retail sales in Virginia increased 426 percent and the general increase was 251 percent.

Deposits in Virginia banks increased 425 percent. The national average increased 269 percent.

Number of telephones in Virginia increased 360 percent. Average, 178 percent.

Motor-vehicle registrations increased 226 percent. Average 133 percent.

It is tommyrot to say Virginia is lagging behind.

We are making great progress all down the line.

We are doing this without debt and with sound governmental policies.

The Dan River Mills symbolize our sound progress in Virginia, and it is fitting that on Independence Day, 350 years after our founding at Jamestown, and 181 years after our Declaration of Independence we congratulate the institution on the occasion of its diamond anniversary.

Danville, the Danville area, and the southside of Virginia also is to be congratulated for its support of this great corporation which for 75 years has contributed so much to the community, the State and the better living of people at home and abroad.

Virginia is proud of this great leader of the textile industry. When this company was originated by the three brothers, Robert A., John H., and James H. Schoolfield, along with Thomas B. Fitzgerald, Benjamin F. Jefferson, and Dr. H. W. Cole, the country was only about 100 years old. Thomas Jefferson had been dead little more than 50 years. Virginia was still trying to rise from the the ashes of the War Between the States, the last of the military governors had been gone only 12 years.

With Virginia the Dan River Mills has grown in sound progress. Today it ranks among the great textile manufacturers of the world. In number of spindles it is a leader in the South. It ranks with the leaders in Virginia in the employment of our people. I am certain that its policy is to deliver the most value for the least cost. That means productive progress. Production is the source of wages. This is the American competitive system. This is the enemy of crippling inflation, and the source of higher living standards.

Under the sound and enlightened leadership of such men as W. J. Erwin, president, and Basil D. Browder, executive vice president, and Dan Daniels, Dan River Mills now is a corporation of more than 800,000 spindles, and more than 18,000 looms, owned by more than 9,500 stockholders, and operated by 18,000 employees, turning out useful products which sell for more than $120 million yearly.

This is truly the Virginia brand of progress represented in a great corporation operating for the profit of its owners and employees, and for the good of mankind who need and are able to use its products.

I take it that when a Member of Congress is among you, he is expected to say something about what goes on in Washington. If that is true I might say this:

The Washington Government is a place of vast and complex pressures. So many of them seem to be so foreign to the traditional concept of our form of government, under which this Natiôn has grown great, it is all too easy to regard them with an apathetic attitude in the belief that such things can't happen here—to my country, my State, my town—to me. But they do.

For instance, the Federal Government has been in the red for 20 of the last 25 years, yet since World War II we have given away nearly $60 billion in foreign aid spread around the globe. Millions of that money has gone to subsidize the textile industry abroad where they use cheap labor in competition with your own Dan River mills.

You have in your midst a fine and patriotic citizen who has properly been honored by the American Legion, as their national leader. He is, of course, as you know, Dan Daniel. He is doing excellent and effective work with reference to foreign aid. Dan Daniel is a great American. He is going throughout the breadth of the land speaking against giveaway programs to foreign countries and for sound policies at home.

Sometimes as I listen to all the talk in Washington about aid for the underdeveloped areas, I wonder if the greatest underdeveloped area of all isn't under the hats of those who propose it.

Practically all of this foreign aid has been charged into our Federal debt, the interest on which, at this moment, is costing American taxpayers more than $7 billion a year. That is a full 10 percent of all Federal taxes collected. In other words, if it were not for this Federal debt, the Federal taxes you and I pay could be cut 10 percent across the board.

But this is not the only aspect of the debt. It is difficult to comprehend, but you know that all the debt in this country totals $800 billion. That is nearly $1 trillion. More than $325 billion of it is in public debt which generally speaking is not productive debt. It is this tremendous debt—resulting from our unprecedented free-wheeling spending spree, largely encouraged by the Federal Government—that is causing the terrible inflation which even today is driving up the cost of living still more.

Yet, even in the face of renewed inflation, the President in January submitted to Congress the largest peacetime budget in history. It actually called for $8 billion more in expenditures by Federal spending agencies than they passed out just 2 years ago. Most of the increase was in domestic civilian programs, having nothing to do with military preparedness.

Think of this in terms of what you pay in taxes. All taxes collected this year in this country will total $110 billion.

That is the equivalent of nearly one-third of our national income.

It is no wonder that the people of the Nation have risen up this year in the greatest demand for reduction in Federal expenditures in all our history. But the spending is too entrenched, and the opposition of the administration was too great. Congress has done the best it could to reduce appropriations. But the result is not nearly enough.

I sincerely hope the people of the country will not be discouraged. They must keep up the demand next year, and for all the years necessary until we can get these expenditures under control, and reduce them to a point where we can reduce debt, stop inflation, and reduce taxes.

In Federal taxes alone, the Government is taking 20 percent of the workingman's salary at the lowest rate. In some cases, individuals are paying Federal taxes of more than 90 percent of what they make. Corporations are paying more than 50 percent before they begin to show a profit and put money aside to replace their machinery, and expand their plants. The average American is working one-third of his time to pay his taxes.

We need to cut taxes at all levels, at the lower levels, in the middle-income brackets where people are taking the worst tax licking, and even in the higher brackets. We need to reduce taxes for small business, and for larger businesses. In short, taxes are too high. They are virtually at a point of diminishing returns. They are killing incentive in both individuals and business.

Please believe me when I say the Members of Congress need your constant and continuing help in trying to get expenditures down

so we can get the debt down, stop the inflation and get the taxes down.

This gigantic Federal spending serves to centralize Government, and that means more and more bureaucrats in Washington tell you in Danville, and me in Winchester what to do, when to do it, and how to do it, and how much to spend for it.

This is the greatest democracy in the history of the world. It has grown to this position in the brief span of 180 years, and with only 6 percent of the world's population. This could not have been achieved without the form of government bequeathed us as a sacred heritage by our forefathers.

Strike down the power of States to control their own affairs, and concentrate all power in Washington, and you strike at the heart of what makes this Nation great.

To me the decision of the Supreme Court abolishing segregation and compelling integration in States and local public school systems was a vicious and destructive invasion of States rights.

It set aside all previous decisions by the Supreme Court on the subject, including the 1928 decision by Chief Justice Taft, a great and learned man and a former President of the United States, who held segregation was constitutional if separate equal facilities were provided.

Bad enough before, when centralization was developing through Federal expenditures, but in more recent years Federal courts have gotten into the act. I mention just a few examples. In the recent Girard case it held that a man's money could not be spent afteer his death in accordance with his will.

In another case, just a couple weeks ago, it put down the police powers of State and local governments.

Time and time again it has usurped legislative powers, which, under the Constitution, are clearly segregated to the Congress as 1 of the 3 separate coordinated branches of Government.

More recently the Federal court has even divested the Federal executive branch from its means of bringing Communists—enemies of democracy—to justice.

These are the things that the people at home must understand—understand what is happening to you. In this Nation you are the supreme voice of the land—not the Supreme Court, not the President, not the Congress—it is you.

I say these things to you on this Independence Day in the sincere hope that you, with all the citizens of this land, will rise up in massive resistance to Federal usurpation of individual and States rights, and assert your independence with an overwhelming demand for the return to the fundamental for which this Nation was founded and for which our independence was won and upon which we have built the greatest nation on earth.

Benson Friends Sentenced in Antitrust Charges

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing a clipping from the Washington Newsletter published by the National Farmers Union of June 21, which points out some of what is happening to the American people by the shenanigans going on at the Department of Agriculture under Secretary Benson:

BENSON FRIENDS SENTENCED IN ANTITRUST CHARGES

Safeway Stores, Inc., a giant grocery chain store firm which is closely associated politically with Secretary Benson, was convicted this week of antitrust law violations.

The Safeway corporation was fined $105,000 and two of its officials were sentenced to suspended prison terms and fined a total of $82,500 by the Federal District Court of Fort Worth, Tex. The sentenced officials are L. A. Warren, former Safeway president and now a consultant, and Earl Cliff, division manager at Dallas, Tex. Safeway and its officials were charged with selling at less than cost for the purpose of destroying competition. They pleaded "no contest."

Safeway has been a perennial antitrust law violator since 1942, the Court was told by Miss Margaret Brass, Justice Department's attorney in the case. This case was the fifth brought against Safeway in that time, she said.

Secretary Benson has worked closely with Safeway officials in planning and administering the farm programs. He has borrowed several Safeway executives for important jobs inside his own office. Safeway's subsidiary, the Superior Cheese Co., got $74,000 of the $2 million an illegal windfall payments by the Agriculture Department when dairy price supports were reduced in 1954. Last year the Republican National Committee hired the Safeway chain's advertising agency, Braun & Co., to advertise Benson to the public during the political campaign.

(The contract with Braun & Co. to advertise Benson was cancelled immediately after Senate Democrats revealed that the advertising firm was involved in the Fort Worth antitrust action against Safeway. Braun & Co. was indicted in July 1955 as a coconspirator with Safeway in its effort to destroy competition. The charge was changed to a criminal information when the criminal charge against Safeway was shifted to a civil antitrust suit.)

The Dominican Republic—The Dictator Is a Flop in the Tourist Business

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 5, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Time magazine for July 15, 1957:

Under a molten summer sun, a portly figure in a palm beach suit set out from his seaside estate one morning last week for a constitutional along Ciudad Trujillo's palm-lined George Washington Avenue. Pedestrians were herded aside, but cars rolled by unmolested just a few yards away. Only a handful of aids guarded Generalissimo Dr. Rafael Leonidas Trujillo Molina, 65, benefactor of the fatherland, genius of peace, etc., etc., etc., as he strolled confidently along. In the dictator's island fief, poincianas were blooming, sugarcane was growing, business was booming.

A hemispheric axiom has it that when a dictator falls afoul of Washington, his opponents are emboldened to try to topple him. This year, Trujillo is in bad grace with the United States, which officially suspects that the Dominicans hired United States Pilot Gerald Lester Murphy to carry out the airplane-kidnaping of Trujillo Critic Jesus de Galindez from Manhattan 16 months ago. But to Trujillo's satisfaction, the axiom has not worked. The Dominicans are as docile as ever. The educated few who know of the Galindez-Murphy case (in some instances from Puerto Rican radio broadcasts) publicly refuse to comment, privately shrug: "What can we do?"

GETTING RESULTS

As the 27th year of the era of Trujillo neared an end, the strongman was still working a seven-day week and still getting results. The gross national product in 1956 was well over $500 million. Exports last year (mainly sugar, coffee, cocoa) reached a record high of $126.5 million. Imports in 1956 were held to $108.3 million, leaving a trade surplus of $18.2 million. The record 1957 budget, nicely balanced at $131.5 million, will buy more schools, hospitals and roads.

Trujillo is essentially a brutally efficient businessman. Name of the business: the Dominican Republic. His basic maneuver is to squeeze other investors, including those from the United States, out of profitable businesses. He sends his representatives to make what is often a scrupulously fair offer; the victims accept rather than face the tax and regulatory troubles that might follow refusal. Trujillo's cement, beer and electric-power monopolies were all acquired in this fashion, and he has nearly completed control of the island's biggest business—sugar. Most recent big United States firm to get out: the West Indies Sugar Co., for $36 million.

ONE FLOP

In only one business venture—the tourist trade—has the dictator proved a flop. He spent $25 million erecting a gigantic "International Fair for Peace and Progress," opened the doors for business only three months before the Galindez kidnaping. The strongman was splashed with a storm of bad notices unequaled since he ordered the massacre of 15,000 Haitian migrant farm workers in 1937. As he steadily blocked FBI investigation of the double crime, magazines, newspapers, radio networks, and United States Congressmen denounced him. The tourist traffic jerked to a halt.

Trujillo obviously hopes to ride out the storm, and to help him he has marshaled one of the most potent corps of propaganda agents that any foreign nation maintains in the United States. But even if Galindez and Murphy are forgotten, the strongman's state has little chance of rivaling traditional Caribbean vacation lands. The few tourists who do visit it return to report a polite but lifeless people, depressingly adept at following the rules of appeasing egomania, but no fit company for a fling.

Inspection of Poultry and Poultry Products

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mr. DOYLE. Mr. Speaker, here is the text of a telegram which came to me on yesterday afternoon from one of my congressional constituents in the great 23d District, Los Angeles County, Calif., recommending my favorable consideration of H. R. 6814, the bill for compulsory poultry inspection:

DOWNEY, CALIF.

We earnestly recommend your support of H. R. 6814. It is the most progressive, beneficial step yet taken by the poultry industry.

Yours respectfully,

SOUTHEAST POULTRY CO.,
W. C. MCKIBBEN.

But, the wire did not come to my office until after I had already voted "aye" on passage of the bill and had returned to my office where I received the wire.

More About John M. Blair

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. HYDE. Mr. Speaker, I believe it is important for the public and the Congress to become acquainted with the background of an employee who holds such an important position with the Senate Antitrust and Monopoly Subcommittee. The public and the Congress will be in a better position to evaluate any reports submitted by this committee of this gentleman's work.

I, therefore, under unanimous consent, insert in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the May 15, 1957, issue of the New York Herald Tribune written by Donald I. Rogers and entitled "More About John M. Blair":

MORE ABOUT JOHN M. BLAIR
(By Donald I. Rogers)

John M. Blair, chief economist under Senator ESTES KEFAUVER, Democrat, Tennessee, chairman of the Senate's Antitrust and Monopoly Subcommittee, is the man who will do most of the research and handle most of the presentation when Senator KEFAUVER conducts his probes of the country's leading industries, including the oils, motors, public utilities, and chemicals.

Mr. Blair is reputed to be an expert on oil.

He is an avowed—an announced—mistruster of big business.

He believes that big business will reduce employment and lower wages.

He believes that big business will extract an increasing amount of work from employees at decreasing rates of reward.

VIEW OF CAPITALISM

He believes that capitalism will give an increasingly large share of the Nation's wealth to the higher income groups at the expense of the lower income groups, thus ultimately destroying its own market place.

This is the man, a man who has spent much of his life working for government, who will sit at the right hand of an ambitious United States Senator in the months until the 1958 election, assisting wherever possible in a studious effort to discredit some of the most successful enterprises in some of America's most important industries.

His views are set forth with great clarity in several writings, most important of which is his book, Seeds of Destruction, printed in 1938 and published at $4 by Covici-Friede. Mr. Blair has never publicly recanted the beliefs expressed in his book.

THE MAN BEHIND THE POST

Last Sunday this reporter quoted several excerpts from Mr. Blair's book to show the socialistic caliber of his thinking. Following are some additional quotes from Seeds of Destruction, which indicate, at least, the temper of the man who holds such an important post.

Even these excerpts show that Mr. Blair writes with bias, hostility, sarcasm and that he makes fun of the business community.

"One of the factors that enters into restriction of production is waste, waste occasionally being deliberately fostered or at least countenanced in order that output might be lessened. According to the American Federated Engineering Societies, the responsibility for this waste lies mostly upon the shoulders of management. * * *

CALLED PRICE DEVICE

"This deliberate waste brought about by management is to a considerable extent but an obvious mechanism to restrict actual or potential production, all for the purpose of keeping prices stable" (pp. 101–102).

And here's a prediction in the same book:

"For our national economy as a whole, the only scientific assumption which can be drawn * * * is that the trends brought out as operating in the past and in the present will undoubtedly continue to do so in the future, that physical volume of production will grow—providing there is a market—that horsepower will increase rapidly, that general population will grow but at a progressively slower rate while factory employment declines, that separations will continue their increase over additions, that as a consequence of all this, technological unemployment will steadily increase, that the machine industries will remain physically capable of absorbing but the slightest proportion of the workers displaced by the machinery installed" (p. 34).

KEY TO PHILOSOPHY

It behooves the reader to go over that one again. It is an awkwardly constructed paragraph, but it contains a whole theme, almost a whole economic philosophy.

It is the core of Seeds of Destruction, for the book purports to be a study of the weaknesses of capitalism.

Perhaps it is more a study in the weakness of Mr. Blair's logic—and perhaps the book embodies the seeds of destruction of his influence on the subcommittee.

Let no one in big business or a key industry underestimate Mr. Blair. He is no lightweight. He is sharp, and can take care of himself.

SACLANT's 5 Years: A Study of NATO Command Responsible for a Vast Area of the North Atlantic

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Monday, June 24, 1957, by Hanson W. Baldwin, entitled "SACLANT's 5 Years: A Study of NATO Command Responsible for a Vast Area of the North Atlantic":

One of the most important but perhaps least known commands of the North Atlantic Treaty Organization announced last week a series of Atlantic naval exercises in the fall.

At Norfolk, Va., the flags of the NATO nations fly outside the headquarters of Adm. Jerauld Wright, known in naval abbreviation as SACLANT—Supreme Allied Commander, Atlantic. Admiral Wright's command is not so well known or as long established as that of SACEUR—Supreme Allied Commander, Europe, in Paris. But it provides a unified top command for a vast North Atlantic Ocean area from the North Pole to the Tropic of Cancer, and its strategic importance is very great.

The naval exercises in the fall—part of an extensive regular cycle of NATO training for sea, air, and land components—will be under the overall direction of Admiral Wright at his Norfolk headquarters. Subordinate commanders of the Eastern and Western Atlantic areas and of the Atlantic Striking Fleet will be in direct charge of various exercises involving fleet operations, submarine and antisubmarine warfare, mining and minesweeping exercises.

MANY PROBLEMS REMAIN

The exercises will put a capstone to the 5 years of existence of SACLANT. Since the Norfolk headquarters were established in 1952 many allied naval problems have been resolved, a working organization has been created and a joint staff set up. But many problems remain, and the command, like the rest of NATO, faces some serious future difficulties.

The staff at Norfolk now numbers 138 officers, most of them Americans, British, Canadian, and French, but with representation from all the small NATO maritime powers except Belgium and Iceland.

Admiral Wright, who is a NATO commander, is also a United States Commander in Chief, Atlantic Fleet. As such he has a large separate United States staff. At one time there was some thought of splitting the two jobs, but experience and study have shown that the two are almost indivisible, particularly since the United States Atlantic Fleet is the principal NATO naval force in the Atlantic.

The achievements of SACLANT, though publicized far less than those of SACEUR, are considerable. There has always been a sort of international fraternity of the sea; this is reflected in the Norfolk staff. There has been a joining together, a manifestation of mutual interests at Norfolk. The duty is so popular many of the foreign naval ministers have recently reduced the tour of duty at Norfolk from 3 years to 2.

STANDARDIZATION ADVANCED

The staff's teamwork has been matched by considerable standardization of naval procedures. A common signal, communications and cipher system has been established and communication facilities are far better integrated than formerly. A good many fuels and naval stores and some naval ordnance are now common to all. Training exercises and test procedures like those scheduled for the fall are held periodically. War plans are formulated at Norfolk and are under constant revision.

Considerable supporting infrastructure—the group's terminology for airfields, facilities, and so on—is being built up, at a cost of almost $90 million. This includes naval communications facilities in Iceland, 3 maritime patrol airfields in Norway, 1 in Scotland, a major naval base area with supporting airfields on the Clyde, Scotland; a maritime patrol airfield at Brest, France; 2 in Portugal; and fuel and ammunition facilities at Lisbon.

Some progress in command structure has been made. The position of Commander Striking Fleet, Atlantic, has been raised to a level directly subordinate to Admiral Wright, and is no longer subordinate as it was in the first year to regional commanders. Canada recently revised her dual air-naval command system and gave full authority to the navy for responsibility at sea.

BRITISH COMMAND SYSTEM

Difficulties and problems that remain are several. The British still retain in the eastern Atlantic the two-headed and difficult command system, with two coequal naval and air commanders for the same area. No solution of the IBERLANT—Iberian sub-

sector of the Atlantic treaty command—problem has been reached. This subsector embraces a large and highly important stretch of ocean off the Iberian Peninsula and Morocco and off the approaches to the Strait of Gibraltar.

The British insist this area should be commanded by a British admiral subordinate to Admiral Wright. They must have control, they say, over the approaches to the Mediterranean. The French say they cannot consider—for reasons of prestige—any non-French commander.

The United States points out that no subordinate commander in the important eastern Atlantic is an American; that our Sixth Fleet is the major naval force in the Mediterranean, and that Spain, with her important bases and her dominant position at the Strait of Gibraltar, would not favor either a British or a French command.

The British want the headquarters at Gibraltar; the French want it at Casablanca; the United States, at Lisbon. No compromise has been reached. Meanwhile IBERLANT comes under the general control of the two British commanders—naval and air—of the eastern Atlantic area, who are subordinate to Admiral Wright.

Another major problem facing SACLANT is the recent British white paper on defense. This paper, which justified and programed extensive cuts in the British armed forces, has worried the Norfolk staff. The staff fears it will establish a precedent and that at exactly the time when NATO naval forces are beginning to achieve strength, many powers will follow Britain's example.

The future worries SACLANT, yet at Norfolk there are no doubting Thomases. There is unanimity that victory without seapower is impossible.

How About a National Lottery?

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. FINO. Mr. Speaker, I am happy to inform my colleagues that my lottery bill continues to gain more and more support every day.

Recent support for a national lottery comes from Inez Robb, a columnist for the New York World Telegram. In her column of July 3, 1957 entitled "How About a National Lottery To Keep Uncle Sam in Cash?" Miss Robb urges serious consideration of a national lottery.

I am inserting this article in the Appendix of the CONGRESSIONAL RECORD for the serious consideration of the Members of this Congress:

HOW ABOUT A NATIONAL LOTTERY TO KEEP UNCLE SAM IN CASH?

(By Inez Robb)

Recent reports from the Nation's capital say that inner circles within inner circles in Washington are cottoning up to the idea of a national lottery as one more means of raising money to support the Federal Government in the style to which it has become accustomed.

Well, sir, there was a time when this intelligence from Washington would have made me bridle like Carry Nation sniffing a cupful of basic bourbon. But inflation has weakened my moral fiber, and maybe—I'm not certain, but maybe—it might be wise to keep that Irish sweeps money at home.

Interesting characters have sidled up to me in numerous nations from Cuba to Tierra del Fuego to Portugal to sell me tickets in national lotteries. I have a feeling that they sidled up to me in North Africa, too, but for the life of me I can't remember whether it was lottery tickets or dirty postcards.

In the past my lofty moral scorn of such dubious methods of national financing have even withered the kind of characters who seem to engage in the lottery traffic and, take my word for it, that's a lot of moral scorn.

Perhaps I might not have been so susceptible to the prospect of a national lottery to pay off the mortgage on the vine-covered Federal cottage if I had not read of it almost simultaneously with a financial column that bluntly said "money costs more today."

And ain't it the truth? A dollar will scarcely get you 50 cents in today's market. In Canada, it takes $1.05 face value of American coin to buy $1 face value Canadian. And up north our neighbors, great jokers, are complaining because Big Brother to the south holds them in economic bondage. They've got saddle sores from those solid-gold chains.

My moral fiber slipped another notch when it became apparent that Uncle Sam, with or without box tops, couldn't give away his long-term bonds in the present money market, since he is unwilling to pay the high interest rates it takes today to hire money.

So a lottery began to take on a kind of rosy glow. Americans are great gamblers. Nor are we totally devoid of that human greed that makes man rejoice at getting something for nothing—or a lottery ticket. Naturally, the Government would have to make the payoff prizes, say a million in cash as tops, exempt from all kinds and sorts of taxes. Otherwise, it would hardly pay to take a flier.

The football pools in England are tax-exempt. In tax-ridden Albion such pool prizes offer practically the only way a citizen can strike it rich. Britain has also copied the Scandinavian countries in offering savings bonds that amount, in the long run, to a form of national lottery.

Such bonds, in Norway and England, pay no interest. Because every so often these respective Governments draw bonds that pay off handsomely in the same way as a lottery. The top prizes are substantial. There are also any number of smaller prizes that console the gambler—pardon me, investor. Of course, the take from the bond lottery is temptingly tax-exempt, too. And the investor whose bond wasn't drawn this time can always hope that Lady Luck will be with him at the next drawing, 4 to 6 months hence.

Our new Secretary of the Treasury, Robert B. Anderson, could do worse than consider a straight-out lottery or lottery bonds. We might as well live it up, for, as Punch put it recently and pungently, money doesn't seem to have any future.

The World Bank and the Mutual Security Bill in World Trade and in World Peace

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. SIEMINSKI. Mr. Speaker, Congress will soon consider the mutual security bill. Everyone but Congress calls it the foreign-aid bill.

When the mutual security bill comes before us, it might be helpful to review again to what extent it provides investment to increase production, to raise living standards and to bring about a better balance in world trade and a solid hope for world peace.

That was also the job the World Bank set out to do 11 years ago in 1946.

An article on the World Bank in today's New York Times, July 10, sets the goals of the World Bank with its 60 member countries who are its stockholders.

The World Bank was established to provide and facilitate international investment for increasing production, raising living standards and helping bring about a better balance in world trade.

In its 11 years, the bank has loaned more than $3 billion in 44 countries and oversea territories.

The World Bank was new after World War II. There was no such institution after World War I.

The World Bank works for world peace when it contributes to world trade and to improved living standards through increased production. It is said that the mutual security bill aims to do the same. When the measure is presented for consideration it is hoped that the benefits of the bill will be as clearly evident as those set out by the World Bank in the Times article. It follows:

WORLD BANK TO BORROW 100 MILLION IN FRANKFURT—LARGEST LOAN OUTSIDE THE UNITED STATES IS PLACED WITH WEST GERMAN HOUSE—DEBTS TO RISE ABOVE 1 BILLION

A West German bank, the Bank Deutscher Laender of Frankfurt-am-Main, has agreed to lend $100 million for 1 to 3 years at 4½ percent interest to the International Bank for Reconstruction and Development (World Bank).

The private placement is the third and largest issue of World Bank dollar obligations placed entirely outside the United States.

As evidence of its indebtedness the World Bank will issue notes dated July 11, 1957. Of the total, $40 million will mature in 1 year and $30 million each in 2 and 3 years.

Interest will be payable semiannually, with the first payment due January 11, 1958. Payments of interest and principal will be made at the Federal Reserve Bank of New York.

The transaction is the third sale of World Bank obligations this year. Two previous issues were offered publicly through United States investment houses, $100 million of 4½ percent 20-year bonds in January and $100 million of 4¼ percent 21-year bonds in April.

Previous placements outside the United States included $50 million of World Bank dollar bonds with investors in 23 countries in September 1954 and a $75 million issue of World Bank dollar bonds placed with investors in 22 countries in September last year.

Total outstanding obligations of the bank, giving effect to the new borrowing, will amount to about $1,135,000,000. They will consist of $935 million of United States dollar bonds and the equivalent of $200 million of bonds denominated in Swiss francs, Canadian dollars, sterling and Netherlands guilders.

The World Bank was established to provide and facilitate international investment for increasing production, raising living standards and helping bring about a better balance in world trade.

Since it began operations in 1946 it has made more than 166 loans totaling $3,006,000,000, net of cancellations and refundings, in 44 countries and overseas territories.
